SUBJECT INDEX-PART I

INTRODUCTION

The entries in this index refer to the abstracts by their serial number, not by the page number. The entries are grouped under headings (printed in bold type, e.g. "**Abrasion**") which represent, in the main, general categories or concepts rather than specific names. If a heading for a particular subject does not appear, a more general heading should be consulted; for example, "Zone plates" would be listed under "**Diffraction/light**"; "Barkhausen discontinuities" under "**Magnetization process**". There are numerous cross-references directing attention to related headings in other parts of the index.

Many of the headings are subdivided by the use of subheadings, which are indented (i.e. printed slightly to the right) and commence with a small letter (for example, see the subheadings under "**Absorption**").

ARRANGEMENT OF HEADINGS AND SUBHEADINGS

The headings are arranged throughout the index in alphabetical order according to British Standard 1749:1951 (the "word by word" system, not "reading right through"). The subheadings, with a few exceptions, are themselves arranged in alphabetical order under their respective headings. The exceptions (for example, see the subheadings under "**Spectra**", "**Crystal structure, atomic**") are cases where a more logical order is preferable to a purely alphabetical one.

ARRANGEMENTS OF ENTRIES UNDER HEADINGS

Entries are arranged in two alphabetical groups as follows. First group: generalities and named substances (in words); second group: named substances (chemical formulae). If a search is being made for a particular substance, both the first and second alphabetical groups should be inspected since, for example, alumina may also be listed as Al_2O_3 .

COLLECTED LIST OF SUBJECT HEADINGS

The alphabetical arrangement of the headings is the most convenient for locating a known heading quickly, but there may be other related headings elsewhere in the index of which the reader is unaware, and which he would only come across by accident. To assist the reader to discover all the headings appropriate to his subject, a collected list of the headings is given on pages S2 to S16, which follow this page; they should be consulted as a matter of routine each time a search is made. In this list, the headings are not arranged in alphabetical order, but are grouped into sections by subject on the same basis as the arrangement of the abstracts in the monthly issues of Physics Abstracts. By using this list, the reader can quickly determine which are the headings appropriate to his subject, and they are then easily found in the main index in their alphabetical position.

HEADINGS WITH NO ENTRIES

Because physics is a developing subject, it is not possible to maintain the list of headings unchanged from year to year; it is subject to a continuous process of revision, with the introduction of new headings and subheadings, and the alteration and elimination of old ones. This process is a gradual one, however, and the great majority of the headings are the same as those of the previous year. To assist in maintaining the continuity of the index, all the headings in current use in a given year are printed, even those for which there are no abstracts to be recorded. The latter are followed by the announcement "No entries"; this supplies confirmation that these headings have not been dropped from the index, and entries may reappear under them in the next issue of the index.

ELEMENTS, COMPOUNDS AND OTHER SUBSTANCES

The names of elements, their compounds, a few compounds of special interest (e.g. "**Ruby**", "**Water**") and a few common materials (e.g. "**Wood**", "**Paper**") are included as headings or subheadings (e.g. "**barium titanate**" under "**Barium compounds**"). Under these, as well as under the appropriate "subject" headings, are listed any abstracts which contain significant physical information about the element, compound or substance named; except however, that abstracts listed under headings referring to nuclear properties, including radioactivity, are not necessarily also listed under the substance name. The entries under these headings are themselves arranged in alphabetical order of substance or nuclide names, so that a given substance can be readily located.

Inorganic compounds of the elements are listed under the first element in the chemical formula, and all the compounds of a given element are grouped under a single heading (e.g. "**Sodium compounds**"). Alloys are listed under compounds of the base or first-named constituent, e.g. Au-Ag alloys under "**Gold compounds**". There are also four special headings for the common alloys: "**Aluminium alloys**", "**Copper alloys**", "**Iron alloys**", "**Nickel alloys**". Organic compounds are grouped under "**Organic compounds**", "**Polymers**", "**Plastics**" and under special substance headings such as "**Paper**", "**Proteins**", etc.; all the latter are listed in the collected list of headings at the end of the index.

BEFORE USING INDEX, CONSULT LIST OF SUBJECT HEADINGS ON PAGES S2-S16,
WHICH FOLLOW THIS PAGE

LIST OF SUBJECT INDEX HEADINGS

The headings used in the Alphabetical Index are listed below. The headings are grouped into sections on the same basis as the arrangement of the abstracts in the monthly issues of Physics Abstracts. Each section lists the headings which concern its subject and it follows that many of the headings are listed in several places.

An introduction to the Subject Index will be found on page S1

SUBSTANCES

Chemical elements and inorganic compounds

All the chemical elements are listed by name, followed by their compounds, e.g. "Cadmium", "Cadmium compounds".

"Hydrogen" is subdivided by the subheadings "neutral atoms", "neutral molecules", and "ions". "Deuterium" and "Tritium" are independent headings. "Hydrogen compounds" is supplemented by "Ice", "Steam", and "Water".

"Oxygen" is supplemented by "Ozone", and "Carbon" is supplemented by "Diamonds" and "Graphite".

The following inorganic compounds are further subdivided by subheadings as shown:-

Barium compounds	Nitrogen compounds
barium titanate*	ammonia
Cadmium compounds	ammonium compounds
cadmium sulphide	Potassium compounds
Calcium compounds	potassium bromide
calcium fluoride	potassium chloride
Gallium compounds	Sodium compounds
gallium arsenide**	sodium chloride
Indium compounds	Zinc compounds
indium antimonide**	zinc sulphide
Lithium compounds	
lithium fluoride	

* Ferroelectric properties are listed under "Ferroelectric materials/barium titanate"

** Semiconducting properties are listed under the corresponding subheadings of "Semiconducting materials"

Organic compounds

Organic compounds are grouped under headings "Organic compounds", "Polymers", "Plastics", "Proteins". "Rochelle salt" is an independent heading.

Substance groups

In addition there are the following headings for groups of elements, compounds or substances:-

Actinides	Metals
Actinide compounds	Minerals
Alkali metals	Rare-earth metals
Alkali-metal compounds	Rare-earth compounds
halides	Semiconductors
Alkaline-earth metals	Semiconducting materials
Alkaline-earth compounds	gallium arsenide**
Ferrites	germanium**
Ferroelectric materials	indium antimonide**
barium titanate*	silicon**
Garnets	Transition metals
Halogens	Transition-metal compounds
Inert gases	

* Used for ferroelectric properties only

** Used for semiconducting properties only

Alloys

General papers on alloys are indexed under "Alloys". Alloys of specified composition are listed under, either

- (i) special alloy headings (there are five of them: "Aluminium alloys", "Copper alloys", "Iron alloys", "Nickel alloys", "Steel"), e.g. Al-Ni alloys under "Aluminium alloys", or
- (ii) compounds of the base or first-named element, e.g. Mn-Zn alloys under "Manganese compounds", and silicon-iron under "Iron alloys".

Special substances and materials

There are also the following special headings for certain common substances:-

Air	Paper
Blood	Porous materials
Ceramics	Powders
Clay	Quartz
Coal	Rubber
Concrete	Ruby
Fibres	Sand
Gelatin	Seawater
Glass	Soil
Mica	Waxes
Optical materials	Wood

ADP (ammonium dihydrogen phosphate). See Nitrogen compounds/ammonium compounds.

 resonance line, width and shift dependence on temp. 8=13342
 reverberation room, edge effect in absorption coeff. meas. 8=6181
 semiconductors, spin-cyclotron-phonon resonance 8=2352
 silencers with quasisonant living, attenuation freq. characteristics 8=10738
 solids, re-entrant excitation of hypersonic waves rel. to air-gap effect 8=8621
 spherical volume absorber, coefficient calc. 8=10742
 transmission loss meas. using vibr. transducers 8=10754
 volume, individual, by small chamber method 8=10755
 walls, double and single 8=10741
 Bi-Ca-V garnet 8=18397
 CO₂-D₂O mixture, rel. to vibr. relaxation of CO₂ 8=21071
 Ge, attenuation coeff. by donor spins 8=22096
 He II, below 0.6°K 8=6235
 KMgF₃:Ni²⁺, near acoustic paramag. reson. 8=22912
 Nb, superconducting, mixed state, u.s. attenuation rel. to transverse mag. field 8=17502
 O₂, H₂O vapour mixtures, obs. 8=1476
 Si, attenuation coeff. by donor spins 8=22096
 YFe garnet, ferroacoustical reson. absorpt. 8=18397

acoustic waves, ultrasonic

in A₂B₆ type crystals, effect of illumination 8=4915
 acetate-alcohol binary mixtures 8=4571
 antiferromagnetic insulators, rel. to lattice and Heisenberg spin systems 8=9388
 benzene and furan vapours obs. 8=12687
 crystals, usefulness of thermal cond. obs., for determ. attenuation at high and low temp. 8=22092
 dielectric crystals with high impurity concs. 8=17491
 ferroelectric, near phase transition rel. to long range dipole-dipole effects 8=18181
 by free electrons in quantizing mag. field 8=6165
 gases at high temp., rot. collision and vibr. relax. determ. 8=4478
 graphite, stress wave packet, attenuation effect on freq. content 8=8626
 Heisenberg paramagnets, attenuation asymptotic behaviours near critical points 8=22757
 ice crystals in supercooled water rel. to crystal growth 8=22102
 metal in quantizing mag. field by free electrons, calc. 8=22093
 paramagnetic crystals, quantum theory of resonance and relax. absorpt. 8=17487
 propionic acid 8=12860
 pyridine and thiophene vapours obs. 8=12687
 resonance reverberation method, 10 to 300 kc/s 8=12858
 Rochelle salt, u.s. relaxation near ferroelec. transition 8=1858
 rock samples in lab., meas. by bending vib. method 8=22095
 shallow water propag. loss at sonar freqs. 8=1554
 silicones, # 200 series, 30-350 MHz and -30° to +30°C rel. to viscosity 8=8063
 solids, attenuation consts., resonance meas. 8=17489
 superconductor, anisotropic, attenuation in gl < limit 8=22090
 in superconductors, in intermed. state 8=4914
 superconductors, type II, anisotropy of attenuation 8=22091
 triglycine sulphate, u.s. relaxation near ferroelec. transition 8=1858
 two-zone superconducting alloys, theory 8=22535
 Ag, attenuation rel. to Fermi surface deformation 8=1851
 Au, attenuation rel. to Fermi surface deformation 8=1851
 Ar, liquid 8=1553
 CO₂, 300°-1300°K 8=4478
 CO₂-water-vapour mixtures, at 1.25, 3.3, 4.8, 9.9 and 14.0 MHz 8=7931
 CS₂, var. with impurity 8=12861
 CoO, antiferromagnetic, attenuation-frequency relationship near Neel point 8=22106
 Cu, attenuation rel. to Fermi surface deformation 8=1851
 Cu, shear waves, attenuation at low temps. 8=22099
 D₂, H₂, and sound velocity at high temp. obs. 8=1251
 Eu, polycrystalline, attenuation and elastic moduli from 4.2 to 300°K 8=17781
 Ga, geometric oscillations 8=4922
 GaAs, infrared radiation effect 8=13352
 Gd, critical attenuation near Curie temp. 8=22101
 Ge, attenuation, low temp. 8=8629
 Ge-Si alloys, decrease on alloying 8=1853

Absorption—contd**acoustic waves, ultrasonic—contd**

- In, normal and superconducting, electronic contribution to attenuation 8=13354
- In, waves, quasi-longitudinal, superconducting electronic attenuation 8=22103
- K, by conduction electrons 8=22104
- KCl deformed crystals, by dislocations, rel. to freq. 8=8630

Absorption—contd

light—contd

water, relative spectral attenuation coeffs. 8=12888
 water vapour, atmospheric, i.r., over slant path 8=18879
 weakly absorbing layers, rel. to optical consts. of solids 8=18486
 xanthane rel. to mols. $\pi\pi^*$ and $n\pi^*$ levels location 8=1302
 Ag foils, thin, rel. to struct. and surface characts. 8=18502
 Ag in irradi. metaphosphate glass 8=4990
 AgCl absorpt. edge, polaron states 8=22955
 AgIn, u. v. spectral bands, system A, vibrational analysis 8=16262
 As-S glasses, origin of 800 cm^{-1} bands 8=5584
 Au film, absorption band edge 8=5585
 Au foils, thin, rel. to struct. and surface characts. 8=18502
 Ba silicate glasses, γ -ray effects 8=13479
 BaF_2 , X-ray coloured, by colour centres, temp. dependence 8=17683
 n- BaTiO_3 , single-domain ferroelectric, 26-130°C 8=9506
 C particles, computation: results discussed 8=513
 CO fundamental band, spectral absorpt. coeff. at high temp. 8=21067
 CO_2 , atmospheric, i.r., over slant path 8=18879
 Ca films, between 0.5 and 5.5 eV 8=14204
 CaCO_3 , complex indices 8=5579
 CaF_2 , proton irradiated, band strength, and change in microhardness, kinetics 8=22320
 CaF_2 - Sm^{2+} crystals, optical spectrum 8=9513
 CaF_2 , X-ray coloured, by colour centres, temp. dependence 8=17683
 CaS films, and SrS conc. effects 200-450 μm 8=9511
 Cd crystals, interband absorpt., 32° and 295°K 8=18545
 CdS, doping, heat treatment and deform. effects, 4.2°K 8=9606
 CdS, exciton effects 8=22965
 CdS, 2-photon processes intermediate states lifetime meas. 8=14173
 CdS with Te as isoelectronic trap, and fluorescence 8=23048
 CdSe, doping, heat treatment and deform. effects, 4.2°K 8=9606
 CdSe, and reflection spectra in i.r. at low temps. 8=23026
 CdSnAs_2 , polarized 8=22966
 n-CdTe:In, free carrier 8=22967
 CeO_2 , spectra obs. 8=1740
 CoBr_2 , spectra high temp. and pressure 8=1580
 CoCl_3 , spectra high temp. and pressure 8=1580
 CoF_2 , polarized spectrum rel. to magnon sidebands 8=22974
 CoO, semiconducting, i. r., 0.5-700 μm , by small polarons 8=23008
 Cs in Cs-Ar low-pressure discharges 8=7401
 CsBr, Raman and i. r. spectra at second order, interpretation 8=5595
 Cs_2Sb , time depend. of absorpt. and photoemission 8=13937
 Cu film on Si, in spectral region from 1.5-7 μ 8=14212
 Cu film, spectra 8=5596
 Cu films, thin, and transmission in spectral region between 0.6 and 4 μ 8=22972
 Cu ions in NaCl crystals 8=18521
 Cu and Cu-Ni alloys, rel. to Ni conc. effects 8=2411
 CuCl exciton spectrum, 4.2°K 8=9523
 CuCl exciton states rel. to spectrum oscils. 8=8932
 CuCl rel. to photocond. spectrum, 4°K 8=9251
 CuCl weak lines and luminesc. rel. to exciton complexes 8=9525
 CuO_2 crysts. excitons photoionization, assoc. absorpt. coeff. calc. 8=9529
 Cu_2O rel. to exciton-phonon interactions, n=1 line profile, 4.2-112°K 8=9527
 Cu_2O exciton spectrum, uniaxial press. and n irradi. effects obs. 8=9521
 Cu_2O spectrum rel. to band struct., obs. 8=9524
 $\text{Cu}_{1-x}\text{Zn}_x\text{Ni}_x$, $x < 0.25$ and $0.08 < y < 0.10$, at room temp. 8=22976
 Dy, M_{IV} and M_V lines and edges 8=5602
 Er ferrite-garnet, dichroism and mag. anisotropy 8=18523
 GaAs, edge shift, influence of magnetic field 8=9531
 n-GaAs in mag. field, circularly polarized waves, doping effect 8=22981
 n-GaAs:S, Se, Te, i. r. spectra 8=18528
 GaP, intrinsic 8=2417
 GaP: Ni, spectrum 8=22983
 GaP, uniaxially stressed, interband absorpt. rel. to band-to-band threshold 8=18529
 GdAlO_3 , antiferromag. order, from optical absorption studies 8=22880
 Gd, M_{IV} and M_V lines and edges 8=5602
 Ge, amorphous, rel. to elec. conductivity 8=18066
 Ge, amorphous, i. r. bands rel. to electronic struct. 8=22987
 Ge, electron irradi., absorption edge 8=9534
 Ge, interband, rel. to photon-assisted magnetotunnelling in elec. and mag. fields 8=5260
 Ge:Li(P), i. r. bands rel. to impurity vibrational modes 8=9532
 Ge thin films, piezoabsorption, above fundamental energy gap 8=22986

Absorption—contd

light—contd

H in solution in liq. Ar, translational spectrum in far i. r. 8=12889
 $\text{H}_2\text{NH}_4\text{PO}_3$ films, i. r. spectra in polarized light, 400-4000 cm^{-1} rel. to internal vibrations 8=14224
 He liquid, by excess electrons 8=19687
 $(\text{HgTe})_3\text{-In}_2\text{Te}_3$ alloys, single-crystals, optical energy gap 8=5608
 InAs, free carrier absorpt. coeffs. 300°K and 80°K obs. 8=18536
 n-InSb, in 0.2-4 mm. range at 4.2°K 8=18537
 InSe crystal, 0.4 \rightarrow 25 μ range 8=5609
 K, thin films 8=5612
 K_2 vapour, nonlinear absorpt. of ruby laser light, and resonance fluoresc. 8=7527
 $\text{K}_2\text{B}_2\text{O}_7$ glass, γ -irrad., induced absorption bands assoc. with Ti^{4+} , Pb^{2+} or Bi^{3+} 8=5639
 KBr, Ca doped, growth of bands by X-irrad. 8=2429
 KBr, F-band absorpt., u. s. strain modulation 8=22232
 KBr:OH, i. r. spectra rel. to temp. dependence of intensity of OH vibrations 8=18538
 KCl, constant, and reflectivity spectra rel. to exciton states 8=14230
 KCl, in i. r., induced by monovalent impurities 8=9544
 KCl, transform. of OH centres into U centres by electrolytic decoloration 8=13456
 KCl:Ag (from AgI), of impurity rel. to E-band models 8=14228
 KCl(Br) foils, P-polarized light band at plasma frequency 8=2123
 KCl, F-band absorpt., u. s. strain modulation 8=22232
 KCl-KBr solid solns. 8=2431
 KCl and KF, dichroism, mag. circular, of R, band 8=14235
 KClO_3 , new bands in i. r. after X-ray irradi. 8=22993
 KCl:OH, i. r. spectra rel. to temp. dependence of intensity of OH vibrations 8=18538
 KDF_2 , i. r. study of lattice vibrations 8=5617
 KHF_2 , i. r. study of lattice vibrations 8=5617
 KH_2PO_4 films, i. r. spectrum, internal vibrations 8=9545
 KI-NaI (-RbI), (-KCl) solid solns., temp. dependence, 80-100°K 8=22994
 KI:Ti⁴⁺, B band symmetry assignment 8=5616
 KNbO_3 crystals, ferroelectric, absorpt. edge temp. dependence 8=2430
 KNiF_3 , antiferromagnetic, anomalous temp. depend. 8=22996
 KX, (X = Cl, Br, I), rel. to U centre electronic structure 8=2001-2
 LaCoO_3 , p- and n-type, by small polarons 8=2434
 LiBr, fine structure near K-edge 8=18544
 LiCl, fine structure near K-edge 8=18544
 LiF, fine structure near K-edge 8=18544
 LiF, and LiH, rel. to F-centres exchange interactions 8=17684
 $\text{LiH}_3(\text{SeO}_3)_2$, fundamental edge near ferroelectric phase transition pt. 8=9548
 LiI, fine structure near K-edge 8=18544
 Mg crystals, interband absorpt., 32° and 295°K 8=18545
 MgF_2 , i. r., selection rules 8=5621
 MgO, "mirror", fluorescence 8=9620
 $\text{MnCsCl}_2 \cdot 2\text{H}_2\text{O}$, spectrum rel. to Mn^{2+} crystalline field parameters 8=8197
 α -MnS, rel. to elec. conductivity 8=18057
 MoS_2 , thin anisotropic, crystals, delocalized excitons from magneto absorpt. study 8=13674
 N_2 , in shock tube, vac. u. v. absorpt. 8=7532
 NO, solid, rel. to mol. excited states, 2300-1100 Å 8=14243
 NO in solid Ne, Ar and Kr rel. to excited states, 2300-1100 Å 8=14243
 N_2O , coeff. 600-1000 Å 8=16447
 N_2O , i. r. spectral bands rel. to isotopic mols. and crystal lattice vibrations 8=14251
 Na, liquid rel. to electronic structure 8=8111
 NaCl:Eu rel. to luminesc. centres structure, obs. 8=9623
 NaCl, F-band absorpt., u. s. strain modulation 8=22232
 NaCl:OH, i. r. spectra rel. to temp. dependence of intensity of OH vibrations 8=18538
 NaClO_4 , X-ray irradiated crystals 8=18548
 NaHF_2 , i. r. study of lattice vibrations 8=5617
 NaI, in i. r., induced by monovalent impurities 8=9544
 NaI, i. r. vibrational by U-centres 8=9557
 NaNO_3 , absorpt. spectra from 450-5700 cm^{-1} 8=9556
 in Nd^{3+} laser glass, saturable absorpt. of colour centres rel. to self Q-switching 8=11107
 in Nd^{3+} - Yb^{3+} laser glass, saturable absorpt. of colour centres rel. to self Q-switching 8=11107
 Ni^{2+} in MgO, spectra, line shift rel. to temp. 8=2442
 NiBr_2 , spectra high temp. and pressure 8=1580
 NiO, semiconducting, i. r., 0.5-700 μm , by small polarons 8=23008
 Pb, supercond., far i. r. rel. to critical energy gaps 8=18555
 PbBr_2 :Mn and luminesc. excit. and emission spectra 8=9622
 PbCl_2 :Mn and luminesc. excit. and emission spectra 8=9622
 $\text{Pb}_{0.85}\text{Sn}_{0.15}\text{Te}$, energy gap 8=2446

Absorption—contd**light—contd**

- Pb_{0.93}Sn_{0.07}Te, energy gap 8=2446
 PbI₂, in region 0.5–15 μ and photoconduction at 0.525 μ 8=2444
 PrF₃, i.r., dichroism 8=9560
 RbCl, F-band absorpt., u.s. strain modulation 8=22232
 SO₂, with ketones, nitriles, esters or alcohols, u.v. absorpt. spectra 8=18688
 Se, amorphous, rel. to elec. conductivity 8=18066
 Si, amorphous, i.r. bands rel. to electronic struct. 8=22987
 Si, amorphous, rel. to elec. conductivity 8=18066
 Si, B-doped, broadening 8=2452
 Si, rel. to bound excitons 8=5132
 Si, three-photon process 8=5635
 SiC polytypes, infrared 8=23013
 SiO₂ film, i.r., rel. to temp. of deposition 8=21889
 SiO₂ vitreous films, i.r. 8=5637
 SnO₂, thin films, u.v. edge spectrum 8=2458
 SnTe, visible and i.r. obs. 8=18562
 Sr films, thin, between 0.5 and 5.5 eV 8=23014
 SrF₂, X-ray coloured, by colour centres, temp. dependence 8=17683
 Su film, edge due to quantum transition from d-band 8=5585
 Te, amorphous, rel. to elec. conductivity 8=18066
 ThO₂, spectra obs. 8=1740
 TlBr:Mn and luminesc. excit. and emission spectra 8=9622
 TlCl:Mn and luminesc. excit. and emission spectra 8=9622
 TiO₂ layers, rel. to electronic carrier props. 8=23017
 V₂O₅, absorption coefficients 8=23020
 Yb, M_{IV} and M_{II} lines and edges 8=5602
 Zn crystals, interband absorpt., 32° and 295°K 8=18545
 ZnO:Ni(Co), lattice-vibration effects 8=9563
 ZnS luminesc. reabsorption rel. to equilib. emission kinetics 8=9641
 ZnSe, and reflection spectra in i.r. at low temps. 8=23026
 ZnTe, and reflection spectra in i.r. at low temps. 8=23026

 by dislocation motion in ionic crystal 8=17637
 impedance, mutual between flexible different-size disks in infinite rigid plane, calc. 8=6160
 jet, free with periodic structure, radiation 8=10722
 loudspeaker casings, dimensioning for bass reflection using equivalent electric circuits 8=10730
 monopole in reverberation chamber, calc. of power radiated 8=178
 moving, Doppler correction of spectra 8=19577-8
 moving in helical path, press. field, directivity and total energy 8=10726
 plane base, properties 8=19593
 plate, thin elastic, under random loading 8=10729
 plates, circular vibrating, nearfield press. distribution calc. 8=6152
 point emitter in absorbing waveguide, total field of damped normal modes 8=10724
 spark underwater 8=12863
 spherical, calc. of radial vel. at surface for prescribed pressure distrib. 8=19553
 wave generation by r.f.e.m. radiation and effect on metal surface impurities 8=180

Acoustic receivers

See also Microphones.

- arrays, directivity pattern in Fresnel zone, error compensation 8=19550
 design using signal detectability theory 8=184
 detection of incoherent finite signal using sensors in isotropic noise field 8=6159
 earphones, free-field frequency response determination 8=3050
 line arrays, inter-element coupling effect on signal to noise ratio and beam steering 8=10734
 Luneberg fluid lens, acoustic field 8=19562
 nonlinear mixing, detect. by optical Bragg diff. 8=10732
 plane wave confronting circular device, analog equivalent cct. 8=6158
 point array directional response major and minor lobe structure of response by 2-parameter calc. 8=15065

Acoustic resonators

- air in tube, forced vibrations of finite amplitude 8=16705
 jet, choked, radiation from 8=10722
 LiNbO₃:Cr³⁺ hypersonic, propag. of 10⁴ Mc/s, room and He temps. 8=8631
 YFe garnet single crystal, magnetoacoustic resonance obs. 8=22891

Acoustic streaming

- bubble in liquid, u.s. 8=21590
 bubble mass transfer, effect of u.s. streaming 8=21584
 fluid, elastico-viscous, near cylindrical obstacle 8=6169
 fluid, flow field method for heat transfer from transverse oscill. cylinder 8=3098
 induced by finite amplitude sound 8=3067

Acoustic transducers

See also Acoustic generators; Acoustic receivers; Microphones; Sound reproduction.

- displacement type, effects of air compression between parallel plates 8=7892
 infrasonic, role in obs. geoaoust. phenomena due to artificial sources 8=9804
 piezoelectric, acoustic dispersion in thin cylindrical rods 8=4913
 piezoelectric ceramics, sensitivity to high stress perpendicular to polar axis obs. 8=19556
 piezoelectric ceramics, stress sensitivity of permittivity reduced by heat treatment 8=19555
 piezoelectric, mechanical responses 8=5379
 piezoelectric plate, with prescribed input, electrical response 8=15064
 piezotransducers, equivalent circuits, for u.s. analysis 8=196
 reactor structural damage due to vibr. of high pressure gas, meas. 8=20885

Acoustic transducers—contd

- rotational displacement, construction and design 8=6000
- spark chamber readout system, matching and backing problems 8=3485
- systems, flush mounted, as spatial and spectral filters for turbulent boundary press. field 8=10731
- ultrasonic and liquids viscosity meas. 8=8028
- wedge, for Rayleigh wave excitation 8=182
- LiNbO_3 , resonant and antiresonant freq. constants rel. to rot. angle 8=9226
- LiTaO_3 , resonant and antiresonant freq. constants rel. to rot. angle 8=9226

Acoustic wave propagation

- See also Absorption/acoustic waves; Dispersion/acoustic; Doppler effect; Helium/liquid, sound propagation; Shock waves; Velocity/acoustic waves.
- acoustic nonlinearity of an orifice, meas. 8=3053
- anomalous, in atmosphere around nuclear explosions 8=9898
- atmosphere after nuclear explosion 8=2583
- cavitation and streaming due to sound waves of finite amplitude 8=12753
- cross-section of a circular cylinder with an impedance-loaded strip along a generatrix 8=176
- dielectric crystal, excitation by interaction of charged particles 8=8625
- far field pressure from driven coated plate with baffle 8=3048
- far-field pressure from driven infinite plate with baffle 8=3047
- fluid nearly incompressible, inviscid. due to time depend. motion of arbitrary submerged body 8=21662
- gases, monatomic 8=1474
- in gas-particle mixture, and acoustic combustion instability 8=16704
- in highly rarefied gases, effect of gas-surface interaction 8=21519
- infrasonic, from aurora, shock-wave model 8=19533
- interaction with electrons in strong elec. field, Boltzmann eqn. 8=13343
- lens, liquid, aberration theory, focusing props. 8=19573
- liquids, finite-amplitude waves 8=12856
- liquid force on bubble in standing wave 8=16826
- in liquid metals, attenuation 8=12859
- liquid, viscous, non-Newtonian 8=16830
- methane-water vapour mixture, vib. Napier relax. time 8=4481
- mode-conversion in the long-wavelength limit 8=186
- ocean, sound fluctuations and random inhomogeneities 8=3054
- in ocean, spherical waves, induced nonlinear losses and cavitation 8=9820
- panels, double, transmission loss, calc. allowing for absorption by cavity walls 8=10740
- physical acoustic, principle and methods: the effect of imperfections, book III A 8=17485
- piezoelectric semiconductors, I-V characteristic under sound amplification conditions 8=18021
- in pipe, hydraulic analogy 8=187
- plane longit. waves in bar, vel. gains for free free mode-resonator case 8=3057
- pulsed, in layered inhomogeneous medium, time struct. depend. on vertical coordinate 8=3056
- quartz, hypersound generation by stimulated Brillouin scatt. 8=2451
- radiation-driven acoustic waves in confined gas 8=4483
- radiation, flexurally vibr. plates, abatement, by dampers 8=3019
- radiation from underwater spark 8=12863
- ray theory expressions for a wide class of vel. functions 8=19560
- ray tracing, 3D, Frenet formulation 8=6161
- sand, propagation parameters for various grades 8=22107
- scattering by front rows of audience, experimental model 8=15068
- semiconductors, piezoelec., amplification critical electron drift velocity 8=19571
- semiconductors, piezoelectric interaction of growing sound noise 8=22094
- shock-front-vortex interaction, sound generation, maths. 8=188
- solids, non-isotropic second sound dispersion and damping 8=4910
- solids, phonon amplification, spatially inhomogeneous 8=4917
- sound amplification in gas, radiation induced, possibility 8=21516
- sound propagation in highly rarefied gases, effect of gas-surface interaction 8=21519
- split-beam sound field, ray representation of diffraction effects 8=19567
- standing wave in rigid-walled tube containing air, theory and obs. 8=21518
- turbulent media, statistical properties, book 8=10735
- 240 nsec r. f. pulse, compression by Bragg diffraction of light with microwave sound 8=8618
- underwater acoustics 8=4569
- underwater, effect of internal water wave propag. 8=3051
- underwater, nonlinear, transmission 8=6164
- underwater signals, cross correlation 8=3059

Acoustic wave propagation—contd

- underwater sound-pulse distortion by converging lens 8=4570
 - underwater, theory, book 8=10751
 - underwater, waveguide layer model 8=3055
 - walls, double and single 8=10741
 - water, parametric amplification, with uniformly distributed bubbles 8=12864
 - water, standing wave, forces on bubble 8=12855
 - in waveguides with arbitrary cross-section, calc. of eigenvalues 8=3052
 - waveguide, with inhomogeneities in medium and at boundaries 8=10737
 - in wind-tunnel, press. grad. effect on turbulent-boundary layer press. fluctuations 8=4480
 - BaTiO_3 , ferroelectric modes, and soft optic modes, mixing 8=22665
 - Bi, plasma, theory 8=17498
 - CdS, Rayleigh wave amplification at 30 MHz 8=13350
 - He^4 liquid, 3-phonon mechanism incompatibility with obs. 8=258
 - in Hg discharge, ion-acoustic 8=4313
 - K, shear wave magnetoacoustic effect 8=22105
 - KBr, phonons, first and zero sound, elastic const. variation 8=13357
 - $\text{LiNbO}_3 \cdot \text{Cr}^{3+}$, 10^4 Mc/s hypersound perp. to optical axis, room and He temps. 8=8631
 - α -Mn, longitudinal and transverse velocities and ultrasonic attenuation betw. 4.2–300°K 8=17501
 - SiO_2 , vitreous, shear wave losses and phase vel. vars. obs. 8=13358
- ultrasonic**
- amplification, Love type in dielectrics with thin CdS layer 8=4921
 - amplifiers, parametric, misalignments 8=3066
 - butyl alcohol, stimulated and thermal Mandel'shtam Brillouin dispersion 8=21665
 - gases, molecular, kinetic theory 8=4479
 - graphite, stress wave packet, attenuation effect on freq. content 8=8626
 - holography, recording technique 8=6176
 - laminated materials, forbidden frequency bands 8=6166
 - liquid, cavitating, parametric effects 8=21664
 - liquids rel. to volume viscosity, theory 8=16804
 - metals, compressional and shear waves generated electromagnetically, meas. 8=4920
 - metals, e. m. waves and interaction with u. s. waves, theory 8=22951
 - metals, shear wave circular polarization 8=17488
 - mixed salt solns., interferometric obs. 8=16827
 - phase velocity, pulse-echo-overlap method incorporating diffraction phase corrections 8=6177
 - piezoelectric semiconductors, rel. to non-linearity of elec. props. in a. c. field 8=18022
 - piezoelectrics, ultrasound generation under Gunn effect 8=22100
 - polyelectrolyte solns., vibr. potentials 8=8061
 - in polymers, cryst. 8=1859
 - polystyrene in chlorinated biphenyl solns., dynamic mech. props. 8=12818
 - position sensing device in air 8=19579
 - pulse attenuation meas. for dynamic modulus 8=17715
 - pulse compression, using Bragg scatt. of light by u. s. waves 8=8617
 - quantizing mag. field, free electron absorpt. 8=6165
 - semiconductors, multilayer, amplification by carrier drift 8=17855
 - in solids, u. s. and hypersonic waves 8=1842
 - surface waves, generalized, in cubic crystals. 8=1855
 - CdS, longit., amplification 8=8627
 - He liquid 8=10806
 - RbMnF_3 , near magnetic critical point, attenuation and velocity 8=17504
 - SrTiO_3 , reduced, at low temps. 8=17505

Acoustic waves

coefficients at very low temperatures 8=7954
electronic theory 8=2046
moist powder, to solid in temp. field 8=22303
of pneumatic tyre to wet road, simulation, and theory of viscous hydroplaning 8=17752
polycapromamide fibres to polyvinylalcohol, CF₃ radiation grafting effects, obs. 8=22410
polyethylene, cross-bindings prod. by reactor irradi., showed by n scatt. 8=16969

Adhesion—contd

- polyethylene, filled, effect of chem. nature of substrate 8=13617
 polyethylene, relation with wettability 8=8879
 polyethylene, and wettability 8=8874
 polymers to porous substrates, formation of joints, and strength 8=17751
 polymers, wettability data 8=17841
 polypropylene fibres to polyvinylalcohol, CF_3 radiation grafting effects, obs. 8=22410
 polyethyleneterephthalate fibres to polyvinylalcohol, CF_3 radiation grafting effects, obs. 8=22410
 rubber, cross-bindings prod. by reactor irradi., showed by n scatt. 8=16969
 75 Cu-25Ni laminate on Cu core in coinage composite, bond degradation mechanism 8=22329
 spherical particles, effect of capillary liq. 8=8150
 styrene, cross-bindings prod. by reactor irradi., showed by n scatt. 8=16969
 surface energy of, role in metalworking 8=5034
 ZnS:CdS:Cu phosphor-silicic acid sol. to glass, obs. 8=8157

Adiabatic demagnetization. See Magnetic cooling.

Adion. See Adsorption.

Adsorbed layers

- dyes on solids, ionization energy 8=5424
 intermolecular nucl. mag. relax., theory 8=8330
 metals, desorption of multiple additives, rel. to thermionic diodes 8=17154
 monolayers, capillary ripple 8=1514
 organic, on metal films, polymerization 8=2251
 polycyclic cpds. monolayers, isotherms rel. to mol. struct. obs. 8=17178
 poly(methylmethacrylate), interface tension, tacticity determ. 8=4551
 polystyrene, conformation meas. by attenuated total reflect 8=8350
 stripping, double-layer charging 8=2535
 vapour deposition, obs. by mass spectra 8=17155
 on n-Ge, conductivity hydrostatic pressure dependence 8=18045
 U on W, study by field emission work function 8=22715
 H_2O mols. in oxide films on Si, dielectric relax. 8=1706
 W, Ce and Ba, e emission, Thomas-Fermi-Dirac theory 8=5414
 Zn, on W emitter, adconc. rel. to following crystallite nucleation 8=1746

Adsorption

- See also Chemical analysis/adsorption; Chromatography; Films; Heat of adsorption; Sorption.
 amylose, asymm. adsorpt. of DL-mandelic acid and DL-ethyl mandelate. 8=18696
 anions on metal surface 8=4760
 asbestos, adsorpt. of gases 8=21898
 by atmospheric particles, of radioactive I 8=9892
 biotite, adsorpt. isotherms of alkyl ammonium ions in aqueous solns. 8=13106
 carbon, adsorpt. of polyethers at soln.-solid interface 8=1708
 carbon blacks, graphitized, of Xe rel. to surface heterogeneity, obs. 8=17162
 carbon black of poly(dimethyl siloxane) from CCl_4 and xylene solns. 8=8336
 cations on metal surface 8=4760
 cell for study by i. r. spectrography 8=17157
 charcoal, activated, of ethylene, n-scattering studies rel. to adsorbant mol. motions 8=21901
 charcoal, surface heterogeneity meas. 8=8293
 clay minerals—Al oxide, hydrous, mutual adsorption 8=8341
 direct electrical meas. on electrodes 8=9767
 effect on orbiting pressure gauge errors 8=5838
 gas-covered surfaces, kinetic electron ejection model 8=16435
 gas-solid interface study, i. r. cell 8=6530
 glass, of acetone vapour, increase in surface conductivity 8=4766
 glass, of methanol vapour, increase in surface conductivity 8=4766
 glass of water vapour, increase in surface conductivity 8=4766
 graphite, of CO_2 , anisotropy of polarizability 8=21900
 graphite grains, interstellar 8=23572
 graphite, localized 8=8339
 graphite, of various gases and vapours, by fresh surface 8=8338
 Graphon, adsorpt. of isopropyl alcohol 8=1700
 Graphon and Spheron 6, monocarboxylic acids and methyl esters 8=8340
 heats of, calorimeter obs. 8=6221
 heterogeneous surfaces, defined adsorpt. sites and free energies 8=13103
 hydroxyapatite catalysts, H content 8=14395
 immersion and adsorpt. heats, thermodynamic relations and lateral interactions effects 8=17152
 isotherms, analysis 8=13102
 large atoms, configurational entropy 8=13104-5
 liquid phase adsorpt. fractionation in fixed beds, anal. 8=17151
- Adsorption—contd**
 low pressure adsorpt and pot. theory 8=21895
 metallic lattice, calculation by method of stochastic processes 8=8334
 montmorillonite, Na and Li, of trimethylcarbonil, by i. r. spectra 8=1705
 nylon, adsorpt. of polyethers at soln.-solid interface 8=1709
 oil molecules, mean adsorpt. time obs. 8=17156
 organic crystals as adsorbents for gas-solid chromatography 8=18763
 oxide-film on metals, passivity theory 8=9702
 packed powders with fluids, at liquid/solid interface, rel. to permittivity 8=22648
 phthalocyanine blue of poly(dimethyl siloxane) from CCl_4 and xylene solns. 8=8336
 portland cement component hydration products, of Ca lignosulphonate and salicylic acid 8=21902
 powders, adsorpt. of He at room temp. 8=21899
 preferential, prep. of o- H_2 and p- D_2 8=17158
 rutile, adsorpt. at solid-liq. interface from binary soln. 8=1710
 second layer adsorpt. model allowing for energy losses in primary layer 8=17150
 silica, adsorpt. of aliphatic aldehydes and ketones, i. r. study 8=8346
 silica gel, surface meas. 8=21742
 soda-lime glass with adsorped water spreading of org. liqs. 8=1520
 on solids from non-ideal solutions 8=8331
 soluble surface active material at oil/water interface 8=16811
 solute at gas-liquid interface 8=5760
 steel, of H_2 in Cd plating 8=17163
 on substrate, of vapour, rel. to kinetics of film nucleation 8=8305
 surface localized vibration mode 8=17153
 Teflon 6, N_2 and Ar isotherms 8=13047
 thermodynamic treatment for substrate in equilb. with ionized vapour, and emission 8=18263
 time-dependent impurity adsorpt., influence on metal electrocrystallization 8=17225
 trons-dichloroethylene on silica gel, laser Raman spectra 8=23031
 vacuum microbalance techniques, conference Newport Beach USA (1966) 8=14919
 vapour-solid interactions in effusion oven 8=7899
 zeolite/water, methanol, methylamine or propane systs. 8=18454
 zeolites LiX and NaX, of Xe and Kr, press. and temp. depend. 8=1713
 AgI, adsorpt. of methanol vapour 8=8337
 AgI: KNO_3 nuclei, of water vapour obs. 8=8335
 Al, of H_2O , effect on electron emission 8=9270
 Ar, adsorbed in equilibrium with gas in ultrahigh vacuum, obs. 8=21530
 Ar f. c. c. crystal, of inert gases, potential energy profiles 8=17159
 BeO, hot-pressed, effect of adsorbed sulphate and fluoride on density 8=21821
 Br on silica gel, laser Raman spectra 8=23031
 Ca_2 aluminate hydration product, of Ca lignosulphonate and salicylic acid 8=21902
 Ca_2 aluminoferrite hydration product, of Ca lignosulphonate and salicylic acid 8=21902
 Ca_2 silicate hydration product, of Ca lignosulphonate and salicylic acid 8=21902
 Ca_2 silicate hydration product, of Ca lignosulphonate and salicylic acid 8=21902
 CCl_4 on silica gel, laser Raman spectra 8=23031
 CO_2 , radiolysis in adsorbed state 8=18741
 CS, on silica gel, laser Raman spectra 8=23031
 CdS films, of O_2 , effect on elec. props. 8=13791
 Cr, adsorpt. of polar organic mols. 8=13107
 Fe, (011) surface, O adsorption, low energy electron diffraction study 8=1701
 Fe_2O_3 of poly(dimethyl siloxane) from CCl_4 and xylene solns. 8=8336
 Fe_2O_3 powder, of the anions VO_3^- , WO_4^{2-} , MoO_4^{2-} and $\text{Cr}_2\text{O}_7^{2-}$, pH depend. 8=8342
 He, by condensed gas layers 8=8329
 Hg/methanol interphase 8=18721
 Hg-Mo system, desorption 8=21903
 Hg-W system, desorption 8=21903
 Ir, of Cs rel. to film formation and electron emission 8=9268
 K, on W, desorption from emitter of field emission microscope 8=3211
 KBr, adsorpt. of water vapour on cleavage surface 8=17166
 KCl, adsorpt. of water vapour on cleavage surface 8=17166
 LiF, adsorpt. of water vapour on cleavage surface 8=17166
 Mg-Fe mixed hydroxides, of benzene, rel. to surface area 8=17023
 Mg-Fe mixed hydroxides, of cyclohexane, rel. to surface area 8=17023
 Mg-Fe mixed hydroxides, of N, rel. to surface area 8=17023
 MgO , adsorption of nitro-cpds. rel. to electron donor props. on surface 8=8343

Adsorption—contd

- MgO, of OH, retention props. 8=1703
 MnO₂, radiochem. separations 8=9763
 Mo crystals, of O₂, from surface exam. by LEED and work function studies 8=17165
 Mo films on W crystal, and electron emission 8=9269
 Mo, fluorinated, adsorpt. of Cs, structure of adsorbed layer, and effect on thermionic conversion 8=17154
 Mo tip, of O₂, H₂, and N₂, field emission study 8=21905
 NH₃ on supported Fe catalyst, Mössbauer spectra 8=13108
 NaBr, adsorpt. of water vapour on cleavage surface 8=17166
 NaCl, adsorpt. of water vapour on cleavage surface 8=17166
 Ni of Ar, temp. dependence. 78-120°K 8=17168
 Ni, clean {100}, of CO 8=21906
 Ni films, of O₂, effect on Hall effect and elec. conductivity 8=17936
 Ni(110), of CO, behaviour model 8=17169
 Ni surfaces, of H₂, electron probe surface mass. spectrometer obs. 8=21908
 Ni and W ribbons exposed to water, low-energy electron bombardment 8=21907
 Pb-Sn alloy, of Na, at grain boundaries 8=8344
 PbCrO₄, of poly(dimethyl siloxane) from CCl₄ and xylene solns. 8=8336
 Pd, i.r. spectra of adsorbed CO 8=4764
 Pt electrodes, adsorpt. of hydrocarbons 8=9714
 Pt electrodes, adsorpt. of n-hexane 8=5737
 Pt, oxidative adsorpt. of propane 8=2534
 PuO₂ of O, sintering effects and adsorpt. sites, obs. 8=8345
 Re-Nb alloy, adsorpt. of H₂O vapour, study by work function behaviour 8=13927
 Rh electrodes, adsorpt. of CO 8=18726
 Rh electrodes, adsorpt. of CO + H 8=18727
 Si(111) surface, of PH₃, LEED study 8=4765
 SiO₂, adsorpt. of polyethers at soln.-solid interface 8=1707
 Ta ribbon, work function changes on Cs, O₂ and H₂ adsorpt. 8=9276
 TiO₂, adsorption of CO, i.r. spectroscopy 8=8347
 TiO₂ of poly(dimethyl siloxane) from CCl₄ and xylene solns. 8=8336
 U, surface potential of H₂ 8=21909
 W, adsorption of N₂, rel. to work function 8=1711
 W, carbon, field emission pattern 8=2276
 W, of CO, effect of surface O 8=4762
 W field emitter tips, of Hg, nucleation obs. 8=1702
 W, of I₂ vapour 8=18699
 W film, of N₂, sticking probability obs. 8=4761
 W, of Mo rel. to film formation and electron emission 8=9269
 W, of N₂, phase changes of N₂ on e-impact 8=21913
 W, (112) and (100) oriented crystal surfaces, surface potentials of CO 8=21910
 W polycrystals, of CO, behaviour model 8=17169
 W surface, adsorpt. of CsF, influence on work function 8=18270
 Xe f. c. c. crystal, of inert gases, potential energy profiles 8=17159
 Y₂O₃, of ethanol, methanol, ethylene, acetaldehyde and H₂O i.r. obs. 8=4768
 ZnO, of gases, rel. to electoreflectance 8=9564
 ZnO, impure, of O₂, i.r. absorpt. studies 8=4769
 ZnO powder, cond. effect of O₂ 8=22612

Aerials. See Electromagnetic waves/radiators.

Aerodynamics

- See also Flow/gases; Jets; Shock waves; Supersonic flow; Turbulence.
 aerofoil in non-uniform stream 8=21488
 aerofoil problems in magnetoaerodynamics 8=19804
 aerospace vehicles, gliding, aerodynamic manoeuvre 8=14708
 air flow over boundary between smooth surface and small waves 8=1460
 air, jet, cold, axisymmetric, turbulent mixing with room temp. stagnant, obs. 8=16669
 airborne dust sampling through orifice, cross-wind effect 8=16907
 atmosphere, high-altitude, acoustics 8=9905
 axisymmetric jet, exhausting into quiescent atmos., length of supersonic core 8=16680
 blunt body heat transfer, shock wave effect 8=19538
 boundary layer, compressible, mixing length and kinematic eddy viscosity 8=21489
 boundary layer flows with large injection 8=21485
 boundary layer transition, anemometry 8=21486
 circular cylinders, flow field in far wake 8=16674
 compressible fluid flow in wake of symmetrically positioned body 8=7862
 compression corner, boundary layer separation 8=21484
 conical body, 8° half angle, boundary layer transition at Mach 5.5, shock tunnel investigation 8=12670
 critical points, determination using wire heater and differential thermocouple 8=12668
 discontinuities in charged aerosol jets as cause of ionization 8=4301
 drag coeffs. for cones, supersonic 8=23460
 electric arc in transverse aerodynamic and mag. fields, heat transfer and flow 8=16424
 expansion flows behind incident shock waves, probe studies 8=15049

Aerodynamics—contd

- exponentially sheared in vert. dirn., effect on induced drag of elliptically loaded lifting line 8=16677
 flag waving motions, wind tunnel experiments 8=21477
 flexure-torsion flutter of aerofoils 8=16679
 flow between parallel plates, meas. parabolic profile 8=7902
 flow visualization using holographic moire fringes 8=6572
 hypersonic flow blunted bodies, soln. valid for whole field 8=16654
 inviscid, past delta, wing, field near centre of rolled-up vortex sheet 8=1459
 laminar compressible boundary layer, heat transfer 8=21491
 laminar-turbulent transition, small parameter method 8=12655
 lift and drag in free-molecule flows, applic. fo Nocilla wall reflection model 8=21495
 magnetoaerodynamic flow, supersonic, blunt body, theory 8=355
 momentum defect superposition, wind-tunnel obs. 8=21481
 motion of gas behind diverging detonation wave 8=4461
 Navier-Stokes eqns., non-uniform Mach number expansion 8=21479
 near wake flow field, theoretical soln. 8=16670
 non-adiabatic temp. distrib. behind detached shocks 8=15053
 particle deposition on vertical surfaces 8=16909
 rarefied flow past thin wedge 8=21487
 Reynolds number effect on Apollo near-wake temp. 8=23459
 sharp cones in rarified hypersonic flow, surface pressure distribns. 8=16681
 shock wave diffr. in fluid by supersonic wedge 8=21492
 shock wave structure, from fluorescence meas. 8=3033
 shock wave velocity distribution function, gas of rigid spheres, using model and computer 8=6139
 shock waves in air, ion density profiles 8=4460
 shock waves in fluid with steady uniform flow, 8=21447
 of solar stills, coeffs. rel. to leakage of steam-air mixture 8=19678
 solid particle in gas flow behind sloped diaphragm 8=7906
 space vehicles, pitch-damping coeffs. calc. 8=23458
 sphere, steady motion in dusty gas 8=12669
 supersonic real gas flow over solid of revolution, perturbations damping 8=21480
 supersonic entropy layers, linearized perturb. 8=16652
 thin-ring air foil, loading calc. anal. in viscid source flow field 8=21473

Aeronomy. See Atmosphere: Meteorology.

Aerosols

- See also Foams.
 artificial fogs, attenuation in visible and i.r. 8=1606
 atmosphere, concentration and size distribution 8=18870
 atmosphere, evidence for layer at 71 km 8=9875
 atmospheric, condensation nuclei vertical distrib. in boundary layer 8=9835
 atmospheric, particles removal by raindrops and snow crystals. 8=23275
 atmospheric, rel. to haze, microstruct. from polarization ellipticity of scatt. light 8=9877
 atmospheric, and condensation process from optical obs. 8=9834
 atomizer, ultrasonic, particle size-capillary wave amplitude relation 8=21734
 charged jets, ionization caused by aerodynamic discontinuities 8=4301
 cloud droplet growth by hydrodynamic capture, stochastic model 8=18869
 and cloud microphys. props. at Hawaii, comp. of inland and sea forming clouds 8=9859
 dioctylphthalate, particle conc., by turbidity meas. 8=8153
 dispersing device, dry-powder, with long-time output stability 8=21738
 droplet size distribution determ. 8=4635
 dust particle sampling through orifice, cross-wind effect 8=16907
 flow, non-symmetrical, near obstacles 8=21737
 fluorescent photography using Q-switched laser light source rel. to particle size determ. 8=4636
 fog, laser beam attenuation rel. to Buger's law validity, obs. 8=21739
 ionically irradiated, particle interaction at high press. 8=21732
 latex, high-speed beam 8=12952
 light scattering by extremely small particles, photons detection 8=21740
 liquid flows around obstacles for small Stokes numbers 8=4634
 metals, prep. by evap., electron microscopy 8=4839
 metal smoke particles prep. by evap. 8=4839
 microstructure, optical estimation parameters 8=18871
 particle aggregation, in sound field 8=6156
 particle deposition on vertical surfaces 8=16909
 particle size analysis by flame ionization 8=16908
 particle size comparator 8=5
 photophoresis, kinetic theory 8=4629
 polystyrene latex particles, aqueous suspensions, atomization 8=8154

Aerosols—contd

- radioactive dust in neighbourhood of accelerator 8=6690
 radioactive, mass-transfer between airstreams and surfaces, rel. to pollen travel 8=23298
 separation, viscous momentum transfer effect 8=21736
 shock waves effects in gas-dust medium 8=10239
 smoke diffusion from high stacks, time-average ground concentration 8=14614
 smoke distribution in turbulent jets using pulsed laser obs. 8=8152
 smoke, laser beam attenuation rel. to Buger's law validity, obs. 8=21739
 smoke, laser light absorpt. and scatt. 8=18878
 solution drops in binary gas mixt., diffusive phoresis 8=21741
 in sound field under Oseen flow, hydrodynamic particle interaction calc. 8=21731
 spectrophotometric emission particle analyzer 8=21733
 stearic acid, particle conc., by turbidity meas. 8=8153
 thermal conduction props. 8=21735
 triphenylphosphate, particle conc., by turbidity meas. 8=8153
 AgI for cloud seeding, hygroscopicity and chemical composition 8=1605
 H₂SO₄, light scatt. studies 8=12951
 Na, produced by burning, characts. 8=12950
 Pu, produced by burning, characts. 8=12950

Afterglow. See Discharges, electric.**Ageing.** See Alloys; Metallurgy; Phase transformations/ solid-state.**Air**

See also Atmosphere.

- acoustic impedance of thin layer, correction for parabolic diaphragm deformation 8=19554
 adhesion coefficients at 4.2° and 20°K 8=7954
 adsorption on Molecular Sieves 5A, 10X, and 13X, at 77.3°K and press. range 10² to 10⁻³ torr, effect of preadsorbed H₂O 8=21897
 air-pentane mixtures, effect of vessel size and turbulence on explosion press. 8=6147
 air-water vapour mixtures, third virial coeff. 8=4468
 between parallel plates of displacement transducer, effects of compression 8=7892
 breakdown, elec. 7.5-20 cm gap 8=16414
 convecting layer, temp. gradient reversal, interferometric obs. 8=4475
 discharge voltage, comparison with SF₆ 8=16421
 drying by molecular sieves 8=18644
 electric breakdown, humidity effect 8=12691
 flow, laminar, between parallel plates, parabolic profile meas. 8=7902
 flow, low speed, study of skewed turbulent boundary layers 8=21475
 flow, in tubes, acoustic reflection coeff. of discontinuous changes of cross-section 8=19565
 free convection from vertical flat plate with step discontinuities in surface temp. 8=21458
 glow discharge in toroidal tube, expt. investigation 8=4286
 glow discharge, secondary electron energy distrib. 8=16409
 high-temperature, meas. of continuum and atomic line rad. spectra 8=16198
 high-temperature, microwave breakdown 8=21244
 high-temp. plasma, l.p. growth rate calc. 8=21390
 humidity control system for small chamber 8=16645
 hydrodynamic boundary layer at a disc 8=4449
 ion density profiles in expanded shock tube flows 8=15050
 ionization energy per ion pair formed by H⁺₂ particle 8=4315
 ionized, Joule heating by low-voltage d.c., 6700-7800°K and 10-20 atm. 8=12421
 jet, cold axisymmetric, turbulent mixing with room temp. stagnant, obs. 8=16669
 jet, nozzle-fluid concentration field 8=4453
 laminar forced convection in entrance region between parallel flat plates 8=21459
 light absorption, humidity and pressure influence 8=7935
 in organic gaseous mixtures, optical-acoustic effect 8=21520
 plasma containing electrophilic gases, microwave meas. behind shock waves 8=7754
 plasma excitation in e.m. shock tube 8=1337
 plasma flames, induction-coupled, spectroscopic obs. 8=21411
 plasma, permittivity and conductivity variations with freq. and electron density 8=4346
 pre-breakdown currents rel. to temp. at high pressure 8=16417
 pressure and acoustic wave propagation after nuclear explosions 8=2583
 shock heated, elect. conductivity obs. 8=4486
 shock tube, electrodeless, using θ -pinch effect 8=6136
 shock wave front, luminance temp. obs. 8=21483
 shock waves, ion density profiles 8=4460
 spark, by focused laser beam, development 8=4292
 sparkover in mixtures with water vapour 8=12412
 steam-air mixture leakage from solar still, rel. to aerodynamic coeffs. 8=19678
 stream, arc heated, temp. fluctuations and autocorrelation function 8=12653

Air—contd

- thermal conductivity, hot-wire cell meas., 30°-100°C, 120-150 torr 8=16700
 thermals, observations 8=2578
 turbulent flow through concentric annuli, experimental study 8=12650
 turbulent thermal convection between horizontal plates, velocity and temp. obs. 8=12686
 vibrations, forced, of finite amplitude in a tube 8=16705
 Ar-air mixture, shock wave front luminance temp. 8=21483
 CO₂-air interface, plane shock refraction and expansion wave generation 8=4482
 H₂-air system, free convection, heat transfer and binary diffusion 8=4491
 He-air system, free convection, heat transfer and binary diffusion 8=4491
 TiO₂ surface discharge, channel development 8=1330

Airglow

- See also Atmospheric spectra; Aurora; Sky brightness; Twilight; Zodiacal light.
 afterglow from recombination of e and ions temp. depend. obs. 8=7719
 arcs, intertropical, movement and shape rel. to ionospheric equatorial anomaly peaks 8=23390
 conjugate photoelectron flux onset timing, solar cycle variation, from 6300 Å and Te obs. 8=23331
 dayglow, O₂ emissions 8=9925
 day, during solar eclipse, λ 3914 Å and λ 6300 Å, 30 May 1965 8=2628
 grenade glow clouds, spectral energy distrib. 8=9924
 Lyman α dayglow, degree of polarization, meas. 8=14646
 night, [O I] 5577 Å and 6300 Å, Na D-lines and continuum at 5300 Å, rocket obs. 8=18935
 night, 3100-10 000 Å spectrum 8=23333
 nightglow, long-term correls. 8=2632
 nightglow, OH rotational temps. and intensities 8=14647
 nocturnal, and mag. storms, low and middle latits., obs. analysed 8=2752
 optical research, 20 year review 8=19066
 twilight, far u.v., rocket photometry obs. 8=9927
 O 45%, O₂ 10% and N₂ 45% mixture, daytime, photoelectron excitation calc. 8=2627
 OH emission bands in nightglow, photometric obs. 8=9928
 OH(8, 3) band, OI 5577 Å line and continuum at 5775 Å, nocturnal, mid-latit., rocket obs. 8=2631
 OSO-B2 satellite obs. 8=23332

Albedo. See Cosmic rays; Earth; Nuclear reactors, fission.**Alfvén waves.** See Magnetohydrodynamics; Plasma/oscillations.**Algebra**

- Adler-Weisberger sum rule, rigorous derivation 8=773
 antilinear operators, canonical form 8=6016
 associative, for mass formula problem 8=15688
 B*, integral representations of invariant states 8=2879
 C*-algebra A, covariance, generalization 8=6009
 C*, extremal invariant states 8=6010
 of currents, derivation of Regge poles 8=3558
 Fock-space language for drone theory of ferro-magnetism 8=13975
 Galilean, translational invariant in describing nuclei 8=3765
 γ, σ , rel. to spinor theories, graphical methods 8=11268
 Lie, deformation and contraction 8=6026
 Lie, dynamical variables in classical mechanics 8=10490
 Lie, infinite-dimensional, one-particle representations, tensor product 8=6724
 Lie, inhomogenization condition for isomorphism 8=2878
 Lie, nonintegrable representations, mass-splitting theorem 8=11375
 Lie, rotation R₃ group, new representations 8=11360
 Lie, rel. to transformation of Bhabha's equation 8=648
 Lie, in unitary representations of non-compact groups 8=14932
 projector-operator, applic. to decay of unstable system 8=11262
 spherical harmonic expansion of $f(\mathbf{r}_{AB})Y_{lm}(\theta_{AB}, \phi_{AB})$, radial depend., integral form. 8=19354
 spinors and 3-D rotations, relation extended to n dimensions 8=660
 U(6, 6) group, matrix elements of generators 8=14934
 von Neumann, types rel. to extremal invariant states 8=6013

Algol. See Calculating apparatus/digital computer programmes.**Algorithms.** See Calculation.**Alignment**

- orientation system for balloon-borne γ -telescope 8=19328
 quadrupole magnet systems, tolerances 8=15277
 supporting system, tilt, accurate meas. method 8=6001

Aliphatic compounds. See Organic compounds.**Alkali metals**

See also the individual metals.

- alkali-Noble gas mixture, partially ionized, e vel. distrib. calc. 8=12423
 atomic vapour, optical pumping, polarization effect 8=4088
 atoms charge transfer, Gryzinski procedure tested 8=12424
 atoms, collision with inert gas, fine-structure transition cross sections 8=4106
 atoms, electron scatt. 8=1190

Alkali metals—contd

- atoms, g. determ. by atomic beam resonance technique 8=12089
 atoms ^{23}P , fine structure transitions in adiabatic collisions, calc. 8=1162
 atoms, long-range interactions 8=12108
 atoms, optical orientation rel. to meas. of weak mag. fields 8=20934
 atoms, reson. states lifetimes, inert gases and vapour press. effects 8=20976
 atoms, thermal excitation and deactivation in atmosphere of inert gas 8=12088
 condensation, boundary thermal resistivities 8=8049
 continuum theory, nonlinear, based on quantum mechanics 8=17711
 doping of semiconductors, in small quantities, by electrolysis of fused salt 8=18017
 electron-ion pseudopotentials 8=22427
 gas, Cotton-Mouton effect in optically oriented 8=4485
 gas, ionization by p impact classical binary approx. calc. 8=12417
 interionic potential modified in conduction electron presence 8=4671
 ion distrib. in surface layer of glass, diffusion theory 8=21146
 ionic crystals, cohesion with noble gas atoms 8=8193
 ions scatt. at He atoms 8=7464
 liquid phase m. h. d. 8=15384
 liquid, resistivity and thermopower pressure depend. 8=9010
 pseudo-atom phase shifts 8=8910
 purification by preferential contact in magnetoplasma device 8=4302
 solid, resistivity and thermopower pressure depend. 8=9010
 vapour, with buffer gas, optical pumping rate eqns. 8=20978
 vapour detect. by mass spectrometer 8=21532
 vapours, optical pumping and relaxation 8=12086
 NH_3 solutions, phase separation model 8=12808

Alkali metal compounds

- See also the compounds of the individual metals.
 alkali borate glasses, co-ord. equilib. of Ni(II) 8=21836
 aluminogermanates, high press. transforms rel. to geochem. 8=8261
 aluminosilicates, high press. transforms rel. to geochem. 8=8261
 antimonides, photoelectric emission, double-photon 8=18278
 beryls, structure dependence on tempering at 600-1200°C 8=17345
 borate glasses, binary, u.v. absorpt. of Cr(VI) 8=18519
 dilute binary alloys, liq., resistivity theory 8=12919
 multialkali-antimonide, anomalous vector effect of photoemission 8=2282
 nitrates- AgNO_3 , molten ternary mixtures, thermodynamics 8=21648
 nitrates and thiocyanates, refractometry 8=1556
 nitrates, binary mixtures with $\text{Ca(NO}_3)_2$, relax. processes in supercooled melts 8=1586

- in alkali halides, with cyanate ions, i.r. spectra 8=14233
 dicarbide formation when diffusing in graphite 8=4950
 fluorides, F-centre electronic structure from wave functions 8=1997
 orthophosphates, double, Sn-activated luminescence 8=14309
 oxides, e.s.r. of F centres 8=13456
 pyrophosphates, Eu^{2+} activated, luminesc. 8=9628

Allotropes. See Phase transformations; Polymorphism.

Alloys

See also Crystal structure, atomic/alloys; Heat treatment/alloys; Solid solutions; Steel; and under alloys or compounds of the base of the first-named element.

- AB binary, triplet probabilities rel. to pair correlations 8=9313
 above solidus temp., mech. for deformation, strength and fracture 8=22304
 alloys oxidation, high temp., scales form. mechanism 8=5711
 analysis by X-ray fluorescence 8=9750
 binary, freq. spectrum of lattice vibrs., calc. with quantum Green functions 8=8605
 binary, interatomic energies from short-range-order meas. by diffuse scattering 8=17331
 binary, liq. of equi-valent metals, Knight shift charges rel. to conc. 8=12927
 binary, slab, unidimensional solidification rel. to time-dependent surface temp. 8=21757
 bonds, atomic interactions 8=4666
 composite growth from melts 8=4647
 conductivity, thermal, 4.2-273°K 8=22129

Alloys—contd

contacts for GaAs semiconducting devices suitability, fabrication and ohmic props. 8=5291
 crystallization, dendritic, general soln. of eqn. for binary alloys 8=8174
 deformed f. c. c., intrinsic stacking-fault tetrahedra formation 8=22215
 dendrites and interdendrite spaces, distribution 8=4823
 dilute binary, liq., theory of resistivity 8=12919
 Dilute, new magnetic, characteristic, temp. var. 8=1659
 dislocation motion mechanism for coherent, ordered, stresses precipitates 8=1978
 dislocation structure and grain size effect on validity of Cottrell-Stokes law 8=8721
 e state density around an impurity 8=5112
 electron cell model 8=21815
 equilibrium petition between ferrite and cementite, temperature dependence 8=17279
 eutectics, multicomponent, brittle rupture of Cd and Sn during contact melting 8=8832
 f. c. c., stacking fault energies, extrinsic to intrinsic relative magnetudes 8=17666
 ferromagnetic, additivites of electronic states 8=5446
 ferromagnetic, neutron elastic diffuse scatt. 8=22766
 ion emission, secondary, rel. to chemical analysis 8=18286
 Ising model, Onsager's results using Green's function 8=2964
 Ising models, ordering conditions 8=4686
 liquid and amorphous, structure and correl. by X-ray and n diffraction 8=12795
 liquid, atomic distrib. and electronic transport props. from X-ray diff. 8=12799
 liquid, binary expt. and theory of mixing 8=12844
 liquid binary, model for anal. of enthalpies and entropies of mixing 8=12846
 liquid, Hall coeff. and elec. resistivity 8=16880
 liquid, interatomic distances from X-ray diff. pattern peaks 8=12784
 liquid, reln. between pair pots. and radial distrib. functions of ions 8=16787
 liquid, thermodynamic props. effect of electronic and structural characts. 8=12845
 liquid, Wagner interaction parameters determ. 8=8016
 liquid, Ziman pseudo-atom phase shifts calc. for monovalent ions 8=16882
 macrosegregation on solidification, and mold design effect 8=16930-1
 magnetic, dilute, low temp. props. 8=18289
 magnetic, effect of electrons of opposite spins on elec. resistivity 8=22432
 magnetic impurity degenerate orbitals, Kondo and Anderson Hamiltonians 8=13008
 magnetic meas., prep. of ball-shaped samples 8=10859
 magnetic, sp. ht. calcs. 8=13367
 magnetic, sp. ht. rel. to Kondo model 8=17510
 magnetoacoustic effect, theory and experiment 8=8624
 mechanical relax. due to changes in short-range order produced by stress 8=5009
 metallic, crystalline structure changes at early stages of ageing and order-disordering 8=17036
 metal, structural characts. from solubility method 8=17001
 of metals from groups IB and IV B, liquid, elec. resistivities 8=12912
 metals oxidation, high temp., scales form. mechanism 8=5711
 microanalysis, electron probe data analytic correction 8=14472
 Nimonic type, stability of dislocation structures 8=17643
 of noble metals, liq., Hall coeff., resistivity and electron states 8=12923
 noble metals, surface preparation for optical meas. 8=14163
 non-ferrous, thermomechanical deformation 8=23777
 ordered, containing antiphase domains, X-ray diffr. 8=4863
 ordered, effect of crystal symmetry on field ion images 8=4881
 ordered, grain boundary theory 8=17258
 ordering, dislocations and antiphase boundaries rel. to plastic deformation 8=17634
 ordering of ternary b. c. c., having three types of sites, theory 8=17033
 oxidation, high temp., scales form. mechanism 8=5711
 oxidation mechanism, isotopic study 8=23092
 f. c. c. polycrystals, plastic deformation computer simulation and derived rolling texture 8=13512
 shear stress increase due to coherent precipitates 8=5017
 solid solution, field ion emission patterns, computer simulation 8=8453
 sormite type, influence of Nb on hardness and structure 8=5066
 strength, time and temp. depend., non-equilib. state 8=8811
 structural, tensile work hardening, exponential relation 8=22282
 superconducting, worked, critical current density rel. to dislocation distrib. 8=9029
 thermodynamic props. and heat processes meas. in twin calorimeter 8=250
 two-phase, finely dispersed, recrystn. behaviour 8=8395

Alloys—contd

two-zone superconducting, u.s. adsorpt. theory 8=22535
 X-ray microanalysis data corrections for complex alloys 8=14471
 Zener relax. 8=5009
 Al-base, unidirectionally solidified eutectic, structure 8=4685
 Al-Al₃Ca, unidirectionally solidified eutectic, structure 8=4685
 Al-Al₃Ce, unidirectionally solidified eutectic, structure 8=4685
 Al-Al₃Y, unidirectionally solidified eutectic, structure 8=4685
 Co-Ni-Al-Cu-Ti-Fe, solid soln. struct. 8=17010
 CsCl-type ternary, hyperfine fields and electronic structure 8=14156
 Cu₃Au, ordering conditions, cubic-to-tetragonal structural transition 8=4687
 Fe-rich, with various transition elements, magnetization values 8=22811
 In-Sb-Ni, the quasibinary section InSb-NiSb in 8=4691
 K-Na, density 0 to 300 °C 8=21624
 Mg, binary, isothermal growth of Mn precipitates in 8=4688
 Mg-Zn, dendrite arm spacing and grain size, influence of coarsening 8=4849
 Mn with Dy, Ho and Er, X-ray fluorescence analysis 8=2552
 Na-K liquid metal reactor coolants, role of possible impurity admixtures, O, H, C and N 8=7328
 Na-K, K:49, 51 and 74% viscosity at 300 °C 8=21627
 Ni-bearing steels, ageing rel. to martensitic structure 8=1762
 NiPb formation by simultaneous evaporation of NiPb 8=21852
 V₂VL_{3+x}, Te and Se phase and grain boundary detection by chem. etching 8=17102
Alnico alloys. See Nickel alloys.
Alpha decay. See Nuclear decay theory; Radioactivity/decay periods; Radioactivity/decay schemes.
Alpha-particle model. See Nucleus/models.
Alpha-particles and helium nuclei
 See also Alpha-rays.
 cluster and 4-body scatt. correl. rel. to 4 particle-4 hole states in O¹⁶, Ca⁴⁰ 8=15958
 d- α , 42 MeV α projectile, d break-up, spectrum 8=15868
 d + He³ \rightarrow He³ + pp, pick-up and charge-exchange 8=6990
 e + He⁴, elastic scatt. cross section, 30-59 MeV 8=15732
 e-He⁴ high energy scatt. and N-N correlation 8=891
 form factor, charge, Irving wave function calc. 8=11657
 γ + He³ \rightarrow π^+ + H³, using PCAC and current algebra 8=15765
 γ + He⁴ \rightarrow H³ + n + π^+ , impulse approximation 8=888
 γ + He⁴ \rightarrow ρ^- + He⁴, determ. of particle scattering amplitudes 8=11858
 ground state props. with Hamada potential 8=885
 ion source for Van de Graaff accelerator improved by K vapour exchange 8=6693
 K⁻ + He⁴ \rightarrow Λ^0 + π^- + p + d obs., impulse model fit, via intermediate Σ + nucleus + π^- state 8=20417
 model for nuclear matter 8=11650
 μ capture rate in channel n + n + p + ν 8=6817
 μ^- + He³ \rightarrow H³ + ν_μ , asymm. in recoil of H³ 8=15740
 μ^- + He³ \rightarrow H³ + ν , rate, phenomenological treatment of exchange effects 8=20589
 n + He³ \rightarrow p + H³ rel. to "elementary particle" model of nuclei 8=15873
 N-He⁴ high energy scatt. and N-N correlation 8=891
 photodisintegration cross-section calc., normalization anomaly 8=11655
 photoreactions, cloud chamber for investigation 8=7000
 π^- -He³ reaction π^0 yield obs. 8=7220
 π^- + He³ \rightarrow γ + t by PCAC generalization of Kroll-Ruderman theorem 8=7217
 π^- + He⁴, inelastic at 140 MeV, excited and multineutron final states 8=6848
 plastic track detectors 8=20220
 p photo-absorpt. sum rule 8=3577
 states of odd-parity, trans. prob. 8=887
 in AgCl crystals, track recording technique 8=15644
 Al²⁷-He³ scatt., 37.7 MeV rel. to structure of Si²⁸ 8=15963
 B¹⁰(d, $\alpha\alpha$) α 3α sequential decay process obs. 8=11718
 C¹²(He³, He^{3'}, γ_{4-43})C¹², angular correlation symmetry angle 8=20831
 D(t, n)He⁴, as polarized n generator 8=15844
 D(p, γ)He³, cross-section from p+d wave function 8=11593
 H²(He³, γ)Li³, 2-5.5 MeV, resonances obs., applic. of S-matrix theory 8=20581
 He⁺ ion source using Cs vapour exchange 8=15872
 He⁻ source using charge exchange between He and K vapour 8=15871
 He⁺⁺ + N \rightarrow He⁺ + N⁺, classical cross-section calc. 8=7461
 He²⁺ + H(1s) \rightarrow He⁺(1s) + H⁺, back-coupling and distortion 8=7466
 He³ binding energy of 3-body system, with 2 charged particles 8=20587
 He³, charge density function calc. from e-He³ scatt. 8=20393
 He³, Coulomb energy and e.m. radius, perturbation calc. 8=3740

Alpha-particles and helium nuclei—contd

- He³, Coulomb energy in non-local potential and binding energy diff. 8=11654
 He³(d, p)He⁴, d tensor polarization degree (P_{33}) obs. 8=6994
 He³(d, p)He⁴, p polarization and asymmetry 8=7002
 He³ Fadeev calc. of binding energy, T matrix perturbation theory 8=20584
 He³ + $\gamma \rightarrow$ d + p, with Cabibbo-Radicati sum rule 8=6999
 He³-H⁴ current algebra sum rule possible test 8=3756
 He³(He³, n) for Be⁹ ground state search, 18.0–26.0 MeV 8=3790
 He³(He³, 2p)He⁴, dependence of B⁸ solar neutrino flux on rate of reaction 8=5969
 He³-He⁴ interaction, resonating group theory in single channel approx. 8=20588
 He³ inelastic scatt. on Li^{6,7}, B¹⁰, F¹⁹ and Al²⁷ at 10 MeV 8=7233
 He³, μ capture rate calc. using charge form factor and vacuum polarization corrections 8=20393
 He³, p-d final states, 5.5–12.0 MeV rot. obs. in p reactions on Li⁶, 9–10 MeV 8=7187
 He³ photodisintegration, Cabibbo-Radicati sum rule appls. 8=695
 He³, photodisintegration cross section 8=11652
 He³ photodisintegration, two- and three-body cross section calc. 8=15870
 He³ prod. at interaction of 660 MeV protons with light nuclei 8=16071
 He³-p scatt., 30 MeV no evidence for excited state of He³ 8=20586
³He, search for excited states in reaction ³He(p, p')He* 8=11653
 He⁴ charge form factors and charge distrib. calc. 8=886
 He⁴, excited levels rel. to particle hole interaction 8=7003
 He⁴(γ , p)H³, 50 MeV, cross-section 8=889
 He⁴(p, B)He⁴, magnitude and phase of baryon scatt. amp. 8=890
 He⁴, photodisintegration, calc. using Levinger-Bethe sum rules and vel. depend. pot. 8=11658
 He⁴(π , M)He⁴, magnitude and phase of meson scatt. amp. 8=890
 He⁴, product of nuclear reaction, excited states, obs. 8=15953
 He⁴, radius meas., use of impulse model 8=20590
 He⁴ second order corrections to negative parity excited states 8=15932
 He⁴-beam prod. by charge exchange of He⁴⁺ with K vapour 8=15347
 HF, search for analog states in Li⁷(p, t)Li⁵, Li⁷(p, He³)He⁵ 8=11659
 He⁶, search for T = $\frac{1}{2}$ states 8=11659
 He⁸ production rate from pp, π^- , K⁻ interactions with emulsion nuclei 8=892
 Li⁹-He³ scatt., 8–20 MeV, optical model parameters deduced 8=20833
 Nb⁹³, emission, energy obs. 8=1041
 T(d, n)He⁴, as polarized n generator 8=15844
 T(p, n), He³, obs. 8=882

Alpha-ray spectra

- See also Nuclear decay theory.
 fission accompanying, probability in spontaneous and induced 8=3977
 rare-earth metals, fine structure obs. 8=16038
 Ac^{209, 215} decay, energy determ. 8=20759
 Ac²²⁵ decay, energy obs. 8=16048
 Au^{177, 178, 179, 181, 183, 185, 187} decay 8=16045
 Au^{179, 181, 183, 185} decay 8=7148
 Bi²¹¹ decay 8=7150
 C¹¹ hindered α -decay 8=11950
 Fm²⁵³ \rightarrow Cf²⁴⁹ 8=11836
 Hg^{179, 180, 182} decay 8=7148
 Ho^{152, 153, 154}, radioactive decay 8=3883
 Ne²⁰, delayed emission for meas. β -decay 8=3865
 Np²³⁷ accompanying fission, probability rel. to fragment mass asymm. 8=3977
 Po²¹¹ decay 8=7150
 Pt^{176, 177, 178, 180} decay 8=7148
 Pu²³⁹ \rightarrow U²³⁵ decay 8=11789
 Th²³² accompanying fission probability rel. to fragment mass asymm. 8=3977
 U²³³ 8=11830
 U^{235, 238} accompanying fission, probability rel. to fragment mass asymm. 8=3977
 103^{256, 257} decay 8=7151

Alpha-ray spectrometers

- cellulose nitrate target, particle energy meas. for hole diameter 8=11293
 n detector using (n, p) reaction on He³ 8=6959
 n detector to 20 MeV 8=6967
 semiconductor detector, resolution and stability, temp. effects 8=884
 with Si detector, design and operation 8=6998
 Si:Li surface barrier detector, prod. and resolution, 8.78 MeV 8=20201

Alpha-rays

- See also Alpha-particles; Cosmic rays/alpha-particles; Radioactivity.
 He⁴⁺ ions, multiple freq. acceleration 8=6714

Alpha-rays—contd**absorption**

- range, simple stand for determination 8=883
 in water, slowing-down, fast neutron irradiation 8=644
angular distribution
 from projectile nuclei, in nucleus-nucleus collisions prod. by cosmic ray primaries 8=16126
 B¹⁰(d, d₀)Be⁸ 8=16112
 Be⁹(He³, α)Be⁸ \rightarrow α + α , for spin-parity assignment to Be⁸ 8=20834
 C¹²(He³, $\alpha\gamma$)C¹¹, $\alpha\gamma$ correls., C¹¹ energy levels 8=953
 C¹²(O¹⁶, α)Mg²⁴, cross-section fluctuations 24.3–27.7 MeV 8=1105
 C¹²(O¹⁶, α)Mg²⁴, fluctuations, statistical analysis compound nucleus model 8=1104
 Ca⁴⁰(d, α)K³⁸, 9.2 MeV 8=7230
 Np²³⁷, fission-accompanying, to distinguish from prior-emitted α 8=3977
 O¹⁶(n, α)C¹³, 14.1 MeV stripping and knock on process fits 8=3936
 S³²(He³, α)S³¹, 7.6 MeV meas. 8=3966
 Th²³², fission-accompanying, to distinguish from prior-emitted α 8=3977
 U^{235, 238}, fission-accompanying, to distinguish from prior-emitted α 8=3977
detection, measurement
 See also Alpha-ray spectrometers; Dosimetry; Particle detectors; Radioactivity measurement.
 cellulose nitrate target, particle energy meas. from hole diameter 8=11293
 counting efficiency for case of widespread solid α sources 8=20591
 cyclohexane as dosimeter 8=20592
 high counting rate circuit 8=6997
 Injun 4, Si surface barrier with four electronic discrimination levels 8=18961
 liquid scintill. for α -p discrimination 8=1075
 pair and single low level counting system 8=6996
 range, simple stand for determination 8=883
 scintillator, noble gas 8=6643
 spark-chamber, He-alcohol, lowest pressure for sparks 8=11328
 spark counter for α -activity meas. 8=7120
 spectrometer parameter calibration and evaluation 8=20585
 B¹⁰(n, α)Li⁷, use of semiconductor detector 8=852
 He-Xe gas scintillation counter, linearity 8=20193
 Nb⁹³, emission, energy obs. 8=1041
 Si detector, channeling effect 8=3467
 Z-102 isotopes half-lives and energies in 8=1206

effects

- See also Nuclear reactions due to/alpha-rays.
 alkali-metal and alkaline-earth radioactive source prod. 8=7121
 light output from some organic scintillators 8=2495
 metal embrittlement, produced by thermal neutron reactions 8=22237
 noise pulses from photomultiplier tubes 8=3216
 scintillation prod. in He, He-Ar and He-Ne, due to decay of 3α mol. 8=12202
 Au, cold-worked, recrystallization during α -irrad. 8=21943
 UI, self irradiation investigated 8=17105
 ZnS-Ag single crystal, luminescence 8=5674

scattering

- α - α and the ground state energy and lifetime of Be⁸ 8=7072
 A=12–124 rel. to nuclear dimensions 8=15949
 Austern-Blair theory modified to include non-adiabatic effects 8=3963
 d- α , double scatt., rel. to polarized d beams 8=876
 d- α , 3–14 MeV, negative parity states of Li⁶ 8=11651
 d + α , phase shifts, and odd parity P level in Li⁶ 8=15869
 e-He rel. to α charge form factor 8=11657
 even-even nuclei, energies between 12 and 16 MeV 8=7235
 group theory, resonating, in single channel approx. 8=20588
 nuclei about A = 60, abs. compared to optical model 8=7237
 optical model parameters, influence of expt. errors 8=11941
 p- α , 1 GeV obs. rel. to π cross-sect. 8=1052
 p- α , 6–11 MeV, p polarization obs. 8=837
 p- α 22–25 MeV, Li⁶ resonance obs. 8=20532
 phase shift analysis with hard-core potential 8=3738
 p-He³, low energy, spin-dependent interaction theory 8=832
 p + He⁴ \rightarrow B + He⁴, B-N scatt. factor 8=3736
 π^- - α , 24 MeV, π e. m. form factor 8=3616
 π + He⁴ \rightarrow M + He⁴, M-N scatt. factor 8=3736
 rare earth nuclei Y₄₀ and Y₆₀ shape component determ. 8=11713
 Al²⁷ optical model parameters rel. to Al²⁷(He³, α)Al²⁶, 10 MeV 8=11945
 As⁷⁵, 3.5–8.1 MeV, multipolarities, spins and parities of levels 8=3816
 Be⁸ inelastic at 28.5 MeV 8=7234
 Bi, 20 MeV, yield depend. on orientation of crystal and beam 8=20801
 C¹², 3.6–3.8 MeV, optical-model parameters 8=3965
 C¹², 22.5 MeV, ang. correl. function symm. angle rel. to mass-transfer reactions 8=11843

Alpha-rays—contd**scattering—contd**

- Ca^{40,42,44,48}, 31 MeV, new multipole states, spin-parity assignments 8=3807
 Ca⁴⁰, 31 MeV, states obs. 8=11746
 Cd¹¹¹, new transitions, B(E2) values, energy level lifetimes 8=20712
 Co⁵⁹-He³, 37.7 MeV optical model fit, level structure of Ni⁶⁰ 8=15981
 Cr^{50,52,54}(He³, α), 18 MeV, DWBA analysis tested 8=3969
 Fe⁵⁴, expt. data and optical model parameters 8=16120
 Fe⁵⁶, 21 MeV cross-section to first 2⁺ level, optical model fit ambiguity 8=11940
 H³-He³, using 2-body pot. calc. compared to expt. 8=11656
 He³-He³, using 2-body pot. calc. compared to expt. 8=11656
 He³-He³, levels of Li⁷ and Be⁷ 8=7001
 (He³, t) quasi-elastic, differential cross section analysed 8=7231
 In¹¹⁵, 8 MeV, deduced levels 8=3822
 K⁻ α , differential cross section, low-energy elastic 8=11549
 Li⁷(α , α')Li^{7*}, rel. to Li⁷(α , γ)B¹¹ investigation of B¹¹ levels 8=11721
 Mg²⁴, 29 MeV, optical-model parameters 8=1097
 Mg²⁴, 42 MeV, optical and Fraunhofer models 8=11939
 Ni^{58,62}, 21 MeV cross-section to first 2⁺ level, optical model fit ambiguity 8=11940
 Ni⁶⁰, expt. data and optical model parameters 8=16120
 Pb^{204,206} rel. to transition strengths in the Pb region 8=995
 Re^{185,187}, γ -vibrational state obs. 8=16000
 Re^{185,187}, 16.6 MeV, vibrational band obs. 8=3954
 S³², elastic, 10-17.5 MeV, optical model analysis 8=20831
 Si²⁸, 22.5 MeV, ang. correl. function symm. angle rel. to mass-transfer reactions 8=11843
 Sm^{148,150}, inelastic, 15.1 MeV cross-section obs., E2, E3 transitions 8=20824
 Sm^{152,154}, inelastic, 15.1 MeV cross-section obs., E2, E3 transitions 8=20824
 Te isotopes, excitation of one- and two-phonon states 8=1098
 Zn⁶⁴, 21 MeV cross-section to first 2⁺ level, optical model fit ambiguity 8=11940
 Zn⁶⁶, expt. data and optical model parameters 8=16120

Altimeters. See Length measurement.

Aluminium

- absorption in L_{II,III} region, structure 8=22956
 analysis, Cu determ. by at. absorpt. spectrometry 8=2545
 annealed, commercially pure, strain ageing 8=5042
 annealed, helices and large loops, in prismatic dislocations X-ray topography 8=17647
 anodic oxidation in presence of hydrated oxide 8=18729
 APW band structure calcs, systematic numerical error 8=17883
 Bauschinger effect in quenched samples 8=5020
 bed to polyurethane coats, effect on network density in surface layer 8=17145
 binary rare earth systems arrangement 8=13286
 block, indented by opposed steel punches, deformation, theoretical and actual, comparison 8=10562
 brazing sheet with improved corrosion behaviour 8=10462
 cladding with stainless steel rel. to composite sheet prod. 8=10461
 coating on Ir, u.v. reflectivity calc. 8=14227
 cold-worked, nucleation of recrystallization 8=8397
 collective motions of atoms in liq. state, compared with polycryst. solid 8=12796
 composite bar of hard and soft section response of plastic deform. wave on junction 8=19395
 content and distrib. in schistic biotites, phengites and chlorites 8=13055
 corrosion of anodized, electrolytic quality test evaluation 8=23097
 crystal, 15 eV plasma loss, damping 8=2121
 cylinders, thin wall, expt. plastic buckling at 500°F 8=17757
 deformation bands and (111)-(001) fibre texture formation 8=5045
 deoxidation of liq. Fe, form. of cloud group of oxide inclusions 8=22183
 diffusion of Ag. 8=22147
 diffusion coeff. meas. by n. m. r. 8=4949
 diffusion in Ge 8=13406
 diffusion in Mo 8=1911
 diffusion of Pd, Ag, Cd, In and Sb 8=8671
 dislocations, formation during slow heating and cooling 8=8723
 distribution of sputtered atoms by electron microprobe 8=21876
 effect on grain coarsening temp. of austenite 8=8462
 elastic modes, e. m. excitation 8=17760
 elasto-plastic behaviour study of pure monocrystalline sheets 8=8848
 electrical resistivity recovery after low temp. electron and neutron irradiation 8=2134
 electrode, electrochemical behaviour at d. c. and a. c. polarization 8=18725

Aluminium—contd

- electron diffraction, energy dependence from 100 keV to 1 MeV 8=4868
 electron emission, effect of abrasion in air, O₂, N₂ and H₂O vap. 8=9270
 electron-irradiated, deformation at 20°K rel. to dislocation model with defect barriers 8=13523
 electron irradi., resistivity recovery, kinetics study 8=5171
 electron-irradiated, stage III annealing study 8=13475
 e-irradiated, state II and III recovery temp. and impurity conc. dependence 8=1935-6
 electron slowing-down spectrum 8=13474
 electroplating, alkaline Zn pretreatment soln. 8=14431
 electroplating using stannate activation and bronze strike deposit and plated Al corrosion 8=14430
 electropolished, form. of surface tops and pits during heat treatment 8=17117
 energy loss of fission fragments, range-energy relation 8=2021
 excitation of L-shell electrons by 20-keV electrons 8=22495
 exoelectronic emission due to sliding friction obs. 8=18254
 extrusion, recovery and recrystallization during 8=4841
 fatigue-crack propagation, 2024-T3 cantilever 8=5043
 fatigue mechanism, 0.5-0.85 Tm°K 8=8806
 50 kV electron mean free path for plasmon excitation, diffr. condition effect 8=13696
 film on glass, vacuum deposition 8=17123
 films with organic molecular inclusions, enhancement of critical temp. 8=12965
 film, oxidation effect on photocurrent 8=18221
 films, oxidation in low-pressure O₂ atmosphere 8=18669
 films, plasma oscillatory modes at surface, energy rel. to intensity 8=8946
 films on Ta (110) surface, growth studied by LEED 8=8311
 fine particles, surface plasma oscillations 8=8967
 flow stress, effect of specimen diameter 8=8820
 foil, dislocations, dynamic behaviour on deformation, continuous obs. 8=13433
 foil membrane, circular, deform, under hydrostatic pressure 8=5044
 foils, microstructure, by transmission electron microscopy 8=4840
 foils, range-energy for α -active products of Pb²⁰³(O₁₆, X)Y, Bi²⁰⁹(O₁₆, X)Y 8=11952
 freezing pt., as fixed pt. 8=244
 γ -beam scatt., differential albedo obs. 8=16844
 grain boundary sliding, constant-stress shear test 8=22220
 grain boundary sliding, isothermal shear test 8=22221
 Hall coeff., high field, from helicon resonances 8=5169
 Hall effect and mag. resist. var., 2.5° to 300°K 8=5170
 hardening, influence of quenching temp. 8=13530
 heat capacity between 2.7 and 20°K 8=22114
 heavy ion penetration along low index channels, effect of atomic thermal motion 8=2024
 hemispherical reflectance, rel. to λ and surface roughness 8=2399
 high speed impact extrusion 8=19340
 hydrostatic tension on solidification 8=21758-9
 internal friction, room temp. peak 8=13532
 lattice defects recovery after tensile deformation 8=22184
 lattice distortion in plastic deform., e microprobe-Kossel obs. 8=21978
 lattice vibrations, 6% accuracy in freqs. 8=22080
 liquid, effective ion-ion potential 8=8237
 liquid, rare earth impurities, mag. susceptibility and Knight shift changes 8=21724
 magnetoresistance and resist. of plastically deformed 99.999% pure, \leq 175 kOe and 4.2-77°K 8=17926
 microdeformation measuring technique 8=22273
 with microrough or dispersed surface, increase of thermal rad. compared with polished surface 8=22139
 molten, electronic band struct., density of states, and resistivity calc. 8=16789
 n-irradiation damage and recovery rel. to defect doping effect 8=1953
 neutron monochromator 8=854
 nucleation of vacancy clusters 8=1944
 n. m. r., strongly saturated, modulation and cross-relaxation effects on line shape 8=18455
 1 μ thick, filtered electron diffraction obs. 8=8455
 oxidation, controlled, in radio-frequency-excited glow discharge 8=8310
 oxidation and diffusion removal of Mg impurity 8=18670
 phonon damping at low temp. due to electron-phonon interact. 8=17477
 phonon-frequency distrib. and ht. capacity 8=1868
 plasma produced by laser beam, energy spectra 8=2122
 plastic stress relaxation rel. to stacking fault energy 8=13529
 plates of constant cross section, high order Lamb wave excitation and reception 8=19491
 plates, fatigue crack propag. under extension and bending, effect of mean stress 8=17758
 polycrystalline, deformation at high strain rates 8=13533
 polycrystalline films, influence of annealing on block structure charact. 8=4741
 polycrystals, temp. depend. of thermal diffuse X-ray scattering 8=5581

Aluminium—contd

positron annihilation meas. cf Se 8=5150
 pure single cryst. growth by strain-annealing from zone-refined Al 8=8398
 purification by fractional crystallization 8=4801
 quenched and degassed, form. of dislocation loops 8=1966
 quenched, interaction of point defects with dislocations 8=8690
 quenched, nucleation rate for dislocation loops 8=17645
 range of Kr and Xe ions, 500 KeV to 2 MeV 8=13481
 rapid self-diffusion along dislocations rel. to void annealing 8=13432
 reoxidation in Al electrolysis 8=23151
 resistance at He boiling temp. for purity determ. 8=9741
 rods, polycrystalline, texture changes rel. to mech. forming processes 8=22308
 rolled, texture representation by biaxial pole figures 8=17778
 rolling and recrystallization texture orientation relationships 8=1755
 rolling and recryst. textures, relationships 8=21938
 SAP and normal, elect. cond. 8=13707
 sections and wires, reinforced by continuous steel wires 8=10459
 sheet free of streaks by cladding 8=10460
 shock wave attenuation 8=8814
 single crystals, dynamic deformation 8=22310
 single crystals grown from melt, direct observation of sub-boundaries 8=17678
 solid, liquid and vapour states, X-ray emission spectra 8=9502
 solidifying, continuous radiographs of solid-liq. interface 8=4646
 solubility in cryolite melts, comp. and temp. dependence 8=21618
 stacking fault energy calcs. using pseudopotentials 8=17673
 stacking fault removal via n irradi., Frank loops change to perfect loops 8=17670
 stage I recovery recoil energy dependence from e-irrad. data 8=4961
 strain accumulation, second-order, at u. s. freq. 8=13527
 strengthening rate in slow loading process 8=22311
 stressed, thermally cycled, temp. after-effect rel. to strength and creep 8=13534
 stress-strain curves for shear deformation, zone refined 8=17761
 superconducting cylinders, mag. field periodicity in flux quantization expts. temp. depend. 8=22539
 superconducting transition temp. calcs. 8=5201
 superconducting transition temp. change due to 3d transitional impurities 8=9041
 surfaces, dispersion of surface plasma oscillns. 8=12547
 surfaces, (111), (100) and (110), atomically clean, prep. and props. 8=4728
 surface rearrangement involving chemisorbed O₂ 8=5726
 surface stacking faults after mechanical working, e-microscopy obs. 8=17675
 target for ion emission, bombard by Ar⁺ 8=6626
 thermal conductivity at low temp. 8=17542
 thermal conductivity 2.5-33.5°K 8=22132
 thermal radiation increase from microrough surface compared with polished one 8=22139
 thermoelectric power, and elec. resist. high press. effects 8=13902
 thermopower meas. rel. to electronic diffusion and phonon drag contributions 8=5382
 thin film strips, direct obs. of electro-transport 8=17927
 thin film, thickness monitor 8=17118
 u.s. shearwave, attenuation and rot. in mag. field 8=17497
 vacancy diffusion rate calc., Debye model 8=22172
 Wiedemann-Franz ratio and anomalous lattice cond. 8=8990
 wires, deformed, double fibre texture rel. to orientation 8=4832
 work function changes during and following low press. oxidation 8=5407
 X-ray atomic scatt. factors, Slater approx. 8=8506
 X-ray emission, K α doublet 8=5582
 X-ray K-satellites and K-absorption spectra 8=2398
 X-ray prod. and e backscatt. rel. to microanalysis, obs. and calc. 8=18794
 X-ray production on p-bombardment 8=4995
 zone-refined, strain-anneal grown, dislocation densities and configs. during heating and cooling 8=22198
 Al⁺, atomic interaction potential calc. 8=7456
 Al²⁺, pseudopotentials 8=7409
 Al²⁶ in oceanic sediment, atm. origin 8=23236
 Al II, spectra, transition probabilities 8=7411
 Al II, theoretical multiplet strengths 8=7410
 Al II, III, beam-foil excitation 8=12079
 Al(III) coord. no. in aq. mixtures 8=16888
 Al III, vacuum u. v. spectra 8=16202
 Al-Al₂O₃-Ag sandwich, electroluminescence rel. to electron emission 8=9277
 Al-Al₂O₃-Al sandwich photoemission studies 8=13858
 Al-Al₂O₃-Al, superconducting tunnel junctions, temp. dependence of energy gap 8=17958
 Al-Al₂O₃-Al thin film diodes, noise meas. 8=13851
 Al-Al₂O₃-Al thin film structures, electrode props. rel. to photocurrent direction 8=22689

Aluminium—contd

Al-Al₂O₃-Au film system, contact barrier height determ. by photoelectric meas. 8=18277
 Al-Al₂O₃-Au thin film structures, internal photoemission yields, Monte Carlo calcs. 8=22722
 Al-Al₂O₃-metal diodes, negative resistance obs. 8=5377
 Al-Al₂O₃-M film diodes electroluminescence 8=9598
 Al-Al₂O₃-metal structures, int. photoelectric effect, attenuation length 8=13910
 Al + Cl reaction, from 500 to 650°K, kinetics and rates 8=14358
 Al-MgF₂-Al bandpass, filter, far vac. u. v. 8=20065
 At beam range-energy studies 8=13473
 Fe content, by absorption spectrometry at 2483Å 8=9756
 in Fe liquid, heat of solution 8=16799
 O₂ content determ. by radioactivation anal. 8=5764
 Po beam range-energy studies 8=13473
 in Si, impurity redistrib. in oxidation and depletion depth, obs. 8=22606
 in YFe garnet rel. to spin wave susceptibility saturation above instability threshold, obs. 8=22864

Aluminium alloys
 See also Aluminium compounds.
 age-hardenable, vacancy conc. 8=1941
 ageing, natural, effect on subsequent artificial ageing 8=17764
 AlNi₃ A, magnetization coercive field strength, time- and temp.-depend. 8=5460
 Alnico V cylindrical bar magnets, meas. of axial field near magnet 8=19749
 analysis, Cu determ. by at. absorpt., spectrometry 8=2545
 analysis, Mn determ. by at. absorpt. spectrometry 8=2547
 cavitation damage resistance 8=5035
 cracking, during welding 8=5047
 cryogenic, high strength with good weldability 8=17762
 dislocations multiplication, transmission electron microscope obs. 8=13435
 duralumin, mass ejection by laser pulse 8=8759
 dynamic indentation, conical projectile, up to 550°K 8=17780
 electroplating, surface pretreatments 8=14429
 fatigue behaviour, thin anodic oxide films effects 8=2049
 irradiated, tensile and shear props. at cryotemps. 8=17763
 lattice defects recovery after tensile deformation 8=22184
 mechanical props., short-transverse, thick plate 8=13531
 microstructural changes, during and after hot working 8=21979
 secondary ion emission 8=18287
 shear deformation up to fracture under reversed loads 8=17759
 sheets, stress corrosion cracking at cutting planes 8=8818
 surface bubble formation during fatigue, rel. to humidity 8=4729
 surface preconditioning for electroplating, electron microscopy 8=8291
 2014-T6, crack propag. under low cyclic load rates 8=17746
 2219-T87 and 2219-T6, mechanical props. at elevated temp. 8=5048
 wrought, strength and ductility rel. to ingot structure 8=5046
 Al-Ag(20%) films, dynamical multiple reflections in electron diffraction patterns 8=13256
 Al-Ag, plasticity and tensile tests 8=8821
 Al-Al₃Ca, unidirectionally solidified eutectic, structure 8=4685
 Al-Al₃Ce, unidirectionally solidified eutectic, structure 8=4685
 Al-Al₃Ni, stability of eutectic stressed at elevated temps. 8=4842
 Al-Al₂O₃, dispersion strengthened, compression and cold rolling 8=8812
 Al-Al₃Y, unidirectionally solidified eutectic, structure 8=4685
 Al-Au, solid-liq. interface, radiographs 8=4646
 Al-4%Cu, deformational instability 8=8816
 Al-Cu alloys, dendrite arm spacing rel. to coarsening effect 8=4820
 Al-Cu alloy, dendrite structure at chill surfaces 8=4821
 Al-Cu, dendritic solidification 8=8177
 Al-4.5%Cu, macrosegregation on solidification, and mold design effect 8=16930-1
 Al-4 wt.%Cu, precip. phase microanalysis by e-microscopy and energy analysis 8=17276
 Al-Cu, X-ray Al-K β , emission bands 8=9502
 Al-Cu-Ag, precip. nucleation 8=17040
 Al-Cu-Cd alloys, deformation before and during ageing, effects on precip. 8=17039
 Al-Cu-Cd, resistivity, in artificial ageing 8=13708
 Al-Cu-Mg, atomic diffusion within lattice on ageing 8=17041
 Al-Cu-Mg with 1%Fe and 1%Ni, intermetallic phases comp. rel. to age hardening obs. 8=14495
 Al-Cu-Mg, stress-corrosion props. 8=8819
 Al-Dy-U system, phase equilib. 8=13060
 Al-Fe, Al activity at 1315°K 8=21651
 in Al-Fe alloys, activity at 1315°K 8=21651
 Al-Fe, disordered and ordered, soft X-ray emission spectra 8=5624

Aluminium alloys—contd

- Al-0.25 wt.% Fe, internal friction 8=5049
 Al-Fe, 12.42-12.8%, u.s. sound speed, effect of mag. polarization and temp. 8=13348
 Al-Fe-Si, Al-rich, phases 8=13058
 Al-Fe-Si-Mg-Zn, magnetoacoustic effect obs. 8=8624
 Al-Li, neutron irradi., grain boundary migration and gas bubble growth 8=8456
 AlM, (M = Mg, Ga, Ag), e-irradiated, stage II and III recovery temp. and impurity conc. dependence 8=1935-6
 Al-2%Mg, dislocation network knitting on stress-induced climb 8=17644
 Al-Mg, Mg atom clustering, electronic origin 8=13636
 Al-Mg, oxidation and diffusion removal of Mg 8=18670
 Al-Mg, Portevin-le Chatelier effect, rel. to comp. and testing temp. 8=22309
 Al-5%Mg with small Ag additions, X-ray investigation of ageing 8=13528
 Al-Mg, structure dependence on plastic deformation and ageing 8=17004
 Al-Mg, various ageing conditions and recovery 8=17765
 Al-Mg, X-ray Al-K β , emission bands 8=9502
 Al-Mg-Zn, brittle, precipitates, grain boundaries and dislocation movements 8=17646
 Al-Mn 1.04% dilute, solute atom-vacancy binding energy 8=8693
 Al-Si eutectic, modified, struct. 8=13155
 Al-Si, interaction between dislocations and precipitates 8=13431
 Al-Si, solidification process, study 8=1619
 Al-Sn system, above solidus temp., deformation, strength and fracture 8=22304
 Al-Ti, tensile creep at 250°C 8=8813
 Al-U-Sm system, phase equilib. rel. to use as nuclear fuel 8=13059
 Al-Y, phase analysis and crystal structure studies 8=22045
 Al-1 at.%Zn, electron irradiation hardening 8=8822
 Al-Zn eutectoid alloy, superplasticity rel. to grain boundary shear 8=17766
 Al-Zn eutectic, undercooling 8=17003
 Al-Zn, lattice defects and aging phenomena 8=13536
 Al-Zn, neutron-irradiation effect on Guinier-Preston zone formation 8=17274
 Al-10%Zn, neutron-irrad., pre-precipitation rate at 78°K 8=21980
 Al-Zn-Mg alloys, quenching rate rel. to age hardening 8=8817
 AlZn-Mg cast, surface structure rel. to stress corrosion cracking 8=22312
 Al-Zn-Mg, lattice defects and aging phenomena 8=13536
 Al-Zn-Mg, precipitation and ageing 8=13062
 Fe content, by absorption spectrometry at 2483Å 8=9756
 O₂ content determ. by radioactivation anal. 8=5764
 Zn determ. by atomic absorpt. spectrometry 8=23184

Aluminium compounds

- See also Aluminium alloys; Ruby.
 alumina, adsorpt. of He at room temp. 8=21899
 alumina, anodic layer analysis by X-ray fluorescence 8=18595
 alumina ceramics-Mb seals, bonding mechanism obs. 8=16743
 alumina, pure, γ -irrad., and magnesia-doped, thermoluminescence 8=5652
 aluminate i. r. glasses, optical, mech. and thermal props. 8=22954
 aluminosilicate catalyser in sludge, concentration by recording permittivity 8=15167
 corundum, complexes of bound impurity ions, group-theoretical classification 8=8887
 corundum crystals, large, hydrothermally produced 8=8400
 corundum, far u. v. polarizing power 8=15551
 corundum, H etched, orientation meas. by optical back reflection 8=17206
 corundum macroparticles accel. by laser radiation 8=10885
 corundum, mean strain curves, 0-900°C rel. to uniform dilatometric meas. 8=6
 corundum plates, elec. domains, and elec. effects rel. to plate-like whisker formation 8=21972
 corundum, thermal expansion, mean curves 8=17534
 cryolite-alumina melts in contact with Al, Al reoxidation process 8=23151
 erionite and offretite, differentiation 8=13153
 garnets, mag. structure by n-diffr. 8=22865
 garnet, phase change with symmetry enhancement as function of magnetic field 8=21839
 leuco-sapphire crystal, destruction by powerful laser radiation, mechanism 8=22247
 methyl ammonium aluminium sulphate dodecahydrate, thermal expansion 8=8647
 mica, tracks caused by e showers 8=22246
 oxide, X-ray emission, K α doublet 8=5582
 sapphire, critical surface tension 8=13080
 sapphire, Fe²⁺-doped, u.s.-induced changes in e. s. r. spectra 8=18407
 sapphire, filament growth from melt 8=21973
 sapphire, pulse compression by Bragg diff. of light with microwave sound 8=8618

Aluminium compounds—contd

- sapphire, Raman effect and vib. anal. 8=2401
 sapphire rod thermosensor 8=19668
 sapphire, spin-lattice relax. time meas. 8=9416
 sapphire, Si chemical-vapour deposition obs. 8=4826
 sapphire, with Si film, space-charge limited currents 8=2213
 sapphire, single crystals, alloyed with Ti, increased hardness and fracture strength 8=17767
 sapphire window mountings for low temp. spectroscopy 8=3362
 silicates, irradiated, thermoluminescence and e. s. r. 8=23044
 zeolites in liquid, proton relax. meas. 8=18454
 zeolites, synthetic, ion exchange theory 8=18651
 Al in Cr solid solution, antiferromagnetism obs. 8=14063
 Al-AlO interface, ionic diffusion 8=1912
 AlB₂, ht. of formation 8=2512
 AlB₁₀, crystal structure 8=8507
 AlB_{1n}, crystal structure by convolution mol. method 8=17337
 β -AlB₁₂ containing <2%Si, prep., stoichiometry and structure 8=17199
 α -AlB₁₂, ht. of formation 8=2512
 AlBeB₄, prep., stoichiometry and structure 8=17199
 Al₂Be₃Si₂O₁₈, crystal chemical analysis and structure refinement 8=17338
 AlBr phthalocyanine luminesc. singlet-singlet transitions 8=18591
 AlCl₃, in binary solvent mixtures, n.m.r. 8=8138
 AlCl₃, monomeric, mol. structure from gas e-diffr. exam. 8=16264
 AlCl₃, p. m. r. determ. of coord. no. in aq. mixtures 8=16888
 AlCl₄⁻ ion, h.f. i. r. active ν_2 vibr., correction 8=4142
 AlCl₆, force field and thermodynamics 8=4143
 AlF₃, anhydrous cryst., enthalpy 273°-1173°K 8=4929
 AlF₃, assoc. with NaF in saturated vapour 8=9692
 AlF₃, ht. of sublimation and i. r. spectrum 8=12997
 α (AlFeSi), crystal structure 8=8508
 α -AlFeSi, 4 possible phases 8=13057
 AlH₃, thermodynamic props. 8=4928
 AlK alum, cryst. growth rate, rel. to super-saturation 8=21940
 Al₂Me₆, force field and thermodynamics 8=4143
 Al₂Me₆Cl₂, force field and thermodynamics 8=4143
 Al-Mg alloys, liq., atomic distrib. and electronic transport 8=12799
 AlN:Cr photo-, cathodo- and electroluminesc. and S and Zn impurity effects, obs. 8=9595
 AlN, electrical and optical properties 8=2185
 AlN:Eu photo-, cathodo- and electroluminesc. and S and Zn impurity effects, obs. 8=9595
 AlN, i. r. lattice vibrations 8=8609
 AlN:Mn photo-, cathodo- and electroluminesc. and S and Zn impurity effects, obs. 8=9595
 Al oxide, hydrous, adsorption, mutual, with clay minerals 8=8341
 Al-O tetrahedral distances in aluminosilicate framework structures 8=21795
 AlO, absorption spectrum, dissociation energy 8=12169
 AlO clouds, night sky radiation obs. 8=18872
 AlO, new $2\Sigma^+-X^2\Sigma^+$ band, Franck-Condon factors 8=16263
 AlO trail spectra rel. to upper atmosphere densities and temps. 8=2613
 Al₂O₃, amorphous and polycrystalline, charact. energy-loss spectra and -Im ϵ^{-1} 8=13695
 Al₂O₃, amorphous, range distrib. of Na, K, Kr and Xe ions 8=13476
 Al₂O₃, rel. to anodic oxidation of Al in presence of hydrated oxide 8=18729
 Al₂O₃, anodized and crystalline, absorption in L_{III} region, structure 8=22956
 Al₂O₃ ceramic, for testing surface roughness rel. to directional emittance if thermal rad. 8=22138
 α -Al₂O₃, containing oxygen ion, electronic quadrupole polarizability 8=8232
 α -Al₂O₃, (corundum), vacuum deposition of Si 8=5281
 Al₂O₃ (corundum), V³⁺ ions, longit. relax. at simple electron levels 8=5541
 Al₂O₃:Cr³⁺, e. p. r. and acoustical mag. reson. in elec. field, profiles 8=18406
 α -Al₂O₃, crystal whisker sizing and testing 8=17248
 Al₂O₃, Cs activated, semicond. low work function films, props. 8=17999
 Al₂O₃, excitation of L-shell electrons by 20-keV electrons 8=22495
 Al₂O₃, dispersion of surface plasma oscilns. 8=12547
 Al₂O₃ films on Al in boric acid-formamide electrolyte 8=13089
 Al₂O₃ films, breakdown electric strength rel. to thickness 8=5351
 Al₂O₃ films, chem. deposition and props. 8=4740
 Al₂O₃ films e beam evaporation and dielec. props. 8=22652
 Al₂O₃ films, photoluminescence, spectral distrib. curves 8=9596
 Al₂O₃ films, plasma oxidized, breakdown field strength, thickness variation 8=22651
 Al₂O₃ films, pyrolytically grown, voltage-current charac. 8=13873

Aluminium compounds—contd

- Al₂O₃, film-thickness by tunnel emission and capacitance obs. 8=8312
- Al₂O₃ grain, effect of environments on fracture strength 8=13526
- Al₂O₃, irradiation damage on exposure to 5×10^{21} fast neutrons cm⁻² 8=22244
- Al₂O₃, large-area planar and non-planar films 8=13088
- Al₂O₃, lattice expansion and density decrease rel. to n irradi. 8=13249
- Al₂O₃, m. p., environment effects 8=1613
- α -Al₂O₃, n irradi. induced macroscopic growths 8=13132
- Al₂O₃ powders, reflection and polarization properties 8=14266
- Al₂O₃:Rh, fluoresc. 8=14300
- Al₂O₃ (sapphire), crack-branching, vel. meas. and stress effects 8=8815
- Al₂O₃, single crystal and sintered, γ photo-conductivity 8=18222
- Al₂O₃, sintered, fast n-irrad., effects on lattice, thermal cond., microstruct., density etc. 8=22245
- α -Al₂O₃, sintered, non-basal, dislocations, Burgers vectors 8=1967
- Al₂O₃, sintering, activation enthalpy 8=13052
- Al₂O₃, sintering, kinetics, data correlation 8=8258
- Al₂O₃, sintering kinetics, resonant freq. meas. 8=17027
- Al₂O₃, solubilities of MgO, TiO₂ and MgTiO₃, in H₂ atmos., temp. dependence 8=21818
- Al₂O₃, sputtering by Cs ions, 2.5-10 keV 8=8760
- Al₂O₃ systems, surface photochemistry 8=14441
- Al₂O₃, thermal cond., with Cr/Mn impurity, γ -irrad. effect 8=1886
- Al₂O₃, thermal expansion 8=13381
- Al₂O₃, tunnel structures, interface trapping 8=5381
- Al₂O₃, vapour-deposited, transitions from 300°C to 1200°C 8=13061
- Al₂O₃.V³⁺, Zeeman effect of absorption lines, up to 79 kOe at 4.2°K 8=9500
- Al₂O₃, X-ray analysis, qualitative and quantitative 8=9762
- Al₂O₃ whiskers, structure and mech. props. rel. to size and geometry 8=5050
- α -Al₂O₃-Cr₂O₃ solid solns., crystalline parameters 8=8241
- Al₂O₃-Y₂O₃ system, formation of compounds 8=4720
- Al₂O₃-Y₂O₃ system, liquidus curve meas. 8=16921
- Al₂O₃/SiC powders, reflection and polarization properties 8=14266
- 3Al₂O₃.2SiO₂, free energy of reaction of formation from CoO-Al₂O₃-SiO₂ 8=9669
- Al(OH)₃, nordstrandite, structure determ. by X-ray powder analysis 8=17339
- AlP, Raman and i. r. active modes 8=18500
- AlSb superconductivity 8=9043
- AlSb, Te and Se donors, photoexcitation spectra 8=22953
- Al₂SiO₅F₂, e. p. r. of Fe³⁺, hyperfine structure 8=2368
- Al₂SiO₅F₂, e. s. r. spectrum of Fe³⁺, fine structure 8=9412
- AlTiBO₆ (B=Nb, Ta, Sb), crystal structure and fluorescence 8=4879
- Al₂WO₆ bronzes, struct. evolution with temp., phase stability 8=17048

- ion laser, single-freq. operation at 5145 Å 8=19957
- ionization chamber as extreme u.v. absolute detectors, comparison with thermopile 8=11162
- ionization cross-sections for 100-2000 eV electrons 8=12446
- ionization energy per ion pair formed by $H^3\beta$ particle 8=4315
- ionization near threshold by electron impact 8=7711
- ionization recombinations and wall effects 8=1363
- ionizational relax. behind shock front 8=1356
- ionized by shock wave, electron density and collision freq., microwave obs. 8=12431
- ions, incident on polycrystalline targets rel. to sputtering coeff. 8=8766
- isotope mixtures, thermal diffusion props. 8=1492
- jets, subsonic, electron densities, Langmuir probe 8=1409
- laser action in thermionic hollow cathode discharge 8=15457

Argon—contd

laser for colour television display 8=11068
 laser-heated plasma radiation spectra 8=16200
 laser lines, high gain, identification 8=7395
 laser lines, i.r., isotopic displacements 8=7397
 laser, long life construction 8=6439
 laser, mode-locked quieting 8=15466
 laser mode sustained by excitations, single frequency operation 8=6440
 laser, pulsed, upper level population obs. 8=19956
 laser, spectrum stable, magnetic field-tunable and line-width determ. 8=11043
 liquid, activation particle detector 8=20203
 liquid, charge transport temp. dependence 8=18161
 liquid, H in solution, translational H absorpt. spectrum in far i.r. 8=12889
 liquid, at 85-9°K, calc. of atomic self-motion 8=21603
 liquid, cold-n scatt. at 94.4°K, analysis using computer molecular-dynamics expts. 8=21611
 liquid, collective motion, evidence from n scatt. 8=16793
 liquid, quasielastic scattering of cold neutrons 8=1524
 liquid, scattering, inelastic, of cold neutrons, at high temps. 8=16792
 liquid, sound velocity and law of corresponding states 8=1552
 liquid, thermal conductivity calc. using Green correlation function 8=8053
 liquid, thermodynamic functions calc. using geometric theory 8=8042
 liquid, thermodynamic props. calc. 8=8041
 liquid, u.s. absorption 8=1553
 liquid, velocity autocorrelation function calc. 8=12777
 liquid viscosity, shear, meas., elec. method 0-200 Kg/cm² and 86-146°K 8=12820
 mass spectra, obtained with static operation, mass 80 peak 8=12056
 melting curve to 30 kb, obs. 8=1610
 melting, significant struct. theory 8=12967
 mol. beam reflection at Al surface, energy meas. from 100-7500 eV 8=16382
 mol. beams at high intensity, condensation forming single crystals 8=16383
 molecular flow through capillary, interaction with tube wall 8=7893
 monatomic, partially ionized, transport props. 8=4304
 neutral, transition probabilities in intermediate coupling 8=12055
 normal ionizing shock wave, structure 8=21490
 I and II, interferometric wavelength meas. in region 5000-7000 Å 8=4070
 paraboloid eroded by ion bombardment 8=13466
 partially ionized, supersonic source flow expansion into vacuum 8=16658
 Penning discharge modes characts., <10⁻⁴ torr 8=1332
 physisorption on silica at low temps., process and mean adsorpt. time 8=17172
 plasma containing alkali metal additions, elect. conductivity 8=12482
 plasma, flames, induction-coupled, spectroscopic obs. 8=21411
 plasma, flowing, specific energy and electric field for intense stable discharge 8=16402
 plasma, l.p. growth rate calc. 8=21390
 plasma jet, heating of condensed powder particles, calc. 8=12574
 plasma, laminar flow heat transfer in entrance region of circular tube 8=16477
 plasma, meas. of refractive index 8=4378
 plasma, microwave induced for spectrochem. anal. of metals 8=18785
 plasma, with N₂ admixture, applicability of two temp. model 8=12460
 plasma, permittivity and conductivity variations with freq. and electron density 8=4346
 plasma viscosity and thermal conductivity, partially ionized 8=7734
 polycrystalline, elastic constants calcs. 8=17768
 positive column, direct display of electron temp. var. 8=16407
 pumping speed-press. data, getter-ion pump 8=1495
 reactor, Ar-filled, thermionic, with thermionic convertor 8=298
 refractive index, real part, calc. from Kramers-Kronig dispersion relation 8=1670
 resonance-line lamp for u.v. photochemistry 8=18738
 scattering ionization, short range forces 8=1364
 scintillation counter, characts. and light spectrum, impurities effects, obs. 8=20194
 self-consistent phonon theory, phonon spectrum and bulk thermodynamic props. 8=13336
 shock compression, Thomas-Fermi-Dirac theory 8=16994
 shock layer e density meas. 8=21265
 shock wave front, luminance temp. obs. 8=21483
 shock waves, explosively generated, radiation 8=1480
 solid, charge transport temp. dependence 8=18161
 solid, compressibility 8=5075
 solid, excitons and band gap from e energy loss obs. 8=9194
 solid, free carrier mobility 8=17863

Argon—contd

solid at 0°K, parameters from interact. potential of gas 8=1468
 solid, with trapped Ru atoms, optical and X-band e.s.r. spectra 8=18558
 solid, zero-point energy, effect of long-range 3-body forces 8=22083
 solubility in H₂O-methanol system 8=12809
 solidified, vapour pressure, binding energy and mean vibration freq. 8=16960
 superradiant transitions 8=7398
 supersonic flow, by h.f. induction, electronic and ionic properties. 8=21266
 on Teflon 6, isotherms 8=13047
 test gas in ballistic compressor, thermodynamic conditions 8=1470
 thermal conductivity, between 24 and 73°K 8=4940
 thermal conductivity, hot-wire cell meas., 30°-100°C, 120-150 torr 8=16700
 thermal conductivity meas. with hot-wire cell 8=6210
 thermal plasma, continuous emission spectrum 8=16207
 in thermionic diodes, effect on performance 8=15216
 thin solid films, microstructure, electron diffraction study 8=8313
 translation accommodation coeff., on W surface 8=17113
 transport properties, single-component model 8=1438
 Ar ions reflected from Cu crystal incident obliquely 8=8767
 Ar self diffusion coeff. and atoms interaction-energy 77.5-121°K and 294°K 8=1489
 Ar-like ions, phys. props. rel. to electronic config. for excited states 8=1148
 Ar II capillary arc discharge, effect of mag. field on inversion population of levels 8=7692
 Ar II laser, polarization in perturbed spontaneous emission spectrum 8=11042
 ArII lines, Stark broadening parameters, obs. 8=20949
 Ar II, stationary arc discharge, population inversion in 4s and 4p states 8=7693
 Ar II, transition probabilities 8=1163
 Ar', highly excited, autoionization prod. by electron impact 8=12430
 Ar' laser operation, study of relevant characts. of Ar gas discharge 8=12402
 Ar' laser, spectroscopic study 8=3307
 Ar₂, ground state, wavefunctions and potential curves 8=7526
 Ar₂, 2nd virial coeff. obs. 8=7913
 Ar₂, thermal conductivity at 100-300°C, 1 atmosphere, obs. 8=4477
 Ar²⁺ + Ar, reaction cross-sections 8=4310
 Ar³⁹ 'excess' in stone meteorites, origin 8=19277
 Ar³⁹, nuclear spin and magnetic moment, spectroscopic measurement 8=11739
 Ar-C₂H₂ mixture, ionization defect meas. 8=7710
 Ar+Cs positive column contraction 8=21231
 Ar Cs system, electron density in plasma prod. by fission fragments 8=15215
 Ar-F₂ cryst. state, phase diagram 8=1670
 Ar-H₂ plasma jet radial temperature distribution, determination 8=12571
 Ar-5%He gas mixture scintillation props. 8=11301
 Ar-Hg low-pressure discharge luminescence efficiency 8=4287
 ArI, mean lives of some 4p levels 8=4069
 Ar-Kr binary mixture, spectra in vapour, liq. and solid states 8=7425
 Ar-N₂ mixture, meas. of thermal-diffusion factors 8=1488
 Ar-N₂ mixtures, virial coeffs. from Burnett meas. 8=16691
 Ar-O₂ gas lasers, mechanism of laser action 8=11975
 Ca IX, spectra, transition probabilities 8=7411
 He-Ne laser wavelength increase due to Ar addition 8=11063
 In-doped solid film, absorption spectra 8=9541
 K-Ar, interatomic potential, χ^2 minimum method 8=12205
 L₁ shell, Coster-Kronig and Auger spectrum 8=7396
 N₂-Ar gas mixtures, thermal conductivity 8=4474
 O₂-Ar gas mixtures, thermal conductivity 8=4474
 TiO₂ surface discharge, channel development 8=1330
 Xe-Ar couples in binary mixtures, translation spectra 8=7425
 in ZnO:Zn, ions energy losses obs. 8=18624

Argon compounds
 AsH and AsD, A, ³I, -X, ³S⁻ band systems 8=21062

Aromatic compounds. See Organic compounds.

Arsenic
 impurity addition to steel, effect on temper brittleness 8=17797
 inhibitor, in Cu-Zn alloys, selective corrosion 8=23100
 ions, registration in olivine and hypersthene crystals. 8=11325
 polarizability 8=9505
 X-ray K absorption spectra, chemical effects 8=22957
 p-GaAs, photoluminescence, affect of heat treatment with excess As pressure 8=23054
 in Ge, solid solution, supersaturated, decomposition mechanism 8=17005
 n-InP crystal doping, elec. effects 8=9113

Arsenic—contd

in Si, implanted atoms location and lattice disorder,
obs. 8=17414

Arsenic compounds

X-ray K absorption spectra, chemical effects 8=22957
AsF₃, general force field 8=4157
AsF₃, mean amplitudes of vibration 8=16298
AsO, potential curves of electronic states 8=1236
As-S glasses, origin of 800 cm⁻¹ absorpt. 8=5584
As-S-Se partially vitreous system, sintering obs. 8=13053
As-Se glasses, thermal expansion 8=13382
As-Se system, thermal conductivity in glassy
state 8=1887
As-Se vitreous alloys, introduction of Cu atoms 8=13111
AsSe_x glass, refractive index 8=14198
As₂S₃, amorphous, carrier mobilities from conductivity
studies on e-irradiation 8=18162
As₂Se₃, crystal structure refinement by NQR
method 8=17340
As₂Se₃-4As₂Te₃, thermal cond. in glassy and cryst.
states 8=1887
Ga-As-M (M = Au, Ag or Cu), equil. ternary liquidus-
solidus phase diagrams 8=4639

Assistors. See Semiconducting devices: Resistance. electrical.

Association

hemoglobin with O₂, theory 8=13111
ion pair, constants and solvent composition 8=8009
tetracene dimer, association const., absorpt. and emission
spectra 8=1301
thiobutylolactam, dimerization, values of ΔH° , ΔG°
and ΔS° 8=4241
thiocaprolactam, dimerization, values of ΔH° , ΔG°
and ΔS° 8=4241
thiovalerolactam, dimerization, values of ΔH° , ΔG°
and ΔS° 8=4241

gases

azo compounds in vapour phase 8=16958
I, at h. p. 8=23080
NaF + AlF₃ in saturated vapour mixture 8=9692

liquids

See also Colloids.
alcohols, tertiary, from dielec. consts. 8=12908
dispersion interact. energy as molar vol. /int. press.
prod., rel. to H bonding energies 8=12779
methyl viologen cation, aq. and alcoholic solns., water
induced dimerization, e.s.r. spectra obs. 8=8123
molten salts containing water, quasi-lattice model 8=8015
phenols, from dielec. consts. 8=12908
tetracyanoquinodimethane anion, aq. and alcoholic solns.,
water induced dimerization, e.s.r. spectra obs. 8=8123
tungstate solns., aggregation study, by W¹⁸⁵ 8=21607
LiClO₄ in acetonitrile-dioxane, ion pairs 8=8108
LiClO₄ in H₂O-dioxane, ion pairs 8=8107
LiClO₄ in methanol-dioxane, ion pairs 8=8108
Zn(NO₃)₂·xH₂O, molten, ion assoc. 8=16868
ZnSO₄ soln. in H₂O-glycol, ion assoc. 8=8062

Astatine

beam, range energy in Al, Al₂O₃ 8=13473
At^{209, 211} beam, recoil prod., for bombard. of Al
foil 8=11952

Astatine compounds

No entries

Asteroids. See Planets; Solar system.

Astigmatism. See Aberrations, optical.

Astronautics. See Space research.

Astronomical instruments

See also Radioastronomy; Telescopes/astronomical.
achromatization, partial, device for u. v. stellar
research 8=10319
camera, electronic, US Navy, linearity and information
gain over photography 8=14742
camera, wide-angle, all-reflecting Schmidt 8=10107
Danjon astrolabe, reflecting modification 8=10105
echelle spectrometer-spectrograph for astronomical
use 8=14740
electronic camera and spectroscope for use at high
dispersion 8=14743
glass-filters in photometry, effect of temp. changes 8=10103
gratings to increase intensity of u. v. spectrum 8=10102
image intensifier, two-chamber, for telescope
obs. 8=11147
interferometer, optical intensity, for stellar temps.
meas. 8=19134
lens, 535 mm, objective of coronagraph, investigation
of 8=536
meteor visual observations recorder 8=19264
micrometer, photoelectric for meridian passage
times 8=10104
optical device for spacial filtering of photo-
graphs 8=14744
photometer, small-diaphragm, for faint objects photoelec.
obs. 8=23498
photomultiplier as photon counter of very faint light
sources 8=10904
polarimeter, two-cell photoelectric using rotatable
achromatic half-wave plate 8=10106
solar radio spectrograph, 30-300 MHz 8=14869
solar spectrometer, large Echelle grating 8=10385
spectracon, for obs. of stellar rotations 8=19105

Astronomical instruments—contd

spectrograph, multi-slit, for simultaneous slit
spectra 8=23498
stellar amplitude interferometer 8=19135
stellar spectrum analysis, reading of diagram
coordinates 8=14763
telescope fixing on star, clock-controlled drive 8=2772
two-cell photoelectric polarimeter, Uppsala,
Sweden 8=19168
two-channel spectroelectrophotometer with pulse-
counting registration 8=19104

Astronomical observations

See also Radioastronomy.
atmospheric scintillation, spiking probability
calc. 8=18876
Ephemeris time corrections rel. to revised lunar
theory 8=10485
inertial frames of reference, planetary and
galactic 8=14739
new variable stars, around globular cluster NGC6304,
6638 and 7099 (M30) obs. 8=19182
photoelectric polarization meas. on faint stellar objects,
detection principle 8=19143
practical amateur observatory, construction 8=23499
radar astronomy, fundamental principles and recent
research 8=19326
stellar magnetic field, var. observer effect 8=19115
stellar magnitudes directly from in-focus images,
method 8=5852
stellar photometry, direct elimination of sky
background 8=23542
sun, observatory, Hawaii 8=10374
telescope dome, microthermal slit obs. rel. to image
quality 8=14741
Tokyo, time and latitude bulletins 8=10068
FK₄ catalogue, periodic errors 8=14745

Astronomical spectra

See also Atmospheric spectra; Cosmic radiations,
radio-frequency; Stars/spectra; Sun/spectra; and
other individual astronomical bodies.
Compton effect, energy-differential cross
section 8=3571
extra galactic radio sources 8=23607
 γ Pegasi, from electronic photography and spectros. at
high dispersions 8=14743
nebulae gaseous, A₂ recombination lines relative
intensities 8=14793
quasistellar objects, absorption spectra 8=23628
radio galaxies rel. to fine struct. const. time var., O III
emission obs. 8=14727
radio source spectra and cosmological red shift, hyperbolic
model 8=14812
r.f., two planetary nebulae, optical depths and electron
temp. obs. 8=23561
stellar spectrum automatic reduction, automation 8=14763
u. v., intensity increase by means of gratings 8=10102
Venus, atm. light scatt. props. rel. to CO₂ bands
intensities 8=14846
CO₂, relative intensities, 160°-280°K calc. 8=7506
OD transition B² Σ^+ -A² Σ^+ , high resolution obs. of excited
water vapour jet 8=21095
OH 18 cm lines, cosmic, polarization theory 8=7543
OH-18 cm rad., anomalous elec. polarization 8=23582
OH transition B² Σ^+ -A² Σ^+ , high resolution obs. of excited
water vapour jet 8=21095
N₂O-CO mixture, study of overlapping absorpt.
bands 8=7507
Si II superposition of configuration applied to a
series of states 8=19158
Si II λ 4128 and λ 4130Å in model atmospheres and B
stars 8=19163

Astronomical telescopes. See Radioastronomy; Telescopes/
astronomical.

Astronomy and astrophysics

atmosphere; Ionosphere.
absorption of 5.65 mm waves 8=5789
aerosol and condensation process from optical
obs. 8=9834
aerosol, condensation nuclei vertical distrib. in boundary
layer 8=9835
albedo, Tiros VII obs. 8=23285
albedo from 2 colour photoelectric earthshine obs.,
S. Africa 8=2594
atom-atom collision processes 8=16230
barotropic, nonlinear geostrophic adjustment 8=2573
boundary layer, appl. Ekman spiral instability 8=14601
boundary layer, Eulerian rel. to Langrangian correlation
coeffs. 8=14593
boundary layer, flux of momentum, heat etc., scale
handover 8=14578
boundary layer over oceans, importance in synoptic
meteorology 8=14582
boundary layer turbulence over land and sea 8=14596
boundary layer, turbulent variables, joint probability density
functions 8=14592
clouds, noctilucent, and jet streams detect. by satellite
i.r. obs. 8=9855
convection below cloud base 8=2578
cosmic -ray at re-entrant albedo intensity calc. from
balloon obs. 8=903
density from satellite orbital decay and instruments 8=5796
'earth-atmos.' outgoing rad. correl. with total cloudiness
etc. 8=9861
energy, annual var. and spectrum, (1963-64) 8=23252
explosion, geomagnetic disturbance due to shock
waves 8=2746
frontogenesis, narrow zone, from field having only large-
scale var., numerical expt. 8=18860
general circulation, computer model for global
study 8=9822
global, research programme, study conference 8=23250
gravity wave instability 8=2584
ground layer, turbulent transfer for quasi-homogeneous
flows 8=15610
high altitude fronts, theory of types and anal. of velocity
fields 8=9830
laser backscatter, Raman component, obs. 8=23263
laser and nonlaser light propag., comparison 8=9867
lower layers, model for two-dimens. heat and mass
transfer 8=23267
lower, meteorological analysis and predictions 8=18848
magnetosphere, hydromag. emission rel. to
perturbations 8=2739
meson monitoring, meteorological corrections 8=3753
mesosphere, thermal behaviour 8=2575
meteors fragmentation, deform. and ablation and
luminous intensity 8=10364
microboroms origin and rel. to microseisms 8=9773
millimetre transfer radiation from O₂¹⁶ molecules, influence
of Earth's mag. field 8=23284
momentum, relative angular, and day length vars. 8=14510
morning magnetospheric perturbations, relation with
v.l.f. emissions 8=23318
and ocean surface, dynamical and thermal inter-
actions 8=9829
particle spectrum calc., by small-angle scatt.

planetary boundary layer, appl. Ekman spiral
instability 8=14601
planetary, energy loss functions for electrons and
protons 8=23658
pollutant effect on electrical contacts 8=8988
potential energy, available zonal and eddy, earth i.r.
radiation generation obs. 8=23262
radiation, outgoing terrestrial 7-26 μ , statistical characts.
from Cosmos obs. 8=23283
radiation transfer, with reflection from boundaries 8=9862
radiation, measurement of 8=10066
radio refractivity, world atlas 8=18905
radiowave refraction and attenuation, book 8=14629
Rayleigh-scattering, of large optical thickness, global
radiation 8=14831
ring current growth and polar magnetic
substorms 8=19056

Atmosphere—contd

shear flows, thermally stratified, rel. to laboratory
models 8=14599
smoke diffusion from high stacks, time-average ground
concentration 8=14614
solar type stars, non-gray model 8=2775
stratified, acoustic and gravity-wave emission by turbulent
motions 8=23270
strato-mesospheric, temp. and density from hypersonic
sphere obs. 8=9831
stratospheric circulation, southern hemisphere 8=2574
temp. stratified, wind speed components, spectral
structure 8=14607
top, solar e.m. flux incident, numerical calc. 8=2840
troposphere, scintillation of discrete sources 8=23287
troposphere, structure factor from radio data 8=2603
turbulence effect on optical surveillance systems 8=14598
Van Allen radiation changes rel. to polar substorms,
Alouette 1 obs. 8=18966
whistlers and v.l.f. emissions, obs. and theories 8=14672

composition

above 30 km, i.r. absorption meas. by balloon-borne
diffusing system 8=9840
alkali metals, optical meas. 8=9925
chemi-ionization in upper atm., model 8=23307
electron flux at synchronous altitude, variations,
ATS-1 obs. 8=18924
ion-temp. and relative composition, low altitude polar
satellite obs. 8=18919
magnetosphere, He ions effect on micropulsation 8=9921
mass spectrometer obs. above 100 km 8=9901
particles in Antarctic atmosphere, near surface 8=23264
precipitation of low-energy particles at high latitudes
results of satellite meas. 8=9954
radioactivity and O₂ at Antarctica (90°S) 8=9897
radio astronomy meas., relating data to opacity and
source brightness 8=2595
60-100 km altitude range 8=14590
sodium, upper 8=18916
sodium, upper 8=18917
tropical oceanic air, sea-salt particles, var. of ion ratios
with size 8=9837
upper, meteoric dust, detection from sounding
rocket 8=18918
water, isotopic fractionation at liquid-vapour and solid-
vapour transformations below 0°C 8=2503
CO₂ gas constituent, number density determ. using laser
beams 8=14585
CO, low concentrations in air, spectrophotometry
analysis 8=14589
Cl, natural gaseous, origin rel. to volcanic action 8=9841
H².³, cosmic ray produced, balloon obs., June
1965 8=3752
H₂O gas constituent, number density determ. using laser
beams 8=14585
Na, daytime distrib. and origin, 92.4 km 8=2616
Na distribution 8=9903
Na, rel. to meteoric origin 8=9902
O, atomic, at 120 km, mass spectrometric meas. 8=18920
O₃ concentration, mesospheric rocketsonde obs. 8=18852
O₃ concentration above S. Africa up to 45 km,
obs. 8=14588
O₃, heating and radiative equilibrium in
stratosphere 8=2579
O₃, oscillation, quasi-biennial, from monthly O₃
data 8=2581
O₃, from satellite meas. 8=2576
O₃ and submicron dust soundings, N and central America
troposphere and stratosphere 8=18851
O₃ vertical distribution, troposphere and stratosphere
obs. 8=18853
O₂ gas constituent, number density determ. using laser
beams 8=14585

humidity

See also Humidity.
ceramic sensing device, obs. 8=18855
condensation of moisture from tropical maritime air
masses as freshwater source 8=18854
moisture determ. from absorption of solar
radiation 8=14586
moisture flux, diurnal fluctuations in Caribbean 8=2580
at north pole of cold, 1.38 and 1.87 μ bands obs. 8=9874
vertical structure parametrization 8=9836
water vapor, stratosphere, absorption spectra obs. 8=14587
water vapour transfer, turbulent, at different stability
condns. 8=14611
BaF₂ film hygrometer element, storage stability 8=18856

ionization. See Atmospheric electricity; Ionization, atmosphere; Ionosphere.

movements

aerodynamic-acoustic theory, high-altitude
fluctuations 8=9905
baroclinic flow, stability in zonal magnetic field 8=2582
boundary layer, alternating and horizontally rolling
vortices with axes in mean flow direction 8=14600
in boundry layer, mass transfer from radioactive tracer
obs. 8=14594

Atmosphere—contd

- movements—contd**
 boundary layer, turbulence 8=14595
 circulation in equatorial region, model eqns. for stationary case with zonal press. fields 8=9846
 circulation rel. to solar activity 8=23253
 diffusion in wind direction, and surface layer 8=9847
 diurnal variation of winds over eastern Hawaii 8=9849
 exchange studies by Na²² meas. 8=18857
 fluctuation data, in surface layer over sea, analysis 8=23266
 governing equations and spectra, transports in freq., wave-number space 8=23269
 hydromagnetic oscs., structure polarization and propag. 8=2609
 ionosphere drifts, comparison of anal. methods 8=19000
 ionospheric drift meas., statistical method 8=19001
 ionospheric drifts, winter, during quiet-sun period 8=19004
 jet streams, origin 8=18862
 large-scale, eddy diffusion and viscosity coeffs. 8=23237
 long waves with cross-wind 8=9843
 lower layers, model for two-dimens. heat and mass transfer 8=23267
 mesosphere, tidal oscs. and summer flow near subpolar mesopause, obs. over Alaska 8=18863
 nongeostrophic effect on baroclinic wave disturbances 8=9845
 nuclear debris, interhemispheric transfer 8=23297
 oscillations, free, rel. to mean wind 8=9844
 pressure and acoustic wave propagation after nuclear explosions 8=2583
 stratosphere, lower, circulation from radiometric temp. obs., Tiros VII 8=18858
 stratosphere, turbulence obs. 8=14580
 stratospheric winds over Panama, obs. 8=14606
 structure, a model, between 85 and 110 km 8=2617
 suspended particles, diffusion theory 8=18861
 thermal turbulence in forced convection, model and analysis 8=12638
 thermosphere, diurnal vel. oscill., new anal. 8=14602
 tidal eqns., β plane form, asymptotic solution of Cauchy problem 8=9771
 tropospheric wind field above low-level jet, diurnal oscillations 8=23271
 turbulence in boundary layer over sea, spectra and stress meas. 8=18859
 turbulence due to mountain disturbance of airflow 8=14597
 turbulence, locally isotropic, veloc. and temp. derivatives cross-correl. moment 8=14604
 turbulence parameters, discussion 8=14591
 turbulence, rel. to fluctuations in light waves from edge of solar disc 8=14623
 turbulence, spatial coherence of 3.2 mm e.m. wave 8=18900
 turbulence, spherical e.m. waves propag. 8=18897
 turbulent boundary layer, contaminant transport with unstable stratification 8=14608
 varying turbulence rel. to intensity fluctuations of propag. light beam 8=14618
 velocity spectra, one- and three-dimens., comparison 8=9848
 vortices, free, generation, governing parameters 8=7904
 waves due to Pyrenees, wind and temp. meas. 8=5790
 waves, instability rel. to billow clouds and clear-air turbulence, obs. 8=23265
 wind profiles, boundary layer eqns. approx. soln. 8=23273

precipitation

 aerosols, concentration and size distribution 8=18870
 aerosol particles removal by raindrops and snow crystals. 8=23275
 cloud droplet growth by hydrodynamic capture, stochastic model 8=18869
 cloud nuclei production and droplet concentration, effect of sugar cane fires 8=18868
 contaminant washout and rainout, theory 8=9852
 droplets and nuclei in cloud, number concentration comparison, obs. 8=18867
 drops in elect. field, free falling, mass loss and distortion 8=21586
 freezing level altitude by radar obs. 8=9856
 hailstones, liquid water content 8=23276
 ice nuclei sizes 8=2587
 ice from supercooled H₂O, particles growth and struct., obs. 8=23274
 near earth's surface and 500-1000 m, microstruct. obs. 8=9854
 particle size and charge, meas. 8=23279
 precipitation—evaporation ocean surface, balanced by heat exchange 8=9814
 raindrop distribution and growth, deduction from vertical wind tunnel obs. 8=1519
 statistical studies, on local, national and continental scales 8=18865
 suspensoid stratification and cloud-top accumulation of droplets 8=14609
 AgI-KNO₃ nuclei, water vapour adsorption obs. 8=8335

Atmosphere—contd**precipitation—contd**

- NO_x ions, role in thunderstorm electrification 8=23290
radiation belts
 alpha particles, trapped in mag. field, OGO 1 obs. 8=2643
 betatron acceleration by geomag. storm, adiabatic 8=2645
 cosmic ray cut-off rigidity, effect 8=20630
 and cosmic ray cutoffs, magnetosphere model 8=18960
 cyclotron instability limit allowing for wave absorption in ionosphere 8=18956
 cyclotron instability, nonlinear theory 8=18957
 diffusion, radial, of particles with arbitrary pitch angle due to extensive mag. disturbances 8=18962
 dose rate meas. graphs 8=23347
 electron lifetimes, 1 MeV, at mirror altitudes of 350, 500 and 750 km, calc. 8=18959
 electrons trapped in low L shell, 1962-1965 obs. 8=2644
 high-energy proton data, from Telstar 1, stat. anal. and modeling 8=9955
 inner, Brazilian magnetic anomaly, proton components, Proton 1 and 2 data 8=18954
 inner, electron flux and spectra following Starfish test, satellite obs. 8=9953
 inner, energy fluxes of low energy protons and positive ions 8=23348
 inner zone electrons, temporal behaviour, 1965/66 Pegasus 1 obs. 8=23344
 ionospheric effects of e precip. 8=23360
 mag field study by means of belts 8=19028
 magnetosphere (B, L) coord. system allowing for distortion by ring current 8=23434
 magnetosphere v.l.f. emissions, discrete, gyroresonance model 8=2647
 outer boundary with zone of unstable radiation, location and props. 8=23345
 outer, disturbances rel. auroral irregular phenomena 8=993
 outer, electron energy spectra, Elektron 1 and 2 data 8=18953
 outer, high-latitude boundary, local time asymmetries, Alouette II data 8=18955
 outer at mag. equator, electron omnidirectional intensity contours 8=23350
 outer, proton diffusion 8=18964
 outer, proton events rel. to mag. bays in auroral zone, 1961 Explorer 12 obs. 8=2648
 outer, relativistic electrons, pitch angle diffusion obs. by Hitch-hiker I 8=2650
 α particles, geomag. trapped, Injun 4 obs. 8=18961
 particle motion in dipole field, mag. moment adiabatic invariant 8=2649
 precipitation of low-energy particles at high latitudes results of satellite meas. 8=9954
 proton motion in geomagnetic trap 8=9958
 proton whistlers, dispersion, Injun 3 and Alouette 1 data 8=18958
 protons and electrons, differential energy spectra rel. to mag. field, OGO 3 obs. 8=2646
 storm, polar, trapped particle accel. Explorer 26 obs. 8=23349
 storm-time, rel. to magnetic and auroral substorms 8=19046
 trapped electrons, low-altitude, boundary collapse in mag. storms 8=14656
 trapped flux, processes and future levels 8=23346
 Van Allen boundaries and electron increases beyond boundary from IMP-B satellite 8=9956
 Van Allen electrons scattering by e.m. transverse waves travelling along mag. field 8=18965
 Van Allen, energetic electrons by satellite obs. 8=2651
 Van Allen, proton meas., electron contamination 8=9957
 Van Allen, r.f. synchrotron radiation 8=14654
 Van Allen zone, outer, intensity maxima, position depend. on electron energy 8=14655
 H and charged particles, interaction and consequent Lyman α emission 8=18963
radioactivity

 I adsorption by atmos. particles 8=9892
 aerosol transport across trade wind inversion at Hawaii 8=9896
 aerosols and vapours, mass transfer, appl. to travel of spores and pollen 8=23298
 α -activity meas. for environmental surveys 8=16013
 fallout, north east Pacific ocean 1961-62, particles sinking rate 8=14633
 in layer above ground, emanation vertical propag. theory 8=9894
 thermonuclear explosion γ -glow 9 July 1962, riometer obs. validity 8=14636
 Be⁷ over Australia, 1965 obs. 8=23299
 Br⁸⁷, γ and β rays 8=2611
 C¹⁴, excess deposit after nuclear explosion, decay calc. 8=2610
 C¹⁴ prod. by cosmic ray processes, obs. 8=20620
 CO₂ from troposphere, C¹⁴ content obs. 8=2566
 Cd¹⁰⁹ in USSR from Jan. 1964 to June 1966 8=23302
 Rn decay products, conc., seasonal variation 8=5794

Atmosphere—contd

radioactivity—contd

- Rn exhalation changes, rel. to changes in conc. and of decay products 8=9891
 Rn²²⁰ and prods. 8=9893
 Rn²²² distrib. over Atlantic, Antarctic and Paris 8=14635
 Sr90, global budget, implications of changes 8=14634
 Th exhalation changes, rel. to changes in conc. and of decay products 8=9891
 W¹⁸⁵ distribution and stratospheric transport processes 8=23300

structure

- Hartree-Fock eqns. solns., stability conditions 8=16174
 troposphere, from radio data 8=2603
 O₃ vertical distribution, troposphere and stratosphere obs. 8=18853

temperature

- and cosmic ray intensity var. 60 m.w.e. underground, London 8=11678
 equilibrium gradient 8=9824
 equilibrium gradient, rel. to discussion 8=9826
 freezing level altitude by radar obs. 8=9856
 and geomag. disturbances 8=10051
 mesosphere from O₃ microwave spectra 8=23258
 radiative heating, meas., in surface layer 8=23261
 solar-terrestrial physics, The Inter-Union Symposium Belgrade, 1966 8=10325
 at South Pole, rel. to O isotope ratio in snow and firn 8=23227
 spectra, one- and three-dimens., comparison 8=9848
 stratosphere, rocket altitudes, height-lag correlations of density with press. and temp. 8=23255
 stratospheric profile from O₃ microwave spectra 8=23256
 stratosphere, radiometric meas. from Tiros VII rel. to circulation 8=18858
 temperature grads with heat flux equal to zero 8=9825
 troposphere and solar wind 8=18850
 upper, neutral, response of F2 region to changes 8=10018
 upper, optical meas. 8=9925
 H⁺ ionosphere, determ. from proton whistlers 8=23356
 O₃ absorption lines, equivalent width obs. 8=2577

thermodynamics

- boundary layer, momentum rel. heat vertical transfer 8=14584
 earth i.r. radiation rel. to zonal and eddy available pot. energy generation, obs. 8=23262
 heat conduction waves propag. 8=2614
 heat, water vapour and momentum transfer in lower 8=14583
 latent heat exchange with ocean in low latitude synoptic scale systems 8=9828
 lower layers, model for two-dimens. heat and mass transfer 8=23267
 thermally stratified surface layer flux-gradient relations 8=23259
 thermobaric seishes, origin 8=9827
 H₂O vapour and heat turbulent transport in unstable atm., obs. 8=23260

upper

- acoustic-gravity waves, due to nuclear explosion and to earthquake 8=14641
 alpha particles trapped in geomag. field, OGO
 auroral-zone precipitation event, simultaneous balloon and satellite obs. Sept. 20, 1963 8=9944
 boundary layer, l.f. limit of inertial subrange 8=9906
 bow shock compression, IMP 2 and OGO 1 simultaneous obs. 8=23329
 chemi-ionization, model 8=23307
 composition above 100 Km mag. deflection mass spectrometer obs. 8=9901
 concepts, definition and explanations, review 8=18911
 conjugate photoelectron flux onset timing, solar cycle variation, from 6300 Å and Te obs. 8=23331
 corpuscular heating effect near sunspot max., Explorer 6 obs. 8=18915
 cosmic ray secondary electrons, flux and energy spectrum calc. 8=11669
 cosmic ray shower production of combined optic and e.m. pulse 8=3750
 counter-electrojet in equatorial latitudes 8=2642
 current system and polar mag. disturbances, IGY winter obs. 8=23442
 current systems, quiet day, of solar-diurnal mag. vars., construction by graphic integration 8=19039
 densities at high altitudes from satellite accelerations 8=5832
 density changes, 140-160 km, from solar X-ray absorption obs. 8=9900
 density, by low altitude satellite drag 8=14640
 density at 100 km altitude, variations meas. by Thompson scattering 8=18912
 density, satellite magnetron ionization gauges 8=16733
 density, semi-annual var. near 200 Km, 1966-67 8=23306
 density variations at 280 km from satellite air drag 8=5797
 density, var. rel. to heating, and geomag. var., satellite drag obs. 8=14695
 density var., semiannual, analogy with mag. activity var. 8=10035

Atmosphere—contd

upper—contd

- density var. near 150 km, satellite obs. 8=18913
 dust layer at 85 km, optical radar evidence 8=23309
 e and ion accel. by mag. solitary waves 8=2620
 electrojet current layers, equatorial, explanation of formation 8=9952
 electrojet, equatorial, latitude movements possible cause of ionospheric drifts 8=19016
 electrojet equatorial Sq currents, S. America IGY obs. 8=2640
 electrojet equatorial Sq currents on individual quiet days, obs. 8=2641
 electrojet, equatorial, in India, prelim. results 8=18948
 electrojet, Indian equatorial, 1958 and 1964 8=9949
 electrojet, seasonal movement over India 8=9950
 electrojet, seasonal movement over India 8=9950
 electron beam attenuation at different levels 8=18972
 electron conc. diurnal vars. and temp. changes, 160-200 km 8=23355
 electrons in earth's magnetotail, obs. by Vela satellites 8=23431
 electron flux at synchronous altitude, variations, ATS-1 obs. 8=18924
 exosphere plasma conc., hydromag. sounding 8=23314
 exospheric density var. near 1100 km from satellite orbits calc. 8=18914
 fluorescence, molecular, accompanying the twilight injection of triethylborane 8=9926
 geomagnetic bays as superposition of effects due to Hall current system and westward electrojet 8=19047
 geomag. field-solar wind boundary, appl. of ideal-case analysis 8=7750
 geomagnetic neutral sheet acting as particle source by accelerating solar wind 8=2618
 geomag. tail detection by Luna 10 8=23313
 geomagnetic tail at 10³ earth radii, Pioneer 7 obs. 8=2748
 heat conduction waves propag. 8=2614
 hydromag. emissions (Pc1), narrow band, nature and origin 8=10048
 hydromagnetic toroidal resonance, math. viability 8=2723
 infrasound spectra of rocket flight and take-off 8=197
 ionospheric irregularities, large scale, radio interferometer obs. 8=9986
 ionospheric winds, nocturnal variation from gun projectile luminous trail obs., Barbados 8=2683
 ion-temp. and relative composition, low altitude polar satellite obs. 8=18919
 magnetic tail, IMP 3 rel. to Lunik 10 obs. 8=23315
 magnetosheath, mag. noise of freq. 3-300 Hz, OGO 1 obs. 8=2621
 magnetosheath, shock aligned mag. oscills. 8=9920
 magnetosheath, structure and pulsations at 18 earth radii, Vela 3 obs. 8=2744
 magnetosphere, anomalous charged-particle diffusion 8=2625
 magnetosphere, attached 2nd standing shock wave 8=2624
 magnetosphere, balloon obs. 8=23319
 magnetosphere, bulk motion and associated elect. field 8=9919
 magnetosphere, closed, neutral points on boundary 8=9911
 magnetosphere, convection limitation by ionospheric dissipation 8=9918
 magnetosphere, deformed, charged particle motion by Stormer theory and Euler pots. 8=14644
 magnetosphere, elect. field generation and auroral particle acceleration 8=18930
 magnetosphere, elec. field meas. with probes, necessary conditions 8=9907
 magnetosphere, excitation by solar wind 8=9923
 magnetosphere, guided propag. of Alfvén waves 8=23327
 magnetosphere, importance and theory of elec. fields 8=9914
 magnetosphere, interaction of moon with 8=2815
 magnetosphere ionization density profiles and whistler propag. 8=9909
 magnetosphere at L = 5, electron response rel. to solar wind during April 17-18, 1965 storm 8=23321
 magnetosphere, lower, electron concentration diurnal var. from lunar radar echo obs. 8=23326
 magnetosphere, mag. field merging across neutral sheet 8=23323
 magnetosphere, meas. of elec. fields 8=9913
 magnetosphere meas., high-latitude, rel. to closure of auroral electrojet circuit 8=9951
 magnetosphere, m.h.d. resonances, guided poloidal mode 8=350
 magnetosphere m.h.d. waves rel. sudden mag. storm commencement 8=10043
 magnetosphere, model experiments 8=12465
 magnetosphere, neutral sheet, position and shape 8=18926
 magnetosphere, night-time, origin of v.l.f. auroral hiss 8=5801
 magnetosphere, nondipole part of geomag. field influence on boundary 8=18932
 magnetosphere, one-dimens. model of transition layer, motion of charged particle 8=14645
 magnetosphere, outer, coupling with ionosphere, depend. on geomag. field topology 8=9910

Atmosphere—contd**upper—contd**

magnetosphere, outward plasma flow in tail after negative geomag. bays, Vela 2 obs. 8=18928
 magnetosphere, particle energy storage and higher-order ring currents 8=18927
 magnetosphere, planetary, magnetized plasma partial corotation 8=14834
 magnetospheric plasma, collisionless, viscosity in weakly turbulent mag. field 8=18929
 magnetosphere plasma resonances, axially symmetric modes obs. 8=9922
 magnetosphere props. from OGO 1 whistler obs. 8=23322
 magnetosphere, proton escape 8=9958
 magnetosphere, proton events rel. to auroral mag. bays, 1961 Explorer 12 obs. 8=2648
 magnetosphere, separable case of poloidal m. h. d. resonances of plasma 8=18925
 magnetosphere, solar-atmos. reaction times, accentuation rule and variations 8=18931
 magnetosphere, solar cosmic ray injection 8=23721
 magnetosphere, solar ejected plasma interaction, lab. analog 8=2622
 magnetosphere-solar wind interact, scaling for model plasma gun-terrella expts. 8=14643
 magnetosphere and tail, proton flux Explorer 33 obs. 8=23324
 magnetosphere, trapped radiation shells, and cosmic ray cutoffs, model 8=18960
 magnetosphere v.l.f. emissions, discrete gyroresonance model 8=2647
 magnetosphere, whistler mode propag., effect of longitudinal elect. field 8=19008
 magnetospheric ionization, 1.9 to 2.6 Re, from whistler radio records, 1957-1966 8=23317
 magnetospheric particle motion, appl. of model 8=23343
 magnetospheric plasma, flow past satellites nonmagnetized lab. simulation 8=12475
 magnetospheric tail, associated mag. storm effects 8=9912
 magnetospheric tail, electrons within neutral sheet 8=23320
 magnetospheric v.l.f. noise triggering by 60 watt transmission 8=23325
 magnetospheric v.l.f. propag., France to S. Africa 8=9915
 magnetospheric waveguide propagation along field aligned irregularities 8=18986
 mapping of earth's bow shock and mag. tail by Explorer 33 8=23430
 meteoritic dust, detection from sounding rocket 8=18918
 micrometeor flux at 60 to 145 km, rocket obs. 8=2829
 neutral motions, review 8=18921
 oscillations, interactions between 8=23310
 particle asymmetries, local-time, ATS 1 synchronous orbit obs. 8=9916
 physics, book 8=23305
 plasmopause down minimum equatorial distance rel. to mag. activity, obs. 8=2747
 plasmopause, shape, location and rel. to 3 hr K_p index, IMP 2 obs. 8=9917
 polar cap absorption, anomalous separation into 2 types 8=10407
 pressure meas., airstream adsorption errors 8=5838
 processes and solar optical radiation, review 8=18910
 properties from satellite orbits 8=5795
 protons, secondary, and re-entrant albedo from balloon and satellite obs. 8=3751
 radio scattering, incoherent, at perpendicular intersection with geomag. field 8=9983
 re-entry plasma stability near photoemission surface 8=7842
 rel. to ionosphere D-layer form., >40 keV e flux at ≤ 100 km 8=14680
 rotational speed rel. to orbital inclination of satellite calc. 8=18922
 rotational speed above 200 km 8=14642
 satellite lifetime rel. to density vars., nomogram 8=14711
 secondary electrons spectrum and intensity rel. to IMP-A data 8=7020
 sodium distribution 8=9903
 sodium, and stratospheric warning at high latitudes 8=18917
 sodium and stratospheric warnings at high latitudes, comments 8=18916
 solar proton precip. over poles, obs. of nonuniformity Feb. 1965 lat. 68° to 82°S 8=905
 space, neutron flux after PCN event of November 15, 1960, Atlas ballistic flight obs. 8=2623
 spectroscopic and photometric studies, Canadian survey 8=14639
 stratosphere, electron streams, riometer obs. 8=18951
 temp. and density from AIO trail obs., 105-165 km 8=2613
 temperature, optical meas. 8=9925
 thermal anisotropies, solar wind, Vela 3 and IMP3 obs. 8=10406
 thermosphere, acoustic-gravity waves, equation solved 8=2686
 thermosphere, middle and upper, wind system, deviation 8=9996
 thermosphere, spectral energy distrib. from grenade glow clouds 8=9924

Atmosphere—contd**upper—contd**

tides at 90 to 120 km from wind distribution obs. 8=18998
 topside, sunrise effect in summer, onset time and plasma temp. rise 8=23402
 triethylborane rocket injection, obs. of yellow-green luminosity 8=9904
 turbulence, energy balance 8=23311
 turbulence, energy balance 8=23312
 twilight layer noctilucent cloud, satellite detection 8=2626
 BO_2 emission from injection of triethylborane 8=23330
 H distribution, in thermosphere up to 800 km, solar cycle and diurnal variations 8=2615
 N and NO, distribution and lifetimes in 100 to 280 km 8=23308
 N_2^+ intensity distrib. among bands, obs. 8=18933
 Na, daytime distrib. and origin, 92.4 km 8=2616
 Na, meteoric origin 8=9902
 O, atomic, at 120 km, mass spectrometric meas. 8=18920
 O₂, 8mm absorption and emission 8=18934
 IMP-2, magnetosphere and near space, meas. of magnet. field, results 8=2832
 PCA, cosmic noise, midday recoveries 8=9969

Atmospheric acoustics
 acoustic-gravity waves, wind effects rel. to grandpress. 8=23303
 aerodynamic-acoustic theory, fluctuations, high-altitude 8=9905
 anomalous propagation of powerful signals 8=9898
 infrasound generated by nuclear explosion, period < 1 minute effect of wind structure on propag. 8=23304
 oscillations excited by surface waves 8=9899
 ray tracing in layered atmosphere, analogue computer solution 8=14637
 sound absorpt. rel. to humidity, pressure depend. obs. 8=23268
 standing wave in rigid-walled tube containing air, theory and obs. 8=21518
 stratified atmos., acoustic and gravity-wave emission by turbulent motions 8=23270
 thunder, dominant 200 Hz peak 8=18909

 Rylov solution, multiple-scattering interpretation 8=18884
 scattered radiation at small angles, intensity aerosol spectrum 8=18880
 scattering, optical radar performance 8=9879
 scattering, small-angle, particle spectrum determ. 8=23251
 seeing, by resistance analogue obs. 8=14622
 scintillation, spiking probability calc. 8=18876
 solar disk flattening, obs. 8=2597
 thick layers, light transmission 8=6538
 transmittance at north pole of cold, i.r. and sub-mm obs. 8=9874
 transparency, anomalous and twilight vars., u.v. obs. 8=9871
 transparency, rapid determ. from obs. of sky brightness 8=18886
 turbulence, limitations on planetary photography 8=14835
 turbulence, validity of ray optical calc. 8=18877
 N₂ intensity distrib. among bands, obs. 8=18933

Atmospheric pressure and density

baroclinic wave disturbances, non-geostrophic effect 8=9845
 barometer with digital output 8=9832-3
 cosmic ray barometric coefficient calc. allowing for variations in primary spectrum and cut-off rigidity 8=909
 cosmic-ray intensity data, barometric correction 8=893
 density, exosphere, variations near 1100 km from satellite orbits 8=18914
 density at 100 km altitude, variations meas. by Thompson scattering 8=18912
 density var. near 150 km, satellite obs. 8=18913
 double wave rel. to moisture flux diurnal var. 8=2580
 at high altitudes, density from orbital drag coeff., computer estimation 8=2612
 isobaric surfaces in N. hemisphere, altitude changes after solar flares 8=18923
 magnetron ionization gauges for neutral particle density, press. conversion consts. 8=7958
 orbiting gauges, airstream adsorption errors 8=5838
 pressure changes at ground level due to nuclear explosions 8=2721
 sound absorpt. with varying humidity, effect 8=23268
 strato-mesospheric, from hypersonic sphere obs. 8=9831
 stratosphere, rocket altitudes, height-lag correlations of density with press. and temp. 8=23255
 tropospheric responses to chromospheric flares, search 8=23257
 upper, density, semi-annual var. near 200 Km, 1966-67 8=23306

Atmospheric spectra

See also Atmospheric optics.
 airglow, night 3100-10 000 Å 8=23333
 i.r. absorpt. of minor constituents above 30 km, meas. with diffusing system 8=9840

Atmospheric spectra—contd

5577 and 6300 Å regions using a prism grating spectrometer 8=5966
 5577/3914 Å intensity ratio, in auroras, mechanism explaining obs. 8=5800
 m.m. and sub m.m. spectral range, rel. to absorpt. by water vapour 8=9865
 molecules in mesosphere, temp. determ. 8=23258
 particle, calc., by small-angle scatt. pattern 8=23251
 Raman scatt., pulsed N₂ u.v. laser obs. 8=23289
 reflected solar, and emitted thermal rad. of natural surfaces and clouds, 1.6 to 5.4 μ 8=9866
 sky temp., apparent, at mm wavelengths 8=2593
 1 mm to 130 μ obs. aboard aircraft at 40 000 ft. 8=9863
 BO₂ emission from injection of triethylborane 8=23330
 Na in dayglow rel. to atmospheric distrib., 92.4 km 8=2616
 O₂, 8mm absorption and emission 8=18934
 O₂ equivalent width, atmospheric temp. determination 8=2577
 O₂ microwave emission, stratosphere, and temp. profile deduction 8=23256
 O₂ microwave, mesosphere, means of temp. determ. 8=23258
 O₂, microwave, satellite obs. to obtain vertical sense 8=2762
Atmospherics
 auroral zone, 0-30 kHz hiss, morphological obs. 8=18947
 e.l.f. attenuation rates, nonreciprocal, from slow tail obs. 8=9890
 e.l.f. slow tail waveforms, direction dependence, nocturnal obs. 8=9982
 e.l.f. and v.l.f. radio noise and lightning currents, amplitude statistics 8=2602
 fluctuations affecting c.m. and m.m. wave radio-astronomy 8=18894
 ionospheric reflection type, amplitude spectra 8=9977
 lightning corona currents and e.l.f. emissions 8=2598
 nocturnal, amplitude spectra, 70 Hz to 30 kHz 8=18994
 phase spectra, 1-20 kHz, and freq. rel. to source distance 8=2600
 precursor whistler generation obs. 8=18895
 proton temp., ionosphere, determ. from whistlers 8=23356
 sun, lower chromosphere, CaII and MgII lines 8=2859
 thunderstorm sources, book 8=19005
 u.l.f. radiations, depend. on mag. bays and state of ionosphere 8=9971
 v.l.f., long period fading 8=14628
 v.l.f. spheric counting rates, Uppsala and Ankara 8=18893
 whistlers in low latitudes, dispersion and occurrence freq. in IGY 8=2601
 whistler propag. and magnetosphere ionization density profiles 8=9909
 whistlers, subprotonospheric 8=23373

Atomic beams

See also Particle velocity analysis.
 alkali metals, g factor determ. 8=12089
 for coherent light prod. of stable freq., theory 8=6438
 reflection from crystal surface, rel. to surface micro-structure 8=13201
 time-of-flight velocity analysis 8=16379
 Ag, electron-impact ionization cross-sections 8=12429
 Ar, secondary electron emission from gas-covered surface 8=22731
 Ba, electron excited, lifetimes and light emission polarization 8=21019
 Cs, scatt. by benzene and cyclohexane, comparison 8=1205
 Cs, surface ionization on W and Pt, temp. depend. 8=12110
 F, interaction potentials with inert gases 8=12104
 H, control of excited state distrib. 8=21276
 H, prod. by thermal dissociation, dissociation temp. var. 8=7474
 H, photoionization 8=21020
 H, polarized source, atomic conc. from H₂ dissociation in h.f. discharge 8=21018
 H, ZnO crystal change in surface conductivity 8=7475
 K lamp, line shape dependence on current 8=15523
 K, scatt. by benzene and cyclohexane, comparison 8=1205
 K, surface ionization on W and Pt, temp. depend. 8=12110
 N, photoionization 8=21022
 Na, scatt. from polyat. gases, quenching of glory undulations 8=7633
 Na, scattering by Cs beam, total elastic cross section, vel. depend. 8=21091
 O, interaction potentials with inert gases 8=12104
 O, photoionization 8=21021
 Rb, scatt. by benzene and cyclohexane, comparison 8=1205
 Rb, surface ionization on W and Pt, temp. depend. 8=12110
 Tl, surface ionization on Pt and oxide-coated W 8=12110

Atomic clocks. See Time measurement.

Atomic frequency standards. See Time measurement.

Atomic mass and weight

See also Isotopes; Mass spectra.
 coriolis coupling in ethylene type mols., effect 8=4195
 Fe⁵⁶-Fe⁵⁷ mass difference, from mass-spectroscopic and reaction Q-value analysis 8=21017

Atomic orbitals. See Atoms/structure; Orbital calculation methods.

Atomic scattering factors. See Crystal structure, atomic; X-ray crystallography; X-ray scattering.

Atomic spectra. See Spectra/atoms.

Atoms

See also Atoms, mesic; Elements; Nucleus; Positronium.
advances in atomic and molecular physics,
book I and II 8=16171-2
alkali ion scatt. at He atoms 8=7464
alkali-metal, optical orientation rel. to meas. of weak
mag. fields 8=20934
alkali metals, long-range interactions 8=12108
in anharmonic crystals, mean-square velocity 8=13035
atom-diatomic mol. collision, compound state
resonances 8=4255
atomic ensemble, quantum statistics of multi-mode
radiation 8=19452
collision problems, slowly converging radial integrals,
evaluation 8=21003
collision processes rel. to astrophysics 8=16230
collision processes rel. to planetary atmospheres
phenomena 8=14832
collisions, 3 body, rearrangement for high energies, linear
model 8=16228
concentration for line with complex structure using
reabsorption method 8=4051
coupled bimodal system, photon cross correlations 8=12102
dark-filled images form by electron microscope, nearly
incoherently illuminated 8=1145
diamagnetic susceptibility calc. and temp.
dependence 8=18294
discharge-flow system, and free radicals, reactions 8=9700
dynamic polarizability, coupled and uncoupled approx.
for many open shells 8=7368
earth-ionosphere cavity resonances 8=2608
e capture p impact on He, Ar, Ne, N₂, H₂, C₂, with transition
to 3s, 4s states of H, obs. 8=7462
e capture in He⁺-He collision, with excitation,
probability calc. 8=7463
electron affinity, rel. to reaction rates 8=14357
electron-impact ionization, empirical formula 8=1351
electron spectroscopic method for study 8=16180
electronic energy calcs. by modified local-energy
method, reliability 8=1146
electrons interact. in infinite square well, quantum
mechanics 8=3403
e quadrupole moment induced by nuclear quadrupole
moment, hyperfine structure effect 8=7402
energy calc. by method of local moments 8=12025
exchange energy in SCF method, using non-orthogonal
basis functions 8=4046
exchange interactions in different perturbation
formalisms 8=12361
exchange interactions, three- and four-atom, in Gaussian
effective-electron model, perturbation anal. 8=21793
exchange interacts, Schrödinger perturb. formalism 8=4256
excited states, press. shift in gaseous medium 8=4052
interact. of 2 not in ⁴S state, elastic and resonant
exchange cross-sections 8=4104
interactions, second-order three-body, with Gaussian
wavefronts 8=7457
interaction potentials for different electron
distributions 8=7456
inert gases, interaction potentials with O and F
atoms 8=12104
ion transport in solids, under conditions including large
elec. fields 8=21813
isoelectronic systems, phys. props. rel. to electronic
config. for excited states 8=1148
linear chain, fast vib. excited mol. collision, exchange
energy and momentum loss 8=16381
Long-range interatomic forces 8=12232
low Z, asymptotic reln. between press. for Thomas-Fermi
and Thomas-Fermi-Dirac models 8=1151
magnetic, ground state spin in non-mag. metal
host 8=16991
many-electron problem, perturb. theory from Hirschfelder
eqn. 8=7369
in masers, photons interaction with atoms with angular
momenta 8=19921
metal ion promoted atom-transfer oxidation-reduction
reactions 8=14401
metals in flames, detect. by atomic fluoresc. 8=14460
metals, radii calcs. from shock-wave eqn. of state
meas. 8=8225
multiphoton absorpt., laser and thermal light relative
prob. 8=20975
one-electron wavefunctions, simple approx. 8=1156
1¹S state of two-electron isoelectronic series, lower
bounds for energy-eigenvalues comment 8=1150
orientation by superposition of interactions separately
not orienting 8=7374
periodic table and atomic props. 8=20918
polarizability calc. for e systems with several open
shells 8=1142
polarizability increase by induced deformation, new
nonlinear effects 8=20910
positronium atom conversion on O₂ and NO 8=7476
primary, distrib. function for total paths 8=7365

Atoms--contd

quantum orbital calc. using convolution theorem 8=1228
in radiation field, coupled, correlations 8=19458
radiation propagation in a resonance medium 8=21000
rare-earth ions, electric multipole interactions 8=16977
recoil accompany α -emission, charge 8=16014
retarded interaction energies between like atoms in
different energy states 8=21006
r. f., l. f. and v. l. f. radio propagation, conference,
London, England (1967) 8=14671
rigidity of gyromagnetic prop., eqn. of motion 8=4047
scattering, from continuous media 8=2017
scattering, iteration-variation convergence methods 8=7454
scattering, light, three-photon, in fluids 8=4044
screening effect on internal conversion decay 8=15946
6-12 gas-atom-solid atom pairwise model rel. to gas-solid
interaction 8=8332
in solids, energy loss and range of energetic,
neutral 8=13469
solids interatomic forces, moderately long-range
and meas. 8=16993
space quantization of ang. momentum, simple Stern-
Gerlach apparatus 8=1144
spontaneous emission, line shape for imperfect mixing
of degenerate levels 8=4049
Stark effect consts, quadratic, computation for 8
elements 8=20935
S-state, dipole polarizabilities, bounds, from oscillator-
strength sum rule 8=7373
stimulated rad. during interact. of cascade
transitions 8=417
terminal position determ. by X-rays, rel. to charge
distribution effect 8=1261
with three energy levels, 1-dimens. medium, polychromatic
scatt. of radiation 8=16186
two-photon processes in 2-level system, photon field
statistics 8=20948
Van der Waals coeffs. bounds from Padé approxi-
mants 8=16229
Van der Waals constant for atom-atom force, self-
consistent calc. 8=21002
van der Waals forces, macroscopic, macroscopic
derivation 8=4105
van der Waals interactions, dipole-dipole term
calc. 8=7550
vibrations, thermal, rel. to X-ray anomalous
transmission 8=13222
weak interactions, new perturbation procedure 8=12103
X-ray scatt., He atomic form factor 8=12053
Al, distribution of sputtered atoms by electron micro-
probe 8=21876
Ar-like ions, phys. props. rel. to electronic config. for
excited states 8=1148
Ar and Kr, multielectron ionization in close collisions
with Ar⁺ and Kr⁺ ions 8=21012
CO, interaction energy for 6³ Σ state 8=4109
Cu, p-irradiated, platelets of interstitial atoms rel.
to dislocation loops 8=22202
Fe, ground state, universal potential field calc. 8=20952
H, α -particle capture of electrons, collision
process 8=12101
H, coherent elastic scatt. of photons 8=7379
H, energy of interact. in ground-state, by Gaussian-
type functions 8=1198
H, ground state, differential polarizability 8=12048
H, long-range interact., appl. of electrostatic Hellman-
Feynman theorem 8=1197
H⁺ or H⁺ + H⁺ fluxes, 1-10 keV, an energy independent
detector 8=7381
H-fast H⁺ and He⁺ collision processes rel. to
astrophysics 8=16230
H⁺ on Kr scattering, charge transfer 8=1203
H, quantum-mechanical treatment without complicated
mathematics 8=12046
H, relax. of F = 1 level of ground state, appl. to H
maser 8=12049
He³, gas, nucl. spin relax. by surface interactions
suppression 8=1160
He⁴, Ramsauer-Townsend effect 8=1200
He isoelectronic sequence multipole polarizabilities 8=16199
He sequence, 1s²S-1snp¹P transitions, calc. 8=7388
H-H interaction pot. using isotope effect in dissociative
attachment 8=21075
He-He interaction, quantum calc. 8=4110
He-He interaction, SCF-MO approx. 8=21013
He-Li⁺ interaction energy at small internuclear
distances 8=21014
Hg, 6s6d levels, collision cross-sections with inert
gases 8=1201
MnHg, atomic thermal vibration amplitudes at 298°K 8=8236
N-(p-bromophenyl) benzene sulphonamide, intramolecular
van der Waals interactions 8=1278
Ne, metastable, conc. in glow discharge at low
temp. 8=1368
Ne-like ions, phys. props. rel. to electronic config. for
excited states 8=1148
O, charge distribution effect on terminal position determ.
by X-rays 8=1261
Pd fission fragments, highly ionized, electron binding
energies 8=1112

toms—contd

- RaA, charged capture metal disk 8=1370
 Rb, optically pumped, relax. in collisions with Kr atoms, correl. times 8=7472
 $^{15}\text{S}_0$ systems, magnetoelectric susceptibilities 8=4053
 Sm fission fragments, highly ionized, electron binding energies 8=1112
 Sn, on silica gels and zeolite, states and dynamics 8=16912
 Sr fission fragments, highly ionized, electron binding energies 8=1112
 Tl, oscillator strengths for np, \rightarrow ms $_{1/2}$ and np \rightarrow md transitions 8=4086
 Xe fission fragments, highly ionized, electron binding energies 8=1112

electron scattering

- alkali metals, neutral atoms 8=1190
 atomic props. investigation, periodic table investigation 8=20918
 collision processes 8=12091
 elastic, ang. and energy depend. of Mott polarisation at 100–2000 eV 8=7439
 elastic scatt. amplitudes calc. for Z = 1 to 54 8=4100
 in electron-avalanche, impacts of second kind on excited atoms 8=21243
 excitation and ionization study using Coulomb wave approx. 8=7427
 40–100 keV electrons, amplitudes for atoms in solids 8=13240
 Gell-Mann-Goldberger theory 8=12420
 integral expressions for scattering amplitudes 8=20989
 long-range interaction, dominant nonadiabatic contrib. 8=12092
 low energy, relativistic effects by Fredholm method 8=1189
 optical pot., partial wave expansion 8=20992
 plasma, ion line width shifts 8=12511
 quasi-free, of low and middle-energy electrons 8=12093
 Rydberg states excitation 8=20970
 subshells, incomplete of any number, h.f. approx. calc. 8=12094
 variational methods of Hulthén, Kohn and Malik comparison 8=7448
 Ar, $(3p^4s)^3P_1$, lifetime obs. 8=1164
 Ar, 40 keV gas electron-diffr. 8=7447
 Ba, Rydberg states obs. 8=20941
 Ca, Rydberg states obs. 8=20941
 Cd I, $5^3P_{0,1,2}$, effective cross sections 8=20993
 H, correlation method for extension of S-wave to higher partial waves 8=7441
 H, elastic resonance 8=16222
 H, exchange scattering amplitudes 8=12090
 H, excitation analysis using many-channel resonance theory 8=7443
 H, excitation to n = 2 level, theory and expt. 8=7442
 H, low energy, expansion approach 8=20994
 H, in 1s state, e-impact ionization cross-section obs. 8=21273
 H, in magnetic bottle for prod. of polarized e beam 8=15304
 H, positronium formation in e⁻-H, field theory cross-section calc. 8=16223
 H, simplified second Born approx. 8=20996
 H, six-state close-coupling at low energy 8=7440
 H, variational methods of Hulthén, Kohn and Malik, comparison 8=7448
 H, zero-energy positrons, elastic scatt 8=20995
 H, e-H compound states, 5 parameter wave function for lowest two 8=20997
 He, atomic form factor and incoherent-scatt. function 8=12053
 He, differential and total cross-sections, 100–400 KeV, Born approx. anomaly 8=16218
 He, excitation of 2^1P and 2^3P states 8=7446
 He, positron annihilation in gas 8=20998
 He, zero-energy positrons, elastic scatt 8=20995
 Hg, angular distribution and spin polarization, influence of plural scatt. 8=16225
 Kr, 40 keV gas electron-diffr. 8=7447
 Mg, Rydberg states obs. 8=20941
 Ne, 40 keV gas electron-diffr. 8=7447
 Ne, transition between levels, excitation 8=20947
 O, polarization effects, and photodetachment from O⁻ 8=4101
 Si II, inelastic, collision contributions to ion linewidths 8=20991
 Sr, Rydberg states obs. 8=20941
 Xe, 40 keV gas electron-diffr. 8=7447

excitation

- alkali-metal, cross sections for fine-structure transitions in adiabatic collisions 8=4106
 alkali metals, by electrons, first threshold 8=1190
 alkali metals, by low energy electrons, absolute cross sections 8=12087
 alkali metals 2P , fine structure transitions in adiabatic collisions, calc. 8=1162
 alkali-metal, thermal, and deactivation, in inert gas atmosphere 8=12088
 alkalis reson. states lifetimes, inert gases and vapour press. effects 8=20976

Atoms—contd

excitation—contd

- anticrossing signals from $6s^1P$, level 8=16211
 atomic collisions, molecular-orbital theory 8=7451
 broadening of spontaneously emitted line in presence of laser beam 8=12040
 coherent and incoherent, magnetization equations 8=121
 decay of excited states, lineshape of double resonance signals 8=7428
 depolarization cross-section in medium 8=4089
 echoes, radiative 8=3274
 electron-atom collisions, threshold cross-sections 8=12077
 electron impact, Coulomb wave perturbation theory 8=7427
 electron impact, determ. of excited state lifetimes 8=7429
 electron and proton collisions, classical adiabatic perturbation theory 8=7460
 e scatt., Gell-Mann-Goldberger theory 8=12420
 energy, average, of states of given multiplicities 8=12034
 energy levels, perturbation by e.m. wave 8=7375
 fluorescent X-rays from γ -irradiated target, absolute yield meas. 8=23039
 forbidden lines, $2p^3$, $2p^4$, $3p^2$ and $3p^4$ isoelectronic sequences 8=12076
 free-free transitions, survey of theoretical results 8=11454
 by h.f. discharge, orientation of excited states 8=16215
 p impact induced, ID model 8=20152
 interaction, perturbation theory for exchange forces 8=4043
 laser, ionization photoelectron counting statistics, quantum theory 8=20987
 laser, spontaneous emission, polarization 8=7430
 lifetimes determ. by single-photon counting 8=7429
 lifetime of excited-states, meas. by Hanle effect 8=1181
 long-lived highly excited, collisional ionization 8=4303
 metallic target, electron emission by Auger de-excitation of atoms by sputtering 8=5422
 by modulated light, modulation of absorption of resonance emission 8=20972
 noble gases, lifetime of at. excited levels by time analyser 8=20926
 optical lifetime obs., using positive ion Van de Graaff accelerator 8=16183
 optical pot. in terms of self-energy of single particle Green's function 8=20992
 optical, by simultaneous beams, step-wise fluoresc., coherency matrix calc. 8=20974
 oxygen, $^5S^0$ metastable state 8=1304
 photoelectric effect, multiquantum, and laser coherence meas. 8=20986
 plasma, distrib. eqns. and solns. 8=7730
 population and r.f. coherence transfer by spontaneous emission 8=16220
 radiative transitions, retarded pot. calc. of probability 8=16212
 resonance fluorescence, applic. of projection-operator decay theory 8=11262
 secondary radiation, theory of intensity beats 8=12078
 silver halides, optical absorpt. spectra of transitions of Ti^{3+} and Fe^{2+} , Jahn-Teller effect 8=14193
 spectrum of linear chain of paramag. atoms with spin-phonon interaction 8=20977
 spontaneous emission from a system of 2 level atoms interacting with relaxation mechanism 8=20971
 three-level system, obtaining inverse repopulation of levels 8=20924
 Ag, Rydberg state by e collision 8=20970
 Al II, III, beam-foil excitation spectra 8=12079
 Ar, to ground and excited states of Ar⁺, cross-sections 8=21267
 Ar, Rydberg state by e collision 8=20970
 Ar I, mean lives of some 4p levels 8=4069
 Ar I, transition probabilities in intermediate coupling 8=12055
 Ba, electron excited, Rydberg states 8=20941
 Ca, electron excited, Rydberg states 8=20941
 Cd, decay of excited states, lineshape of double resonance signals 8=7428
 Cd $5^3P_{0,1,2}$ levels lifetimes and transitions, obs. 8=1183
 Cd I, $5^3P_{0,1,2}$ electron excitation, effective cross sections 8=20993
 Cu, $1s^2s^2p^3s^2p^3d^4f$, universal potential field calc. 8=20952
 Fe XVII, electron impact, Coulomb-Born calc. 8=12081
 Ga V, $3d^9$ – $3d^84p$ transition spectra 8=12082
 Ge, As and Sb impurities, spectra, under uniaxial compression 8=13424
 Ge, Auger electrons, energy spectra, surface contamination detection 8=1688
 Ge VI, $3d^9$ – $3d^84p$ transition spectra 8=12082
 H, by e scattering, excitation to n = 2 level 8=7442
 H, by e scattering, resonances analysis 8=7443
 H, elastic resonance in electron scattering 8=16222
 H, Lyman- α prod. by electron collisions on H₂ 8=12050
 H, $1s \rightarrow 2s$ and $1s \rightarrow 2p$, by e and p impact 8=20996
 H(1s, 2s, 2p) in electron capture reaction $\text{H}^+ - \text{He}(1s^2)$ 8=7465
 H, Balmer- α line, by electron impact, cross section and polarization meas. 8=20979

Atoms—contd

excitation—contd

- H*, highly excited, production by H_2^+ and H_3^+ passing through Ne, H, Na and Mg 8=21082
 H, by scattering, correlation method analysis 8=7441
 H-C collisions, levels 8=1193
 H-O collisions, levels 8=1193
 H, 2^1 -pole oscillator strength sum rules 8=7380
 He, adiabatic exchange approx. calc. 8=7434
 He aligned depolarization of resonance fluorescence when in Zeeman rf field. 8=20982
 He, by electron impact, determ. of excited state lifetimes 8=7429
 He, by 100-400 eV electrons, cross sections rel. to Born approx. 8=16218
 He, 4^1P to $4F$, evidence by population studies of $4F$ state 8=12054
 He-like, Hartree-Fock equations for $1s2p$, 3p and 1P states, perturbation treatment 8=20921
 He, in hollow cathode, balance eqns for 2^3S , and 2^3P levels 8=20981
 He, impact of H^+ , D^+ , H_2^+ and H_3^+ 8=16217
 He ionization by e impact, cross-section calc. 8=12084
 He, metastable, Penning ionization of gases 8=21258
 He, metastable states, dipole props. 8=20980
 He, from metastable 2^3S He, cross-section 8=4055
 He, by fast protons and H atoms 8=7433
 He, n^1S , n^1P , n^1D states by 0.15-1 MeV p bombard. 8=7384
 He, para- and ortho-, ratios of cross sections 8=7431
 He⁺, $2s$ state, close-coupling calc. of electron-impact 8=4091
 He⁺, $2s$ state, electron-impact expt. 8=4092
 He, 2^1P and 2^3P states by e scatt. 8=7446
 He, 3^1P - 2^1P transition, polarization 8=7432
 He, 3^1P , 4^3S and 4^1D levels, lifetime obs., using positive ion Van de Graaff accelerator 8=16183
 He, by p, d, 0.15-1.0 MeV impact, obs. compared with theory 8=7385
 He, 1S , 1D , 1P states by d bombard. 8=7384
 He², electronic orientation, from previously oriented nuclei 8=16226
 He, Rydberg state by e collision 8=20970
 He², transverse optical pumping and detection of modulation resons. 8=16195
 He-like atoms, 1^1S state conservation prob. in β -decay 8=7426
 He⁺-He collisions, with e capture probability calc. 8=7463
 He(n^1p) \rightarrow He(n^1D), validity of Wigner spin rule 8=21015
 He-Kr mixture in d. c. discharge 8=4093
 He-Ne mixture optical pumping by He-Ne laser, Hanle and saturation effects obs. 8=20983
 Hg, 6^3P_2 level, relaxation anisotropy 8=7609
 Hg, 6^3P_1 state depopulation, effect of N_2 and CO 8=7405
 Hg, 7^3S_1 - 6^3P_1 - 6^1S_0 cascade correlation, and 6^3P_1 coherence time 8=4078
 Hg(6^3P_1), energy transfer with gaseous paraffins 8=9688
 Hg, 3^1P_2 metastable state, coherent, by e impact, rel. to res. absorpt. 8=4094
 Hg*(6^3P_1), quenching by H_2 , phase-space theory 8=14436
 Hg, $6s6d$ levels, lifetime, magnetic meas. 8=4095
 Hg, lifetime of 3^1P_1 state, meas. by Hanle effect 8=1181
 Hg¹⁹⁹ and Hg²⁰¹ isotopes, 6^1P_1 level structures 8=7404
 I($5^2P_{1/2}$), time resolved emission obs. 8=4079
 In¹¹³, L and K Auger spectra from Sn¹¹³ capture decay 8=4099
 K, $4^2P_{1/2}$, collisional mixing with inert gases 8=12064
 Kr, by electron-atom collisions, for 3^3 spectral lines 8=4096
 Kr, excitation cross sections for some of the states of $4p^4$ - $5p$ configuration 8=20973
 Li, adiabatic exchange approx. calc. 8=7434
 Li ground-state levels by slow electrons, cross sections obs. 8=7435
 Li to Kr, by β decay, probabilities calc. 8=4090
 Mg, electron excited, Rydberg states 8=20941
 Mg, oscillator strengths, semiempirical calc. 8=20959
 Na, depolarization cross-section by collision with inert gases 8=7436
 Na, by electrons, cascade transitions 8=20962
 Na-like, autoionization, structure of curves 8=21256
 Na-Na collisions, energy transfer in sensitized fluorescence 8=16213
 Na, resonance fluorescence quenching in inert gases 8=1185
 Ne, excitation cross sections for some of the states of $2p^4$ - $3p$ configuration 8=20973
 Ne, multiply ionized, mean lines of some excited levels 8=4097
 Ne, population transfer and alignment by spontaneous emission 8=20985
 Ne, probability of $3s_2$ - $2p_4$ transition in Ne 8=3317
 Ne, Rydberg state by e collision 8=20970
 Ne, $2S_{1/2}$, $2P_{1/2}$ and $3P_{1/2}$, Landé factors 8=1186
 Ne, X-ray $\kappa\alpha$ satellites (non-diag. lines) intensity 8=1170
 O, multiply ionized, mean lines of some excited levels 8=4097
 O, on e-collisions and excitation of extreme u.v. radiation 8=7722

 Ar, shock compression, Thomas-Fermi-Dirac theory 8=16994
 Ar, (3p⁴s)³P₁ state, lifetime obs., e excitation method 8=1164
 Ar II, transition probabilities 8=1163
 Au III, transition strengths between 5d⁶6s and 5d⁶6p configurations 8=4071
 B, ²P ground state, electronic structure 8=20950
 Ba, g_J-values of lowest ³P₁ states 8=7424
 Be isoelectronic sequence, diagram, calc. 8=12058
 Be⁺, pseudopotentials 8=7409
 C I electrostatic interaction integrals using screened hydrogenic orbits calc. 8=7394
 C I and II, wave functions and oscillator strengths, from superposition of configs. 8=4073
 C, term splitting for p² ground-state configuration 8=20951
 Ca⁺, ²F and ²G levels, polarization by outer electron 8=7413
 Ca⁺, pseudopotentials 8=7409
 Ca²⁺, dipole polarizability from spectra 8=7414
 Ca II, Hartree-Fock multiplet strengths 8=4081
 Cm³⁺, low-lying levels 8=4074
 Co²⁺, energy levels in MgO 8=23050
 Cs, one-electron energy levels for extended pot. 8=1167
 Cs-inert gas, collisional J reorientation and e spin polarization from D₂ pumping 8=1194
 Cs 6p and Rb 5p doublets, depolarization 8=7471
 Cs¹³⁴, h.f.s. of 8²P_{3/2} state 8=7400
 CSCP and e partition energy in hydrogenic atom 8=1157
 Cu⁸⁺, configuration interactions, polarization corrections from quadrupole moment determ. 8=12061
 Cu I, lifetime of 3d⁹4s4p⁴P_{3/2} state 8=12062
 Cu, pseudopotentials 8=7409
 Dy³⁺, energy levels in Dy₂O₃ cryst. 8=18522
 Er(III), in YPO₄ and YVO₄, angular overlap treatment 8=4075
 Eu³⁺ in garnet struct., hypersensitivity of ⁵D₀-⁷F₂ transition 8=18602
 Gd I, g values of levels from Zeeman effect 8=4077
 Gd²⁺, energy levels in LaCl₃ 8=16975
 Gd³⁺ ion, according to reflection spectrum of Gd₂O₃ and GdF₃ powders 8=2421
 e-H compound states, 5 parameter wave function for lowest two 8=20997
 H, and Coulomb potential energy of two charges 8=7378
 H, Green function 8=4035
 H⁺, hyperpolarizability, computer calc. 8=20942
 H, improved Gaussian wave functions 8=21080
 H, interaction with radiation field, Coulomb-Green's function calc. 8=12047
 H-like, hypervirial operators 8=3408
 H, ²-pole oscillator strength sum rules 8=7380
 He, atomic form factor and incoherent-scatt. function 8=12053
 He, correlation factors, effective range 8=20938
 He e excitation of triplet states, relativistic effects 8=7445
 He, ground state dynamic polarizability, variational calc. 8=20945
 He, ground state, variational calc. of expected values 8=7386
 He, hyperpolarizability, computer calc. 8=20942
 He isoelectronic sequence shielding factors 8=16199
 He isoelectronic sequence, ¹S states eigenvalues calc. 8=7391
 He isoelectronic sequence, ³S states eigenvalues and wave functions calc. 8=7392
 He isoelectronic sequence, 1snp¹P and ³P states, wave functions calc. 8=7390
 He isoelectronic series, ground-state wavefunctions and energies 8=4067
 He-like, Hartree-Fock equations for 1s2p, ³P and ¹P states, perturbation treatment 8=20921
 He-like, ¹S state, Hartree-Fock equations 8=7389
 He, lower bounds to eigenvalues 8=11253
 He params. from wave functions with pole-eliminating correl. factors 8=16197

- u. s. attenuation, amplitude of giant quantum oscs. 8=1848
- valence-band maximum location from recombination and phonon dispersion expts. 8=13660
- Ag¹¹⁰ diffusion, dependence on crystallographic direction 8=13407

Bismuth—contd

- Bi, phonon dragging obs. using thermal e. m. f. and
Nernst effect 8=22435
Bi I, $^2D_{3/2}$ and $^2P_{1/2}$ levels hyperfine structure, $6p^3$
ground configuration 8=4072
Bi $^{3+}$ -activated phosphors 8=23046
Bi $^{3+}$ in $K_2B_2O_4$ glass, γ -irrad., induced absorption
bands 8=5639
Bi $_2$ and Bi $_4$, electron-impact fragmentation and dissoc.
energies 8=4239
BiMn $_2O_6$, mag. structure and ordering 8=22844
Bi:Sb, diamagnetic susceptibility max. and depend. on
Sb content 8=22745
Bi-Sb, transformation of semiconductor into metal, obs.
using magnetoresistance 8=22581
in Si, photoexcitation lines, anomalous broadening rel. to
optical phonons, obs. 8=5601
Sn and Te doped, solid and liq. phase boundary, Peltier
coeff. 8=9238
Sn-doped, galvanomag. effects at low fields at 77°K
rel. to doping 8=2186

Bismuth compounds

- electron structure from quantum oscillatory phenomena,
1.2-4.2°K 8=13659
Ba-Bi titanate (IV), ceramic, Fe $^{3+}$ doped, model and
props. 8=5236
Bi halide complex salts, cryst. struct. 8=8574
Bi $_{1-0.5}Ca_{0.5}Fe_{0.75}V_{1.25}O_{12}$, magnetoelastic inter-
action 8=22850
BiCl, dissociation energy 8=1309
BiCl, A'-X system rotational analysis 8=7504
Bi $_{1-x}Cu_xMnO_3$ solid solns., mag. props. in pulsed mag.
field of 160 kOe 8=18330
BiFeO $_3$, atomic and mag. structure from time-of-flight
n-diff. 8=17346
BiFeO $_3$ with Pb(Ti, Zr)O $_3$, solid solns., dielectric props. at
high temp. and freq. 8=13885
Bi $_2GeO_{20}$, ferroelec., cryst. struct. 8=13254
Bi $_2GeO_{20}$, photo-induced changes in optical
polarization 8=2404
Bi-Hg alloy, angular correlation of positron
annihilation 8=8974
BiI $_3$ refl. spectrum doublet structure rel. to spin-orbit
interaction, 1-5 eV 8=9509
BiO, absorption bands rotational structure 8=12171
BiO molecular absorption bands rotational
structure 8=12171
BiO molecules, magnetic interactions in Hund's
case 8=12172
Bi-O system, new tetragonal phase, crystal
structure 8=17347
Bi $_2O_3$, electrical properties and defect structure in
range 175-250°C 8=8996
Bi $_2O_3$ -WO $_3$ and Bi $_2O_3$ -MoO $_3$ system, crystal structure and
comp. of phases 8=17047
BiOCl, variation of electron diff. intensities 8=1784
Bi-Sb alloys, electron energy spectrum meas. 8=5104
Bi $_2S_3$, evaporated film microstructure 8=17126
Bi-Sb alloy, Shubnikov-de Haas effect vanishing under
pressure 8=22514
Bi-Sb films, 2-layer, struct. defects by Moiré
method 8=22186
Bi $_{1-x}Sb_x$, ($0 < x \leq 0.15$), galvanomag. props. at
77°K 8=22518
Bi-Se layers, vitreous, as near-infrared photo-
detectors 8=22704
Bi-Se vitreous system as semiconductor 8=22579
Bi $_2Se_3$ -Bi $_2Te_3$, thermoelect. props. of cryst. and pressed
powder 8=18212
Bi-Sn eutectic alloys, of type 304 stainless steel,
dissolution kinetics, convective-diffusion study 8=4558
Bi-Sn, superconductivity transition temp. under
pressure 8=2156
BiTe, electrotransport of Ag, Au and Cu, 150 and 250 A/cm 2 ,
 $\leq 400^\circ\text{C}$ 8=17564
Bi $_2Te_3$ alloys sintered, orientation 8=21922
Bi $_2Te_3$, electronic band structure calc. 8=17881
n-Bi $_2Te_3$, thermal diffusivity variations between -200
and +50°C 8=4941
Bi $_2Te_3$, diffusion of Cu, etching technique
investigation 8=1914
Bi $_2Te_3$ -Bi $_2Se_3$ alloys, n-type, thermoelectric props. 8=9237
BiTe:I, I electrotransport, obs. 8=17564
Bi $_2Te_3$ -PbTe alloys, thermoelect. props. 8=22680
Bi $_2Te_3$ -In $_2Te_3$, thermal and microscopic analysis 8=21828
Bi $_2(Te, Se)_3$ system, reflectivity, rel. to effective mass
of conduction electrons 8=2096
Bi-Tl-Te systems, phase equilibrium in Te-rich
regions 8=4703
SnTe-Bi $_2Te_3$ alloy system, thermoelectric props. and
phase relations 8=4716

Bitter patterns. See Magnetization state/domains.**Bitumen.** See Materials.**Block walls.** See Ferromagnetism; Magnetization state/domains.**Blood**

- aortic flow meas., isolation of myocardial
stimulus 8=19931
catalase, crystal structure 8=8575

Blood—contd

- γ -scanning, heart, separation of blood flow and
muscle 8=5981

Boiling

- See also Distillation.
di-ethyl ether, heat transfer in nucleate boiling 8=16948
forced liquid flows, critical heat flux 8=4656
Freon 113 horiz. strip, transition and film boiling, heat flux
and surface temp. fluctuations 8=12986
heat transfer data at low heat flux 8=21773
methane, h. p. heat transfer apparatus 8=16944
nucleate, delay time of bubbles from artificial sites rel. to
surface orientation 8=12987
nucleate pool boiling, bubble freqs. and departure vols., at
subatmos. press. 8=12984
nucleation, third factor 8=12991
pool boiling, effect of subcooling on wall
superheat 8=21772
propyl alcohol, subcooled in tube, heat-transfer
rate 8=21657
simulated, heat transfer coeff. on submerged heating surface
rel. to bubbles 8=16945
in two-phase flow system, transient behaviour of vapour
volumetric conc. 8=12988
vapour pressure, improved boilers for ebulliometric
determ. 8=16952
water, forced convection, flow patterns and burnout 8=4657
water, saturated pool boiling heat transfer, effect of
interfacial vibration 8=12985
water, subcooled in tube, heat-transfer rate 8=21657
water, surface, in vertical tube, local fluid friction 8=12989
N $_2$, h. p. heat transfer apparatus 8=16944

Boiling point

- He, thermodynamic temp. scale 8=19689

Bolometers

- aerial measurements of sea surface temperature in the
infra-red 8=308
development trends, review 8=15098
metal, impedance and noise 8=224
semiconductor, for infrared 8=226
semiconducting thermosonde, use for investigation of
Umov-Poynting's flux distribution in waveguides 8=19880
thin strip, theory 8=19627
p-Ge, using Hall effect 8=6205
p-InSb, using Hall effect 8=6205

Boltzmann equation. See Transport processes.**Bonding of materials.** See Adhesion.**Bonds**

- See also Molecules.
alkali metals, ionic crystals, cohesion with noble gas
atoms 8=8193
n-alkanes, anisotropies of polarizability 8=12248
alloys, atomic interactions 8=4666
ammonium acetate, H bond studies 8=8503
angle, and correl. energy 8=16252
aromatics conjugated π -bonds rel. to absorpt. spectra
obs. 8=4178
atoms X-ray emission spectra distortion 8=16191
aziridines, mag. anisotropy, variation with H bonding,
n. m. r. obs. 8=16895
bent XY $_2$ molecules, bond energy-force constant
relationship 8=7493
biphenyl, phosphoresc. state 8=12288
butatriene, parallel and perpendicular components of
polarizability calc. 8=12264
carbides, stoichiometry and bonding rel. to carbon κ and
metal emission bands 8=2406
charge-transfer complexes, Cl 35 n.q.r. 8=14158
chemical, electronic repulsion theory 8=1229
decane, C-C and C-H bond electrons momentum distrib.
rel. to β^+ annihilation 8=16324
diamond, bending and stretching model for photoelastic
constants 8=8830
diamond, covalent, X-ray diff. meas. 8=4869
diamond-type crystals, bending and stretching model for
photoelastic constants 8=8830
diamond, valence force potentials for calculating cryst.
vibrs., especially rel. to covalent bonding 8=16968
diatomic crystals, force consts. and cohesive
energies 8=8192
diatomic hydrides, binding and molec. charge
distrib. 8=7496
dimethyl amides 8=21150
diphenyls, 4-monosubstituted, conjugated π -bonds rel.
to absorpt. spectra, obs. 8=4212
1,4-distyrylbenzenes, 4-monosubstituted, conjugated
 π -bonds rel. to absorpt. spectra, obs. 8=4212
ethanol, strong intermolec. H bonding at room temp. 8=1523
glasses, nature, det. by spectral char. of Mn 8=8194
halogens, rel. to electron density and space groups 8=17328
hexane, C-C and C-H bond electrons momentum distrib.
rel. to β^+ annihilation 8=16324
s-hybrid charact. of bonding orbitals 8=16251
hydrocarbon molecules, C 13 -H coupling 8=7510
hydrogen bond stretching vibr. in phenol and substituted
phenols 8=4211
intermetallic cpds., length dependence on hybrid character
of bond orbitals 8=13004
ion removal from square lattices 8=21791

Bonds—contd

lattice energies of heavy ionic crystals 8=21794
length corrections using 'riding' model 8=16966
lysozyme, bent H bonding 8=10447
malonic acids, intramolec. H-bonding 8=16894
metal-metal, in coordination complexes 8=8594
metals and alloys, electronic, rel. to diffusivity in metals 8=17559
metals and alloys, using pseudo-atom phase shift model 8=8910
metals and solid solns., cohesive and volume props., ab initio calc. 8=4665
methanol, strong intermolec. H bonding at room temp. 8=1523
methylacetylene, methyl-triple bond interact. MO calc. anal. 8=1291
mixed cryst., impurity-host coupling rel. to intermol. pot. energy 8=17865
molecular complexes exhibiting polarization bonding 8=8585
molecular complexes, quantum theory 8=16249
molecules, π electron, MO's calc. 8=21049
myoglobin, bent H bonding 8=10447
oxides of metals, X-ray spectroscopic investigation 8=9499
paraffins, e irradi., dissoc. probability for specific bond, calc. 8=4206
pentamethylenetetrazole-ICl complex, ligand struct. 8=17453
 π electron systems and mol. packing in crystals 8=13031
piperidinium picrates, stability of cation-oxygen ligand complexes (ligands=triphenylphosphine, tetrahydrofuran) in chlorobenzene, by elec. cond. meas. 8=16338
polarizabilities, effect of internal field on additivity 8=4132
polymethylacrylate and copolymers solns. networks rel. to rheological props., obs. 8=21552
polyphenoxyacetylene, substituents in conjugated bonds, effects 8=4266
polyphenylacetylene, substituents in conjugated bonds, effects 8=4266
quinaldic acid, H-bonding from dimer formation studies at low temp. 8=1825
 σ and π , effects in coordination of CN group 8=12181
7, 7, 8, 8-tetracyanoquinodimethane-anthracene complex structure rel. to polarization bonding 8=17460
in silicate melts, rearrangement in Newtonian flow 8=21628
sydnone ring 8=12299
terphenyls, 4-monosubstituted, conjugated π -bonds rel. to absorpt. spectra, obs. 8=4212
transition metal complexes, ligand exchange and e.s.r. linewidths 8=4616
transition metal cpds. rel. to thermodynamic stability, effective bonds calc. 8=4669
transition metals, electronic 8=8976
transition metals, 5th and 6th periods, valency structure 8=16967
transition-metal fluorides, MO calc. of 10 Dq 8=4667
trans-stilbenes, 4-monosubstituted, conjugated π -bonds rel. to absorpt. spectra, obs. 8=4212
triphenyl boron and phenyl boron halides, boron-phenyl bond strength from thermodynamic props. 8=1863
2, 2, 2-trifluoroethanol H bonding acid, spectroscopic study 8=16863
in X-ray microanalysis, bonds prod. wavelength shifts compensation 8=14481
Al-Mn 1.04% dilute alloy, solute atom-vacancy binding energy 8=8693
Al-O tetrahedral distances in aluminosilicate framework structures 8=21795
Ar, solidified, vapour pressure, binding energy and mean vibration freq. 8=16960
B₂O, planar cpds., B-O bond lengths, mol.-orbital treatment 8=16268
BO₂, vibr. spectrum in alkali halides obs. 8=22946
C-F, positive hyperfine interaction 8=16358
C-H bond strengths, student expt. 8=21109
(CH₃)₃CCl, rupture in γ irradi. at 77°K 8=12349
(CH₃)₂CCl₂, rupture in γ irradi. at 77°K 8=12349
(CH₃)₃SiCl, rupture in γ irradi. at 77°K 8=12349
Co(III) ethylenediamine, secondary coordination shell 8=12319
C-O, bond strength in NCO 8=16369
Eu complex, ligand exchange kinetics 8=23085
Ge, bending and stretching model for photoelastic constants 8=8830
Ge-O-Ge in germanium fluoro- and hydroxyfluoro-compounds and thermal polymerization products, i.r. vibr. freqs. 8=4170
H, between phenol and N, N-dimethylacetamide, solvent effects 8=1571
H-bonded complexes, proton transfer meas. by F n.m.r. 8=12157
H bonding energies in liqs. and dispersion interact. energy, estimation 8=12779
H, in carboxylic acids, i.r. spectra 8=7571
H, in crystals, rel. to elec. cond. 8=13704
H, effect of bond strength on stretching vibr. freq. 8=21141
H, ht. of formation in chloroform-triethylamine system 8=18649

Bonds—contd

H, intramolec. in ethylenediamines 8=1283
H, intramolec. in o-phenylenediamine 8=1295
H, isotope effect on vapour press. 8=4662
H, nature of, and water structure 8=4529
H, in salicylaldehyde soln., n.m.r. obs. 8=16883
H, stretching force const. 8=18532
H, in succinimide-dimethyl sulphoxide 8=12334
H, two approaches to heats of formation 8=12156
H₂⁺, binding energies 8=12194
H₂, intramol. bridging, pot. 8=7497
HCl.2H₂O, H bonding and crystal structure 8=8504
HCl.3H₂O, H bonding and crystal structure 8=8505
HCo(CO)₄, metal-H distance, anal. from n.m.r. with quadrupole coupling 8=5559
HMn(CO)₅, metal-H distance, anal. from n.m.r. with quadrupole coupling 8=5559
H₂O, H bonds and liquid structure from thermodynamic functions, n. scatt. meas. 8=1525
InAsTe, chemical structure analysis 8=1760
K-Ar, interatomic potential, χ^2 minimum method 8=12205
K-F, lattice energy at 0°K and Debye temp. calc. from elastic constants meas. 8=2056
Kr, solidified, vapour pressure, binding energy and mean vibration freq. 8=16960
MnSe, K absorption spectra rel. to chemical bonding 8=14242
Na₂Tl, Tl tetrahedra, model 8=8536
Nb-Mo alloys, atomic bond strength, Debye temp., Young's modulus 8=1626
Nb-Ta alloys, atomic bond strength, Debye temp., Young's modulus 8=1626
Nb-Ti alloys, atomic bond strength, Debye temp., Young's modulus 8=1626
Nb-V alloys, atomic bond strength, Debye temp., Young's modulus 8=1626
Nb-W alloys, atomic bond strength, Debye temp., Young's modulus 8=1626
Ni complex, bis-salicylaloximate-nickel, bond lengths 8=8549
NO, hybridization of O atom effect on terminal atom position determ. by X-rays 8=1261
O-methyl O-(2, 4, 5-trichlorophenyl)N-alkylphosphoramidates, H bonds in soln., i.r. spectra obs. 8=7591
OH-stretching, vibration in solid alcohols, band-width 8=8228
P, covalent, mag. rot. and partial ionic charact. 8=21098
S...H-N in thiourea 8=13339
Si, bending and stretching model for photoelastic constants 8=8830
Si, covalent, X-ray diffr. meas. 8=4869
Si-Fe alloys, rel. to elec. resist. at 800-1700°C 8=9017
Si-O in silicates, rel. to haradaite, SrVSi₂O₇, crystal structure 8=17416
Si-O tetrahedral distances in aluminosilicate framework structures 8=21795
S-N cpds., bond stretching freqs. 8=1299
Sn with Co, Mn, Mo and Re in organo-Sn cpds., Mössbauer obs. 8=4668
Sn-O-Sn in tin fluoro- and hydroxyfluoro-compounds and thermal polymerization products, i.r. vibr. freqs. 8=4170
Sn(O, S, Se or Te) cpds. rel. to chem. shifts of K_α X-ray line 8=9558
Ti-I, in tetraiodothallates 8=18477
Ti-Tl, rel. to Na₂Tl crystal structure 8=17399
[V(CN)₆]³⁻→⁴⁻CN⁻, central ion-ligand charact. 8=23088
VN, electronic state from X-ray diffr. intensity meas. 8=22414
Xe, solidified, vapour pressure, binding energy and mean vibration freq. 8=16960
Bone. See Materials.

 micro, motion due to cavitating liquid under ultrasonic field 8=21664
 in nucleate boiling, delay time from artificial sites rel. to surface orientation 8=12987
 production of uniform, small bubbles, vibrating capillary 8=4516
 production, use as cavitation nuclei 8=12766
 rising velocities of large bubbles 8=12770
 sphere pulsating in fluid, theory 8=21585
 spherical cap, rising in liquids, velocities and shapes 8=12768
 in streamers associated with acoustic cavitation annihilation obs. 8=1512
 on submerged heating surface, in simulated boiling, heat transfer coeff. 8=16945
 vapour bubble-growth calc., importance of non-equilib. region at bubble wall 8=21767
 wakes behind two-dimens. air bubbles 8=12767
 water, in standing sound wave, forces 8=12855
 water, uniformly distributed, and parametric sound amplification 8=12864

Bubbles—contd

- water vapour, in solid Ag, formation and growth 8=22307
 Al alloy, surface formation during fatigue, rel. to humidity 8=4729
 CO_2 , fixed position in flowing water, interphase mass transfer at high Reynolds numbers 8=12764
 CO_2 in water, volume strain and laminar flow 8=21591
 H_2 in electrolytic dissoc., size rel. to added solutes 8=23149
 He , in Al-Li alloys, neutron irradiation 8=8456
 N in water, decay constants and pulsation frequencies determ. 8=21588
 N_2O in water, volume strain and laminar flow 8=21591
 Zn liquid, vibration rel. cavitation intensity 8=4521

Burgers vector. See Crystal imperfections/dislocations.

CPT (charge, parity, time) conservation. See Field theory, quantum/interactions; Parity.

Cadmium

- addition to Zn, effect on dislocation density and substructure 8=17295
 atom, Stark effect obs. 8=20966
 atoms $5^2\text{P}_{0,1,2}$ levels lifetimes and transitions, obs. 8=1183
 brittle rupture during contact melting with multi-component eutectics 8=8832
 crystal interband absorpt., 82° and 295°K 8=18545
 crystal, vapour-grown, patterns from screw dislocations 8=4803
 diffusion in Al 8=8671
 dislocations and slip planes in single crystals 8=8725
 electric cond., isotopic composition effect 8=13712
 electromigration of small amount in liq. Bi 8=12815
 etch figures 8=1726
 Fermi surface and band structure, calc. 8=2111
 freezing pt., as fixed pt. 8=244
 galvanomagnetic props., evidence for anisotropic electron-phonon scattering probabilities 8=8901
 gravimetric determ., appl. of tetrazoline-5-thiones 8=14188
 ions, effect on photographic process 8=533
 Knight shift anisotropy, reversal at low temps. 8=5552
 laser c.w. oscillation at 4416 Å obs. 8=6460
 liquid, optical consts and dielec. const $\epsilon_1 + i\epsilon_2$ 8=12877
 molten, ultrasonic velocity 8=12867
 moving boundaries, solute profile 8=8468
 ratio in $\text{U-H}_2\text{O}$ subcritical assembly, meas. by scintillation detector 8=7314
 resistance below 3.7°K, temp. variation meas. with supercond. bolometer 8=22573
 resonance fluorescence, modulation effects and lifetime meas. 8=9609
 sheathing of H_2 radiation counter 8=852
 steel plating, H_2 adsorption 8=17163
 texture study by magnetores. and Hall effect 8=8454
 vapour impinging on W, film nucleation in two phases 8=8305
 whisker growth from vapour on Cd substrate, and orientation 8=1747
 Cd I , $5^2\text{P}_{0,1,2}$ electron excitation, effective cross section 8=20993
 Cd^+ ions, 100-500 eV energies, sputtering coeffs. of metal carbides 8=8762
 Cd^+ sputtering of metal nitrides and borides by Cd^+ ions, coeff. determ. 8=17705
 Cd_2^+ , trapped in inert gas matrices, spectra 8=8227
 Cd^{2+} , diffusion in NaCl single cryst. 8=4956
 Cd^{3+} -containing phases, e.p.r. rel. to molecular and structural props. 8=9436
 Cd-Bi solder joints, thermal transport near 0.1°K 8=5203
 Cd^{109} , atmospheric fallout in USSR from Jan. 1964 to June 1966 8=23302
 Cd^{109} and Cd^{111} n.m.r. frequency ratio between 8=16232
 Cd^{109} and Cd^{111} oriented by optical pumping, relaxation on silica walls 8=16233
 K -absorption spectrum, variations rel. to beam direction 8=2408

Cadmium compounds

- alloys, magnetic properties 8=22755
 EDTA chelates of Cd^{2+} , comp. study by ultrasonic vel. meas. 8=23170
 oxide, controlled resistors 8=18034
 Cd(II) , sulphosalicylic acid chelates, of, u.s. velocity and adiabatic compressibility lowering 8=8633
 Cd_3As_2 , Righi-Leduc effect meas. 8=9289
 Cd-Bi eutectic solder, superconductivity 8=2161
 $\text{CdCl}_2 \cdot \text{Mn}^{2+}$, e.s.r. study 8=22902
 CdCO_3 , crystal growth, e.p.r. study rel. to antiferromagnetism 8=18372
 $\text{CdCl}_2 \cdot \text{Ag}$, γ -irradiated, e.p.r. and optical spectra 8=9419
 $\text{CdCl}_2 \cdot \text{Cu}^{2+}$ layer, e.s.r., exchange coupled pairs spectrum 8=18416
 $\text{CdCl}_2(\text{ZnCl}_2) \cdot \text{H}_2\text{O}$, crystn. interphase equil. 8=21933
 $\text{Cd}(\text{ClO}_4)_2 \cdot \text{HClO}_4 \cdot \text{H}_2\text{O}$ saturated solution, thermodynamics 8=12847
 Cd-CdCl_2 soln., radiometric study 8=21615
 $(1-X)\text{CdCr}_2\text{S}_4 \cdot \text{XCdCr}_2\text{Se}_4$ system, mag. and crystallographic props. 8=14006
 CdCr_2Se_4 , magnetostriction constants, resonance linewidth, anisotropy constant and Curie temp. 8=2316

Cadmium compounds—contd

 CdF_2 , carrier mobility 8=18029
 CdF_2 crystal activated by rare earth ions, semiconduction and electroluminescence 8=5658
 CdF_2 single crystals, growth and phys. props. 8=8409
 CdGeAs_2 , semiconducting, high-temp. modifications 8=21842
 $\text{Cd}_{0.23}\text{Hg}_{0.77}\text{Te}$ alloy, n-type, determ. of lifetime and recombination mechanism 8=5238
 $\text{CdH}_2\text{IO}_6 \cdot 3\text{H}_2\text{O}$, crystal structure 8=8558
 CdI band spectrum, 3586 to 3495 Å C-system representation by vibr. quantum eqn. 8=21070
 CdI films, vac.-deposited, structure 8=8317
 CdI_2 , absorpt. spectra and luminesc. 8=5660
 CdI_2 , thermoluminescence curves, use of computer anal. 8=5659
 CdI_2 , two new polytypes crystal structure 8=1786
 $\text{CdI}_2(\text{Eu})$, absorpt. spectra and luminesc. 8=5660
 Cd-In alloys, liq., abs. thermoelec. power 8=12913
 $\text{CdI}_2(\text{Pb})$ phosphoresc. and fluoresc. excit., e transitions 8=9605
 Cd-Mn alloys, low temp. electrical resistivity, influence of magnetic ordering 8=2136
 CdO , u.v. reflection, influence of lattice vibrations 8=9514
 $\text{Cd}_2\text{P}_2 \cdot \text{Cd}_3\text{As}_4$ solid soln. system, semicond. 8=22582
 CdSe , absorption and reflection spectra in i.r., low temps. 8=23026
 $\text{Cd}[\text{SC}(\text{NH}_2)_2]_2 \cdot \text{SO}_4 \cdot 2\text{H}_2\text{O}$, crystal structure 8=8513
 $\text{Cd}[\text{SC}(\text{NH}_2)_2]_2 \cdot \text{SO}_4 \cdot 2\text{H}_2\text{O}$, crystal structure 8=8514
 Cd-Sb molten alloys, free energy of mixing and elec. resistivity 8=12842
 CdSb , alloyed with Au, acceptor level depth 8=22456
 CdSb , growth, poly and monocrystalline, electrical and thermal properties, investigation 8=13698
 CdSb , thermoelec. eddy currents 8=5386
 CdSb , thermoelec. efficiency 8=2254
 CdSb_2O_7 ($x=1, 3; y=4, 6$), prep. and props. 8=14363
 CdSb , Te donor level energy position 8=9097
 CdSe , acoustoelectric effect in regime of continuous intense supersonic electron stream 8=8628
 CdSe , conductivity spectra dependence on light intensity over 0.55-0.75 μ 8=18226
 CdSe , control of photocond. props. 8=18231
 CdSe crystals, photoconductivity at high injection levels 8=18224
 CdSe , p-type, Hall effect measurement 8=5239
 CdSe luminescence, absorpt. and refl. spectra rel. to doping, heat treatment and deform., 4.2°K 8=9606
 CdSe , luminescent yield from radiative electron capture by sensitizing recombination centres 8=18598
 CdSe photoconductive layers, current saturation and negative resistance 8=18229
 CdSe , photoconductivity, microwave and d.c., spectral distribution 8=5400
 CdSe powder, surface investigation by e.p.r. method 8=8294
 CdSe , as target in vidicon 8=3215
 CdSe , splitting of exciton lines by uniaxial stress 8=14273
 CdSe , stoichiometric, preparation in thin film 8=17127
 Cd-Se system, phase equilibria 8=16955
 CdSe whiskers, photoinjected space-charge-limited currents 8=18230
 CdSe-CdS mixed crystals at 4.2°K, photoluminescence 8=5656
 CdSe:Mn , photoconductivity rel. to Mn deep donor level 8=2259
 CdSe(S) , band structure rel. to optical props. 8=8928
 CdSnAs_2 , absorption of polarized light 8=22966
 CdSnAs_2 , conduction band structure 8=8929
 n-CdSnAs_2 , magnetoresistance, influence of spin 8=2290
 CdSnAs_2 , n-type, magnetoresistance at 77° and 300°K, obs. 8=5241
 CdSnAs_2 , semiconducting, high-temp. modifications 8=21842
 Cd(S;Se) powder, cathodic luminescence 8=9604
 Cd(SSe) , sintered, photoconductivity decay, rel. to temp. 8=2262
 CdS-SiO_2 film system, heat-stimulated currents, and 'quenched' cond. 8=9096
 CdTe , absorption edge, imperfections effect 8=5603
 CdTe , far i.r. spectrum, 30 cm^{-1} to 4000 cm^{-1} 8=14207
 CdTe films, polymorphism from multiple refl. studies 8=1694
 CdTe , n-type, Gunn effect 8=5242
 CdTe , Gunn effect, rel. to current instabilities 8=5243
 CdTe , Gunn effect and impact ionization, influence of ionized impurity scatt. 8=22583
 CdTe , i.r. absorpt. spectrum 8=14208
 CdTe , metal vacancies formation energies rel. to Te-Te covalent bonding 8=17608
 n-CdTe , photoelectromag. effect 8=18225
 CdTe , pressed, far i.r. optical properties 8=18518
 CdTe solar cell, photovoltaic barrier form. by Pt sputtering 8=10856
 CdTe solar cells, spectral response and integrated array fabrication 8=10856

Cadmium compounds—contd

- CdTe solar cells, 28 V module and roll-up array 8=10857
 p-CdTe, thermostimulated currents and trap levels 8=2260
 CdTe thin film solar cell 8=19735
 CdTe, thin films, structure, obtained by coevaporation 8=4747
 CdTe, wedge-shaped films, photo-voltages rel. to incident angle of illum. 8=5398
 CdTe-Cu₂-Te heterojunction photoconverter 8=6276
 CdTe-HgTe, mass transfer by evaporation-diffusion 8=8673
 CdTe:Mn²⁺ e.p.r. and forbidden transitions 8=14119
 n-CdTe:In, free carrier absorpt. 8=22967
 CdTeS₂, semicond., crystal structure and elec. characts. 8=17354
 Cd₂V₂O₇, cryst. struct. 8=8512
 Cd-Zn solder alloys, high-strength, props. 8=5056
 Cd_{1-x}Zn_xAs₂, thermal and elec. cond. and thermoelec. power 8=5385
 Cd_{1-x}Zn_xS, mixed single crystals, optical, photoconductive and thermoelectric props. 8=18227

cadmium sulphide

- absorption, 2-photon, intermediate states lifetime meas. 8=14173
 acoustic waves, longit., amplification 8=8627
 acoustoelectric effect 3- and 4-phonon processes obs. 8=1850
 acoustoelectric light scanner 8=5309
 application, soleil i.r. compensator 8=15550
 capacitive changes in thin crystals under d.c. bias 8=9195
 cathodoluminescence, electron-probe meas. 8=1754
 cathodoluminescence temp. dependence 8=18597
 chemical sensibilization 8=22584
 crystal amplifier 8=5337
 crystals, bulk, closed system vapour growth from Cd and S 8=17228
 crystal growth from liq. Cd soln. 8=17229
 crystal, single, polishing by phosphoric acid 8=9705
 dislocations origin in vapour growth, obs. 8=8726
 double injection, current kinetics 8=22692
 edge emission, peak shift with excitation intensity 8=2478
 elastic constants between 4.2-300°K, Debye temp. calc. at 0°K 8=13542
 electrical conductivity in strong electric field 8=18030
 electroabsorption, exciton effects 8=22965
 electroacoustic transducer, wideband, using diffusion layer 8=19557
 electroluminescence, d.c. excit. mechanism obs. 8=9608
 electron emission, secondary, and cathodoluminesc., e microprobe obs. 8=14317
 electrooptical effect, meas. at 10.6 μ 8=18515
 etched in KOH(NaOH) soln., light sensitization investigation 8=14294
 exciton stimulated emission for excitation by 50 keV electrons 8=14311
 excitons lines, emission intensity variation rel. to excitation intensity, 4.2°K 8=22964
 exciton lines splitting by uniaxial stress 8=14273
 film on dielectric, ultrasonic Love wave amplification 8=4921
 films, structure and phase composition by electron diffr. investigations 8=4746
 first and second current saturation, build-up time 8=2188
 fluorescence, green-edge, 4.2°K 8=2479
 growth, improved furnace, rel. to fluorescence 8=1739
 hexagonal, band structure calc. by orthogonalized-plane-wave analysis 8=2097
 laser induced refractive index inhomogeneities and absorption saturation effects 8=9515
 laser transition at 90°K using two-photon excitation 8=11091
 lattice Raman scattering theory 8=2397
 layers on Ge, elastic surface wave behaviour 8=8850
 longitudinal optical phonon-plasmon coupling 8=14206
 luminescence, absorpt. and refl. spectra rel. to doping, heat treatment and deform., 4.2°K 8=9606
 luminescence centres nature, heat treatment and impurity effects obs. 8=8741
 luminescence excit. by high photon densities, 4.2 and 77°K 8=9607
 luminescence induced by double photon absorpt. 8=14313
 luminescence, i.r., and thermally stimulated currents 8=5661
 luminescence of photochemically sensitized and unsensitized 8=9603
 luminescence in two-photon excitation case 8=18599
 optical longitudinal phonon-plasmon coupling rel. to reflectivity and wavelength 8=14206
 paramagnetic centres on surface 8=18415
 phase structure recovery to room press. at 77°K 8=1671
 photoconducting, field distrib. and current saturation 8=9250
 photoconducting, optical quenching spectrum temp. dependence 8=9249
 photoconduction induced by double photon absorpt. 8=14313
 photoconductive, h.f. current oscillations on multiple band illumination 8=5397

Cadmium compounds—contd**cadmium sulphide—contd**

- photoconductivity at low temps. 8=9248
 photoconductivity, impurity, stationary lux-ampere characts. 8=22693
 photoconductivity, microwave and d.c., spectral distribution 8=5400
 photoconductivity, ruby laser excited 8=22690
 photoelements, sintered, with p-n-heterotransitions 8=22710
 photoconductivity, thermally stimulated, influence of electric field 8=9239
 photo Hall mobility at high electric field 8=2187
 photoluminescence efficiency, and photocond. response 8=14312
 photoluminescence spectrum, emission bands rel. to N₂ impurities 8=5657
 photosensitive layers, field effect freq. and temp. dependence 8=18228
 photothermoelec. effects 8=22681
 piezoelectric polarons, cyclotron resonance theory 8=9220
 piezoelectric semicond., elec. field distrib. determ. by optical probe 8=18033
 polycrystalline bulk crystals and thin films, orientation inversion 8=8374
 Rayleigh wave amplification at 30 MHz 8=13350
 recombination centres, sensitizing, radiative capture yield of electrons 8=9602
 refractive index, from interference max. on transmission curve 8=2409
 single crystal, photo-Hall mobility and elec. field 8=17860
 solar cell deployable rigid-frame array, performance obs. 8=10845
 solar cells environmental thermal cycling test obs. 8=10848
 solar cell, thin film 8=19735
 solar cells, thin film on Cu and plastic, characts. and stability 8=10855
 solar film cell mechanism obs. 8=10847
 structure, rel. to shift of exciton lines 8=13673
 surface and volume conductance, kinetics comparison 8=18032
 transducers for coherent optical systems 8=15072
 trapping spectrum, effects of optical radiations and water vapour 8=5396
 2-photon transitions to exciton states, oscillator strengths 8=8953
 u.s. amplification, mobility temp. depend. rel. to electron trapping 8=2081
 u.s. dispersion, by acoustoelec. effect 8=1849
 u.s. vibrations, diffr. of light 8=18514
 u.s. wave amplification, 87 MHz transverse, and signal to noise ratio 8=22098
 CdS-Au alloy recombination centre parameters in single crystals 8=14293
 CdS-Au, photosensitive carrier e.s.r. 8=2362
 CdS-CdSe films, thermal quenching of photoconductivity 8=5399
 CdS_{1-x}-CdSe_{1-x}, laser generation freq., temp. depend. 8=11092
 CdS_x-CdSe_{1-x}, stimulated rad. during two-photon excitation 8=23049
 CdS-Co₂S solar cell, mobile impurity ions model 8=10846
 Cd(S;Se) photocond. spectral distrib. and band gap, 100 and 300°K 8=2261
 CdS_{1-x}Se_x, birefringence rel. to concs. of components 8=5763
 CdS_{1-x}Se_x films, prep., structure and props. 8=4748
 CdS-SiO₂ film devices, thermostimulated currents and "frozen" cond. 8=5388
 CdS:Ti²⁺, e.p.r. 8=22900
 S₂ annealing pressure effect on resist. homogeneity 8=8980
 with Te as isoelectronic trap, optical fluorescence and absorpt. 8=23048

Caesium

- additive in thermionic converter emitters, correl. of emission processes 8=15214
 absolute values of ionization cross-section close to threshold 8=12436
 adsorption on Ta ribbon, work function changes 8=9276
 arc diode, effect of Kr, Xe, I and Ar as additives 8=15225
 atom, Cs-inert gas collisional J reorientation, e spin polarization determ. from D, pumping 8=1194
 atom, collisional depolarization of doublets 8=7471
 atom, h.f.s. of 8²P_{3/2} state 8=7400
 atom, Stark effect obs. 8=20966
 atomic beam, scatt. by benzene and cyclohexane beams, comp. 8=1205
 atomic beam, surface ionization on Pt and W 8=12110
 atoms in Cs-Ar low-pressure discharges rel. to light absorpt. 8=7401
 atoms, excitation by low energy electrons, absolute cross sections 8=12087
 atoms, reaction with Br₂ and I₂ molec. beams, kinetics 8=1202
 atomic, two-quantum photoionizations rate 8=12437
 concurrent neutralized by electrons, behaviour of potential after neutralization 8=15350

Caesium—contd

- elastic moduli and pressure derivs. at absolute zero 8=17818
 electrode vapour pressure effect on work function 8=18246
 electron recombination at 6P and 5D levels, cross section obs. 8=12080
 films on Ir, adsorption and electron emission 8=9268
 frequency standard, comp. with H for average freq. and freq. stability 8=10483
 frequency standard, errors 8=15160
 heat capacity, 2°-4°K 8=13374
 impurity states in thermionic converter 8=10842
 ion beam, synthesized, electrostatic oscillation obs. 8=16584
 ions, antishielding factors, by nucl. acoustic quadrupole reson. in CsI 8=9470
 ions Cs⁺ on Hg electrode, partial charge transfer react. 8=18722
 ions, linear acceleration in crossed e.m. fields 8=318
 liquid, density in range 100-750°C 8=12813
 liquid, elec. resistivity, appl. of structure factor and pseudo pot. relation 8=12920
 liquid and solid on Re substrate, mode of growth 8=1696
 liquid, thermal conductivity obs. 75-700°K 8=12851
 l.v. arc, plasma measurements with Mo probe 8=7782
 molecular-ion formation by collision of two excited atoms 8=12438
 nuclear spin relax. below 77°K 8=9463
 one-electron energy levels, for extended Thomas-Fermi-Dirac pot. 8=1167
 plasma converter, migration of ions and electrons, diffusion theory 8=15212
 plasma diagnosis by interpret. of spectra, molec. effects 8=12527
 plasma, diffusion coeff. of ions, and reflection coeff. from plasma boundary, meas. 8=12473
 plasma diode, ion current and Schottky effect 8=339
 plasma diode, meas. of pot. and particle energies by obs. of ion and electron energy spectra 8=15210
 plasma, effective electron-Cs heavy particle momentum transfer collision freq. 8=12476
 plasma, ion-acoustic wave, non-linear Landau damping 8=4375
 plasma, particle losses due to charge exchange 8=21288
 plasma, prod. by resonance rad. from Cs discharge, and parameters 8=4362
 plasma, surface ionization in mag. confinement 8=1415
 plasma in vapour, physical props. 8=12474
 plasmas, electron current flow under influence of d.c. fields and plasma grads. 8=12477
 plasmas, thermally ionized, and field-modified emitting electrodes, plane collisionless sheaths 8=21365
 scattering of Na, atomic differential spin-exchange scattering 8=12109
 spectral absorpt. of vap., temp. depend., Fabry-Perot interferometer 8=501
 standard, servo-system, freq. 8=9
 thermionic converter, anal. of dominant ionic species 8=15211
 thermionic converter, departure from Saha-Langmuir surface ionization rehn. 8=15238
 thermionic converters, electrode inhomogeneity influence 8=297
 thermionic converter, spacing and press. effect on electron temps. and ion densities 8=15242
 thermionic converter, use of O as steady-state electro-neg. additive 8=15224
 thermionic diode, collector work function meas, effect of electron scatt. 8=15243
 vapour, charge exchange H⁺ to H⁻ 8=12441
 vapour, effect on electron emission of Pt-group metals 8=18265
 vapour, effect on thermionic emission of Hf, Th and Ti 8=18264
 vapor interaction with ZrC powder under thermoelectron transformation conditions 8=10843
 vapour, rel. to instability of Ag-O-Cs photocathodes 8=18275
 vapour, ionization decay, microwave cavity studies 8=21271
 vapour, viscosity meas. by transpiration tech-from 800 to 2000°K 8=12702
 vapour, viscosity meas. in temp. range 1000° to 2400°K by transpiration method 8=16714
 work function on W crystal faces 8=13926
 Cs⁺, abundance sensitivity improvement on low mass side 8=12029
 in Cs methoxide-methanol ions coordination number and solvates comp. obs. 8=2497
 Cs plasma diodes, identification of dominant ion species 8=15322
 Cs¹³³, self-diffusion in CsI single crystals and polycrystalline samples 8=8674
 Cs¹³⁷, activity, rain water, Sydney 8=14633
 Cs¹³⁷-Ba^{137m} isotope generator 8=1207
 Cs-F vapour, effect on electron emission from transition metals, model 8=18261
 in He, thermal diffusion calc. 8=21525
- Caesium compounds**
 additives effect on work function of W 8=18251

Caesium compounds—contd

- halides, i.r. windows, polishing 8=495
 Cs graphites, Knight shift of Cs¹³³ rel. to comp. and temp. 8=2382
 Cs halides, defect form. energies and migration energy barriers 8=13422
 Cs halides, low temp. thermal expansion coeffs. and related thermodynamic props. 8=8648
 CsAl(SO₄)₂·12H₂O single crystals, e. s. r. of Ti³⁺ 8=18418
 CsBr, colloid band, effect of particle size 8=1604
 CsBr crystals with F- and M-centres, photoconductivity wavelength and temp. dependence 8=22694
 CsBr, elastic and fourth order elastic constants, and nonlinear pressure dependence 8=13544
 CsBr:P radioluminesc. rel. to hole storage at centres, obs. 8=9625
 CsBr, Raman and i. r. absorption spectra at second order, interpretation 8=5595
 CsCl, e. p. r. spectrum of Mn²⁺, spin-Hamiltonian parameters 8=5534
 CsCl, elastic and fourth order elastic constants, and nonlinear pressure dependence 8=13544
 CsCl, Schottky defect energies for Pm3m and Fm3m structures 8=22178
 CsCl, sp. ht. and dispersion curves, using shell model 8=8610
 CsCl-structure alkali halides, Schottky defects, energy of formation 8=8694
 CsCl transition energy at 470°C 8=1672
 CsCl(g) effusion, ang. number distrib. 8=12706
 Cs₂DyF₇, fluoresc. and absorpt. spectra 8=21814
 CsF additive effect on performance of W-emitter thermionic converter 8=15244
 CsF adsorpt. on W surface, influence on work function 8=18270
 Cs¹³³F¹⁹, h. f. s. molec. beam meas. 8=16278-9
 CsF:Na⁺, impurity displacement calcs. 8=8243
 CsHCO₃, CsDCO₃, i. r. cryst. spectra 8=18556
 CsI, charged dislocations 8=17649
 CsI dislocation etching 8=1727
 CsI, elastic and fourth order elastic constants, and nonlinear pressure dependence 8=13544
 CsI, excitation density of slow secondary electrons, distrib. determin. 8=18283
 CsI, isothermal annealing effect on dislocation density 8=17650
 CsI, nucl. acoustic quadrupole reson., antishielding factors of Cs ions 8=9470
 CsI photoelec. emission, two-photon, 6-8.5 eV 8=18279
 CsI, self-diffusion of Cs¹³³ and I¹³¹ 8=8674
 CsI(Na) fluorescent response function 8=5665
 CsI(Tl) fluorescent response function 8=5665
 CsMnCl₃, prep. and crystallographic props. 8=13138
 CsMnO₄, Raman spectra 8=21085
 Cs₂NiCl₆, effect of melting on spectra 8=9519
 CsNiCl₃, effect of melting on spectra 8=9519
 Cs₂Sb, time depend. of absorpt. and photoemission 8=13937
 CsUF₆, crystal structure 8=1787
 Cs[UO_2Br_4], crystal structure 8=17359
 (Li, Cs)₂SO₄, differential thermal anal. 8=8270
 RbNO₃ molten, refr. index meas. by interferometry 8=4583
- Calcium**
 atom, pionic, 4f-3d transition rel. to π mass 8=6839
 calutron, ionized spectrum, Doppler shift due to charge exchange 8=6334
 determination in picomole range by emission photometry 8=9757
 films, absorpt. of light between 0.5 and 5.5 eV 8=14204
 f. c. c., elec. resistivity from 4.2 to 300°K 8=5175
 ionized solar lines, mean and core profiles of H and K lines 8=23706
 ionized vapour laser, pulse efficiency from cyclic excitation and relax. 8=11056
 ions, CaII reson. lines rel. to photosphere-chromosphere transition zone temp. distrib. 8=19319
 muonic K series X-rays 8=1209
 vapour absorpt. spectra using modified King furnace 8=7393
 Rydberg states obs. from electron collision 8=20941
 Sun, CaII resonance line, emission peaks 8=23744
 Ca⁴⁵ deposition in bone, obs. 8=23766
 Ca²⁺, dipole polarizability from spectra 8=7414
 Ca⁺, pseudopotentials 8=7409
 Ca⁺, ²F and ²G levels, polarization by outer electron 8=7413
 CaII, H and K lines in solar spectrum, rel. to chromosphere model 8=23707
 Ca II, Hartree-Fock multiplet strengths 8=4081
 CaII solar line in lower chromosphere 8=2859
 CaII, spatial extent in twilight, airborne obs. 8=9868
 CaII stellar lines near H I clouds, search for 8=5880
- Calcium compounds**
 apatite crystallites, carbonate effects on morphology during growth 8=1720
 apatites, luminesc. and stoichiometry 8=2477
 calcite, Brewster angle generalization 8=22947
 calcite, elastic compliances temp. dependence 273-90°K 8=5055
 calcite, motional effects in e. s. r. of CO₂ 8=22899
 calcite, optical consts. in region of fund. freq. 8=9512

Calcium compounds—contd

- calcite, refractive indices, variation with pressure to 7 kbar 8=22961
 calcite, stimulated Raman effects 8=5591
 calcite, window in double spectrometer, X-ray diffr. profile exam. with monochromatic radiation 8=22004
 calcium fluoxytantalate: Eu^{3+} , Sm^{3+} , crystalline field parameters of ions 8=16973
 chlorospodiosite ($\text{Ca}_2\text{PO}_4\text{Cl}$), e. s. r. and optical spectra of CrO_4^{2-} 8=14099
 dicarboxylates, i. r. spectra and thermal decomp. 8=23095
 F-centres, X-ray prod. 8=1999
 hydroxyapatite catalysts, H content 8=14395
 manganates, CaMnO_3 , $\text{Ca}_2\text{Mn}_2\text{O}_{10}$, $\text{Ca}_2\text{Mn}_2\text{O}_7$, and Ca_2MnO_4 , mag. props. 8=9390
 manganates, localized v. collective d electrons and Néel temps. 8=9391
 phosphate, nucleation from soln. 8=13135
 portland cement component hydration products, adsorpt. of Ca lignosulphonate and salicylic acid 8=21902
 whitlockite and cerite, isotypy 8=4778
 Ca aluminate hydrates, lamellar, crystal structures 8=8511
 Ca aluminate hydration product, adsorpt. of Ca lignosulphonate and salicylic acid 8=21902
 Ca₄ aluminoferrite hydration product, adsorpt. of Ca lignosulphonate and salicylic acid 8=21902
 Ca hydrosilicate, crystallization in presence of gypsum and Al_2O_3 rel. to cement setting 8=1738
 Ca lignosulphonate adsorpt. on portland cement component hydration product 8=21902
 Ca₂ silicate hydration product, adsorpt. of Ca lignosulphonate and salicylic acid 8=21902
 Ca₃ silicate hydration product, adsorpt. of Ca lignosulphonate and salicylic acid 8=21902
 Ca sulphoaluminate hydrates, expansion characts. 8=21831
 CaAl_2O_4 - CaAl_2O_3 - $\text{Ca}_2\text{Al}_2\text{SiO}_7$ - MgAl_2O_4 , liquidus relations in quaternary subsystem 8=21763
 $\text{Ca}[\text{B}(\text{OH})_4]_2$ modifications, crystal structure 8=17353
 Ca-Bi eutectic melt, displacement of inactive marks during diffusion 8=17565
 CaCl_2 aq. soln., phenomenological coeffs. for elect. cond. and diffusion 8=12924
 CaCl_2 - BaCl_2 system analysis by β -ray backscatt. 8=18796
 CaCl_2 , in Mg fused electrolyte, elec. cond. and density obs. 8=23143
 CaCO_3 , absorbing crystal, complex indices 8=5579
 CaCO_3 aragonitic oolites, solubility in sea water pressure coeff. obs. 8=8012
 CaCO_3 (calcite), lattice parameters, precision, and thermal expansion 8=22015
 CaCO_3 in H_2O , surface charge form. and zero point, obs. 8=16903
 CaCO_3 phase-matched 4-freq. mixing obs. 8=14203
 CaCO_3 , X-irrad., electron-hole trapping 8=5105
 CaCO_3 , X-ray luminesc., empirical decay law 8=14307
 $\text{CaCr}_2\text{Fe}_2\text{O}_4$, antiferromag. structure rel. to CaFe_2O_4 8=18371
 $\text{Ca}_2\text{Cr}_2\text{Fe}_2\text{O}_4$, antiferromag. structure rel. to CaFe_2O_4 8=18371
 CaDPO_4 and dihydrate, i. r. spectra obs. 8=5594
 CaF molecule, A-X and B-X band spectra 8=21069
 CaFe_2O_4 , Mossbauer study of spin relax. 8=21804
 $\text{Ca}_2\text{Fe}_2\text{O}_5$, Néel temp. 8=5499
 $\text{Ca}_2\text{Fe}_2\text{Si}_2\text{O}_9$, F^{3+} 3d⁵ configs. splitting by cryst. field 8=1654
 $\text{CaH}_2\text{IO}_6 \cdot 3\text{H}_2\text{O}$, crystal structure 8=8558
 CaHPO_4 and dihydrate, i. r. spectra obs. 8=5594
 CaI_2 , optical, luminesc. and scintillation props. 8=5654
 $\text{Ca}(\text{IO}_3)_2 \cdot 6\text{H}_2\text{O}$, crystal structure 8=8558
 $\text{CaMg}[\text{B}_5\text{O}_{13}(\text{OH})_{12}] \cdot 6\text{H}_2\text{O}$, inderborite, crystal structure 8=17349
 $2(\text{Ca}_2\text{Mg}_2\text{Si}_2\text{O}_{22}(\text{OH})_2) \cdot \text{Mn}^{2+}$, e. s. r. 8=18414
 CaMoO_4 : Er^{3+} , e. p. r. spectra at 4.2 and 10°K 8=18412
 $\text{Ca}(\text{NO}_3)_2$, binary mixtures with MNO_3 (M = Na, Cs, Rb, K), relax. processes in supercooled melts 8=1586
 $\text{Ca}(\text{NO}_3)_2 \cdot 4\text{H}_2\text{O}$ melts, p. m. r. 8=12938
 $\text{CaNa}_2(\text{CO}_3)_2 \cdot 2\text{H}_2\text{O}$, pirssonite, crystal structure 8=1785
 $\text{Ca}_2\text{Nb}_2\text{O}_7$, eight linear electro-optical coeffs. 8=18513
 CaO, colorability enhancement after plastic deformation 8=22229
 CaO, elastic constants at 80-270°K 8=8831
 CaO, effect on elec. cond. of ferrites 8=13715
 CaO e. s. r. of F centres 8=13456
 CaO, neutron or γ irradiated, O_2 chemisorption rel. to surface states 8=5724
 CaO, sound velocity obs. rel. to Birch's law 8=13349
 CaO, thermoluminesc., unirrad. 8=14308
 CaO, water vapour effect on sintering kinetics, 920-1123°c 8=21833
 $3\text{CaO} \cdot \text{Al}_2\text{O}_3 \cdot 3\text{CaSO}_4 \cdot 32\text{H}_2\text{O}$, crystal structure and chemistry 8=13253
 $\text{CaO} \cdot \text{Al}_2\text{O}_3$: Mn Th and Ce sensitized luminescence 8=14303
 CaO: Mn^{2+} , impurity ion hyperfine coupling constant temp. dependence 8=8196
 $3\text{CaO} \cdot \text{SiO}_2$ hydration in Portland cement, obs. 8=14362
 $\text{Ca}(\text{OH})_2$, thermoluminesc., unirrad. 8=14308
 $\text{Ca}_{10}(\text{PO}_4)_6(\text{Cl})_2$, single crystals, conversion to $\text{Ca}_{10}(\text{PO}_4)_6(\text{OH})_2$ by hydrothermal bomb. method 8=4776
 $\text{Ca}_2\text{P}_2\text{O}_7$: Eu^{3+} activated, luminesc. 8=9628

Calcium compounds—contd

- $\text{Ca}_2\text{Sb}_2\text{O}_7$ ($x = 1, 2, 3$; $y = 4, 5, 6$), prep. and props. 8=14363
 $\text{CaS} \cdot \text{SrS}$ phosphors absorpt., excit. and i. r. flash stimulation spectra 8=9511
 Ca_2SiO_5 and Ca_2SiO_4 in Portland cement clinker, high-temp. microscopic investigation 8=21841
 Ca_2SiO_5 and solid solns., polymorphism 8=13064
 $\text{Ca}(\text{SO}_3\text{F})_2$, i. r. spectra and mag. props. 8=9562
 CaSO_4 : Mn, X-ray luminescence, accumulation capacity 8=5655
 CaSO_4 : Mn^{2+} , e. s. r. allowed and forbidden transitions 8=14116
 CaSO_4 : Sm^{2+} , luminescence 8=23047
 CaTiO_3 films, spark discharge along surface 8=7682
 $\text{Ca}_2\text{V}_{10}\text{O}_{28} \cdot 17\text{H}_2\text{O}$, pascoite, structure determ. and refinement 8=17350
 CaWO_4 : Ce, charge-compensated sites, e. s. r. 8=9418
 Ca_2WO_6 bronzes, struct. evolution with temp., phase stability 8=17048
 CaWO_4 , diffusion of Ca 8=13408
 CaWO_4 laser crystals, light loss, possible scattering contribution 8=19994
 CaWO_4 : Nd, role of Nd in reduction coloration 8=22962
 CaWO_4 : Nd^{3+} , e. s. r., uniaxial pressure effect meas. 8=14121
 CaWO_4 : Nd^{3+} , quasicontinuous laser 8=440
 CaWO_4 , quantum efficiency of Nd^{3+} absorpt. and excitation spectra 8=5667
 CaWO_4 , tunnel structures, interface trapping 8=5381
 CaWO_4 : Nd^{3+} , spin-lattice relaxation time obs. 8=22914
 CaWO_4 : Yb^{3+} , absorpt. spectrum and Zeeman effect 8=14205
 CaWO_4 : Yb^{3+} , symmetry of Yb^{3+} on charge compensation by Na^+ , e. p. r. study 8=18413
 CaY_2O_6 , crystal structure, rel. to Ca ferrite isomorphism 8=4870
 $\text{CaZr}(\text{Hf})_2\text{O}_9$ system of type RTiO_5 structure, and stability relations 8=1719
 CaZrO_3 : Mn^{2+} , paramag. resonance spectrum 8=14118
 CuO - FeO - SiO_2 solid solutions, activity-composition relns. 8=17004
calcium fluoride
 colorability enhancement by plastic deformation 8=22228
 colour centre fluorescence, phonon-assisted, in additively coloured sample 8=14306
 dielectric loss in crystals doped with O^{2-} ions 8=5350
 doped with Ce^{3+} and Yb^{3+} at tetragonal sites, charge compensation 8=22918
 e. p. r., dielectric loss 8=2371
 e. p. r. of Ho^{3+} , stress effects 8=14128
 enthalpies of solution, Born model calculation 8=21650
 F centre, ENDOR meas. 8=9417
 F-centres, fourth shell isotropic h. f. s. constants 8=13457
 fluoride, far u. v. polarizing power 8=15551
 lattice theory, elastic const., dielectric const. 8=13178
 n. m. r. in rotating crystal, decay of transverse magnetization 8=14136
 nuclear spin-lattice relax. via paramag. centres 8=18459
 paramagnetic rare-earth activated, magnetooptic rotation 8=5590
 photochromic crystals, thick hologram storage 8=20118
 proton irradiated, change in microhardness, kinetics 8=22320
 thermoluminescence and thermostimulated exo-emission, obs. 8=14305
 X-ray coloured, absorpt. by colour centres, temp. dependence 8=17683
 CaF_2 (111) face, epitaxial growth of Pt 8=4752
 CaF_2 , and MgF_2 and Na_3AlF_6 , i. r. antireflectant suitability 8=2435
 CaF_2 : Dy^{3+} , giant pulse laser, with high repetition rate 8=11090
 CaF_2 : Dy^{3+} , behaviour of F⁻ interstitials during reduction of Dy^{3+} 8=1949
 CaF_2 (Eu) fluorescent response function 8=5665
 CaF_2 : Eu^{2+} , stress induced nuclear quadrupole splitting 8=22928
 CaF_2 : Eu^{3+} , radiochemical reduction giving Eu^{2+} centres 8=18740
 CaF_2 : Er^{3+} , stimulated emission at $\lambda_1 = 8456 \text{ \AA}$ and $\lambda_2 = 8548 \text{ \AA}$ 8=22963
 CaF_2 , F⁻-treated, photocathodes, spectral characts. 8=18281
 CaF_2 : Gd^{3+} , thermoluminescence, Stark splittings of $^6\text{F}_{7/2}$ and $^6\text{P}_{5/2}$ levels 8=14310
 CaF_2 : GdF_3 , surface-layer dielec. relax. 8=18163
 CaF_2 : H_2D , F^{19} nuclear polarization 8=1640
 CaF_2 : Ho^{2+} , magneto-optical rot. 8=18512
 CaF_2 : Mn^{2+} , hyperfine coupling constants temp. dependence 8=18429
 CaF_2 : Nd^{3+} , new laser line, oscillations from ions at noncubic sites 8=3335
 CaF_2 : Sc^{2+} , paramagnetic reson. in ^2E state, effect of linear Jahn-Teller coupling 8=18402
 CaF_2 : Nd^{3+} , stimulated emission, high-temp. effects 8=22960
 CaF_2 : Sm^{2+} crystals, optical spectrum 8=9513
 CaF_2 : Sm^{2+} , fluoresc. 8=14332
 CaF_2 : Sm^{2+} laser action from giant pulse ruby laser excitation 8=11089
 CaF_2 : Sm^{3+} , tetragonal field, energy levels 8=13009
 CaF_2 : Ti^{3+} optical and e. s. r. spectra 8=14126
 CaF_2 : Yb^{3+} , anisotropy of spin-lattice relax. for Kramers doublets 8=9414
 CaF_2 : YF_3 , Nd^{3+} activated, 'ageing' and photoreduction to Nd^{2+} by stimulated rad. conds. 8=8765

Calcium compounds—contd**calcium fluoride—contd**

- CaF₂:Yb³⁺, new laser line, oscillations from ions at noncubic sites 8=3335
- CaF₂:Yb³⁺, polarization effects in cubic cryst. field from e.p.r. and optical spectra 8=21800
- CaF₂:Yb³⁺, spin-lattice relax. 8=18444
- with Cu²⁺ impurities, e.p.r. spectrum 8=9422
- with Eu²⁺ impurity, e.p.r. spectrum at 77-964°K 8=9424
- F dynamic polarization of 45% 8=18458
- with Fe³⁺ impurity, e.p.r. spectrum 8=9437
- H-doped crystals, spin-lattice relaxation time meas. 8=8206

- Nd³⁺ activated, 'ageing' and photoreduction to Nd²⁺ by stimulated rad. conds. 8=3765
- Nd³⁺ doped, cubic e.p.r. spectrum 8=5539
- Nd³⁺ doped, mag. rotatory dispersion curves 8=5592
- Nd³⁺ optical centre, effect of rare earth impurities 8=5593
- with Ni²⁺ impurity, e.p.r. spectrum 8=9437
- with Ti²⁺ impurities, e.p.r. spectrum 8=9422

Calculating apparatus

- CO, adsorption on W surface partly covered with O 8=4762
- CO-air flames, burning velocities 8=15109
- CO, atomic interaction energy for 6³ Σ^+ state 8=4109
- CO catalytic oxidation rel. to Ag surface struct., chemisorpt. obs. 8=18706
- CO, chemisorbed on Pt-Aerosil surfaces, i. r. spectra 8=9704
- CO, diamagnetic molecular susceptibility calc. 8=12176
- CO, electron removal during d. c. discharge afterglow 8=21233
- CO, equilibrium vapour pressure data 8=21779
- CO, evolution from Ni by vacuum heating 8=16745
- CO, fundamental band at high temp., spectral absorpt. coeff. 8=21067
- CO, incubation time in dissociation 8=21184
- CO ions, appearance potential and kinetic energy 8=7721
- CO, laser oscillation characteristics on electronic transitions 8=11069
- CO lines in solar spectrum, near 2.3 μ , interpret. rel. to no. of mols. 8=19294
- CO molecular vibration and kinetic temperature in solar photosphere 8=10412
- CO mols. dissoc. in solar photosphere-chromosphere transition zone 8=12337
- CO mols. energy transfer to solar photosphere particles 8=12377

Carbon compounds—contd

- CO, O low temp. flame, kinetic calc. 8=9699
 CO oxidation on Pd film, induction period 8=5700
 CO plasma in comets, prod. and flow under influence of solar wind 8=14854
 CO, reaction with O atoms in shock tube 8=1342
 CO, residual, in colour picture c. r. t., mass spectrometry 8=15324
 CO, residual, effect on BaO cathode emission 8=18663
 CO spectrophotometric determ. of low concentrations in air 8=14589
 CO, solar lines, centre-limb anal. in five photospheric models 8=23697
 CO solubility in Ta-O-C solid solns. and equil. press., 1700-2000°C 8=21787
 CO, sorption on Mo, physical and chemical processes from low energy electron interactions 8=18702
 CO sorption on Pt. 8=18701
 CO stretching vibs. in Ni(CO)₄, corrections 8=1570
 CO thermal cond., mag. field effects, 290°K 8=4469
 CO, 3ν band, streng. h.s, widths and shapes 8=16269
 CO, vibr. relax. in shock-wave and nozzle expansion-flow 8=16270
 CO + p collisions 8=1357
 CO from W desorption, electron impact 8=21911
 CO, from W, desorption by electron impact 8=21912
 CO⁺ + CO₂, reaction cross-sections 8=4310
 CO₂, radiolysis in adsorbed state 8=18741
 CO₂, relative intensities, 160°-280°K calc. 8=7506
 CO₂, residual, effect on BaO cathode emission 8=18663
 CO₂ sealed laser tube, life expectancy rel. to form. and adsorpt. of CO and O₂ 8=15461
 CO₂, second virial coefficient, -10 to 200°C 8=12675
 CO₂, solubility in molten salts influence on current efficiency in Al electrolysis 8=12805
 in CO₂ solns., Zn corrosion rel. to predominance diagrams 8=2523
 CO₂, thermal cond. 8=16699
 CO₂ from troposphere, C¹⁴ content obs. 8=2566
 CO₂, u. s. velocity and absorpt., 300°-1300°K 8=4478
 CO₂, vibr. relax. times 8=4146
 CO₂ vibrational relaxation in D₂O from sound absorpt. and vel. meas. 8=21071
 CO₂-water-vapour mixtures, ultrasonic absorption obs. 8=7931
 CO₂ 1.049 μ band rel. to Mercury atmosphere search 8=10352
 CO₂, 10.4 μ band, strength and half-width 8=12178
 CO₂-CO atom., stainless steel corrosion, behaviour of C 8=2515
 CO₂ in calcite, motional effects in e. s. r. 8=22899
 CO₂²⁺Π_g → ²Π_g vibrational transition probabilities 8=21066
 CO₂²⁺, CO₂⁻ ions, injected in alkali halides, i. r. absorption 8=5583
 CO⁺ + CO, reaction cross-sections 8=4310
 CO₂, D content by neutron spectrometry 8=9765
 CO₂-SF₆, critical binary fluids, spectral width temp. and angular dependence 8=21778
 CO₂-N₂ plasma, i. r. emission spectra 8=12510
 CO₂-N₂-He laser, radiation prod., effect of water vapour addition 8=11045
 CO₂-N₂-He laser, multikilowatt in modular form construction 8=11046
 CO₂-N₂-He laser, Q-switching, appls. and progress 8=11047
 CO-N₂O mixture, study of overlapping absorpt. bands 8=7507
 CO₂, N₂O, mixtures, separation in thermal diffusion column 8=7945
 CO₂-N₂ gas laser, use of multipath cell 8=419
 CO₂-N₂-He, Pt catalysed laser system 8=3308
 CO₂ + N₂ mixture, vib. relax. time of ν₃ mode of CO₂, meas. with spectrophone 8=7508
 CO₂⁺, study of the ²Π_g → ²Π_g transition 8=16277
 CO₂^{12,13} laser, selective isotope emission 8=19959
 CO₂, adsorpt. on graphite, anisotropy of polarizability 8=21900
 CO₂-air, CH₄-air interfaces, plane shock refraction and expansion wave generation 8=4482
 CO₂, atmosphere, gas constituent number density determ. using laser beams 8=14585
 CO₂, atmospheric, i. r. absorption over slant path 8=18879
 CO₂ atm., stainless steel corrosion, behaviour of C 8=2515
 CO₂, band emissivities, evaluation 8=16272
 CO₂ bands intensities, rel. to Venus atm. light scatt. props. 8=14846
 CO₂, Brillouin scatt. in critical temp. region and isothermal compressibility, obs. 8=16708
 CO₂ bubble, fixed in flowing water, interphase mass transfer 8=12764
 CO₂ bubble in water, laminar flow obs. 8=21591
 CO₂, cryst. Raman spectra 8=9510
 CO₂, diffusivity and solubility in solid solns. of phosphors in polyvinyltoluene 8=20386
 CO₂, electron-impact dissoc. 8=4133
 CO₂, e impact, ionization and excitation, absolute cross sections 8=21268
 CO₂, eqn. of state for region 0-1000°C and 0-1000 bars 8=10666
 CO₂, equilibrium vapour pressure data 8=21779

Carbon compounds—contd

- CO₂, exchange of O with CO on carbon surface 8=2502
 CO₂, fluoresc. excited by transfer from heated N₂, rel. to chem. laser 8=16271
 CO₂, gasification of graphite, transient phenom. rel. to impurities 8=9678
 H₂-CO₂ gas mixtures, thermal conductivity 8=4473
 CO₂, H⁺, H₂⁺, He⁺ charge exchange, 40-1500 eV 8=21275
 CO₂, heat cond., extension of Saxena-Saksena-Gambhir theory 8=16702
 CO₂, ions and fragments, sequential mass spectrometry 8=21270
 CO₂, ionization curves due to electron impact 8=12434
 CO₂ ionization by Fe atoms, ionization ratio meas. 8=1359
 CO₂, i. r. emission from low vib.-rot. levels in discharges, rel. to laser action 8=12177
 CO₂, i. r. maser, i. r. freqs. by O¹⁸ substitution for O¹⁶ 8=10993
 CO₂ laser amplifier, 10.6 μ, gas flow effect on gain 8=11053
 CO₂ laser amplifier gain characteristics at 10.6 μ 8=6445
 CO₂ laser amplifier, nonresonant multipass 8=6446
 CO₂ laser, atmospheric absorpt. of radiation 8=6441
 CO₂ lasers, development review 8=11050
 CO₂ laser discharge, gain 8=19963
 CO₂ laser, effect of tube structure on power and efficiency 8=11044
 CO₂ laser, excited, population inversion time 8=3309
 CO₂ laser, flux limits for continuous and Q-pulse gain for 10.6 μ line 8=19960
 CO₂ laser freq. of oscill., press. and current depend. shifts 8=15460
 CO₂ laser levels, lifetimes, effects of CO₂, He and N₂ 8=420
 CO₂ lasers, inversion mechanism 8=11049
 CO₂ laser, oscillations and amplifiers dispersion meas. by interferometric method 8=11052
 CO₂ laser output visual obs. 8=15463
 CO₂ lasers, plasma temp. obs. 8=15459
 CO₂ laser, pulse recovery time 8=6443
 CO₂ lasers, power output increase, inexpensive 8=6444
 CO₂ laser radiation, obs. using i. r. image converter 8=19962
 CO₂ laser, sealed-off, high output and long lifetime 8=11048
 CO₂ laser; selective oscillation of P and R branches 8=11051
 CO₂ laser transitions, Lamb dip, obs. 8=15462
 CO₂ laser, vibr. levels population calc. 8=15464
 CO₂, liq. and solid, near i. r. spectra 8=21685
 CO₂, melting curve to 30 kb, obs. 8=1610
 CO₂, molec. collisions rel. to vib. deactivation 8=1321
 CO₂ near critical point, admixture density distrib. 8=21744
 CO₂, near critical point, forced convection heat transfer 8=16915
 CO₂-N₂ laser, modulation of optical cavity 8=19961
 CO₂ oxidation of U-Ti alloys at 450°C 8=5718
 CO₂, pre-breakdown currents rel. to temp. at high pressure 8=16417
 C₃O₂-olefin mixture, photolysis, product isomerization 8=5747
 C₃O₂ reaction with O atoms and active N 8=14360
 CS₂, gaseous, thermal cond. 8=16699
 CS₂, ν₃ bands, gas and liq. 8=12265
 CS₂, impure, ultrasonic absorpt. 8=12861
 CS₂, induced combination scatt. of light, and self-focusing 8=4581
 CS₂, ions and fragments, sequential mass spectrometry 8=21270
 CS₂, laser action, P-branch vibrational transition 8=3310
 CS₂, laser beam filament formation, linearized calc. 8=8067
 CS₂, liquid and crystalline state, sub-millimeter wave spectra 8=7568
 CS₂-N₂ laser, interpretation and mechanism 8=19958
 CS₂, soln. of acetone, thermal diffusion coeff. by heterodyning light 8=4553
 CS₂, stimulated Brillouin scatt., quasi-steady state 8=21687
 CS₂, stimulated, scattering spectrum, amplification of ruby-laser radiation line R₂ 8=9520

- acetates, rare earth, Pb and Cu, i. r. spectra and thermal decomp. 8=23095
 amylose, asymm. interaction with DL-mandelic acid and DL-ethyl mandelate 8=18696

Chemical reactions—contd

- aromatic hydrocarbons, pyrolysis, e.s.r. 8=2513
 aromatic-oxygen complex, stabilization constants from aromatics solubility in O₂ 8=2499
 aryl oxalates, electronegatively substituted, reactions with H₂O₂ and fluorescent compounds, chemiluminescence 8=18672
 atom-transfer oxidation reduction, metal ion promoted 8=14401
 atoms and free radicals in fast flow systems 8=9700
 azo-compounds decomp. tracing by n.m.r. spectroscopy 8=8127
 benzene hydrogenation to cyclohexane, effect of support on Ni catalyst 8=9707
 benzene ion reactions with benzene 8=16452
 benzotropones, reactivity indices 8=18673
 contaminants on glass with Na-NH₃ solns. at -78°C 8=21868
 carbon blacks, surface interact. with gaseous Cl 8=9685
 carbon, chemisorption of O₂ 8=5725
 carbonyl cpds., reversible hydration study, limitations of u.v. spectroscopy 8=9682
 cation hydration, charge-dipole model 8=9670
 cellulose hydroxyl groups, reactivity to N oxides in presence of P₂O₅ 8=5721
 chemiluminescence in solution 8=1574
 chemi-ionization in upper atm., model 8=23307
 chemisorption, meas. apparatus 8=5723
 chemisorption, surface mobility parameter 8=14400
 in chloroethylene, ion-molecule, study by ion cyclotron reson. spectroscopy 8=16453
 chloroform-triethylamine system, equilib. and H-bond formation 8=18649
 in chloroethylene, reactions with ions, study by ion cyclotron reson. spectroscopy 8=16453
 chromic (III) cpds., stability, by spectrophotometry 8=23079
 collision-induced, with Dempster mass spectrometer 8=4309-10
 dibenzoylperoxide decomp., tracing by n.m.r. spectroscopy 8=8127
 diffusion and absorpt. in catalysts 8=14402
 di-p-chlorobenzoylperoxide decomp. tracing by n.m.r. spectroscopy 8=8127
 dissociation field effect relax. apparatus, square wave, for rapid reaction rate obs. 8=9665
 effect on soln. of stagnation point laminar boundary layers and viscous shock layers eqns. 8=16671
 energy-surface treatment, state-area principle for phase transitions 8=12963
 extraction of NO₂, U and fission prods. with tri-n-octylamine, temp. effects 8=5708
 electrical contact degradation effect 8=8987
 electrical contacts, tarnishing effect of atmospheric pollutants 8=8988
 electron tubes, residual gases 8=18663
 ethylene, shock pyrolysis, chem. overshoot 8=9690
 exothermic, behind reflected shock waves 8=23120
 exothermic front in condensed medium (k-phase), theory of stationary propag. vel. 8=18660
 flash excitation, obs. with modulated optical null spectrophotometer 8=3359
 formic acid dehydration over Al₂O₃ and SiO₂, i.r. study of chemisorbed species 8=9701
 form. of Ni(II) complexes of glycine peptides in aqueous soln. 8=9664
 free radicals, direct i. r. spectrometry 8=16367
 gas mixtures in chem. equilib., separation in temp. gradient 8=21526
 gas production kinetics, pen recorder 8=14353
 gas reactions, bimolecular and termolecular, tables 8=10466
 gas reactions, transition state and Arrhenius parameters 8=4465
 gases, use of e.s.r. to study of kinetics 8=14351
 in graphite gasification by pure CO₂, transient phenom. 8=9678
 graphite, interact. of gases and vapours with fresh surface 8=8338
 graphite, nuclear reactor, gasification with CO₂ and H₂O 8=2514
 heterogeneous, transient multicomponent diffusion 8=14354
 hexafluoroethane, secondary ion-mol. reactions ion cyclotron reson. 8=21284
 high temp. use of thermal plasmas as environment 8=21410
 hydrides, gaseous, decomp. in r.f. glow discharge rel. to films deposition 8=21872
 hydrogen ion solvation by H₂O mols. in gas phase, kinetics and thermodynamics 8=18661
 hydrolysis of substituted aspirin rel. to intramolec. catalysis 8=5727
 ion-molecule, studied in corona discharges 8=12409
 iron metallurgy, homogeneity and interface reactions 8=5704
 jacketed blender-reactor 8=23091
 layer structures, enhancement at dislocations 8=8710
 metal oxides, dehydration processes, investigation by emanation methods 8=14369
 methane, shock pyrolysis, chem. overshoot 8=9690

Chemical reactions—contd

- monitoring, by synchronous operation of mass spectrometer 8=20914
muonium reactions 8=5713
nickelous nitrate-water-magnesium oxide system low-temp. cementation effects 8=14374
non-equilibrium boundary-layer problems, finite-difference soln. 8=18662
nuclear magnetic resonance spectra, explanation 8=8128
nuclear magnetic resonance spectra for tracing rapid reactions 8=8127
organic cpds., interaction with superconductors 8=9668
organic, liq. phase, under press., differential thermal analysis 8=9684
oxalic anhydrides, reactions with H_2O_2 and fluorescent compounds, chemiluminescence 8=18685
oxides in graphite electrodes burnt in d. c. arc, rel. to spectral line intensity 8=14385
phosphine oxides, $R_1R_2R_3PO(R_{1-3})$ are different hydrocarbon radicals, preparation 8=16345
polymethacrolein reduction with $LiAlH_4$ and polymethyl alcohol prep., obs. 8=23107
polyvinylchloride plasticization by aromatic and condensed ring cpds., obs. 8=23141
propane ions with benzene, butadiene, H_2S and NO 8=14381
propane, pyrolysis in shock tube for temp. range 830 to 1180°C 8=14380
pyridines, electrophilic substitutions 8=18687
quartz-kaolin-microdine, during firing, i. r. studies 8=18690
quartz rocks, hydrolytic weakening at high temp. and press 8=14561
quartz in water soln., 400-500°C, 1 kb, molecularity obs. 8=2520
radical ions formed by electron addition to unsaturated mols., e. s. r. rate study 8=14350
slags, dephosphorizing capacity effect of BaO and CaF_2 8=9676
solid state, theory of nucleation 8=23090
in solutions under pressure 8=14356
in stationary droplets of solns. of salts, study by radio-active tracers 8=14355
steel, analysis of decomposition process and inter-element effect 8=14392
steelmaking, homogeneity and interface reactions 8=5704
superconductors, interaction with organic cpds. 8=9668
surface, exam. by simultaneous X-ray emission and electron diffr. 8=8290
systems far from equilb, oscillations round steady state 8=2500
teflon, and I and AgCl, melting and pyrolysis, high pressure 8=4644
thiophenes, reactivity theory 8=5720
trimethylplatinum(IV) iodide and methylsodium, structural identification of product 8=14382
xanthine oxidase, mech. of action, e. s. r. study 8=14406
Ag, sulphiding by H_2S , effect of surface Fe 8=23096
Al + Cl, from 500 to 650°F, mechanism and rates 8=14358
 Al_2O_3 films prep. from pyrolysis of Al alkoxide 8=4740
 Al_2O_3 -glass composite, effects of hot-pressing 8=18671
 $Be_3N_2 \rightarrow 3Be(g) + N_2(g)$, enthalpy and enthalpy of activation, vapour pressure and evap. coeff. 8=1624
C atoms with Cl, to form free radical CCl , 8=1315
C, evap. films, with heated metal substrates 8=4745
 C_2H_2 with H- and O- atoms, e. s. r. investigation 8=2511
 C_3O_2 with O atoms and active N 8=14360
 $C_{10}OH_{12}N_2O_8$, condensation product of diaminosuccinic acid and pyruvic acid 8=17437
Ca dicarboxylates (malonate to sebacate), i. r. spectra and thermal decomp. 8=23095
 $CaF_2:Dy^{3+}$, behaviour of F⁻ interstitials during reduction of Dy^{3+} 8=1949
 $CaCl_2$ -NaCl- H_2O systems, chem. pot. 8=12848
 $Ca(OH)_2$, thermal decomp. activation energy 8=14308
 $3CaO \cdot SiO_2$ hydration in Portland cement, obs. 8=14362
 $Ca_3Sb_2O_7$, ($x = 1, 2, 3$; $y = 4, 5, 6$), prep. from CaO and Sb_2O_3 and stability 8=14363
Ca-Sr ion exchange props. of synthetic zeolites 8=23081
CdS single crystal polishing by phosphoric acid 8=9705
CdS from Cd and S, bulk crystals, closed system vap. growth 8=17228
CdS, sensibilation 8=22584
 $Cd_3Sb_2O_7$ ($x = 1, 3$; $y = 4, 6$), prep. from CdO and Sb_2O_3 and stability 8=14363
 CrO_3 , reduction into C_4O_2 and Cr_2O_3 , under high press. and temp. 8=9674
Co complex-ions, Szilard-Chalmers reaction, interpret. of specific activity values obtained 8=18749
Fe, liq., deoxidation by Al, rel. to form. of cloud group of inclusions 8=22183
FeO, high-press. synthesis of stoichiometric cpds. 8=13259
 $2GaS_2 = 2Ga_{(g)} + S_{2(g)}$, equilb. const. and thermal stability 8=21786
Ge hydrides, pyrolysis rel. to Ge epitaxial film production 8=17130
Ge with MoO_3 in powder form., reaction mechanism 8=14365

Chemical reactions—contd

- H atoms with F⁻ ions, formation of hydrated electrons 8=18679
H catalytic reduction 8=18735
H, free atoms with simple hydrocarbons, e. s. r. study 8=14376
 $H^2(P)$ with O_2 , luminesc. of OH 8=14366
 H_2 flames, chemiluminesc., effects of SO_2 8=18693
 $He^+ + H_2$ and $He^+ + HD$ reactions 8=21277
InOF, by $In_2O_3 + InF_3$ at 1000°C 8=8414
 $K + NaCl = KCl + Na$, electronic pot. energy surfaces 8=23106
 K_2O-SiO_2 solns., activity 8=21620
 Li_2-SiO_2 solns., activity 8=21620
 $Mn_3Sb_2O_8$, prep. from $MnCO_3$ and Sb_2O_3 and stability 8=14363
Mn-Zn ferrite, oxidation rate from cation diffusion coefficient 8=9691
 M_2WO_3 , ($M = La, Y$), solid state preparative reactions 8=5709
 Mg_2SiO_4 with related minerals in mantle, required temp. and press. calc. 8=2556
of Na_2CO_3 , during prep. of KCl pressed discs 8=14373
 Na_2O-SiO_2 solns., activity 8=21620
 Nb , vacuum deposited on MgO , rel. to substrate-condensate interaction 8=8326
 NH_4Cl formation from $NH_3 + HCl$ 8=12217
 NH_4ClO_4 , thermal decomp., mass spectra 8=9693
 NO_2 chemiluminescence, rad. from far wake of hypersonic spheres 8=21478
Ni-base alloys, refractory-melt reactions in vacuum induction melting 8=9694
O + CO, shock-heated system, radiation 8=1342
O, free atoms with simple hydrocarbons, e. s. r. study 8=14376
 O_2 chemisorbed on Al films, stability and work functions changes 8=5726
 $O_2 + H \rightarrow OH + O$, in oxyhydrogen detonation waves obs. 8=170
O + P(PH_3), stoichiometry and chemiluminescence 8=23109
OH with oximes, free radical intermediates, e. p. r. 8=14394
P(N and S), rel. to use as nuclear fuel 8=12017
 $PbCrO_3$, high-pressure synthesis 8=23110
PbTe compatibility with metals 8=18686
PuZr₂ synthesis from Pu and Zr, obs. 8=8279
Si and Ti carbides, formation by chemical vapour deposition 8=23112
Si hydrides, pyrolysis rel. to Si epitaxial film production 8=17130
 $SiCl_4$ with water vapour, SiO_2 film deposition 8=21889
 SiH_4 decomp. in r. f. glow discharge rel. to films deposition 8=21872
SnTe compatibility with metals 8=18686
 SO_2 , with ketones, nitriles, esters or alcohols, u. v. absorpt. spectra 8=18688
 $SrCl_2$ cryst., e. s. r. of reaction intermediate with F_2 8=14124
 $Sr_xSb_2O_y$ ($x = 1, 2$; $y = 4, 5$), prep. from SrO and Sb_2O_3 and stability 8=14363
Th phosphides, prep. 8=23116
Ti, 4-valent, with OH and O_2 radicals, e. s. r. and chemiluminescence 8=2522
 $TiCl_3 + H_2O_2$, e. s. r. 8=2521
U(N, P and S), rel. to use as nuclear fuel 8=12017
 U^{VI} extraction by methyl propyl ketone 8=20898
U phosphides, prep. 8=23116
 $UCl_4 + Al + H_2S$, for prep. of U_3 , 8=23114
 UO_{2+x} lattice defects rel. to thermochem. and non-stoichiometry 8=23113
Zn ferrite form. at 400°C, obs. 8=23117
W, surface interactions of I_2 vapour 8=18699
- Chemical structure**
See also Bonds.
acetone-chloroform system, n. m. r. study 8=2498
azidopurine from 6-hydrazinopurine + HNO_2 , and crystal structure 8=21117
(3:1) bullvalene- $AgBF_4$ complex 8=4890
complexes formed by H-bonding 8=12242
ethylene oxide- H_2O clathrates, nonstoichiometric 8=17447
hydroxyapatite catalysts, H content 8=14395
manganese vanadate, and O_2 parameters, determ. 8=8534
3-methoxy-5 β , 19-cyclo-5, 10-secoandrosta-1(10), 2, 4-trien-17 β -ol p-bromobenzoate 8=22063
polycarbonate films, rel. to deformation and tensile strength 8=22403
sulphur cpds., determ. by ESCA (electron spectroscopy for chem. anal.) 8=21100
triphenyl boron and phenyl boron halides, rel. to phenyl-boron bond strength 8=1863
 C_7H_8 isomers, chem. ionization mass spectra 8=9745
Cs methoxide-methanol solvates comp. and Cs ions coordination number obs. 8=2497
InAsTe, analysis 8=1760
K methoxide-methanol solvates comp. and K ions coordination number obs. 8=2497
Li methoxide-methanol solvates comp. and Li ions coordination number obs. 8=2497
 $Mn_{a-x}V_x[Mn_{b-x}V_{b-y}]O_2$, and O_2 parameters, determ. 8=8534
Na methoxide-methanol solvates comp. and Na ions coordination number obs. 8=2497

Chemical structure—contd

- Pu²³⁹, var. in ϵ binding energy in strong elec. field 8=4085
 Rb methoxide-methanol solvates comp. and Rb ions
 coordination number obs. 8=2497
 Si sesquioxide, formula 8=9662
 Sn(O, S, Se or Te) cpds, chem. shifts of K_{α} X-ray
 line 8=9558
 TaC_x, stoichiometric effect 8=1881

Chemical technology

- cement setting, rel. to crystallization of Ca hydrosilicate
 in presence of gypsum and Al₂O₃ 8=1738
 metal fume concentration, measurement by atomic
 absorption method 8=5992
 rehydration monitoring, appl. of n.m.r. 8=23770
 Ac²²⁸ in Ra²²⁸ solns, separation and purification by
 solvent extraction method 8=16047
 Al purification using fractional crystallization 8=4801
 BN as a diffusion source for Si 8=8684
 Mg, silico-thermal prod., mechanism from radioactive
 tracer study 8=23776

Chemiluminescence. See Chemical reactions; Luminescence.

Chemisorption. See Chemical reactions; Sorption.

Cherenkov radiation

 coherence effects 8=20027
 density fluctuations in air showers at seas level 8=7013
 density fluctuation in EAS at sea level 8=7013
 EAS det. using r. f. port 8=20597
 incoherent, interpretation of auroral hiss, measured on
 OGO 2 and at Byrd station 8=23342
 lucite, time resolution function 8=5690
 non-linear dielectric, losses of modulated
 current 8=277
 photomultiplier residual light emission 8=6327
 plasma heating in radially non-uniform cylinder 8=16485
 plasma, helically moving test particle 8=12501
 point charge moving parallel to interface between two semi-
 infinite dielectrics 8=6363
 relativistic charged particle passing through classical
 changed oscils. 8=3583
 teaching misconceptions 8=7027
 two-correlated spectrometers system with computer
 data anal. 8=11308
 Vavilov-Cherenkov, by motion of charged ring in
 transparent crystal 8=22949
 in waveguide with elliptic cross section, frequency
 modes 8=6394
 H₂O, time resolution function 8=5690

Chirality. See Elementary particles; Field theory, quantum.

Chlorine

- in alkali-chlorides, K-absorption and q.s.s. 8=2410
 atom, K_{α} line calc. from M/L ϵ capture ratio of
 Ar³⁷ 8=20748
 atomic, new Rydberg absorpt. series and ionization
 pot. 8=1165
 electrodes, high current density, impurity effects 8=18730
 gaseous, interact. with carbon blacks 8=9685
 isotope mixtures, thermal diffusion props. 8=1492
 natural gaseous atmospheric, origin rel. to volcanic
 action 8=9841
 n. q. r. in SbCl₃CH₃CN, SbCl₃POCl₃, and SbCl₅ 8=2391
 reaction with O atoms 8=9696
 vibrational relax. calc. 8=4259
 Cl⁻, passivity breakdown of stainless steel 8=23147
 Cl + Al reaction, from 500 to 650°F, kinetics and
 rates 8=14358
 Cl-Cl system, 2nd virial coefficient for different electron
 states at 2000-6000°K 8=1469
 Cl⁻, effect on transparency of Hf and Th oxide
 films 8=5605
 Cl₂, anomaly of ground-state reduced potential
 curve 8=16275
 Cl₂, complete pot. energy curve for ³ Π_{0^+} state 8=7511
 Cl₂ radical, i.r. spectrum 8=7620

Chlorine compounds

- halides trapped in inert-gas crystals, theory of
 spectra 8=8230
 perchlorates, explosive props. and electronic
 struct. 8=1259
 Cl₃CNO₂ mols. dielec. relax. in solid and liquid, 9GHz,
 10 and 200kHz 8=18179
 ClF₃, quadrupole coupling consts. 8=16276
 ClH, ground-state props. calc. 8=7514
 ClO, dipole moment, from gas-phase electron
 reson. 8=12345
 ClO gaseous free radical, e.s.r. study 8=12340
 ClO, gas-phase electron reson., double quantum
 transitions 8=12308
 ClO₃ in alkali-halide lattices, i.r. spectra 8=22968-9-70
 ClO₄ in alkali-halide lattices, i.r. spectra 8=22968-9-70
 ClOO radical, matrix i.r. spectra 8=12344
 ClO radicals, kinetic obs. 8=23125
 CO₂-NiO/Ni system, isotopic exchange reaction between
 O¹⁶ and O¹⁸ 8=9663
 HCl aq. soln., phenomenological coeffs. for elect. cond. and
 diffusion 8=12924
 HCl as electrolyte for WO₄²⁻ ion, polarography 8=18736

Chlorine compounds—contd

- HCl, hexadecapole moment 8=8230
 HCl₂ symmetrical ion, Cl n. q. r. 8=5568
 HClO₄ aq. soln., phenomenological coeffs. for elect. cond. and
 diffusion 8=12924
 HOCl, matrix i.r. spectra 8=12175
Chondrites. See Meteorites.

 amino acid analyser, sensitive linear flowing-stream
 photometer 8=5762
 effluent retention time meas. 8=14451
 gas chromatograph, application of fast scan mass
 spectrometry 8=5761
 gas, electrodeless discharge as detector 8=23169
 gases, purification by cataphoresis 8=2536
 gas, for partition coeffs. of organic vapours between gas
 and non-polar solvent phases, rel. to molec. dimens.
 determ. 8=1485
 gas-liquid, use of electronic digital integrator 8=10817
 gas, with mass spectrometer, interface separators 8=14506
 gas, Ni⁶³ electron absorpt. detector 8=14505
 gas, spectral-emission type detector 8=18764
 gas, gas-liq. interface and solid support effects 8=5760
 gas-liquid analysis of irradiated organic compounds,
 sample injection port 8=14450
 gas-liquid, stationary phases selectivity 8=5759
 gas-solid, organic crystals as adsorbents 8=18763
 interdiffusion of gases, study using electrodeless discharge
 as ionization detector 8=14452
 lanthanide fission products 8=9739
 paper, trace elements determ. by neutron activation 8=1450
 polar isotopic mol. separation 8=9744
 rare earths, use of phosphoric-acid treated paper 8=18765
 silica gel, surface meas., absorption method 8=21742
 Co, thin-layer, followed by complex formation and
 reflectance spectros. detect. 8=23176
 Cu, thin-layer, followed by complex formation and
 reflectance spectros. detect. 8=23176
 Ni, thin-layer, followed by complex formation and
 reflectance spectros. detect. 8=23176
 Pb in air, colorimetric method 8=9754
 WO₃ film, Pt-activated, sensitivity as gas detector 8=13098
Chromium
 adsorption of polar organic mols. 8=13107
 alloying with steel, effect on temper brittleness 8=17797
 antiferromagnetic, band structure by Green's
 function 8=2348
 antiferromagnetic, spin density wave studies by n-diffr.,
 high pressure effects 8=22876
 antiferromagnetic, X-ray line splitting above and below
 Néel point 8=17358
 antiferromagnetism, itinerant, rel. to resist. and Néel temp.
 press. depend., obs. 8=5500
 deposition from low-energy ion source 8=19796
 deposits, pseudomorphic, on Ni 8=21886
 diffusion in Fe and low C steels, experimental obs.
 in 950-1265°C range 8=4951
 electrodeposits, internal stress development,
 obs. 8=22325
 electronic structure, photoemission investigation 8=22457
 elinvar alloys, influence on mag. props. 8=9348
 film, reflection and transmission coeffs. in
 0.4-1- μ range 8=5580
 films, thin, glow discharge rel. to resist. 8=17128
 Hall effect at 4.2, 77 and 273°K, rel. to applied mag.
 field 8=8855
 Hall effect at 4.2°K, 77°K and room temp., magnetic fields
 up to 147 kOe 8=9002
 L-emission spectra, fine structure 8=14270
 resistance, elec., near Néel point 8=5177
 self-diffusion 8=17566
 solid solns. in Cu, mag. moments 8=22760
 surface oxidation rel. to Cr₂O₃ epitaxial growth 8=4828
 X-ray emission bands fine struct. rel. to e band struct.,
 obs. 8=18527
 Cr³⁺ in alum lattice, relaxation behaviour 8=22903
 Cr³⁺ in ruby, resonance, microwave second harmonic
 generation 8=22896
 Cr³⁺ trivalent ion hyperfine structure obs. using ENDOR
 technique 8=5553
 Cr⁺ in ZnS, photo-induced e.s.r., decay obs.
 77°-325°K 8=18441
 Cr⁺ in ZnTe, photo-excited paramag. reson. 8=5525
 Cr³⁺ ions in ruby maser, L-band appl. 8=15439
 Cr³⁺ in LaAlO₃, e.p.r. spectrum at room temp. 8=18426
 Cr³⁺ in LiNbO₃, e.p.r. 8=18428
 Cr³⁺ in tungstates (ZnWO₄-type), third crystal-field
 constant meas. 8=16974
 Cr³⁺ in Y(Al, Cr)₃(BO₃)₂, e.p.r. at room temp. 8=18439
 Cr³⁺ in ZnWO₄, e.p.r. electric broadening of
 lines 8=18442
 Cr³⁺ spin-lattice relax. in ZnWO₄ 8=10994
 Cr(VI) in binary alkali metal glasses, u.v.
 absorpt. 8=18519
 Cr/Co layered films of high coercive force, for digital
 mag. recording 8=14009
 Cr₂O₃-BaTiO₃ systems, phase transformations 8=17045

Chromium—contd

- Cr-SiO cermet films, elec. props. 8=8981
 Nd:Cr:YAG, sidelight fluorescence changes, due to lasing at 1.06 μ 8=6473
 ZnWO₄:Cr³⁺, theory 8=14085
- Chromium compounds**
 alloys, antiferromagnetic, transport props. 8=18374
 alloys with Co and Ni, antiferromag. props. rel. to Co/Ni conc. 8=22875
 alloys with d-transition group elements, n-mag.-scattering studies 8=18349
 alloys, high-temp. tensile creep, influence on properties by ceramic environment 8=13543
 alloys, N determ. from nitride behaviour 8=9740
 chromel-alumel thermocouples for small difference meas. 8=15121
 chromic potassium (methylamine) alums, temp. scales from nuclear orientation 8=8205
 chromic (III) cpds., stability, by spectrophotometry 8=23079
 halides (CrBr₃ and CrF₃), paramag. phase, exchange integrals by neutron scattering 8=13971
 methylammonium chromium alum, crystal structure 8=22017
 selenides, elec. and thermal cond., thermoelectric power, lattice parameters 8=13703
 α -Al₂O₃-Cr₂O₃ solid solns., crystalline parameters 8=8241
 Cr alloys, antiferromagnetism from time-of-flight n-diff. studies 8=18375
 Cr³⁺ alum, e. s. r. weak fine struct. components 8=14098
 Cr³⁺ diopside, absorpt. 10 000–20 000 cm⁻¹, 1.7–290°K 8=18520
 Cr(II) bistoluene complex, e. s. r. spectra 8=12311
 Cr(V) complexes, liquid solutions, Overhauser effect 8=21725
 Cr-Ag film, reflection and transmission coeffs. in 0.4–1 μ range 8=5580
 (Cr:Al)K(SO₄)₂·12H₂O, Cr³⁺ relaxation behaviour 8=22903
 Cr₂BeO₄, orthorhombic, antiferromagnetic resonance 8=14084
 Cr₂BeO₄, spin-flopping 8=5506
 [Cr(CNS)₆]³⁻-¹⁴CNS⁻, isotopic exchange rel. to structure study 8=23087
 Cr(CO)₆ halogen and pseudohalogen derivs., i. r. spectra 8=14209
 Cr(CO)₆, crystal structure 8=8516
 Cr(CO)₆, space group R factor, significance tests 8=8517
 [Cr(C₂O₄)₃]³⁻-¹⁴C₂O₄²⁻, radioisotopic exchange 8=21796
 Cr-Fe alloys, Cr rich, antiferromag. ordering rel. to energy changes 8=8931
 Cr-Fe alloys, dilute, antiferromag. props. rel. to Fe content 8=2347
 Cr-Fe-C-N alloys, 18%Cr, constitutional diagrams 8=21822
 Cr-Ge alloys, elec. resist. at 20–300°K, Curie points and ferromag. props. 8=9338
 Cr-Mn alloys paramag. susceptibility rel. to band struct., obs. 8=22759
 Cr-Mo alloys, Hall effect and sp. ht. meas., between 125–625°K rel. to comp. 8=4931
 Cr(NH₃)₆NO⁺ ion in soln., e. s. r. and N hyperfine splitting 8=1592
 16/13 CrNi steels, high temp. embrittlement after n irradi. 8=22362
 CrO₂, reduction from CrO₃, under high press. and temp. 8=9674
 CrO₃, reduction into C₄O₂ and Cr₂O₃, under high press. and temp. 8=9674
 CrO₄²⁻, e. s. r. and optical spectra in chlorospodiosite 8=14099
 Cr₂O₃, acoustic spin waves, studied by neutron scattering 8=14065
 Cr₂O₃, addition to Pb(Zr-Ti)O₃ solid solution 8=13043
 Cr₂O₃, epitaxial growth due to Cr surface oxidation 8=4828
 Cr₂O₃ films, optical props. 8=9517
 Cr₂O₃, magneto-electric susceptibility versus temp. 8=5427
 Cr₂O₃ particles in pre-mixed flames 8=23118
 Cr₂O₃ protective scales on Fe-Cr alloy, mechanism of lifting and cracking 8=23099
 Cr₂O₃-Al₂O₃ solid solns., mag. susceptibility 8=13972
 Cr₂O₇²⁻ anion, pH depend. of adsorpt. of Fe₂O₃ powder 8=8342
 Cr₂O₃Cl₂, cryst., electronic absorpt. spectrum 8=22971
 Cr₂K₂, γ and n irradiated, e. s. r. 8=18417
 CrO₂(NH₄)₂, γ and n irradiated, e. s. r. 8=18417
 Cr(ONO)₃(H₂O)₃ 1.5 KNO₂, formation and struct. in crystalline state and in soln. 8=9518
 Cr-Os alloys paramag. susceptibility rel. to band struct., obs. 8=22759
 Cr-Re alloys, dilute, antiferromag. props. 8=18373
 Cr-Ru alloys paramag. susceptibility rel. to band struct., obs. 8=22759
 Cr₂Si, superconductivity, band structure 8=5216
 Cr-Si alloys, electrical resistivity 8=9001
 Cr-SiO cermet films, resistivity and struct. 8=1695
 CrTiBO₆ (B=Nb, Ta, Sb), crystal structure and fluorescence 8=4879
 Cr_{1-x}Te_{1+x} alloys, transport phenomena in paramagnetic state 8=9300

Chromium compounds—contd

- Cr₂WO₆, mag. structure 8=22873
 Li_{0.5}Cr_{1.5}Fe_{1.5}O₄, spontaneous magnetization rel. to compensation temp. 8=14049
 MgO-Al₂O₃-Cr₂O₃ system, coherent precip. 8=21848
 V and Ti alloyed, elec. resist. anomalous decrease 8=9000

 a. c. voltage stabilizer, with high efficiency, and small output distortions 8=15182
 automatic plotter of electron beam current density profile 8=3197
 blanking, for mag. electron multiplier in time-of-flight mass spectrometer 8=20913
 bridge oscillator freq. stabilization 8=3145
 character recognizer, using domain wall motion in Permalloy wire 8=10876
 coincidence, for simultaneous (p, p') ang. correlations 8=20794
 coincident current store performance rel. to ferrite core characts. 8=14043
 communication systems in schools for semi-deaf 8=10748
 comparing frequency reference standard and quartz clock 8=15160
 constant-current power supply for H or D lamp 8=19714
 contactless system for measuring deformation and temperature 8=10780
 controller, programmed, for sequential laboratory operations 8=6245
 converter d. c.-d. c., regulated, providing low standby current for portable radiation instruments 8=3455
 current comparison, automatic 8=10826
 current-voltage converter with output voltage proportional to argument of sinh (input current) 8=10832
 digital pulse-shape analyser 8=6168
 discharge circuits with flash lamps, current and voltage 8=4291
 double-pulse variable-delay, for electron-hole plasma decay meas. 8=15177
 electrical feedthrough, compact 60 kV UHV, construction 8=3140
 electrical lead for high-pressure gas systems at low temp. 8=3147
 e. m. f. to current converter, solid-state, mag. amplifier improvement 8=10831
 electronic components conference, Jackson USA, 1967 8=6244
 equivalent, for plasmas 8=7746
 equivalent, piezotransducers, for u. s. analysis 8=196
 exciting circuit of r. f. amplifier driving cavities of accelerators 8=11334
 exploding-wire, current meas. 8=15171
 filter, linear, giving max. intelligibility over noisy channel for peak power limited transmitter 8=15080
 four coils of square-cross-section, for prod. of uniform mag. fields 8=3162
 frequency follower for sustaining resonance in a plasma 8=16406
 frequency multiplier, phase-locked 8=2877
 frequency reducer, aperiodic 8=272
 function generator, digital, reciprocal 8=3468
 gamma ray spectrum stabilizer 8=20357
 generator, double-phase, infrasonic 8=10833
 helium waves, h. f. phase sensitive detection 8=5138
 h. f. electronics and stimulated radiation of classical oscillators 8=3298
 high voltage supply, d. c., for electron beam machine 8=15290
 hysteresisless nonlinear reactive elements, energy exchange between harmonic sources 8=10829
 ignition switching for inductive energy storage 8=15187
 induced polarization apparatus for metalliferous mineral prospecting 8=2561
 integration system, using temp. variation, to study mag. field stabilization 8=19740
 integrator, electronic to control magnetic field in β spectrometers 8=3597
 integrator, gated, for pulsed n. m. r. 8=14134
 ionization gauge, for detect. of shock and reflected detonation waves 8=3041
 klystron-oscillator power supply for mm spectroscopes 8=15425
 linear gate, with stretcher 8=275
 linear gate, specifications 8=10828
 linear gate, 30 nanosec., high precision parallel-switch type 8=3137
 low-freq., thermistors as circuit elements 8=22619
 magnetic, loudspeaker 8=15258
 magnetometer, transistorized with 10⁻⁴ accuracy 8=19914
 memory elements, optico-elec., static params. theory and obs. 8=6039
 microwave beam pulsing system of nuclear energy level lifetimes 8=7058
 microwave mixing with weakly coupled superconductors 8=15386

Circuits—contd

- nanosecond pulse integrator 8=15643
 microwave receivers, superheterodyne, epoch sensitivity to e.m. pulses from water drop discharges 8=14624
 Nernst glower control 8=3364
 network analogues for heat conduction calc. 8=19646
 nonlinear capacitor in series with inductor, forced oscills. 8=19710
 qoscillation, 100 Mc/s gated clock 8=6246
 oscillator, vibrator-controlled, for measuring elastic constants and internal friction 8=8785
 oscillatory, stabilized, effect of variable attenuator 8=15174
 parallel-to-serial converter, using domain wall motion in Permalloy films 8=10875
 phase-control, automatic, phase following behaviour in noise 8=274
 phase-lock, for 100 MHz spectrometer 8=15430
 phase-locked pulsed oscillator 8=15180
 photocathode current-limiting protection 8=13923
 photomultiplier, automatic gain control 8=6324
 polarization in high resistivity electrolytes, modified Wheatstone bridge 8=18715
 power transmission network, d.c. three-wire, relaxation method, solution 8=281
 pulse-echo apparatus for v. h. f. 8=15073
 pulse, for investigation of weak pulse currents in high-resistance semiconductors 8=22576
 pulse generator for nuclear spectroscopy 8=15632
 pulse generator high current and fast 8=6249
 pulse generator, spark gap system, subnanosec., description 8=6248
 pulse generator using three-electrode spark gap 8=7680
 pulse limiter, for protection of high speed logic circuits 8=19711
 pulsed system operations, use of supercond. coils as energy storage elements 8=13766
 RLC filter, efficiency with Ge(Li) counter 8=20198
 radio thermoluminescent research, electronic instrument for 8=9585
 receiver, l.f. time signals 8=8
 rectangular current pulse generator, using Si controlled rectifier 8=15178
 redundant, electrical continuity checking method 8=3136
 relaxation generators of pulses using secondary emission tubes 8=15179
 relaxation oscill., tunnel diode 8=5330
 sequential recognition system for spoken digits in real time 8=3084
 simulation of fields with rel. motion 8=19372
 single channel recorder, device for conversion to multi-channel sequential recorder 8=6239
 solid state drive for paper-tape punches 8=6035
 spark commutator, pulse correction with heterogeneous shaping line 8=10830
 spark-gap-switch deionization det. 8=7679
 stabilizer, small d. c. currents, semiconductor 8=15183
 static decade register with visual presentation 8=15175
 superconducting oscillator-detector 8=15172
 superconductor, in current magnetometer 8=15253
 superhigh freq. power simulator, for operation in 3 cm band 8=15389
 switching using parallel bank of spark gaps, performance 8=273
 for synchronous operation of mass spectrometer 8=20914
 systems analysis using thermodynamic and nonlinear circuit eqns. 8=26
 thermoelectric generator, use of ferroelectric ceramic capacitor 8=9231
 time mark generator for X-Y recorder 8=15176
 time-to-amplitude converter for photoelectric optical field meas. 8=15496
 timing and control system for radioactive activation by accelerator bombardment 8=11799
 twin-T bridges for impedance and inductance meas. at 10 MHz 8=303
 u. h. f. fast pulse generator using charge storage diode 8=18122
 valves, packing for cryogenic service 8=3139
 voltage-controlled attenuator with photoresistors 8=15181
 voltage integrator, using electronic digital voltmeter 8=15168
 voltage integrator, using electronic digital voltmeter 8=15168
 voltage stabilizers, stabilization coefficient of 8=15184
 wide-band linear amplifiers using secondary emission tubes 8=15173
 wide-band n. m. r. dispersion detector 8=15435
 wideband pulse compression via Brillouin scatt. in Bragg limit 8=10948
 wire loop, e.m. excitation and loading 8=19895
 X130 standard attenuator, with rotating plate, in super-high freq. 8=15415
 zero-crossing detector of bipolar pulses with long cross-over times 8=3141
 zero crossing timing, accurate, using tunnel diodes 8=3142
 GaAs, oscillators, microwave characteristics 8=5301
 Pt resistance thermostat for $\pm 25^\circ\text{C}$ 8=15123
 Si-controlled rectifier switching circuit, for prod. pulsed mag. fields 8=3164

Clathrates. See Molecules; Organic compounds.**Clay**

- adsorption, mutual, with Al oxide, hydrons 8=8341
 electrophoretic filtration, forced-flow, elec. field effects 8=16898
 kaolinite, water saturated, acoustic props. at 4-600 kHz, obs. 8=1857
 mineral mixtures, high-temp. reactions and ceramic props., dimensional and weight changes on refining 8=22323
 surface contour meas. using gas laser probe 8=19339
 ultrasonic dispersal for particle size meas. 8=13046

Cleavage. See Crystals/faces; Fracture.**Clebsch-Gordan coefficients.** See Field theory, quantum; Nucleus/theory; Quantum theory.**Climatology.** See Meteorology.**Clock paradox.** See Relativity.**Clocks.** See Time measurement.**Cloud chambers**

 photoreactions on He³, investigation 8=7000
 Wilson expansion, Polaroid-Land photography 8=20222

Clouds

- aerosol and microphys. props. at Hawaii, comp. of inland and sea forming clouds 8=9859
 rel. to atmosphere waves instability, billow clouds characts., obs. 8=23265
 and back radiation formulae, long wave 8=2590-1
 below base, convection 8=2578
 characteristics correl. with outgoing rad. of "earth-atmos." system 8=9861
 collision efficiencies for small droplets in Stokes flow, theory 8=14616
 condensational growth of NaCl soln. drops 8=9853
 condensation nuclei in air free from aerosols, formation in light and dark 8=18864
 cumulonimbus, large sheared, updraught outflow mixing, obs. 8=23281
 cumulus and cumulonimbus, radio emission during solar eclipse 31st June 1962 8=23282
 droplet coalescence, analytic studies 8=23277
 droplet growth by hydrodynamic capture, stochastic model 8=18869
 droplets and nuclei, number concentration comparison, obs. 8=18867
 evaporation in air, continuum model 8=8184
 gas, expansion in a vacuum 8=4447
 grenade glow clouds, spectral energy distrib. 8=9924
 infrared radiation transfer by spherical harmonics method 8=18866
 microstructure, optical estimation parameters 8=18871
 night, influence on choosing site for astronomical observatory 8=14579
 noctilucous, recent advances 8=2588
 nuclei production and droplet concentration, effect of sugar cane fires 8=18868
 physical processes during formation of layers 8=14617
 radioactive, γ -ray dose calc. 8=10448
 rain water, elec. conductivity, over Hawaii 8=9857
 satellite i. r. obs. for noctilucous cloud detect. 8=9855
 seeding, by AgI aerosols, hygroscopicity and chemical composition 8=1605
 seeding, results and benefits in Australia 8=23280
 short-wave radiation fluctuations relationship 8=9860
 sky conditions, Cerro Tololo Observatory, predictions for 1968 8=14621
 spectral meas. from 1.6 to 5.4 μ 8=9866
 warm over Hawaii, elec. charge on raindrops 8=9858
 Al grenade glow, night radiation obs. 8=18872

Clusius-Dickel columns. See Isotope separation.**Coal**

- agglomerating, specific electrical conductivity, temp. depend. 8=22507

Cobalt

- chromatographic separation, complex formation and reflectance spectros. detect. 8=23176
 critical magnetic scattering of neutrons 8=2317
 deposits, pseudomorphic, on Cu 8=21881
 diffusion studies 8=17575
 domain structures on perpendicular surfaces, obs. with electron microscope 8=13991
 doped MnF₂, magnon sidebands and local order 8=23001
 electrical resistance compared with Fe and Ni 8=17930
 electronic structure, photoemission studies 8=22723
 f. c. c. - h. c. p. martensitic transformation, thermodynamic props. 8=17049
 ferromagnetic lattice, hyperfine magnetic field on Sm¹⁵⁰ 8=2335
 film on Cu, magnetization under circular alternating and longitudinal static fields 8=9335
 films, electrolytically deposited, growth rate rel. to structure and ferromag. props. 8=13999
 films, electron diffraction images of periodic domain struct. 8=22772
 films, galvanomagnetic effect, in rotating mag. field 8=17931
 films, phase changes, thickness depend. 8=17050
 foils, ferromagnetic domain width depend. on thickness 8=22791

Cobalt—contd

- galvomagetic effect obs. in thin film specimens 8=5475
 hexagonal Co films, dynamical multiple reflections in
 electron diffraction patterns 8=13256
 hexagonal single crystal surface plastic deformation due
 to friction against sapphire ball 8=17771
 hexagonal single crystal, Young's modulus dependence
 on thermal expansion 8=22324
 lattice, (0001) surface states calc. using tight binding
 approx. 8=5121
 magnetic recording films, deposition and props.,
 obs. 8=22790
 magnetized, polarized n transmission 8=2031
 magneto-caloric effect near Curie temp. and determ.
 sp. ht. 8=9337
 magnetocrystalline anisotropy and temp. dependence 8=9336
 magneto-optical props., u.v., visible and i.r. 8=18550
 magnetoresistance and electrical resistance 8=8999
 magnetothermal effect during the $\epsilon\epsilon_2\gamma$ phase
 transition 8=13961
 micromosaic block size and misorientation in zone-
 melted crystals, impurity depend. 8=8470
 nuclear polarization in Fe from Fe^{57} Mössbauer expts. at
 1-0.08°K 8=4676
 reflectance meas. 8=22975
 specific heat from magneto-caloric effects near Curie
 temp., specific magnetization 8=9337
 X-ray emission bands fine struct. rel. to e band struct.,
 obs. 8=18527
 in Ag, liquid, diffusion 8=12836
 Co^{56} , extraction from aqueous soln. using 1-phenyl-3-
 methyl-4-capryl-pyrazolone-5 8=18750
 Co^{60} underwater source, γ -ray flux density 8=1008
 $\alpha\text{-Co}$, hexagonal cryst. magnon obs. 8=14008
 Co/Cr layered films of high coercive force, for digital
 mag. recording 8=14009
 Co(II) ions, sublation studies, by radioactive
 tracers 8=23075
 Co^{2+} ion hydration, n.m.r. 8=12937
 Co^{2+} , near i.r. fluoresc. and absorpt in MgO 8=23050
 Co^{2+} in MgO, anisotropy of spin-lattice relax. for
 Kramers doublets 8=9414
 Co^{2+} in MnF_2 , antiferromagnetic, radiationless processes
 and afterglow kinetics 8=23058
 Co^{2+} in $\text{Zn}(\text{NH}_4)_2(\text{SO}_4)_2 \cdot 6\text{H}_2\text{O}$, forbidden hyperfine
 e. p. r. spectra 8=9420
 in Si p-i-n, current oscillations 8=2227
 with Sn, bonds in organo-Sn cpds., Mössbauer obs. 8=4668
 $\text{TiMnF}_3\text{:Co}$, antiferromag. zero anisotropy Co conc.
 dependence 8=9401

Cobalt compounds

- alloy films, meas. of mag. transitions with vib. head
 magnetometer 8=19745
 alloys, f. c. c., ageing effects after cold working
 deformation 8=17622
 alloys, structural defects and precip. 8=17621
 complex, trans-dichloro(1, 4, 8, 11-tetraazaundecane) cobalt
 (111), isomerism 8=7512
 complexes, Co^{99} quadrupole interaction 8=22919
 Co(III) complex, chloropentamminecobalt(III)dichloride,
 crystal structure 8=22016
 Co complex, decammine- μ -amido-dicobalt pentanitrate,
 crystal structure 8=17357
 Co complex, decammine- μ -peroxo-dicobalt pentanitrate,
 crystal structure 8=17356
 Co complex, dichlorobis(2-picoline) Co(II), ligand exchange
 kinetics by n.m.r. 8=2501
 Co complex, tris-dipyridyl Co(111) perchlorate, trihydrate,
 $^{57}\text{Co}^{2+}$ -doped 8=2082
 Co complexes, inversion-vibr. levels and splitting 8=4121
 Co complexes, stereospecificity rel. to conformational
 analysis 8=5691
 Co(III) ethylenediamine complexes, p.m.r. and secondary
 coordination shell 8=12319
 Co(II) halides, absorption spectra at high temp. and
 pressure 8=1580
 Co^{2+} octahedral systems, theory of nuclear resonance
 shifts 8=1597
 Co(II) perchlorates, water solns., u.s. velocity 8=12865
 Co-Al alloy, effect of Ni addition on magnetic
 properties 8=13960
 Co-Al alloy, 'Malcolloy', effect of V addition on mag.
 props. 8=22793
 CoAl, elec. resist., temp. and comp. depend. 8=13721
 Co-Al magnetic alloy, effect of Mo addition 8=22792
 CoAl-Co eutectic, mechanical props. 8=17770
 CoB, transfers of electronic states 8=5461
 Co-Be alloy, ferromag. props. rel. to transfer of
 electron states 8=14018
 $\text{CoBr}_2 \cdot 2\text{H}_2\text{O}$, cryst. structure 8=1798
 Co-Cr alloys, growth of spheroidal graphite crystals 8=13156
 $\text{Co}(\text{CN})_3^{3-}$, molec. and electronic struct. 8=4147
 CoCO_3 , antiferromag. resonance line position, hexagonal
 anisotropy 8=5514
 CoCO_3 , crystal growth, e. p. r. study antiferromagnetism
 and resonance 8=18372
 $\text{Co}(\text{CO})_{12}$, C^{14}O isotope exchange 8=2506
 $\text{Co}(\text{CO})_2\text{NO}$, dipole moment 8=12185
 $[\text{Co}(\text{C}_2\text{O}_4)_2]^{3-}$ - $^{14}\text{C}_2\text{O}_4^{2-}$, radioisotopic exchange 8=21796

Cobalt compounds—contd

- CoCl_2 , in binary solvent mixtures, n.m.r. 8=8138
 $\text{CoCl}_2\text{:MCl}$ (M=Rb, K, Na, Li), symmetry changes rel. to
 CoCl_2 conc. 8=9516
 $\text{CoCl}_2 \cdot 6\text{H}_2\text{O}$, antiferro-paramagnetic transitions at low
 temps. 8=9392
 $\text{CoCl}_2 \cdot 6\text{H}_2\text{O}$, antiferro-paramag. transition rel. to
 Fisher's relation 8=9393
 Co-Cr alloy with W, Ta or Nb, cpd. formation and structure
 on precip. 8=17621
 Co-Cr 10% alloys, contrast effect at cubic-hexagonal
 interface 8=8459
 CoCr_2O_4 , mag. study by neutron diffr. 8=9374
 CoCr_2O_4 , sp. ht. in 80-273°K range 8=17516
 CoCr_2S_4 , mag. structure determ. by n-diffr. 8=18332
 Co-8Cr-Ta, precip. on hardening at 700°K 8=17621
 CoF_2 , optical spectrum 8=22974
 CoFe_2O_4 , coprecipitated particle size distribution 8=4843
 CoGa, elec. resist., temp. and comp. dependence 8=13721
 CoMo alloys, hard magnetic props., structure 8=5462
 $\text{Co}[(\text{NH}_4)_2\text{CS}_4]\text{Cl}$, thermal cond., anomalous enhancement
 rel. to magnon cond. 8=13391
 Co-Ni alloys, effective field distribution at Co^{59}
 nuclei 8=8195
 Co-Ni mag. recording films, deposition and props.,
 obs. 8=22790
 Co-Pd alloys, ferromag., Co^{59} and Pd^{105} n.m.r.
 studies 8=2381
 Co-Pd alloys, (8, 3 to 0.03 at. % Co), effective mag. field at
 Co^{60} nuclei 8=5463
 Co-Ni-Al-Cu-Ti-Fe, solid soln. struct. 8=17010
 CoO, antiferromagnetic, u.s. attenuation 8=22106
 CoO, crystal dynamics and magnetic
 excitations 8=22086
 CoO crystals, growth by arc-transfer 8=4806
 CoO, Néel temp., effect of hydrostatic pressure 8=9394
 CoO, paramagnetic, anomalous Hall effect 8=17914
 CoO, semiconducting, near and far i.r. absorpt. by small
 polarons 8=23008
 $\text{CoO-Al}_2\text{O}_3\text{-SiO}_2$, formation of mullite, free energy of
 reaction 8=9669
 CoO:Li , Seebeck-effect, thermogravimetric effect,
 high temps. 8=1956
 CoO:Li , ($\text{Li}^+ - \text{Co}^{3+}$) dipole relax. losses rel. to free hole
 movement 8=18165
 CoO:Na , ($\text{Na}^+ - \text{Co}^{3+}$) dipole relax. losses rel. to free hole
 movement 8=18165
 Co-P mag. recording films, deposition and props.,
 obs. 8=22790
 Co-Pd and Co-Pt, giant moments theory 8=9302
 Co-Pt binary solns, interdiffusion coeff. conc. dependence,
 by X-ray analysis 8=17570
 CoSi , scattering mechanism and band structure 8=2098
 Co_2Sn , Mössbauer effect 8=1645
 CoTiO_3 , mag. props., theoretical interpretation 8=9399
 CoTiO_3 , mag. resonance and susceptibility 8=9398
 CoW alloys, hard magnetic props., structure 8=5462

 h. c. p. metals and alloys, X-ray study 8=22283
 polyethylene, effect of cold drawing on sorption of
 organic vapours 8=8349
 rolling materials between 4.2 and 300°K, roller
 design 8=19335
 rolling theories, validity 8=5033
 steel, low-carbon, sheets, rolling and annealing
 textures 8=17799
 steel, mild, rolling, yield stress rel. to strain 8=22368
 Zircalloys-2 and -4, effect on terminal solubility and
 thermodyn. activity of H_2 in these and $\alpha\text{-Zr}$ 8=8249
 Al, rolled, textures 8=21938
 $\text{Al-Al}_2\text{O}_3$, dispersion strengthened, workability
 examination 8=8812
 $\beta\text{-AuMn}$, transform. to f. c. c. structure 8=17042
 Co alloys, f. c. c., ageing effects after cold-working 8=17622
 Cu-Fe alloys, effects on mag. props. and elec.
 resistivity 8=17934
 Fe, effect on oxidation in water vapour at 550°C 8=23101
 Pu-Ga (3 at. %) alloy, α -phase precipitation in
 δ -phase 8=21855
 Rh and Ir, poor ductility 8=22390
 $\alpha\text{-Zr}$, effect on terminal solubility and thermodyn. activity
 of H_2 in this, Zircaloy-2 and Zircaloy-4 8=8249
- Collections of physical data**
 Only comprehensive works of reference are listed here.
 ancient geomag. field intensities, geological and historic
 and archeological data 8=23426
 ancient geomag. field intensities, past 10 000 yrs 8=5811
 atmospheric radio refractivity, world atlas 8=18905
 bimolecular rate constants, table for e, H and OH in
 aqueous solns. 8=2510
 crystallographic Fourier map atomic peak heights and
 corresponding Patterson functions 8=1771
 crystallographic symmetry groups up to 3-dimensions,
 geom. symbols 8=8365

Collections of physical data—contd

- electric dipole moments, molecules in gas phase 8=21050
etchants for crystal defect studies, table 8=17597
gas isotope mixtures, thermal diffusion props. 8=1492
gas reactions, bimolecular and termolecular, tables 8=10466
illumination from moon intensity received on earth for any phase and altitude 8=5951
molecular vibrational frequencies, 54 molecules 8=21036
nuclei, $Z = 11 - 21$, energy level props. 8=7054
particles and resonant states, updating 8=15671
photonuclear data index 8=19343
radioactivity, environmental, National Nuclear Research Centre, Pelindaba, S. A., 1966 8=18908
radio emission of 47 bright galaxies 8=5931
210 radio sources, accurate positions 8=23617
spectral-line intensities, revised tables below 2450 Å 8=1152
source between declinations +27° and -30°, identification 8=23615
USSR State Service of Standard Reference Data, organization 8=2
X-ray crystallography, cylinder absorpt. corrections 8=1774
X-ray diffraction powder patterns, 80 substances 8=17327
Cu alloys, low-temp. mechanical properties 8=17779
Cu, low-temp. mechanical properties 8=17779
Si, stopping power for p, d, t, α 8=8778

Collision processes

accelerators with colliding particle beams 8=639
advances in atomic and molecular physics, book I and II 8=16171-2
alkali-metal atoms with inert gas, fine-structure transition cross sections 8=4106
alkali-metal atoms, thermal excitation and deactivation in atmosphere of inert gas 8=12088
alkali vapours buffer gas mixing, evidence from optical pumping 8=20978
anthracene, singlet-exciton collisions 8=17891
rel. to astrophysics, atom-atom processes 8=16230
asymmetric molecule-atom scatt., classical theory 8=12368
atom-atom, inelastic, investigated by perturbed stationary state method 8=12101
atom-diatom mol., compound state resonances 8=4255
atoms by diatomic mols, resonances in elastic scatt. 8=21193
atom-molecule energy exchange, variation procedure 8=20150
atoms and charged particles, matrix elements for large energy or momentum transfer 8=4103
atoms or mols., exchange interacts, Schrödinger perturb. formalism 8=4256
atoms, not in 1S states, elastic and resonant exchange cross-sections 8=4104
atoms, scatt. of changed particles, total cross-section, Bethe cross-section sum rule 8=12107
atoms, 3 body, rearrangement collisions for high energies, linear model 8=16228
atomic, autoionization 8=7714
atomic interaction potentials for different electron distributions 8=7456
atomic, with fast e ejection, molecular-orbital model 8=7451
atomic and molecular interactions, weak, new perturbation procedure 8=12103
atomic rel. to planetary atmospheres phenomena 8=14832
atomic scatt., validity of semiclassical method 8=1191
atomic-shell struct. effects in inelastic collisions 8=7452
atomic, slowly converging radial integrals, evaluation 8=21003
atomic, spectral line breadth, effect 8=7372
bimolecular reactions, velocity spectra 8=7635
broadening of spectral lines 8=21197
broadening of spectral lines, semi-classical calculations 8=7459
charge-transfer, high-energy, involving rare gases, adiabatic hypothesis 8=21005
Coulomb interaction, matrix elements, method of quasispin 8=21011
cross-section determ. from meas. on arc discharges 8=4294
deoxidation product growth and separation, model 8=18658
diatomic gas, accommodation coeffs. 8=7629
diatomic mols., rotational relax., theory 8=12365
diatomic mols., vibr. energy transfer 8=21190
differential cross-sections at thermal energies, transformations and averaging 8=21199
elastic, influence on broadening of ion lines 8=12099
electron-atom, classical perturbation theory of atomic excitation 8=7460
electron-atom, excitation cross-sections 8=12077
electron-atoms 8=12091
Collision processes—contd
e capture, classical theory $H^+ - O$, (N) and $He^+ - N$ 8=7461
e-e, e-ion in partially ionized gas mixtures, subject to elect. and mag. fields 8=12423
e-ion, in taking away energy from ion recombination 8=1355
focused sequence generation, inverse-square potential calcs. 8=17696
Fokker-Planck equation and conservation equations 8=4488
gas-solid, study by scatt. modulated molec. beams 8=1323
gases, effects of excited particles 8=16373
heavy particle and electronic states of molecules 8=4249
heavy particles, exchange matrix elements, evaluation 8=12100
highly excited atoms, ionization 8=4303
Holtmark, between Hg isotopes 8=7468
inelastic atomic, effect of pseudo-interaction on adiabatic transitions 8=21010
inelastic, effects on electron transport 8=7939
inert gas ions, doubly charged, cross-section for momentum transfer 8=7458
inert gases, scattering ionization 8=1364
interatomic scatt., interference effects using modified Lennard-Jones potential 8=7453
interelectron, effect on plasma distrib. function 8=1328
ion molecule reactions at pressure $8 \cdot 10^{-6} - 10^{-3}$ mm Hg 8=4258
ion-polar mols., capture 8=7696
ions, multiple acceleration in electric field 8=630
iron, liq. -silica, deoxidation product growth and separation, model 8=18658
low-energy "orbiting" collisions, semiclassical phase shifts 8=12366
metallic lattice, collision of atom, accommodation coeff. 8=22238
molecular beam, shock-tube produced, for O atoms at 3 eV 8=7640
molecular rot. absorpt. lines, broadening 8=12121
molecular scatt. in presence of angle depend. pot. 8=4254
molecule, fast vib. excited, collision with linear chain of atoms, exchange energy and momentum loss 8=16381
molecule-noble gas atom, ang. mom. reorientation cross-section 8=21524
mols., polyatomic, unimolecular reactions activation mechanism 8=4260
molecules and recoil atoms in condensed media, effective interaction range by nuclear γ resonance obs. 8=21198
non-equilibrium ionization, gas in electric field 8=288
nuclear and atomic, Doppler broadening of energies of emitted particles 8=20763
paraffins-electrons, energy transfer to vibr. degrees of freedom 8=4206
phase shifts for inverse-power force field 8=20142
physisorption, angular distrib. of desorbed mols. 8=17146
 $\pi^- - N_2$, π^+ yield obs. 8=7220
plasma, Coulomb system Green's functions 8=7739
plasma, electron-atom interactions and triple collisions 8=7730
plasma, electron-ion reflection thermodynamics 8=7736
plasma, non-linear mixing of waves, velocity dependence 8=16578
plasma, rate calc. for ions 8=12470
in precipitation deoxidation kinetics, model 8=18658
primary atoms, distrib. function for total paths 8=7365
proton-atom, classical perturbation theory of atomic excitation 8=7460
quasi-particles rel. to transformation properties of the kinetic equations 8=14996
resonance multichannel, T matrix expansion 8=20274
semiclassical approx. for elastic scatt. and eigenvalues 8=20151
slow electron scattering by molecules 8=21061
 3α formation in He, He-Ar, He-Ne gases bombard. by α rel. to scintillation mechanism 8=12202
3-body, approx. from Lovelace-Faddeev eqns. 8=20305
translational-vibr. energy transfer, steric factor 8=4250
transport processes, quantum theory 8=19475
vibrational transition probabilities, reaction matrix calc. method 8=21196
vibrational-translational energy transfer, molec. orientation effect 8=7632
vibrators and librators perturbed by collisions 8=100
wave-packet formulation, semiclassical approx. time-depend. 8=20153
wave packets, relativistic 8=15609
of water drops, in steam atmos., energy dissipation 8=21593
 $Ar^+ + Ar \rightarrow Ar^{m+} + Ar^{n+} + (m+n-1)e$, final change states and discrete loss mechanism 8=4107
 Ar^{2+} , in parent gas, mobility calc. 8=7458
Ar, accommodation coeff. in impact on Al, Ag, Au and Pt, 500-12 000 eV 8=12685
Ar, elastic differential collision cross sections meas. 8=4108
Ar and Kr ions and atoms, multielectron ionization in close collisions 8=21012
Ar-p, e capture excitation to 3s, 4s states of H, cross-section obs. 8=7462
Ar, spectral self-broadening and oscillator strengths 8=7416
Br₂ with K, Rb and Cs atoms, reaction kinetics 8=1202

Collision processes—contd

- CO mols. energy transfer to solar photosphere particles 8=12377
 CO₂, vib. deactivation by collision of mols. in presence of Fermi resonance 8=1321
 CO₂, e impact, ionization and excitation, absolute cross sections 8=21268
 Cs-inert gas collisional J reorientation, e spin polarization determ. from D₂ pumping 8=1194
 Cs plasma, effective electron-Cs heavy particle momentum transfer collision freq. 8=12476
 Cs, 6p and Rb 5p doublets, depolarization 8=7471
 Cs, two excited atoms, rel. to formation of molecular ion 8=12438
 D⁺-rare gas, radiation polarization in charge transfer collisions 8=21004
 D₂ with inert gases, total scatt. cross-sections 8=7634
 D₂ with alkanes and alkenes, rel. to deactivation 8=1358
 H and other ions, cross-sections determ. by ion cyclotron reson. 8=12442
 H atom pairs, hyperfine splitting of energy 8=12105
 H atoms—fast H⁺ and He⁺ rel. to astrophysics 8=16230
 H-C, level excitation 8=1193
 e + H, polarization of Lyman-alpha radiation produced 8=12096
 H-e for prod. of polarized e beam 8=15304
 H-H, 1.25–117 KeV, e transfer and ionization obs. anomaly 8=21276
 H-H, spin exchange cross-section from H maser oscils. 8=21008
 H-H, 2–60 keV, ionization fraction obs. 8=21007
 H-H₂, 2–60 keV, ionization fraction obs. 8=21007
 H(1s) + He²⁺ → He⁺(1s) + H⁺, back-coupling and distortion 8=7466
 H-O, level excitation 8=1193
 p+H, electron capture probability 8=1199
 p-H, 1D model for high-energy charge transfer 8=20152
 H⁺-H, 2–60 keV, ionization fraction obs. 8=21007
 H* formation, by H₂⁺ and H₃⁺ prsing through Ne, H₂, Na and Mg 8=21082
 H⁺-H(1s), elastic and resonant exchange collisions, nuclear symmetry 8=12106
 H⁺, H₂⁺ in N₂, O₂, CO₂, H₂O, charge exchange 40–1500 eV 8=21275
 H⁺ + He(1s²) → H(1s, 2s, 2p) + He⁺(1s), e capture cross section calc. 8=7465
 H⁺ + N(O) → H + N⁺(O⁺), classical calc. of cross-section 8=7461
 H⁺-rare gas, radiation polarization in charge transfer collisions 8=21004
 H₂, accommodation coeff. in impact on Al, Ag, Au and Pt, 500–12000 eV 8=12685
 (H₂, D₂) exchange reaction, vib. versus translational energy importance 8=4257
 (H₂, H₂) exchange reaction, vib. versus translational energy importance 8=4257
 H₂ with inert gases, total scatt. cross-sections 8=7634
 H₂—p, e capture excitation to 3s, 4s states of H, cross-section obs. 8=7462[~]
 H₂—p cross-section obs., Balmer emission 8=12190
 H₂⁺ formation, by H₂⁺ and H₃⁺ passing through Ne, H₂, Na and Mg 8=21082
 H₂⁺ + H₂ → H₃⁺ + H, cross-section obs. 0.1 ≤ W ≤ 10 eV 8=21192
 H₂⁺—H₂, He, Ar, Ne, 20–120 keV, cross-section for H atom in 3s state prod. 8=21191
 H₂⁺—N₂, 100 keV, cross-section for H atom in 3s state prod. 8=21191
 H₂⁺—H₂, He, Ar, Ne, 20–120 KeV, cross-section for H atom in 3s state prod. 8=21191
 He, accommodation coeff. in impact on Al, Ag, Au and Pt, 500–12000 eV 8=12685
 He⁴ atoms, Ramsauer-Townsend effect 8=1200
 He beam on H₂ scatterer, total cross section meas. using high intensity nozzle beam source 8=7639
 He-He, validity of Wigner spin rule 8=21015
 He with inert gases, total scatt. cross-sections 8=7634
 He-Ne laser, field modulation method 8=11061
 He—p, e capture excitation to 3s, 4s states of H, cross-section obs. 8=7462
 p + He → H(2p) + Ne⁺, cross-section 8=21009
 p + He → H(2p) + He⁺, cross-section 8=21009
 He, positron annihilation in gas 8=20998
 He⁺—He, excitation and e capture probability calc. 8=7463
 He⁺ in N₂, O₂, CO₂, H₂O, charge exchange 40–1500 eV 8=21275
 He⁺⁺ → He⁺ + H⁺, e capture probability calc. 8=1192
 He⁺⁺ + N → He⁺ + N⁺, classical calc. of cross-section 8=7461
 He²⁺, in parent gas, mobility calc. 8=7458
 He³⁺—He, 7.2–181 KeV, single and double e-capture cross-sections obs. 8=21278
 He³⁺—N₂, 7.7–166 KeV, cross-sections for single and double e capture 8=21279
 Hg, cross-sections of rare gases 8=7469
 Hg, 6s6d levels, with inert gases 8=1201
 Hg²⁰¹, hyperfine levels, population transfers 8=7467

Collision processes—contd

- I₂ with K and Cs atoms, reaction kinetics 8=1202
 e + K, differential spin-exchange cross section and differential cross section, 0.5 eV 8=12097
 K-inert gas, collisional mixing rel. to selection rules for atomic spectrum 8=12064
 K + O₂, atomic differential spin-exchange scattering 8=12109
 Kr-Ne, Ar, He, spectrum broadening and shift effect 8=20956
 Kr, spectral self-broadening and oscillator strengths 8=7416
 Kr²⁺, in parent gas, mobility calc. 8=7458
 N ions in N drift vels. and reactions at 300°K, 0.5–1 Torr in elec. field 8=7718
 N + O → NO⁺ + e, ionization cross section calc. 8=4111
 N₂, accommodation coeff. in impact on Al, Ag, Au and Pt, 500–12000 eV 8=12685
 N₂ ionization by e collisions 8=16448
 N₂ mols., scattering ionization 8=1364
 N₂ second positive system excited by impact with a metastable Ar atom 8=12209
 N₂—H, spectrum rel. to aurora, cross-section calc. 8=12212,
 N₂—p, e capture excitation to 3s, 4s states of H, cross-section obs. 8=7462
 N₂—p, 0.15–1.0 MeV, spectra of N and N₂⁺ 8=12213
 N₂—p, spectrum rel. to aurora, cross-section calc. 8=12212
 N₂⁺—e, dissociation cross-section 8=1312
 N₂⁺ + O₂ → O₂⁺ + N₂, low-energy cross sections 8=16372
 Na, resonance fluorescence quenching in inert gases 8=1185
 Na + Cs, atomic differential spin-exchange scattering 8=12109
 Na-Kr interference effects using modified Lennard-Jones potential 8=7453
 Na-Xe, interference effects using Modified Lennard-Jones potential 8=7453
 Ne, elastic differential collision cross sections meas. 8=4108
 Ne, spectral self-broadening and oscillator strengths 8=7416
 Ne-He plasma, cross section for second kind collisions, meas. 8=21016
 Ne—p, e capture excitation to 3s, 4s states of H, cross-section obs. 8=7462
 Ne²⁺, in parent gas, mobility calc. 8=7458
 O⁺ + N₂ → NO⁺ + N rate constants energy var., drift tube meas. 8=14667-8
 O⁺ + O₂ → O₂⁺ + O rate constants energy var., drift tube meas. 8=14667-8
 O₂ ionization by e collisions 8=16451
 O₂—p, e capture excitation to 3s, 4s states of H, cross-section obs. 8=7462
 O₂⁺—e, dissociation cross-section 8=1312
 OH mols. and charged particles in interstellar space, maser action 8=5927
 p with He, Ar, Ne, N₂, H₂, O₂, excitation to 3s, 4s states of H obs. by e capture 8=7462
 Rb, optically pumped, with Kr atoms, relax. correl. times 8=7472
 Rb, 5p and Cs 6p doublets, depolarization 8=7471
 Tl 2p_{1/2} state depolarization 8=7473
 Xe+D₂, compound state resonances 8=4255
 Xe+H₂, compound state resonances 8=4255
 Xe²⁺, in parent gas, mobility calc. 8=7458
 ZnS:Ag film, ion beam energy loss anomalies 8=8758
- Colloids**
 See also Electrophoresis; Emulsions; Gels; Sols; Thixotropy.
 aggregates, shape analysis, from electron micrographs 8=16906
 amine oxide micellar solns., potentiometric studies 8=8158
 diffusion const., rot., by transient elec. light scatt. 8=8073
 distribution density rel. to Boltzmann's theory for perfect gases 8=16905
 drilling muds in tubes, laminar and transitional flow 8=8151
 ferric oxides, hydrous, mineralogical comp. 8=12954
 light scatter study of turbulence 8=4440
 metal salts solution, preparation of spherical fuel particles 8=16166
 moisture absorpt., chemical potential 8=21730
 stability of precipitating systems 8=12949
 stability, role of water structure 8=12948
 3-layer body, kinetics of temperature field 8=4633
 ultracentrifugation, simultaneous automatic sequence and photo control system 8=4631
 Ag, colour centres form. in KCl:Ag phosphors, obs. 8=8746
 Ag solutions in water, extinction light curves 8=4579
 Al oxide, hydrous, adsorption, mutual, with clay minerals 8=8341
 Au, radioactive, Ag coated for radiotherapy 8=14893
 Au solutions in water, extinction light curves 8=4579
 CsBr, effect of particle size on colloid band 8=1604
 Li, in pile irradiated LiF crystals 8=12947

 television display using lasers 8=11068

Colour centres

- alkali earth oxides, e.s.r. of F centres 8=13456
 alkali halide, Ag⁺ doped, B-centre 8=17681
 alkali halides, Ca doped, Z₁-bands, theoretical studies 8=13455
 alkali halide crystals with activating impurities, colour-ability and luminesc. 8=17682
 alkali halides, dichroic absorption, appln. to information storage 8=13461
 alkali halides, F-band peak, Mollwo relation 8=17688
 alkali halides, F-band, pressure shift: ion-size effects 8=22226
 alkali halides, F-centre, luminescence, under hydrostatic pressure 8=9599
 alkali halides, F-centre multipole polarizability 8=13453
 alkali halides, formation and decay meas. by pulsed e beam 8=13460
 alkali halides, formed by two-photon absorpt. of pulsed N₂ laser 8=5578
 alkali halide phosphors F-centres rel. to radioluminesc. and carrier motion obs. 8=18594
 alkali-halide phosphors, temp. depend. of optical flash from F band 8=5653
 alkali-halides, props. rel. to divalent cation impurities and dipolons, conc. 8=8701
 alkali halides: Sr⁺⁺, mixed crystals, Z₁- and Z₂-centres 8=22225
 alkali halides, and sputtering induced by slow electron bombardment, formation theory 8=13472
 alkali halides, U-centre-induced i.r. absorpt. spectra, side bands 8=4991-2
 alkali halides, U-centre localized mode, shell model harmonic treatment 8=13321
 alkali halides, Z-centres 8=13454
 alkali silicate glasses, X-irrad., trapped hole centres 8=1998
 alkaline earth fluorides, F-centre electronic structure from wave functions 8=1997
 aluminophosphate glasses, radiocolouration and luminescence kinetics 8=1996
 anthracene, γ -irrad. 8=17689
 crystal lattice, theory of quantum absorption and appearance of electrons developed 8=8739
 crystals, as models of positronium atoms and mols. of chem. cpds. 8=13451
 excitation and recomb. near fundamental absorpt. limit 8=9580
 F, in alkali halides, book 8=17680
 F-centre wave functions calc. 8=13646
 F-centres luminesc. as phosphor hole processes meas. 8=8888
 F, diffusion, lecture demonstration 8=13452
 F', theory of photo-ionization 8=8740
 magnetoacoustic reson., double electron-nuclear 8=8623
 metaphosphate glass, Ag radicals 8=4990
 recombination, effect of high mag. field 8=22223
 R-centre, linear Stark effect 8=1992
 ruby, luminescence meas. 8=1995
 rutile, partially reduced, F-centres from e.p.r. study 8=18436
 sodalites, photochromic, e.s.r. 8=14120
 zircon, natural, obs. of two types of centres 8=9649
 AgBr:Se, e.s.r. studies of Se₂⁻ centres 8=13464
 AgCl:Se, e.s.r. studies of Se₂⁻ centres 8=13464
 Ba silicate glasses, γ -ray effects 8=13479
 BaF₂, additively coloured, fluorescence, phonon-assisted 8=14306
 BaF₂, enhancement of colorability by plastic deformation 8=22228
 BaF₂, F-centres 8=22227
 BaF₂, X-ray coloured, absorpt. by colour centres, temp. dependence 8=17683
 BaTiO₃, movement rel. to electrical breakdown 8=13884
- Colour centres—contd**
 CaF₂, additively coloured, fluorescence, phonon-assisted 8=14306
 CaF₂, ENDOR study of F centre 8=9417
 CaF₂, enhancement of colorability by plastic deformation 8=22228
 CaF₂, F-centres, fourth shell isotropic h.f.s. constants 8=13457
 CaF₂, F-centres, X-ray prod. 8=1999
 CaF₂:Nd³⁺, effect of rare earth on Nd³⁺ optical centre 8=5593
 CaF₂, X-ray coloured, absorpt. by colour centres, temp. dependence 8=17683
 CaO, colorability enhancement after plastic deformation 8=22229
 CaO, e.s.r. of F centres 8=13456
 CaWO₄:Nd, reduction coloration, role of Nd 8=22962
 CdS, luminescence of photochemically sensitized and unsensitized, spectra 8=9603
 CdS luminesc. centres nature, obs. 8=8741
 CdS, sensitizing recomb., radiative capture yield of electrons 8=9602
 CsBr crystals with F- and M-centres, photoconductivity wavelength and temp. dependence 8=22694
 Cu₂O, neutron-irrad., rel. to absorption and photocond. 8=5597
 KBr, aggregated H centres 8=2005
 KBr, Ca doped, F-centres rel. to growth of absorpt. bands by X-irrad. 8=2429
 KBr, F-band absorpt., u.s. strain modulation 8=22232
 KBr, F-centre props. rel. to photocurrent wavelength dependence 8=2264
 KBr, F, thermal stability 8=8750
 KBr, formation and decay meas. by pulsed e beam 8=13460
 KBr, irrad.-induced low temp. vol. expansion from relaxs. at Frenkel defects 8=13486
 KBr, KBr:Ti, F-centres photostimulated e emission mechanisms, obs. 8=9278
 KBr:NO₃, CO₃²⁻, SO₄²⁻ and Cu, luminesc. centres nature, obs. 8=8745
 KBr:Ti F-centres luminesc. rel. to hole processes, obs. 8=8888
 KBr, Ti⁺ and In⁺ activated, F-centre form. spectrum rel. to mechanisms, 5-21.2 eV 8=2008
 KBr, V-bands, effect of stress, obs. 8=2000
 KBr, vacancy conc. changes during electrolytic coloration at 460-670°C 8=17609
 KCl:Ag, Ag centres form. rel. to point defects, obs. 8=8746
 KCl:Ag (from AgI), optical absorpt. of impurity rel. to E-band models 8=14228
 KCl:Ag, assoc. e.p.r. absorpt. rel. to relax. process 8=8743
 KCl:Ag, B-centre, luminescence and photocond. 8=2006
 KCl:Ag:OH, Ag centres form. rel. to point defects obs. 8=8746
 KCl:Ag, Pb and Ti, Cl₂⁻ centres conc. temp. depend., e.p.r. obs. 8=8742
 KCl:Ag:Sr, Ag centres form. rel. to point defects obs. 8=8746
 KCl with blocking electrode, photoelectric charge 8=22230
 KCl with blocking electrode, photoelectric polarization 8=22231
 KCl Cl₂⁻ centres conc. temp. depend., e.p.r. obs. 8=8742
 KCl crystals, transform. of OH centres into U centres by electrolytic decoloration 8=13458
 KCl, excited F centre lifetime below 100°K 8=2004
 KCl, F-band absorpt., u.s. strain modulation 8=22232
 KCl, F-centre half-width and effective lattice freq. calcs. 8=4993
 KCl, F, thermal stability 8=8750
 KCl, γ -irradiated near room temp., F-centre saturation concentration 8=8696
 KCl, irrad.-induced low temp. vol. expansion from relaxs. at Frenkel defects 8=13486
 KCl, KCl:Ti, F-centres photostimulated e emission mechanisms, obs. 8=9278
 KCl:Na, dichroic absorption, appln. to information storage 8=13461
 KCl:Na, F₂ luminescence 8=9615
 KCl:RbCl crystals, Q₁ centre e.s.r. study 8=22905
 KCl:Sr, F-Z₂ thermal equilibrium kinetics 8=2007
 KCl, Ti⁺ and In⁺ activated, F-centre form. spectrum rel. to mechanisms, 5-21.2 eV 8=2008
 KCl, U₂-centre, electronic structure rel. to correlation effects 8=13459
 KCl, X-irradiated, α -centre production and thermal annealing 8=17685
 KCl, Z-centre, Faraday rotation 8=14229
 KClO₄, X-ray irrad., absorpt. spectrum 8=22233
 KI, F-centre formation quenching 8=8744
 KI, Ti⁺ and In⁺ activated, F-centre form. spectrum rel. to mechanisms, 5-21.2 eV 8=2008
 KX, (X = Cl, Br, I), U centre electronic structure 8=2001-2
 LiF, F centres ENDOR 8=18465
 LiF, isotopic, shift of U-center local mode 8=13462
 LiF M-centre luminesc. excit. spectra and transitions, obs. 8=8747

Colour centres—contd

- LiF, M-centre, upper excited states 8=2010
 LiF, n-irradiated, F-centre exchange interactions from optical and e.p.r. spectra 8=17684
 LiF, R-centre, linear Stark effect 8=1933
 LiF, 6955Å zero-phonon line, pseudo Stark and uniaxial stress splitting 8=18542
 LiF, V_K centre, lattice distortion 8=2009
 LiH, form. rel. to u.v. irradi. and crystal growth conditions 8=8748
 LiH, n-irradiated, F-centre exchange interactions from optical and e.p.r. spectra 8=17684
 LiH, for red luminesc. 8=18608
 MgO production, atomic displacement effects 8=2011
 Mn-activated alkaline earth aluminate phosphors, sensitized luminescence 8=14303
 NaCl:Ag, assoc. e.p.r. absorpt. rel. to relax. process 8=8743
 NaCl:Ag F-centres thermal stability rel. to dislocations, microspectrophotometry obs. 8=749
 NaCl:Ag and Pb_2 , Cl_2^- centres conc. temp. depend., e.p.r. obs. 8=8742
 NaCl:Ag phosphors, photo-excited F-colour centres, microdefect interactions 8=2013
 NaCl:Ag, Sr phosphors, F centre thermal ionization mechanism 8=17687
 NaCl Cl_2^- centres conc. temp. depend., e.p.r. obs. 8=8742
 NaCl, electron centres form. by Co^{60} - γ -irrad. 8=22235
 NaCl, F-band absorpt., u. s. strain modulation 8=22232
 NaCl, F-centre first-stage formation, X-ray induced 8=2012
 NaCl, F-centre half-width and effective lattice freq. calcs. 8=4993
 NaCl F-centres photostimulated emission mechanisms, obs. 8=9278
 NaCl, F-centres, photostimulated exo-emission 8=5409
 NaCl, F-centre prod., electric field effects 8=13463
 NaCl, F, thermal stability 8=8750
 NaCl with Sr, Cd, Ag, Ca and Tl impurities, F-centres stability rel. to cryst. defects 8=8751
 NaCl-type, endor. of F-centres, in external electric fields 8=14137
 NaF, F-aggregate centres 8=17686
 NaI, U-centres, i. r. vibrational absorption 8=9557
 $NaPO_3$, γ irradi. effect 8=22234
 in Nd^{3+} laser glass, saturable absorpt. rel. to self Q-switching 8=11107
 in Nd^{3+} - Yb^{3+} laser glass, saturable absorpt. rel. to self Q-switching 8=11107
 Ni centres in molten LiCl-KCl 8=8087
 Ni centres in molten $MgCl_2$ -KCl 8=8086
 RbCl, F-band absorpt., u. s. strain modulation 8=22232
 RbCl, Z_1 centre circular dichroism 8=22224
 RbI:Ti, luminesc. and formation of excitons 8=5131
 $SrCl_2$, electron centres form. by Co^{60} - γ -irrad. 8=22235
 SrF_2 , additively coloured, fluorescence, phonon-assisted 8=14306
 SrF_2 , enhancement of colorability by plastic deformation 8=22228
 SrF_2 , F-centres, e. s. r. and optical data 8=2014
 SrF_2 , X-ray coloured, absorpt. by colour centres, temp. dependence 8=17683
 $(Sr_{0.99}Mg_{0.11})_2(PO_4)_2$:Eu yellow luminesc. centres 8=9629
 SrO, colorability enhancement after plastic deformation 8=22229
 ZnS:Cl excit. peaks of green and blue centres from emission obs. 8=9642
 ZnS:Cu excit. peaks of green and blue centres from emission obs. 8=9642
 ZnS:Ho $^{3+}$ blue luminesc. centres rel. to lattice-activator energy transfer, obs. 8=9643
 ZnS:Sm $^{3+}$ blue luminesc. centres rel. to lattice-activator energy transfer, obs. 8=9643
 ZnS:Tm, Tm luminesc. centres form rel. to Zn vacancies obs. 8=8434

Colour photography. See Photography/colour.

Colour vision

- compact colour perception test device 8=20131
 chromatic threshold, dominant wavelength and purity 8=11239
 difference judgments, monochromatic stimuli 8=11238
 difference perception, method of analysis 8=15580
 eye spectral sensitivity, visual task effect 8=3390
 fovea, central blue-brightness 8=11237
 heterochromatic threshold reduction factor, flicker modification 8=15581
 human, transfer of spatial chromaticity-contrast at threshold 8=3389
 spatially induced brightness changes in rel. to wavelengths 8=15579

Colubium. See Niobium.

Coma. See Aberrations, optical.

Combustion

- See also Explosions; Flames; Heat of combustion; Reaction kinetics.
 chamber with thermo-acoustic self-oscillatory system 8=243
 compact metallic materials 8=2524

Combustion—contd

- drops, single, of liquid fuel, influence of initial diameter 8=19657
 dust flammability, critical O_2 conc. determ. 8=18694
 electric arc in gas flow, stability 8=4293
 flame configuration in guided flow 8=19655
 gas explosions, transient heat convection 8=15108
 gaseous fuels in fluidized beds 8=23119
 gas-particle mixtures, acoustic combustion instability 8=16704
 laminar diffusion flame behind parabolic cylinder, const. press. Oseen-flow model 8=19656
 pure bipropellant droplet, wake-type diffusion flame shape, rel. to free and forced convection 8=15113
 rocket motors, instability rel. to detonation waves interaction with flow field 8=10721
 two-compartment bomb calorimeter 8=15129
 wood, wet and dry, ignition by radiation 8=15110
 $2C_2H_2+SO_2$ mixture, continuous in annular channel, rot. rate of luminesc. heads 8=23121
 H_2 ignition, slot-injected in supersonic air stream 8=15112
 Na, characts. of aerosol produced 8=12950
 Pu, characts. of aerosol produced 8=12950

Comets

- dissociation and ionization 8=2827
 Halley, irregularities in motion in 1910, and physical behaviour 8=23677
 Halley, nongravitational forces 8=19260
 Iyeka-Seki (1965f), airborne photography 8=19258
 Ikeya-Seki (1965f), emission band intensities of C, (1, 0) and CN(0, 0) 8=10359
 Ikeya-Seki 1965f, Na D lines near perihelion passage 8=14852
 Ikeya-Seki (1965f), polarization of head and tail emission and continuum, 3890-5875Å 8=10360
 Ikeya-Seki, tail polarization plane and degree obs. 8=10358
 rel. to meteor shavers origin, Canada and N. Zealand radar obs. comparison 8=19265
 m. h. d. effects in solar wind 8=19262
 Morehouse 1908 III, rays distrib. and movement 8=14850
 Morehouse, vels. of streamers and condensations in tail 8=14851
 observations with 15 in. wide-field astrographic camera 8=23661
 1965f, "sun-grazing" effect on solar radiation, Oct 21 obs. 8=2846
 solar wind interaction, laboratory simulation 8=23678
 in solar wind, motion 8=19261
 "spontaneously" split, fracture mechanism 8=14853
 sungrazing group, orbit determ. 8=19259
 tail, spectral obs., inelastic collisions between CO molecules and pistons 8=1357
 CO plasma, prod. and flow under influence of solar wind 8=14854

Compasses

No entries

Complimentarity. See Physics fundamentals; Quantum theory.

Compressibility

- See also High-pressure phenomena and effects.
 aggregate of particles of 4 sizes, fluid-saturated, and compressional wave vel. 8=22270
 alkali halides, in rel. to Reststrahlen freq. and elastic constants 8=13580
 axial extension by cyclic straining, at ultrasonic freq., second-order strain accumulation 8=13527
 granodiorite shocked mechanically and by nuclear explosion 8=23212
 graphite, foamed, shock compression 8=22316
 inert gases, solid, bulk modulus temp. dependence 8=5075
 iodine, solid 8=13578
 metals, effect of superimposed u.s. vibration 8=8795
 metals, electron orbital, under shock-wave compression 8=8225
 metals, subjected to high press., effect of electron structure 8=11724
 organic crystals, rel. to derivation of oscillation spectrum and charact. temp. 8=17470
 polyurethane, compression modes, obs. 8=22271
 quartz, X, Y and Z cut, elastic shock obs. 8=13608
 shock-velocity-particle-velocity relationship in study of solids under pressure 8=8787
 solid-filled pistons, u. s. meas. of expansion rel. to internal press. 8=10580
 stishovite, anomalous compression curve 8=22039
 Ag_2Al , calc. from elastic constant meas., 77-700°K 8=5040
 Al- Al_2O_3 , dispersion strengthened, workability 8=8812
 Ar solid, bulk modulus temp. dependence 8=5075
 BaTiO $_3$, shock-wave 8=13538
 CO $_2$, isothermal, critical divergence, Rayleigh and Brillouin scatt. obs. 8=16708
 Cd(II), sulphosalicyclic acid chelates of, adiabatic, lowering of 8=8633
 D, polycrystalline, calc. from sound velocity meas. at 2 and 16°K. 8=17499
 Fe, 4.2-300°K 8=5061
 Ge, metallic modification formation under shock compression 8=17083

Compressibility—contd

- KBr, shock wave, compression and phase transitions 8=22376
 KCl powders, energy absorption during compression 8=13592
 KCl, shock wave, compression and phase transitions 8=22376
 KNO₃, dynamic compression by explosive impact loading 8=22377
 Kr solid, bulk modulus temp. dependence 8=5075
 Li⁷H and Li⁷D, to 40 kbar 8=13581
 Mg, plane-strain compression, anisotropy 8=17814
 Mg-Li alloy, plane-strain compression, anisotropy 8=17814
 Mg-Th alloy, plane-strain compression, anisotropy 8=17814
 NaCl powders, energy absorption during compression 8=13592
 NaCl-KCl powder mixture, powders, energy absorption during compression 8=13592
 NaF, ionic crystal, and elastic constants, calc. 8=2062
 Ne crystals, isothermal, and volume coeff. of thermal expansion 8=1803
 Ni, 4.2-300°K 8=5061
 Pb(Zr_{0.96}Ti_{0.04})O₃, shock-wave 8=13538
 Se, calcs. rel. to structure 8=17827
 Si, metallic modification formation under shock compression 8=17083
 Th(II), sulphosalicylic acid chelates of, adiabatic, lowering of 8=8633
 TlBr, temp. and pr. dependence, obs. 8=2068
 Tl and polymorphism and thermal expansion 8=1683

gases

- air, between plates of displacement transducer, effects of compression 8=7892
 linear relation of temp. and density at unit compressibility factor 8=16690
 n-paraffins, adiabatic, and sound vel. 8=21517
 CO₂ bubble in laminar flow of water 8=21591
 N₂O bubble in laminar flow of water 8=21591

liquids

- benzene, hypersonic velocity, from Brillouin shifts, temp. dependence 8=1502
 toluene, hypersonic velocity, from Brillouin shifts, temp. dependence 8=1502
 CCl₄, hypersonic velocity, from Brillouin shifts, temp. dependence 8=1502
 Co(II) perchlorates, water solns., adiabatic 8=12865
 Cu(II) perchlorates, water solns., adiabatic 8=12865
 H₂O, hypersonic velocity, from Brillouin shifts, temp. dependence 8=1502
 Mn(II) perchlorates, water solns., adiabatic 8=12865
 Ne, isothermal, at press. to 1000 atmos. 8=21555
 Ni(II) perchlorates, water solns., adiabatic 8=12865
 S and Se, and sound velocity 8=12866
 Zn(II) perchlorates, water solns., adiabatic 8=12865

Compressive strength. See Mechanical strength/compressive.

Compton effect

- in astrophysics for intense radiation 8=21296
 cosmic black-body radiation interacting with radio galaxies 8=19213
 "edge", teaching misconceptions 8=7027
 energy-differential cross section 8=3571
 forward high energy and Drell-Hearn-Gerasimov sum rule 8=690
 γ -ray scatt., excitation of nuclear resonance fluoresc. 8=20666
 γ spectrometer for n radiative capture, anti-Compton 8=6785
 γ spectrometer, weak, using summing principle with 2 detectors 8=6789
 hadrons, J^P = 1⁻, 3/2⁺, sum rules 8=6901
 harmonic oscill., 3-D, e. m. field coupling, Fabini sum rules satisfied 8=3427
 in intense fields, freq. shift 8=20349
 inverse, motion of e in radiation field, energy spectrum of scatt. photons 8=20346
 inverse, resultant energy losses and thermal instability 8=5944
 large-angle scattering, double logarithmic approximation 8=15715
 light waves standing, obs. of deflection of 1.6 keV electrons 8=20378
 low energy theorem 8=20341
 low-energy theorems for nucleon Compton scatt. 8=20521
 nucleon amplitudes, sum rules 8=6942
 N, with π photoprod., analysis 8=20345
 photon scatt. from electrons, in field of intense laser ray 8=20354
 polarized photons off spin 1/2 particle with charge and anomalous magnetic moment 8=20348
 p scatt., subtraction constants in sum rules 8=20347
 quasars, inverse process and circular polarization 8=23631
 spectral profile of second harmonic in scatt. 8=11426
 spin-0, -1/2 targets, low-energy theorems from dispersion theory 8=20350
 on uncharged fermions, with anom. mag. moment 8=675
 virtual photon, high energy behaviour in O(3,1) symm. compared to Regge pole model predictions 8=20353
 white dwarfs, energy loss 8=10150

Compton effect—contd

- Ge crystal, comparison with Klein-Nishina prediction 8=11435
 Ge(Li) γ -spectrometer, reduction of background by use of single crystal 8=697
 InSb, and thermal agitation in X-ray diffusion 8=13332
 V, and thermal agitation 8=13300

Computation. See Calculation.

Computer memories. See Calculating apparatus/digital computers; Magnetic devices; Magnetic films; Superconducting materials and devices.

Computers. See Calculating apparatus.

Concrete

- creep, high temp. effect 8=2042
 diffusion of water between 50 and 95°C, further comments 8=22148
 heat resistance, elect. insulating props. dependence on temp. and atmosphere 8=13900
 C steel wire stress relax. obs. 8=17789

Condensation

 alkali halide crystals, kinetics of radiational change 8=22501
 alkali metals, pressure depend. 8=9010
 anisotropic mats, meas. from small specimens 8=5156
 anthracene, resistivity obs. on single crystals 8=22523
 basalt, high press. and high temp. 8=8978
 binary cpds., inorganic, rel. to point defects 8=8689
 β -brass, resistivity, effect of heat treatment 8=13714
 β carotene, all-trans, and elec. activation, obs. 8=2465
 coal, agglomerating, temp. depend. 8=22507
 conducting slab, e. m. waves transmission, cyclotron reson. peak 8=19838
 conductor shape changes during "wire explosions" 8=6150
 crystals with high permittivity, theory 8=8897
 crystalline mixtures, rel. to thermal diffusion 8=22144
 DNA with complexed carcinogen 8=18093
 earth, crystalline basement struct., e. m. meas. 8=18821
 earth's surface, rel. to mag. field vertical component variation 8=23441
 earth's surface, review 8=9791
 epoxy compound, rel. to elec. field strength 8=22498
 epoxy resin, polymerization from resistivity studies 8=18707
 excitonic insulator, transport props. 8=13652
 ferrites, effect of CaO and SiO₂ proportions 8=13715
 films, metallic, thickness determ. by Leonard and Ramey method 8=17119
 film, metallic, thin, quantum theory of perp. cond. 8=22510
 flat, circular samples, anisotropy study by four probes method 8=5163
 glass, porous, surface increase by adsorption of water vapour 8=4766
 glasses, transition metal oxide and chalcogenides based 8=22522
 Kondo anomaly, frequency depend. calc. with e-spin interactions 8=13642
 low temp. resistivity meas., eddy current method, contactless, 1-10 000 n Ω cm range 8=5162
 magnetic alloys, effect of electrons of opposite spins on elec. resistivity 8=22432
 mechanisms for current flow and band theory 8=17917
 metals 8=22508
 metals, digital meas. of current decay 8=17922
 metal films, Fuchs geometry, size effects 8=13631
 metals, with impurities, freq. depend. 8=17920
 metal, influence of electron fluctuation pairing, theory 8=17919
 metal to insulator transitions 8=22451
 metals, isotopically disordered 8=13630
 metallized plastic films for source mounts 8=5153
 polyethylene film, I-doped, current oscillations at high field strengths 8=8985
 polyethylene films, I-doped, meas. 8=8984
 polymers, effect of electron irradiation 8=9204
 polysulphimide 8=9138
 polysulphimide 8=22615
 porous, model for cell level 8=18149
 quartz, in a.c. field, 10⁸-10⁹ Hz, 20-700°C 8=18197
 rare-earth sesquisulphide crystals 8=9119
 rock, moist, meas. in lab. 8=13899
 semiconductors, elemental, hot-carrier microwave conductivity 8=13779
 n-type semiconductors as function of impurity 8=5226
 semiconductor with negative bulk differential cond., stationary state 8=13782
 semiconductors, negative differential cond. and sound amplification 8=1843
 semiconductors, organic, temp. dependence meas. in metal chamber 8=9092
 size effects, theory, assuming diffuse surface scatt. 8=13699
 solid solns., resistivity dependence on short range order 8=17915
 space charge, with introduced carriers 8=5158
 superconductors, ordinary and gapless, effect of phonon-bogolon processes 8=13730
 superconducting wire in composite conductor, min. propag. current rel. to int. thermal resistance 8=17993
 TMPD-chloranil crystals, meas. 8=8595
 toluene glow discharge prod. polymer films, obs. 8=21894
 transitional metals, dependence on atomic wt. 8=17924
 vanadites, metallic, rel. to growth 8=4819
 wüstite, hole mobility obs. 1 000-1 300°C 8=13697
 Ag film, vapour-deposited, resistivity annealing temp. and thickness dependence 8=17925
 AgCl, effect of ultrasonic field 8=2237
 AgCl, negative resist., and current-voltage characts. 8=17918
 Al at He boiling temp. for purity determ. 8=9741
 Ag-Mg solid solns., Ag-rich, long-range order dependence 8=21820

Conductivity, electrical—contd

solids—contd

- Ag-Mg solid soln., Ag rich, short-range order dependence 8=21819
 Al, electron irradi., resistivity recovery, kinetics study 8=5171
 Al, plastically deformed 99.999% pure, resist. and strain effects, 4.2-77°K 8=17926
 Al, resistance, and thermoelectric power, high press. effects 8=13902
 Al, resistivity recovery after low temp. electron and neutron irradi. 8=2134
 Al, sintered (SAP) and normal 8=13707
 Al, Wiedemann-Franz ratio and anomalous lattice cond. 8=8990
 Al-Al₂O₃-Au tunnel structures, interface trapping 8=5381
 Al-CaWO₄-Au tunnel structures, interface trapping 8=5381
 Al-Cu-Cd alloy, resistivity, in artificial ageing 8=13708
 Al₂O₃ films, pyrolytically grown, voltage-current charc. 8=13873
 α -Ag₂S, mixed conductor: electronic and ionic 8=22500
 As₂Se₃, vitreous, effects of heat treatment 8=8991
 Au film on quartz glass and BaTiO₃ substrates 8=13709
 Au films, thin, and thermoelectric props., -100 to +100°C in ultrahigh vacuum 8=22513
 Au, resistance, and thermoelectric power, high press. effects 8=13902
 AuMn, spin-disorder resist., anisotropic 8=14064
 Au/Ni-Cr, contacts and conductive paths 8=8993
 Au-V alloys, resistivity, near Kondo temp. 8=8992
 Au-V alloys, resistivity and mag. susceptibility temp. dependence rel. to s-d interaction 8=13657
 B, polycryst., thermopower and resist., temp. and press. 8=18210
 BaTiO₃, anomalies 8=9208
 BaTiO₃ application of small polaron problem 8=5587
 BaTiO₃, between 600 and 900°C 8=5363
 Be, resistivity recovery after low temp. electron and neutron irradi. 8=2134
 Bi, effect of pressure 8=5173
 Bi film, resistivity voltage dependence at 4.2°K 8=17928
 Bi films, temp. dependence 8=8995
 Bi, Shubnikov-de Haas effect meas. at 15 kbar 8=5237
 Bi, thin films, resistivity and thermoelectric power 8=5383
 Bi, 300-540°K 8=13710
 Bi₂O₃, and defect structure in range 175-250°C 8=8996
 Bi_{1-x}Sb_x, (0 < x \leq 0.15), at 77°K rel. to band structure 8=22518
 Bi₂Te₃-PbTe alloys, low temp. obs. 8=22680
 C composite sintered materials, resistivity heat treatment on 8=2129
 C composite sintered materials, resistivity, temp. depend. 8=22502
 C resistors at low temp. 8=17929
 Ca, f.c.c., resistivity from 4.2 to 300°K 8=5175
 CaF₂-GdF₃, surface layer 8=18163
 Cd, isotopic composition effect 8=13712
 Cd oxide, semiconductors, possibility of obtaining controlled resistors 8=18034
 CdCr₂Se₄, ferromagnetic 8=2189
 Cd-Mn alloys, low temp. resistivity, influence of magnetic ordering 8=2136
 CdS film 8=13852
 CdS, resist. homogeneity, S₂ annealing pressure dependence 8=8980
 CdS in strong electric field 8=18030
 CdS, surface and volume conductance, kinetics comparison 8=18032
 CdS, thermally stimulated, influence of electric field 8=9239
 CdS-SiO₂ film devices, "frozen" cond. and thermo-stimulated currents 8=5388
 CdSb 8=13698
 Cd_{3-x}Zn_xAs₂, 80°-400°K meas. 8=5385
 Co, resistivity comparison with Fe and Ni, -190° to 1450°C 8=17930
 Co, resistivity up to 1000 Oe 8=8999
 CoAl and CoGa, temp. and composition depend. 8=13721
 Cr, alloyed with V and Ti, anomalous decrease 8=9000
 Cr films, rel. to glow discharge 8=17128
 Cr resist., mag. contribution temp. depend. rel. to itinerant antiferromag., obs. 8=5500
 Cr selenides, cond. and thermal cond., thermoelectric power, lattice parameters 8=13703
 Cr-Fe alloys, Cr rich, resistance meas. and antiferromag. ordering rel. to energy changes 8=8931
 Cr-Ge alloys, 20-300°K, Curie points and ferromag. props. 8=9338
 Cr-Si alloys, resistivity 8=9001
 Cr-SiO cermet films, resistivity 8=1695
 Cr-SiO cermet films, and temp. coeff. of resistance and Hall coeff. 8=8981
 Cr_{1-x}Te_x alloys, in paramagnetic state 8=9300
 Cu alloys, high-temp. resistivity 8=9003
 Cu complexes, tetraphenylporphine and tetraphenylchlorine 8=9117
 Cu, defect concentrations study from cyclic stressing at room temp. 8=17604

Conductivity, electrical—contd**solids—contd**

- Cu, 99.999% pure, rel. to theory, 78-400°K 8=22134
 Cu oxide semiconductors, possibility of obtaining controlled resistors 8=18034
 Cu, polycrystalline, resist. of dislocations, exptl. determ. 8=9004
 Cu, resistivity, effect of transition elements 8=22133
 Cu, resistivity and susceptibility studies of localized Fe moments 8=22796
 α -Cu-Ag alloy, resistivity and Hall coeff. interpretation 8=13641
 Cu-Be alloys, Guinier-Preston zone formation, from resistance meas. 8=17606
 CuCr₂Se₄, ionic config. from neutron diff. and elec. trans. props. 8=1788
 Cu-Fe alloys, resistivity rel. to cold working 8=17934
 CuFeMn₂O₄, temperature dependence 8=17932
 p-Cu₂S, and thermo-electric power and Hall effect 8=22585
 Eu, contribution to hyperfine field 8=1633
 Fe, electron irradi., resistivity studies 8=5180
 Fe, as function of temp. and magnetization 8=13716
 Fe, reproducible residual resistance measurement 8=5179
 Fe-Al alloys, resistivity 8=9005
 FeCr₂Se₄, rel. to d-orbital interaction clarification 8=5391
 Fe-Ni (35 wt. %)-Cr (0-20 wt. %) alloys (in as-cold worked state), resistivity temperature dependence 8=9006
 GaAs, ultrasonic absorpt. max. for infrared irradiation 8=13352
 GaAs:Zn polycrystalline films, obs. and theory 8=5255
 p-GaSb, effect of pressure and temp. 8=13804
 GaSb-InSb alloys, resistivity at high temps. rel. to comp. and impurity doping 8=4944
 Gd, contribution to hyperfine field 8=1633
 Gd-Yt alloy, spin-disorder resistivity meas. 8=9007
 n-Ge, effect of dislocations on galvanomag. props. 8=22593
 Ge, microwave freq., rel. to impurity conc. and temp. 8=13829
 Ge-Si alloyed heterojunctions, and Hall coeff. at interface region 8=2217
 HfO₂ crystals, defect struct. 8=13419
 HfO₂ films, and resistors characts. 8=22654
 HfO₂, high temp. 8=9198
 Hg, low temperature variation meas. 8=5181
 HgTe-ZnTe system, determination 8=5263
 HgTe-ZnTe, at low temperatures 8=13816
 In₂O₃ films, pyrolytically grown, voltage-current charac. 8=13873
 InSb alloy films, vacuum-evaporated 8=9008
 n-InSb, Corbino, Hall effect 8=9114
 InSb, High pressure dependence 8=13819
 n-InSb, and magnetoresist. below 1°K 8=13820
 p-InSb, 90% compensated, and mobility coeff., 4.2-300°K 8=13822
 InSb, n-type, anomaly at very low temps. 8=5265
 IrO₂, temperature dependence 8=17939
 KAg₄I₅, ionic cond. rel. to cryst. struct. 8=17379
 KBr:Ca, and capacitance, distortion at low freq. 50 and 330°C obs. 8=5154
 KBr:In, thermally stimulated, rel. to impurity C excits. delocalization mechanism 8=8903
 KBr rel. to self-diffusion entropy and enthalpy 8=8679
 KCN single cryst. 8=5352
 KH₂(D₂)PO₄, rel. to isotope effects 8=2130
 KHF₂ and KDF₂ 8=13704
 KI:In, thermally stimulated, rel. to impurity C excits. delocalization mechanism 8=8903
 KNO₃, resistivity rel. transforms, thermodynamic props. 8=18191
 K(Rb, NH₄)Ag₄I₅, electrolytes 8=18719
 KTA_xNb_{1-x}O₃, resistivity comp. dependence and effect of Sn doping 8=22503
 La_xWO₃, resistivity temp. dependence 8=5709
 Li₂O.nB₂O₃ (n = 1, 2), charge with n-irrad. 8=6953
 MgO, at low temps. 8=22506
 Mn ferrites, and Seebeck voltage influence of Mn²⁺ clustering 8=13720
 Mn steel, rel. to martensitic transform. 8=17061
 MnO₂ films 8=4750
 Mo containing Co, resistivity meas., Kondo temp. obs. 8=9009
 Mo, zone refined, residual resistivity, effect of W content 8=17935
 Mo-Al intermetallic resistor films, sheet resistivity and temp. coefficients of resistance 8=22520
 Na aluminosilicate glass, relation with Na self-diffusion 8=22158
 Na-Ca-aluminosilicate glass, relation with Na self-diffusion 8=22158
 NaCl:CaCl₂ + NaOH crystal, and dielectric loss maxima 8=5164
 NaCl, var. with particle size and temp., obs. 8=17913
 NaCl-Sr(Ba)Cl₂, ionic, 200-670°C rel. to assoc. enthalpies of Sr and Ba 8=5165
 NaNO₃ resistivity rel. transforms, thermodynamic props. etc. 8=18191
 Na_{0.35}V₂O₆, single cryst. 8=22601
 Nb, resistivity, linear increase rel. to amt. of dissolved O₂-N₂ mixture 8=9011

Conductivity, electrical—contd**solids—contd**

- NbN, effect of N content variation 8=13702
 Nb₃Sn, Fermi level motion rel. to temp. depend., model 8=5118
 NH₄Ag₄I₅, ionic cond. rel. to cryst. struct. 8=17379
 NH₄ClO₄ 8=2128
 Ni alloys, K-effect 8=13723
 Ni alloys, plastically deformed, resistance recovery 8=13722
 Ni films, electrolessly deposited surface resistivity 8=17136
 Ni films, and Hall effect dependence on O₂ adsorption 8=17936
 Ni, low-temp. obs. 8=17937
 Ni, temp. coeff. of resistivity, divergence at Curie temp. 8=9012
 NiAl and NiGa, temp. and composition depend. 8=13721
 NiCr₂Se₄, rel. to d-orbital interaction clarification 8=5391
 Ni-Cu alloys, rel. to Hall effect 8=9014
 Ni-Cu solid solns., and thermoelectric power rel. to temp. and Cu % 8=5389
 Ni-Fe films, vacuum deposited, resistivity method of thickness meas. 8=17135
 NiFe films and mag. props. rel. to vacuum deposition press., 10⁻⁶-10⁻³ torr. 8=22822
 NiFe₂O₄, thin films 8=2343
 Ni₂Ge alloy in the range 77°K < T < 1300°K 8=18215
 NiO, neutron irradi. effect 8=18058
 NiO, stoichiometry 8=13826
 NiS, semiconductive-metallic transition pressure dependence 8=22885
 Pb, interband transitions 8=14253
 Pb, resistivity and two-band conduction model 8=2107
 PbSe, rel. to forbidden band width 8=5272
 PbTe films, thin, and resistivity and Hall mobility 8=22603
 PbZrO₃ near antiferroelec.-ferroelec. transition, rel. to ageing and relax. polarization 8=2249
 Pd, Lorentz number from 2.5-19°K 8=5184
 Pd-Ni alloys, at 2-30°K rel. to s-electron-paramagnon scattering 8=9015
 PdNi alloys, dilute, resist. and mag. susceptibility, local exchange enhancement effects 8=13634
 Pt film on quartz glass and BaTiO₃ substrates 8=13709
 Pt, resistivity and two-band conduction model 8=2107
 RbAg₄I₅, ionic cond. rel. to cryst. struct. 8=17379
 Re, and thermal resistivity from 2°K to 20°K 8=17546
 RuO₂, temperature dependence 8=17939
 Sb crystals in mag. field up to 420 kOe at liquid He temp. 8=9016
 Sb films, quantum oscill. obs. 8=17940
 Se, conductance during n and γ -irrad., rel. to temp. 8=18067
 Se, high-purity, rel. to Na and O₂ impurity admixture 8=5276
 Si deposited on corundum, resistivity 8=5281
 Si ion implanted with Sb, Ga and As, sheet resist. obs. 8=18072
 Si, microwave props., rel. to impurity conc. and temp. 8=13829
 Si single crystals, repeated alternating bending effects 8=17828
 SiO film, Poole-Frenkel eqn. 8=13705
 SiO₂ films, pyrolytically grown, voltage-current charac. 8=13873
 Sn oxide films, electron emission from high resist. regions 8=22713
 SnO₂, natural 8=5167
 SnTe films, thin, prep., Hall effect and cryst. props. 8=13096
 SrCl₂, pure and Y³⁺(Na⁺) doped, rel. to ionic conduction and diffusion mechanisms 8=8983
 TaN, effect of N content variation 8=13702
 Te, rel. to dislocations, theory 8=4984
 ThC_x, nonstoichiometric, resistivity 8=2140
 Th_xN_y, (x = 1, 3; y = 1, 4), rel. to electronic props. 8=2139
 Ti, resistivity in thickness range 75-350 Å 8=9019
 U-M alloys, (M=Fe, Al and Si), irradiated, resistivity changes rel. to phase comp. 8=8283
 UO₂, nearly stoichiometric 8=18089
 UO_{2+x} and U₄O_{9-y}, and Hall coeff. rel. to carrier mobility investigation 8=18090
 V, pure and H-alloyed, resistivity temp. dependence rel. to H₂ content 8=5186
 VCr₂Se₄, rel. to d-orbital interaction clarification 8=5392
 W, effects of neutron irradi. and subsequent annealing 8=2141
 W, resistivity and two-band conduction model 8=2107
 YH₂, resistivity meas. at 1000-1200°K 8=17942
 Y₂WO₆, resistivity temp. dependence 8=5709
 Zn complexes, tetraphenylporphine and tetraphenylchlorine 8=9117
 ZnCd_{1-x}Sb, rel. to temp. and conc. of acceptors 8=2131
 Zn-Mn alloys, low temp. resistivity, influence of magnetic ordering 8=2136
 ZnO crystals, effect oxygen chemisorption 8=5160
 n-ZnO, neutron irradi., resistivity vs time and temp. 8=2109
 ZnO: (Ni, Co) crystals, liquid N₂ to room temp. 8=9132
 ZnO powder, adsorbed O₂ effect 8=22612
 ZnO rel. to radicaloluminesc. excit. mechanism, obs. 8=9635

Conductivity, electrical—contd**solids—contd**

- ZnO single crystal, γ -irradiated, defect structure 8=22168
 ZnO, surface as detector of atomic H beams 8=7475
 ZnS:Cu rel. to electroluminesc. obs. 8=9133
 ZnS; S^{3+} radioactive, dark, photoluminescence spectrum 8=5000
 ZnSb and ZnSb-CdSb mixed crystals 8=13698
 ZrC₂H₂ cpd. formed in Zr-H-C system 8=17433
 ZrC₂H₂ cpd. formed in Zr-H-N system 8=17433
 ZrH_{1.99-1.96}, resistivity meas. at 1000-1200°K 8=17942
 ZrO₂, cubic, influence of neutron irradiation on ionic mobility 8=5152
 ZrO₂-CeO₂ mixtures, high temp. 8=22614

measurement

- crystals, anisotropic, mech. method 8=18160
 films, thin, meas. and ion bombardment apparatus 8=17121
 plasma induction method, theory reviewed 8=4380
 recorder, multi-range, with linear scale 8=6243
 rocks and minerals, high temp. and press. 8=8978
 semiconductors, resistivity, volume, surface and contact 8=18020
 GaAs, Sn doped 8=2191

Conductivity, thermal

 manometer applic., error in formula 8=21544
 negative eddy, production in presence of buoyancy and shear 8=21441
 nonsteady state, inverse problem soln. for monotonic heating of bodies 8=10773
 one-dimensional heat flow, problems, use of boundary sources 8=234
 planetary interiors, minerals calc. 8=23654
 superconducting solder joints near 0.1°K, thermal transport 8=5203
 Ce magnesium nitrate and He³, boundary resistance due to spin fluctuation 8=10800
 KCl crystals, Ca-doped, 20-90°C, influenced by segregation processes 8=13394
 Li_{0.5}Fe_{2.5}O₄, vacancy depend. 8=8660
 MgFe₂O₄, polycrystalline, dependence on anion vacancies (produced by chem. reduction) 8=17543
 MgFe₂O₄, vacancy depend. 8=8660
 Pt, and elect. resistivity, 373 to 1373°K, obs. 8=22521
 SF₆ plasma, 2400-9000°K, meas. 8=7737
 ZnFe₂O₄, polycrystalline, dependence on anion vacancies (produced by chem. reduction) 8=17543
 ZnFe₂O₄, vacancy depend. 8=8660

gases

- acetylene 8=16699
 diatomic, influence of ang. momentum anisotropy 8=12681
 diatomic, low-temp. in stationary mag. field 8=7919
 diethyl ether, rel. to temp. 8=7925
 dust laden, electronic component of coefficient of cond., calc. 8=1472
 gray, unsteady energy transfer by thermal radiation 8=7923
 heat transfer from wall, hot-film sensor 8=16822
 heat transport medium, Conference, London, March 1967 8=7326
 inert-gas mixtures, binary, ternary, and quaternary 8=21509
 ionosphere, model for e.m. wave propag. effects 8=19903
 with micron-size particles, props. 8=21735
 molecular, in perpendicular stationary and varying fields 8=21493
 multi-component mixtures, computation 8=21509
 quadrupolar gases 8=16699
 rarefied gases between parallel plates, heat transfer and density-distribution obs. 8=21505
 steam, 149-180°C at atmospheric press., obs. 8=4477
 thin films, contactless method 8=270
 Ar, line-source transient-heat-transfer technique 8=16701
 Ar, near critical point 8=12683
 Ar plasmas, partially ionized 8=7734
 Ar₂, 100-300°C at atmospheric press., obs. 8=4477
 CH₄, mag. field effects at 290°K 8=4469
 CH₄-CF₄ dense mixtures 8=21511
 CO, mag. field effects at 290°K 8=4469
 CO₂ 8=16699
 CO₂, extension of Saxena-Saksena-Gambhir theory 8=16702
 CS₂ 8=16699
 D₂-He, normal composition variation 8=7924
 H₂, dense, calc. by lattice theory 8=4476
 H₂-He, normal composition variation 8=7924

Conductivity, thermal—contd**gases—contd**

- H₂-N₂ and H₂-CO₂ gas mixtures 8=4473
 He, line-source transient-heat-transfer technique 8=16701
 N₂, mag. field effects at 290°K 8=4469
 N₂, 100-300°C at atmospheric press., obs. 8=4477
 N₂-Ar and O₂-Ar gas mixtures 8=4474
 N₂O 8=16699
 N₂O, extension of Saxena-Saksena-Gambhir theory 8=16702
 N₂O₄ \rightleftharpoons 2NO₂ system by hot-wire method, relaxation effects 8=7929
 NH₃-Ar, 39° to 199.6°C 8=4470
 NH₄-He, 39° to 199.6°C 8=4470
 NH₃-Ne, 39° to 199.6°C 8=4470
 NO, mag. field effects at 290°K 8=4469
 Ne, line-source transient-heat-transfer technique 8=16701
 2. NOBr \rightleftharpoons 2NO + Br₂ system, 290-900°K 8=12684
 O₂, mag. field effects at 290°K 8=4469
 O₂-Ar mixture, and N₂-Ar 8=4474
 O- and n-D₂, at 18.5, 19.8 and 21.1°K 8=7930
 SO₂, rel. to temp. 8=7925

liquids

- alkali metals, condensation boundary resistivities 8=8049
 alkali nitrates, molten 8=16820
 application of theory to insulating crystals 8=8649
 Bridgman equation, and reln. between sonic vel. and latent heat of vaporization given 8=12852
 calculation from theory of corresponding states 8=4564
 chalcogen group, semiconducting 8=12850
 cryogenic liqs, correl. with viscosity and self-diffusivity 8=15132
 freezing, in rel. to Stefans problem 8=8176
 heat exchanger, response to flow rate disturbances 8=8048
 heat-generating liq. in vertical cylinder, heat-transfer due to convection 8=7916
 heat transfer from wall, hot-film sensor 8=16822
 heat transfer in square ducts 8=12854
 laminar flow in circular tube 8=21656
 metal rot. in magnetic field 8=8054
 mixtures, two-continuum model 8=21655
 monatomic, using Green correlation function 8=8053
 organic, temp. depend. rel. to radiative transfer, obs. 8=12853
 plug, viscous, laminar flow 8=4566
 solutions, two-continuum model 8=21655
 temperature distribution, in circular pipe 8=8055
 CCl₄, temp. depend. rel. to radiative transfer, obs. 8=12853
 Cs, liquid, 75-700°C 8=12851
 H₂, calc. by lattice theory 8=4476
 He³-He⁴ mixture, \leq 0.6°K, due to phonons 8=10801
 He³, pressure dependence, spin-fluctuation theory 8=19693
 He³ spin rel. to Rice theory of nearly ferromagnetic Fermi liquids 8=10800
 Pb-Bi alloys 8=16823

solids

- alloys, radiation correction, 4.2-273°K 8=22129
 calculation of radiant-heating case 8=13386
 chalcogen group, semiconducting 8=12850
 contact conductance, transient sensitivity coeffs. 8=17538
 crystals, non-conducting, linear response function theory 8=13399
 crystals, usefulness obs. for determining u.s. attenuation at high and low temp. 8=22092
 dispersed system having irregular pore sizes comparative study 8=8142
 electron gas, degenerate, due to interaction between electrons 8=8960
 excitonic insulator, transport props. 8=13653
 fibrous insulation, radiant ht. transfer 8=1883
 flat plate, effect on heat transfer 8=22126
 glycine, single crystals, obs. at 60° and 82°C. 8=22135
 graphite, quasi monocrystalline, quantitative description 8=13390
 graphite, quasi monocrystalline, measurement between 6 and 300°K 8=13389
 hafnium iodide, and blackness 8=1890
 heat resistant, high m.p., coefficient meas. at high temps. 8=1885
 insulating crystals, application of liquid transport theory 8=8649
 metals, radiation correction, 4.2-273°K 8=22129
 metal surfaces, low-temp. resistances 8=22130
 minerals, diffusivity from 300° to 1100°K at 1 atm 8=22131
 normal process relaxation times, from thermal cond. data 8=22424
 packing in packed bed of spheres, with fluid stream, determ. of heat transfer and dispersion coeff. 8=13363
 paramagnetic salts, effect of spin-phonon coupling 8=18405
 polymeric and refractory heat shield materials, ablation obs. 8=1860
 porcelain, rel. to structure 8=1893
 powders, insulating, meas. 8=8651
 PTFE 8=17544
 Pyrex glass, 0.4°-4°K in 0-90 kG fields 8=17525
 rocks, ring heat source probe for rapid determ. 8=8654
 sandwich plates 8=2040
 n-type semiconductors as function of impurity 8=5226
 semiconductors, photothermal effect due to illumination of 8=8650

Conductivity, thermal—contd**solids—contd**

- superconductor, type II flux flow state, apparent negative figure 8=2148
 superconductors, intermediate state 8=8652
 superconductors with strong electron-phonon interaction 8=17508
 surface layer of oxide cathode 8=9275
 temperature wave propagation, second sound excitation 8=1882
 textiles of Egyptian cottons, disc-type meas. apparatus 8=13392
 variable, transient temp. field 8=22127
 Al, pure, 2.5-33.5°K 8=22132
 Al, at low temp. 8=17542
 Al, Wiedemann-Franz ratio and anomalous lattice cond. 8=8990
 Al₂O₃, decrease due to fast n-irrad. 8=22245
 Al₂O₃, with Cr/Mn impurity, γ-irrad. effect 8=1886
 Ar, between 24 and 73°K 8=4940
 As-Se system in glassy state 8=1887
 As₂Se₃-4As₂Te₃, in glassy and cryst. state 8=1887
 Bi, temp. dependence, 1.3-2°K 8=8656
 Bi₂Te₃-PbTe alloys, low temp. obs. 8=22680
 CdF₂ 8=8409
 Cd_{1-x}Zn_xAs₂, 80°-400°K meas. 8=5385
 CdSb, poly and monocrystalline, doped and undoped 8=13698
 CdSnAs₂ and CdGeAs₂, semiconducting, rel. to high-temp. modifications 8=21842
 Ce ethyl sulphate, mag. field effect, spin-phonon scatt. 8=13393
 Co(NH₄)₂CS₂Cl₂, anomalous enhancement rel. to magnon cond. 8=13391
 Cr selenides, cond. and elec. cond., thermoelectric power, lattice parameters 8=13703
 Cu, effect of transition elements 8=22133
 Cu, high temp. 8=8657
 Cu-4.6 at. %Ga, decrease due to dislocation density increase 8=8658
 Cu, 99.999% pure, rel. to theory, 78-400°K 8=22134
 Cu-Al-Zn alloys, rel. to dislocation phonon scattering 8=22203
 Fe powder, influence of porosity 8=13388
 FeCr₂Se₄, rel. to d-orbital interaction clarification 8=5391
 Ga single crystals, size effects 8=17545
 GaAs, rel. to Gunn device design 8=5297
 GaSb-InSb alloys, at high temps. rel. to comp. and impurity doping 8=4944
 Ge, lattice cond., effect of impurities 8=1888
 Ge-Si alloys, decrease on alloying 8=1853
 Ge_{1-x}Si_x, effect of defects on lattice thermal conductivity 8=1892
 He isotope mixtures, rel. to lattice distortion scattering due to isotope impurity 8=1889
 He⁴ and isotopic mixtures at high densities 8=15154
 He⁴ oriented single crystals, h.c.p. 8=8659
 InSb-GaSb solid solns., 80-500°K 8=1891
 LiF, 0.05 → 2°K cryostat obs. 8=22112
 MgO, decrease due to fast n-irrad. 8=22245
 MgO, doped, mag. field depend. 8=13395
 Mo, meas. and analysis, 100-400°K 8=4943
 NaCl, resonant phonon scattering 8=8661
 Nb alloys for nuclear reactors 8=5082
 Nb, superconducting, thermal conductivity rel. to energy gap and mag. hysteresis 8=2166
 Nb temperature dependence of temp. coefficient 8=13387
 NbN, effect of N content variation 8=13702
 Ni-60 at. %Co, decrease due to dislocation density increase 8=8658
 NiCr₂Se₄, rel. to d-orbital interaction clarification 8=5391
 PbSe, rel. to forbidden band width 8=5272
 p-PbTe, doped, rel. to Lorenz number and interband interactions of holes 8=9116
 p-PbTe heavily doped betw. 80-400°K 8=8662
 PbTe_{1-x}Se_x, effect of defects on lattice thermal conductivity 8=1892
 Pd, Lorentz number from 2.5-19°K 8=5184
 RbCl:CN, and specific heat, rel. to rot. degrees of freedom of mols. 8=22120
 Re, and elec. resistivity from 2°K to 20°K 8=17546
 Si, containing O₂, neutron irrad. effects at 80°K 8=8663
 Si, 100 to 1300°K 8=22136
 Sn, pure and Cd-doped, effect of superconductivity energy-gap 8=4942
 Sn, superconducting films, in mag. field 8=22137
 Ta temperature dependence of temp. coefficient 8=13387
 TaN, effect of N content variation 8=13702
 ThO₂-UO₂, in-reactor, from thermal simulation expts. 8=1130
 TiSe 8=17547
 UO₂, depend. on temp. and temp. gradient 8=8665
 UO₂, effect of porosity 8=13397
 UO₂ powder compacted fuel, effective cond. in simulation expt. 8=13398
 UO₂, in-reactor, from thermal simulation expts. 8=1130
 UO₂-SiO₂ vitroceraamics, 100 to 400°K rel. to SiO₂ conc. 8=8664
 UO₂-ZrO₂-CaO, nuclear fuel, out-of-pile tests 8=17527

Conductivity, thermal—contd**solids—contd**

- VCr₂Se₄, rel. to d-orbital interaction clarification 8=5391
 W, meas. and analysis, 100-400°K 8=4943
 ZnSb and ZnSb-CdSb mixed crystals, poly and mono-crystalline, doped and undoped 8=13698
measurement
 air, hot-wire conductivity cell, 30°-100°C, 120-150 torr 8=16700
 cryostat for 0.05 → 2°K 8=22112
 dielectrics, temp. dependence 8=17539
 gases, cond. cell 8=4469
 heat resistant high m.p. materials, coefficient at high temp. 8=1885
 hot-wire cell for liquids and gases 8=7852
 insulating materials, new device 8=8655
 at liq. He temp., device using zeolites 8=3106
 method, based on transient change of temp. gradient 8=13396
 potentiometric method, radiation correction for Fourier formula 8=22129
 refractory materials, heat resistance determination, review 8=1894
 rocks, ring heat source probe for rapid determ. 8=8654
 semiconductors, cylindrical specimens, in He bath 8=3107
 semiconductors, temp. dependence 8=17539
 textiles of Egyptian cottons, disc-type meas. apparatus 8=13392
 Ar, hot-wire conductivity cell, 30°-100°C, 120-150 torr 8=16700
 Bi₂Te₃, n-type, diffusivity variations between -200 and +50°C 8=4941
 C, pyrolytic, diffusivity variations between -200 and +50°C 8=4941
 D₂, hot-wire conductivity cell, 30°-100°C, 120-150 torr 8=16700
 He, hot-wire conductivity cell, 30°-100°C, 120-150 torr 8=16700
 KNO₃ molten, optical method, plane source technique 8=21658
 Kr, hot-wire conductivity cell, 30°-100°C, 120-150 torr 8=16700
 NaNO₃ molten, optical method, plane source technique 8=21658
 Ne, hot-wire conductivity cell, 30°-100°C, 120-150 torr 8=16700
 Xe, hot-wire conductivity cell, 30°-100°C, 120-150 torr 8=16700

Conferences

- antennas and propagation, Ann Arbor 1967 8=15401
 applied mechanics convention, Cambridge, England (1966) 8=13490
 astronautics and aviation Conference, Israel 1966 8=5822
 astronomical society of Australia, Sydney Australia (1966) 8=14722
 atmospheric research, global 8=23250
 calculation of the properties of vacancies and interstitials, Skyland, USA, (1966) 8=22165
 chemisorption and physisorption, Rome, March 1967 8=8333
 coherence and quantum optics, Rochester University, New York, June 1966 8=6484
 convention of Italian Astronomical Society, Catania Italy (1966) 8=19111
 cyclotrons, Krakow (1966) 8=6701
 definition, realization and use of time and frequency London 1967 8=10
 discussion, metallurgical problems of heat deform. 8=22277
 earth upper mantle, Newcastle-upon-Tyne, England Feb. 1966 8=9787
 electrical conduction properties of polymers, Pasadena USA (1966) 8=13701
 electrical insulation and dielectric phenomena, Poc. no Manor USA (1966) 8=18154
 electronic components conference, Jackson USA, 1967 8=6244
 electron, ion and laser beams technology, Berkeley, USA (1967) 8=15283
 electron microprobe analysis, Boston, June 1967 8=8445
 electronic processes in low mobility solids, Sheffield, England, April 1966 8=5101
 electronic properties of thin films, Orsay, France (1967) 8=22499
 elementary particle, Liperi Summer School in Theoretical Physics Helsinki, 1966 8=6715
 fast critical experiments and their analysis, Conference, Argonne National Laboratory, Oct. 1966 8=7240
 fracture of metals, polymers and glasses, Boston, USA (1966) 8=13518
 galaxies evolution and structure, Brussels Belgium (1964) 8=19210
 gas as heat transport medium, London, March 1967 8=7326
 geophysical theory and computers, Cambridge 1966 8=18809
 high-energy physics and nuclear structure, Israel 1967 8=15672
 high-energy physics, Oiso Japan (1965) 8=11348
 ice symposium, Pittsburg U.S.A. (1966) 8=21867
 Institute of Metal Finishing, Brighton, England (1967) 8=14419

Conferences--contd

- isotopic ratio measurements, Japan 1966 8=16235
 u.s. and hypersonic wave propag., in solids 8=1842
 Liperi Summer School in theoretical Physics 1966 8=7028
 lubrication and wear, Plymouth, England (1967) 8=13521
 magnetic-fluid and plasma dynamics, New York
 USA (1965) 8=16459
 magnetic materials and their applications, London,
 1967 8=9286
 magnetohydrodynamic electrical power generation,
 Salzburg, Austria (1966) 8=15355
 magnet technology, Oxford England (1967) 8=15259
 magnetic resonance and relaxation, Ljubljana
 (Yugoslavia), 1966 8=22889
 many-body theory, Oiso Japan (1965) 8=10641
 meteorite research in U.K., Leicester, (1966) 8=19274
 molecular spectroscopy, Copenhagen Denmark
 (1965) 8=16239
 molecular structure and spectroscopy, Ohio
 USA (1966) 8=16238
 neutron monitoring for radiological protection, Vienna,
 Austria (1966) 8=15852
 new materials and processes in instrument manufacture,
 Eastbourne, 1965 8=2872
 new methods of instrumental spectroscopy, Orsay,
 France (1966) 8=20071
 noise and vibration control 8=3076
 non-compact groups in particle physics, Milwaukee,
 USA (1966) 8=11352
 nuclear and engineering ceramics, Harwell 1965 8=16168
 nuclear and space radiation effects, Columbus
 U.S.A. (1967) 8=22578
 nuclear science and technology for ceramists, Washington
 USA (1966) 8=16167
 nuclear structure, Dacca Pakistan (1967) 8=15925
 nuclei heavy and medium, Bordeaux (France)
 1967 8=20640
 nucleon-nucleon interaction, Florida (USA) 1967 8=20516
 nuclides far off the stability line, Lysekil Sweden
 (1966) 8=15911
 particle symmetries, International School of Physics
 "Ettore Majorana", ERICE 1965 8=6721
 perturbation theory for exchange forces, seminars
 at University of Wisconsin 8=4043
 phase changes in inorganic solids, Rennes
 April 1965 8=8259
 photovoltaics, Florida USA 1967 8=9242-4
 plasma, e.m. wave phenomena, I.E.E.E., New York,
 1967 8=1398
 plasma, m.h.d., lasers, geophys. solid-state devices and
 electrical material, Dallas 1967 8=12480
 polarized targets and ion sources, Saclay
 France (1966) 8=15629
 power source cells, fuel cells and thermoelectric
 generators Brighton, England 1966 8=286
 radiation research, space radiation biology, Berkley USA
 (1966) 8=23456
 r.f., l.f. and v.l.f. radio propagation, London, England
 (1967) 8=14671
 residual gas in electron tubes and vacuum systems, inter-
 national symposium, Rome, March 1967 8=6317
 semiconductor devices meas. and test methods Budapest,
 1967 8=9144
 solar-terrestrial physics, The Inter-Union Symposium
 Belgrade, 1966 8=10325
 solid state, 2nd Nordic, Tyllösand, Sweden 1966 8=8191
 stars and galaxies, gravitational instability, formation and
 structure, Belgium 1966 8=14734
 static electrification, London May 1967 8=6255
 statistical mechanics and thermodynamics, Copenhagen
 Denmark (1966) 8=15007
 strong and weak interactions, present problems, Erice
 Italy (1966) 8=15695
 strong interactions, Varenna, Italy July 1964 8=6745
 structure and crystal growth, Moscow, July 1966 8=8362
 structure and properties of liquids, Exeter England
 (1967) 8=16784
 surfaces structure, 8-9th Nov, 1966, Durham,
 North Carolina 8=17115
 theoretical and applied mechanics, Haifa Israel
 (1967) 8=16750

 tarnishing studies atmospheric pollutant effect 8=8988
 thermal, empirical formula 8=17540
 Ag and Ag alloy contacts, effect of H₂S
 contamination 8=22512
 Cu-M (M = Cu, Mo, steel, constantan), rel. to normal
 loading 8=8986

Continuous creation hypothesis. See Cosmology.**Convection**

- air layer, temp. gradient reversal, interferometric
 obs. 8=4475
 air, turbulent thermal between horizontal plates, velocity
 and temp. obs. 8=12686
 below cloud base 8=2578
 Benard, cellular motion, Rayleigh number
 intervals 8=6213
 cellular, boundary-layer theory 8=10777
 cellular, finite amplitude stability rel. to extremum
 principle 8=6212
 cellular, in fluid layer, effects of surface curvature and
 property variation 8=21417
 cellular in liquid, induced by surface tension in semi-
 infinite layer 8=1503
 earth, mantle, graphical representation 8=23220
 evaporation, nonadiabatic, from porous system 8=8183
 explosions, gaseous, transient heat transfer 8=15108
 flow, non-Newtonian fluids, boundary layer equation
 solution 8=7857
 fluid, cylinder subject to transverse oscills. 8=3098
 fluid in box heated from below 8=6214
 fluid cell heated from below, finite amplitude 8=6215
 fluid heated from below, Rayleigh cells of arbitrary wave
 numbers, 2D, evolution 8=10775
 fluids laminar and turbulent flow, variational and
 physical analysis 8=7870
 fluid layer, forced, thermal turbulence 8=12638
 fluid of high thermal diffusivity, instability in heated
 layers 8=16639
 fluid unevenly heated from below, nonlinear model 8=16637
 fluid, rotating, large amplitude Benard 8=12616
 free and forced, in field droplet, rel. to wake-type
 diffusion flame shape 8=15113
 free, effect on heat transfer in forced pipe flow 8=16623
 heat pipes, operating characts. when capillarity-
 limited 8=6216
 heat transfer due to natural convection in vertical
 cylinder with heat-generating liq. 8=7916
 horizontal fine wire, effect of vibration 8=19649
 laminar boundary layer, ht. and mass transfer 8=240
 laminar boundary layers, incipient instability 8=4430
 liquid dielectrics, electric field effects 8=21659
 liquid, with internal heat generation, theory 8=4511
 liquid, rotation-induced heat transfer in zero-gravity
 field 8=4562
 liquid, stabilized turbulent flow in tube, heat transfer
 at supercritical press. 8=1550
 in low-loss liqs, rel. to self-defocusing of passing laser
 beams 8=15442
 magnetosphere, limitation by ionospheric
 dissipation 8=9918
 Malkus' transition in thermal turbulence 8=19653
 mixed, high temp., mass transfer between spherical
 particle and medium 8=1473
 natural, in horizontal liq. layers 8=19650-1
 natural laminar, from plane vertical surface in non-
 isothermal surroundings 8=19654
 nichrome ribbon, rel. to heat flux 8=17548
 origin in horizontal fluid layer 8=3108
 plane isothermal sheet in turbulent flow 8=241
 plasma, nonequilibrium, effect on current
 patterns 8=16486
 porous layer, critical temp. gradient 8=10776
 Rosseland approximation appl. 8=19633
 sea surface layer, organized, due to slicks and wave
 radiation stress 8=14571
 self-gravitating fluid sphere 8=10122
 silicone oil heated under constant temp. air
 surface 8=1504

Convection—contd

- stellar zone, density gradient inversion 8=2778
- surface in laminar boundary layer effect of thermal conduction of wall 8=6211
- transient natural, from vertical plate, leading edge effect 8=19652
- vertical impermeable flat surface, turbulent natural convection, theory 8=10778
- viscous liquid, appl. of numerical method 8=21626
- water, acoustical effects on free convective transfer from horizontal wire 8=21663
- water, lower boundary at 0°C and upper at above 4°C, interpenetration 8=16825
- CO₂, near critical point, forced convection heat transfer 8=16915
- ZnSO₄ soln., due to electrolytic heating, obs. 8=1509

Conversion electrons. See Beta-ray spectra/conversion electrons; Gamma-rays/internal conversion.

Cooling

- See also Joule-Thomson effect; Low-temperature production; Magnetic cooling; Supercooling.
- β , γ -spectrometers, improved resolution 8=6811
- electromagnets, appl. of liq. Ne 8=15261
- gas and liquid compared in nuclear reactor 8=20887
- generator, m. h. d., by water, temp. distrib. in channel wall 8=19726
- reaction, radiation cooling, thermionic for space flight, review 8=1114
- tempered metal in non-vaporizable liquid 8=8044
- ultraviolet spectra of molecules, recording device 8=22930
- Al-Zn eutectic, undercooling 8=17003
- He Dewar, fast precooling to N₂ temp. 8=3114
- Na-cooled fast reactor kinetics 8=12002

Copper

- annihilation radiation, momentum distrib., Brillouin zone boundary effect 8=13691
- anodic oxidation in LiCl-KCl 8=5738
- APW band structure calcs, systematic numerical error 8=17883
- atom, polarization corrections for shielding and anti-shielding configurations 8=12061
- atom, λ 3247.5 Å -resonance line profile from hollow-cathode source, by interferometry 8=3365
- atomic state, by absolute meas. of X-ray scattering factors 8=13030
- atomic vapour laser, pulse efficiency from cyclic excitation and relax. 8=11056
- atoms, pseudopotentials 8=7409
- atoms, stabilized in alkali-halide crystals, paramag. reson. 8=22897
- band structure rel. to lattice spacing 8=22458
- Bauschinger effect in quenched samples 8=5020
- Bauschinger effect recovery mechanisms 8=17775
- calorimetry, low-temp. standard 8=15127
- cavitation damage, by magnetostrictive vibratory method 8=22339
- chromatographic separation, complex formation and reflectance spectros. detect. 8=23176
- cold-rolled electrolytic crystallization and Fourier anal. of elastic anisotropy 8=8404
- cold-rolled and recrystallization textures, n-diffraction study 8=17278
- cold worked, impurities rel. to modulus effect 8=22332
- condensate, in vacuum, structural transitions 8=16943
- conductivity, thermal, and resistivity, elec., effect of transition elements 8=22133
- constant thermocouples 8=22686
- contacts rel. to wear and arc current 8=12415
- crack form. and propag. in cyclic deform rel. to coarse slip, obs. 8=22330
- creep at const. and variable loads using tubular specimens 8=17776
- creep at 650-700°C rel. to deformation at 77 and 4.2°K 8=17824
- creep, 78°K and room temp. 8=22256
- crystals with dispersed Co/SiO₂ phases and dislocation distrib. 8=4974
- crystals, generalized surface wave propag. 8=1855
- crystals, nearly perfect, intensities of X-rays diffracted in anomalous transmission 8=4873
- crystal, n-irradiated slip band development 8=22212
- crystal, neutron-irradiated, annealing effect on lattice parameter 8=1937
- crystal, u.v. emission using proton beam 8=2025
- crystals, well-annealed, stress at which dislocations multiply 8=13545
- cubic crystals, thermal expansion coeff., temp. depend. 8=8646
- cubic texture formation during recrystallisation 8=4809
- defect concentrations from cyclic stressing at room temp. 8=17604
- deformed, elastic mod. and creep recovery, role of dislocation rearrangement 8=22337
- deposits, pseudomorphic, of Co 8=21881
- diffusion of Au, detect. by deuteron elastic scatt. 8=8675
- diffusion in Bi₂Te₃, etching technique investigation 8=1914
- diffusion in GaAs, defect centres, Hall effect 8=1954
- dislocation mobility rel. to shear stress 8=1970
- dislocation motion, nature of obstacles 8=22200

Copper—contd

- dynamic indentation, conical projectile, up to 600°C 8=17780
- electric field gradient due to charge density redistribution around dislocations 8=5176
- electrode, anodic behaviour in NaCl aqueous solution 8=2532
- electrodes in H shock tube plasma, V-I characts. 8=21359
- electrode pot. in Brussels mains water, influence of light and cords of circulation 8=18728
- electron irradiated, yield stress increase 8=17773
- electron slowing-down spectrum 8=13474
- electroplating to graphite, rel. to graphite soldering to metals 8=5998
- erosion by liquid droplets 8=22333
- evaporation from Fe-Cu alloys at 1600°C under vacuum 8=12993
- excited state, 1s²2s²2p⁶3s²3p³3d¹⁰4f, universal potential field calc. 8=20952
- exploding wire plasma, temp. meas. 8=7784
- explosive formation, residual strains and hardening 8=13564
- explosively deformed, dislocation structure 8=17651
- f. c. c. angular forces in lattice dynamics model 8=8612
- fatigue cracks, initiation 8=5058
- fatigue life improvement by cyclic strain dispersal, obs. 8=5031
- fatigues, at low strain amplitude, surface and interior structure relationships 8=17774
- Fermi surface, galvanomag. invest. 8=13713
- film, absorpt. spectra 8=5596
- films, creep, elastic lattice strains 8=13548
- films, epitaxial growth, and activity and topographical changes on exposure to H₂-O₂ combination at 325°C 8=8318
- film deposited by sputtering in crossed e.m. field 8=7651
- films, grain boundary cavity form. during high temp. creep 8=13547
- films, obliquely deposited, struct., effect of atom mobility 8=8296
- films, plasma oscillations, interband transitions 8=5117
- film on Si, transmission and absorpt. in spectral region from 1.5-7 μ 8=14212
- film, reflectance and transmittance, anomalous skin and size effects 8=9498
- film, thickness depend. on heat generated by 9 to 100 keV electron beam 8=17699
- films, thin, optical props. in spectral region between 0.6 and 4 μ 8=22972
- foils, ion irradi., agglomerates formation and density 8=13417
- foils, ion irradi., analysis of type and configuration of defect clusters 8=13416
- fracture when fatigued in Hg 8=5057
- γ -ray absorpt. and scatt., stress effects 8=13483
- grain boundary diffusion of Ag and Au 8=17568
- grain struct. prod. in hot working, obs. 8=21984
- heat capacity, temp. dependence, effect of crystal lattice defects 8=13368
- helicon wave excitation by a.c. 8=5147
- high speed impact extrusion 8=19340
- hot, pseudomorphic growth of Fe 8=21880
- hydrostatic tension on solidification 8=21758-9
- impurity in NaI, effect on X-ray luminesc., 8=23062
- interstitial migration kinetics at low temps. 8=8699
- ions, effect on photographic process 8=533
- ions, in NaCl crystal, optical absorption 8=18521
- n-irradiated, small dislocation loops, type 8=13437
- isochromat at 8 kV compared QSS energies and X-ray absorption 8=2414
- isochromats at Cu K α , wavelength 8=2416
- length change, after e irradiation 8=22338
- low-temp. calorimetric standard, atomic heat meas. 8=17517
- oxidation of vacuum deposited films, rel. to temp. 8=18674
- magnetoresistance coeff. at 4.2°K 8=8997
- magnetoresistance, longitudinal from 4.2 to 35°K, electron scattering effects 8=22511
- mass ejection by laser pulse 8=8759
- mechanical properties, low-temp., collection of data 8=17779
- metals analysis, determ. by at. absorpt. spectrometry 8=2545
- microdeformation measuring technique 8=22273
- n-irradiated, with vacancy dislocation loops, thermally activated motion 8=22189
- neutron irradi., dislocation pinning 8=1974
- neutron monochromator 8=854
- O.F.H.C., furnace and foundry equipment for production 8=5997
- oxidised single crystals, exam. by diff. of slow electrons 8=13258
- p-irradiated, platelets of interstitial atoms rel. to dislocation loops 8=22202
- phonon freq. determs. at 49 and 298°K 8=8611
- plastic stress relaxation rel. to stacking fault energy 8=13529
- plastically deformed, annealing behaviour, effect of dispersed phases 8=17772

Copper—contd

- polycrystalline, elec. resist. of dislocations, exptl. determ. 8=9004
 polycrystalline target, sputtering coeff. rel to incident angle of Ne, Ar and Kr ions 8=8766
 polycrystals, grain boundary cavity stability 8=13448
 polycrystals, temp. depend. of thermal diffuse X-ray scattering 8=5581
 positron annihilation ang. depend. rel. to Fermi surface 8=22493
 powder, X-ray study 8=4844
 quench hardening, study 8=22334
 quenched, vacancy annihilation kinetics 8=1946
 recrystallization, deformed with tension, at low temp. 8=17230
 recrystallization and mech. props., rel. to plastic deform. at low temps. 8=8403
 rolled, dislocation structure effect on mechanical props. 8=13550
 rolled high purity crystals, orientation distribution 8=1756
 rolled, texture representation by biaxial pole figures 8=17778
 rolling texture development at room temp. and -196°C 8=22328
 secondary electron emission, H^+ bombardment 8=5423
 shear strength in grossly deformed sample at high temps. 8=8833
 shock waves, prod. by electron beam pulses 8=13484
 single crystals in stressed condition, dislocation arrangement, electron microscope obs. 8=22201
 single crystal film, effect of ion bombardment on texture and structure 8=17124
 solid solns. with Ti, V, Cr and Mn, mag. moments 8=22760
 solubility and diffusion in InAs 8=17011
 stacking fault energy calcs. using pseudopotentials 8=17673
 strong proximity effects: superconductivity in fine Nb-Cu composite 8=22553
 surface self-diffusion coeff. temp. dependence, $600-1030^{\circ}\text{C}$ 8=17567
 susceptibility and resist. studies of localized Fe moments 8=22796
 target for ion emission, bombard by Ar^+ 8=6626
 texture development deformation dependence, pole figure 8=17777
 thermal cond., elec. resist. and Seebeck coeff. of 99.999% pure, $78-400^{\circ}\text{K}$ 8=22134
 thermal diffusivity meas. 8=1898
 thermal smoothing of single crystals. 8=4788
 thin films, Hall effect 8=2133
 thin films, thermopower size-effect for determination of electronic structure 8=13903
 transport properties at high temperatures 8=8657
 ultrasonic attenuation rel. to Fermi surface deformation 8=1851
 ultrasonic shear waves, attenuation at low temps. 8=22099
 u.s. work hardened, flow and recovery 8=22336
 vacancy diffusion rate calc., Debye model 8=22172
 vapour laser, 5106\AA , pulsed, theoretical model 8=15465
 wire, drawing process with lubricant under externally generated pressure 8=2052
 wires, electric explosion, temp. variation during first stage 8=1622
 wires, explosion discharges initiated at the surface and inside the wire 8=4272
 X-ray microanalyser target, K_{α} , depth distrib. obs. 8=15586
 X-ray K-absorption spectra of (100), (110), and (111) structures 8=2413
 X-rays, K_{α} , films and solid targets direct and fluoresc. components 8=14179
 X-ray microanalysis e backscatt. correction, obs. 8=14469
 X-ray prod. and e backscatt. rel. to microanalysis, obs. and calc. 8=18794
 X-ray production on p-bombardment 8=4995
 X-ray transmission temp. dependence (Borrmann effect) from $77-377^{\circ}\text{K}$ 8=14210
 Young modulus and modulus of rigidity, variation-latitude dependence 8=2051
 Ag cementation, in perchloric acid and alkaline cyanide solns., kinetics 8=14427
 As-Se vitreous alloys, introduction 8=13111
 in BeO , e.p.r. 8=2366
 in BiTe , electrotransport, 150 and 250 A/cm^2 , $\leq 400^{\circ}\text{C}$ 8=17564
 $\text{CaF}_2:\text{Cu}^{2+}$, impurity ion e.p.r. spectrum 8=9422
 $\text{CdCl}_2:\text{Cu}^{2+}$ layer, e.s.r., exchange coupled pairs spectrum 8=18416
 Cu^+ , atomic interaction potential calc. 8=7456
 Cu ions reflected from Cu crystal incident obliquely 8=8767
 Cu: Cu-12.5 wt.%Al multiphase couple, interface comps., motion and lattice transformations 8=17552
 Cu and Cu-Ni alloys, optical absorpt. rel. to Ni conc. effects 8=2411
 Cu^{2+} rhombic e.s.r. spectra angular dependence of applied mag. field 8=5526
 Cu^{2+} in Rochelle salt, e.p.r., external elect. field effect 8=14111
 Cu^{2+} , in ZnO crystal, absorption spectra 8=14211

Copper—contd

- Cu^{2+} in ZnWO_4 , e.p.r. spectrum 8=5527
 Cu^{63} , n.m.r. in Cu-Mn alloys, and spin-lattice relax. 8=9464
 in Fe liquid, heat of solution 8=16799
- Copper alloys**

 β -brass, resistivity, effect of heat treatment 8=13714
 brass, rolled, texture representation by biaxial pole figures 8=17778
 brass, rolling texture development at room temp. 8=22328
 brass, Sb embrittlement, effects of U additions and low-temp. annealing 8=22326
 brass, 70-30, texture development deformation dependence, pole figure 8=17777
 α -brass, stress corrosion cracking 8=8844
 α -brasses, Young modulus and modulus of rigidity, variation-latitude dependence 8=2051
 constantan wires, electric explosion, temp. variation during first stage 8=1622
 constantan wires, explosion discharges initiated at the surface and inside 8=4272
 dilute, high-temp. resistivity 8=9003
 electrodiffusion with small additions of Sn, Sb, Ni 8=1916
 mechanical properties, low-temp., collection of data 8=17779
 phonon-drag thermoelectric power 8=18214
 solid solution, latent heat of deformation 8=13551
 thermopowers interpret. rel. to resistivity and band structure 8=18213
 with transition impurities, non-mag., elec. field gradient 8=9458
 Ag-4.09%Cu binding energy and vibration amplitude 8=13029
 Au-Cu single crystal film, effect of ion bombardment on texture and structure 8=17124
 AuCu_3 , vibration amplitude, temp. depend. 8=13029
 Cu-base mats., oxidized, appl. of u.s. vibs. to pickling process in dilute H_2SO_4 8=23780
 α -Cu-Ag alloys, Hall effect. and resistivity interpretation 8=13641
 Cu-Ag(0.083 at.%), internal friction and elastic modulus measurement at low frequencies 8=8784
 Cu-Al, annihilation radiation, momentum distrib., Brillouin zone boundary effect 8=13691
 Cu-Al solid solution, latent heat of deformation 8=13551
 Cu-Al, structure of martensites 8=4871-2
 Cu_3Al , stacking faults in β' -martensite phase 8=17674
 Cu-Al-Mn, surface relief rel. to supercond. transition 8=19686
 Cu-Al-Zn, dislocation-phonon scattering rel. to thermal conductivity meas. 8=22203
 Cu-Au, electron scatt. from disorder, rel. to anomalous absorpt. of rad. 8=17362
 CuAu II films, dynamical multiple reflections in electron diffraction patterns 8=13256
 Cu_3Au , low order, vacancy clustering 8=8695
 Cu-2 wt.%Be, ageing investigated by electron microscopy 8=17056
 Cu-Be, Guinier-Preston zone formation, conc. and ageing dependence 8=17606
 Cu-2%Be, precip. and twins appearing on ageing 8=17625
 Cu-Be, as secondary electron emitters 8=13943
 Cu-Be, quenched and aged, vacancy role in solute clustering 8=17607
 Cu-Be-Ag, precip. nucleation 8=17040
 Cu-Be-Al, ageing characts. obs. 8=22335
 Cu-Co, liquid, solubility and activity coeff. of O 8=8011
 Cu-Cr, dilute, low-temp. theory and magnetoresistance obs. 8=17933
 Cu: Cu-12.5 wt.%Al multiphase couple, interface comps., motion and lattice transformations 8=17552
 CuFe alloy, Kondo resistivity, magnetic field dependence 8=5178
 Cu-Fe, magnetoresistance and magnetization meas. 8=22519
 Cu-Fe, mag. props. and elec. resistivity, rel. to cold working 8=17934
 Cu-Fe mixed whiskers, strength, hardness and growth mechanism 8=17249
 Cu-4.6 at.%Ga, deformed, thermal conductivity decrease rel. to dislocation density increase 8=8658
 Cu-Mn, Cu^{63} n.m.r. and spin-lattice relax. 8=9464
 Cu-Mn, interdiffusion kinetics, by X-ray microprobe 8=22149

Copper alloys—contd

- CuMn alloy, Kondo resistivity, magnetic field dependence 8=5178
 Cu-Mn-Al system, effect of quenching and ageing on mag. phases 8=14010
 Cu₂MnAl and associated structures (Heusler alloys), studies 8=22794
 Cu₂Mn₂Al (Heusler alloy), structure studies 8=22795
 Cu-Ni diffusion pairs, pore migration during counter-current diffusion 8=17569
 Cu-Ni, electron-probe microanalysis, atomic no. effect 8=9764
 75 Cu-25Ni laminate on Cu core coinage composite, bond degradation mechanism 8=22329
 Cu-Ni, optical absorpt. rel. to Ni conc. effects 8=2411
 Cu-Ni, specific heat, anomalous, at low temps. 8=22118
 Cu-Ni, stacking fault density, conc. depend., by X-ray analysis 8=17671
 Cu-Ni, thermal expansion, rel. to ferromag. Curie point of Ni 8=17532
 Cu-Ni-Co alloys, critical shearing stress temp. dependence 8=1971
 Cu-Pt foils, n. m. r., quadrupole effects 8=2383
 pCu₂S-nZnS:MnCu, Cl films, d.c. electroluminescence mechanism 8=23051
 Cu-Sb, stacking fault X-ray meas. 8=17672
 Cu₂Se-In₂Se₃, constitution diagrams, structure 8=8266
 CuSn, liq., Hall coeff. rel. to bound state form. round Sn atoms 8=12917
 Cu-Sn, structural changes on natural ageing 8=17052
 Cu-Sn structures of metastable states during eutectoid transform. 8=17055
 Cu₂Sn₅ liquid, partial structure factors 8=12788
 Cu₂Te-In₂Te₃, constitution diagrams, structure 8=8266
 Cu-Ti, precipitation, direct obs. 8=13065
 Cu-Zn alloys with (Cr, Mn, Fe, Co) impurities, magnetic props. 8=9339
 Cu-Zn alloys, decomposition of β' 8=4706
 β'-CuZn, binary and ternary, cross slip 8=8834
 Cu-Zn brasses in NaOH, anodic dissoln. 8=18732
 Cu-Zn, dendritive crystallization under optimal cooling 8=4822
 β₁ Cu-Zn, martensite, transform. after repeated thermal cycling 8=17053
 β₁ Cu-Zn, martensitic transformation temps. from elec. resistivity meas. 8=4704
 CuZn(β brass) mechanical props., hydrostatic extrusion effects obs. 8=5059
 CuZn(β brass), ordering conditions 8=4686
 β'-CuZn, reflectance and other optical props. 8=2402
 Cu-Zn, rolling textures, X-ray methods 8=21985
 Cu-Zn, selective corrosion 8=23100
 Cu-Zn solid solution, latent heat of deformation 8=13551
 Cu-Zn system, phase equilib. 8=13546
 Cu_x-Zn_{1-x}Ni_y, x < 0.25 and 0.08 < y < 0.10, optical absorpt. at room temp. 8=22976
 Cu-Zn-Si β-phase, inhomogeneity effect on martensite transform. 8=4707
 Cu-Zr, supersaturated solid soln., n. m. r. study of decomposition 8=8265
 MgO, Kikuchi patterns rel. to anomalous absorpt. of rad. 8=17362
 Zn determ. by atomic absorpt. spectrometry 8=23184

Copper compounds

 CuCl photocond. and absorpt. spectra rel. to excitons, 4°K 8=9251
 CuCl X-ray spectra rel. to distrib. of states, obs. 8=9522
 Cu₂Cl₂, crystals, gel growth 8=8406
 Cu₂Cl₂, second harmonic generation under laser radiation 8=14213
 CuCl₂·2D₂O, spin density distrib. 8=22877
 CuCl₂·2H₂O, antiferromag. resonance, relax. effects 8=2358
 CuCl₂·2H₂O, dipolar mag. field at proton site 8=18378
 CuCl₂·2H₂O e. p. r., thermal detect. obs. 8=14100
 CuCl₂·2H₂O, mag. ordering 8=18377
 CuCl₂·2H₂O, wave function of unpaired electrons 8=18376
 CuCr₂Se₄, ionic config. from neutron diff. and elec. trans. props. 8=1788
 CuCr₂Te₄, ferromag. spinel, Te¹²⁵ Mössbauer effect study of hyperfine field 8=8223
 CuF₂, layer growth conditions 8=17232
 CuF₆⁻ ions, absorpt. spectrum and struct. 8=16280
 Cu-Fe system, susceptibility and resist. studies 8=22796
 CuFeMn₂O₄, temperature-dependent electrical resistance 8=17932
 CuFeMn₂O₄, tetragonal distortion 8=17205
 CuFeS₂, (chalcopyrite), Fe⁵⁷ Mössbauer effect rel. to configuration 8=1649
 Cu₂FeS₃ (cubanite), mag. coupling and Mössbauer spectra 8=14066
 Cu-Ga solid solution dislocation structure and grain size effect on validity of Cottrell-Stokes law 8=8721
 Cu(HCOO)₂·4H₂O, magnetic susceptibilities and crystal fields 8=5501
 CuI, equilib. internuclear distance, determ. from rot consts. 8=1240
 CuI, exciton luminescence 8=23052
 CuI layers, low-temp. spectra rel. to nature of substrate 8=9528
 CuK₂(SO₄)₂·6H₂O, heat capacity below 1°K, meas. 8=13372
 Cu₂Mg, mode of precipitation from solid solutions of Mg in Cu 8=4705
 Cu₂-Mg, Fe₂O₄, O content and thermomag. props. 8=2516
 CuMn ferrites mag. props., Sc₂O₃ effects, obs. 8=18359
 CuMn₂O₄, cation distrib. determ. 8=17364
 Cu(NH₃)₄SO₄·H₂O, exchange and "10/3 effect" 8=2365
 Cu(NH₃)₄SO₄·H₂O, proton magnetic resonance, 0.25-4.2°K 8=14138
 Cu(NH₃)₄·SO₄·H₂O, proton n. m. r. at low temp. 8=2384
 Cu(NH₃)₄Br₂·2H₂O, e. s. r. 8=9423
 Cu₂NbS₄(Se₄), crystal growth 8=8408
 Cu-Ni, Kirkendall and Frenkel effect 8=8676
 CuO, isochromat structure 8=2415
 CuO X-ray spectra rel. to distrib. of states, obs. 8=9522
 CuO₂ cryst. excitons photoionization, assoc. absorpt. coeff. calc. 8=9529
 CuO₂, isochromat structure 8=2415
 Cu₂O absorpt. and refl. spectra rel. to band struct., obs. 8=9524
 Cu₂O band struct. and excitons nature 8=8933
 Cu₂O, Debye temp. calc. from elastic constants 8=1869
 Cu₂O exciton spectrum, uniaxial press. and n irr. effects obs. 8=9521
 Cu₂O, 4 exciton line series, effect of plane stress 8=22973
 Cu₂O rel. to exciton-phonon interactions, n=1 line profile, 4.2-112°K 8=9527
 Cu₂O, luminescence non-linear dependence on photexcitation intensity 8=18601
 Cu₂O magneto-absorpt. and Zeeman effect in pulsed fields, 4.2°K 8=11157
 Cu₂O, multielectron theory of excitons in semiconductors 8=22478
 Cu₂O, plastic deformation by motion of a {100} dislocations on {100} glide planes 8=22327
 Cu₂O, 2-photon transitions to exciton states, oscillator strengths 8=8953
 Cu₂O X-ray spectra rel. to distrib. of states, obs. 8=9522
 Cu₂P monocrystals, prep. and props. 8=21948
 α-Cu₂P₂O₇, crystal structure 8=17367
 CuRh₂Se₄ and CuRh₂S₄ with spinel structure, superconductivity obs. 8=13749
 Cu₂S, nonstoichiometric, mag. props. meas. 8=9290
 p-Cu₂S, thermoelectric power, elec. cond. and Hall effect 8=22585

Copper compounds—contd

- Cu₂S-CdS p-n heterojunction, photovoltaic response 8=13843
 Cu(SO₃F)₂, i. r. spectra and mag. props. 8=9562
 CuSO₄, crystal growth from aqueous soln. under X-irrad. 8=21947
 CuSO₄, e. s. r. of anhydrous cryst. 8=2364
 CuSO₄-H₂O system, phase boundaries to 40 kilobars 8=4640
 CuSO₄·5H₂O crystals, proton conductance 8=8982
 CuSO₄·5H₂O e. p. r., thermal detect obs. 8=14100
 Cu₂Se, nonstoichiometric, mag. props. meas. 8=9290
 Cu₂Se₃, umangite, crystal structure 8=17366
 Cu-Si solid solutions, dislocation motion, nature of obstacles 8=22200
 Cu₃TaS₄(Se₄), crystal growth and optical props. 8=8408
 CuTe, liq. Hall coeff. rel. to possible semicond. nature 8=12917
 Cu-Te system, phases investigated by e-diffr. 8=17057
 Cu-Te system in thin films, phase transformations and structure 8=17054
 Cu₂-Te-CdTe heterojunction photoconverter 8=6276
 CuTiF₆·4H₂O, crystal structure 8=17365
 Cu(UO₂AsO₄)₂·2H₂O, meta-zeunerite, e-diffr. meas. 8=17360
 CuX, (X=Cl, Br and I), band structures 8=2190
 ε Cu-Zn phase, dissolved Fe, low-temp. resistance minimum 8=9340
 Ni-Cu solid solns., variation of thermoelectric power and resist. 8=5389

Corbino effect. See Current, electrical.

Coriolis forces. See Dynamics.

Cornea. See Eye.

Corona, electrical discharge

Corrosion

- cast iron, austenitic, effect of Ce 8=21988
 cell for stress corrosion studies 8=8793
 electrical contact degradation effect 8=8987
 erosion rate meas. and flaw detection by microwave interferometry 8=5032
 gases, pressure meas. 8=4448
 gas-tight thermobalance-load seal for studies 8=5991
 Institute of Metal Finishing, conference, Brighton, England (1967) 8=14419
 ionic, of polycrystalline metal surfaces 8=13522
 in liquids, heat transfer influence, review 8=18667
 metals in acids, kinetics rel. to organic inhibitors specificity 8=2509
 metals, with heat transfer, test apparatus 8=18665
 in steam, influence of temp. 8=18666
 steel, anodic dissolution and corrosion potential 8=9723
 steel, by HCl vapour 8=23103
 steel, by H₂O, solid-state diffusion of O₂ 8=22151
 steel, mild, by NaCl solns., NaNO₂ inhibition, 20°C 8=2517
 steel, mild, stress-corrosion cracking in NaOH solns. with various additions 8=22366
 steel, rate as function of minor element content, and distrib. of FeC 8=18664
 steel, stainless, in CO₂ and CO₂-CO, C behaviour 8=2515
 Zircalloy-2 in LiOH solns., hydrating rate, 300°C 8=5719
 Ag, elec. erosion, obs 8=22342
 Ag, sulphiding by H₂S, effect of surface Fe 8=23096
 Ag-Cd alloy, elec. erosion, obs. 8=22342
 AgCdO, sintered and internal oxidized, elec. erosion, obs. 8=22342
 Al alloys, stress corrosion cracks, at cutting planes 8=8818
 Al, anodized, electrolytic quality test evaluation 8=23097
 Al brazing sheet, improved behaviour 8=10462
 Al, electroplated strike 8=14430
 Al-Cu-Mg alloy, effect of quenching rate 8=8819
 Be, coating with BeF₂ as retardant 8=23098
 Cr-Ni stainless steel, intercrystalline, theory 8=8460
 Cu, in Brussels water, rel. to electrode pot., effect of light and circulation conds. 8=18728
 Cu-Zn alloys, selective 8=23100
 Fe, rel. to impurities 8=18664
 Fe-Cr-Al alloys, by S at high temp. 8=23102
 Fe in H₂SO₄, thiourea inhibition and K₂Cr₂O₇, NH₄CNS and KI effects 8=2518

Corrosion—contd

- LiOH-LiF-H₂O, molten, of metals 8=14368
 Nb alloys, stability in nuclear reactors 8=5082
 Ni alloys, heat transfer effects 8=15102
 SF₆, degradation in electrical equipment 8=14383
 Si-steel in silicate glass film removal rel. to magnetostriction, obs. 8=22843
 Ti alloy in non-electrolyte, stress cracking susceptibility 8=8863
 Ti-6Al-4V alloy, stress-corrosion cracking in methanol 8=22394
 U₂Si, reactor fuel possibility 8=4019
 Zn alloys in atmosphere, acrylic and polyurethane protective layers 8=14389
 Zn in CO, solns., predominance diagrams appls. 8=2523
 Zn, surface pitting at dislocation sites 8=13440

 nonthermal sources, energy and lifetime of relativistic electrons 8=19224
 planetary nebulae, 14, at 408 MHz 8=5909
 from planetary nebulae, obs. at 3 microwave freqs. 8=10218
 polarization, linear, obs. at 3.6 cm wavelength 8=19230
 polarization, linear, of 950 MHz emission 8=14806
 quasars and radio galaxies contrasted 8=5945
 quasars and remnants of supernova stars, coherent plasma radioemission 8=14813
 radio galaxies, cosmic black-body radiation interactions 8=19213
 radio galaxies, 1418 MHz, upper limits to degree of circular polarization 8=23600
 radio-sources, extra-galactic, conference, Brussels Belgium (1964) 8=19210
 radio source spectra and cosmological red shift, hyperbolic model 8=14812
 radio source 3C 273B, 9.10⁶ wavelength baseline interferometer obs. 8=10286
 radio sources, 38 MHz, interferometric obs. 8=10287
 radio survey of sky at 81.5 Mc/s north of declination 70°, using tech. of 2-dimens. aerial synthesis 8=10294
 radiostar existence? 8=2799
 relict emissions at 8.2 mm, abs. meas. rel. to black body temp. 8=19227
 Sgr A, discrete source, obs. of flux density at 2.11 mm 8=19226
 sky temp. calc. from radio and other galaxies 8=5936
 source between declinations +27° and -30°, identification 8=23615
 source counts, fitting cosmological models 8=23467
 source, diffuse X-rays background between 4 and 40 keV 8=10282
 source, magnetic field, i.r. spectra obs. 8=23613
 source 3C31(NGC383), beamwidth obs. 8=10267
 sources 3C 225 and 3C 267, obs. 8=10298
 source 3C338(NGC6166), beamwidth obs. 8=10267
 source W49, anomalous OH emission 8=10290
 sources, consequences of inverse Compton effect 8=23619
 sources, diameters new limits rel. to interplanetary scintillations obs. 8=10296
 sources, extended, inertial confinement 8=23618
 sources, in 4 C catalogue, identifications with bright galaxies 8=10288
 sources, Fornax A 8=23601
 sources, 458 with declination in range +18° to +20° at 750 and 1410 MHz, pencil beam survey 8=23605
 sources, model in terms of gravitationally bound current loop 8=14811
 sources, 9.55mm, flux density obs. 8=23599
 sources, non-thermal, thermal X-ray emission 8=5941
 sources polarization, of arbitrary optical thickness 8=5942
 sources, position and models from lunar occultation observations 8=10301
 sources previously identified with clusters of galaxies 8=19212
 sources spectral indices distrib. rel. to freq., obs. 8=23614
 sources, survey, in declination ranges -07° to 20° and 40° to 80° 8=2803
 sources, theory of multiple constitution 8=23611
 sources, 210, accurate positions 8=23617
 sources, 31, between 40 and 130 MHz, obs. 8=23616
 sources, wavelength depend. of linear polarization, stochastic theory 8=10300
 spectra, rel. to Fermi accn by shocks in source 8=10292
 stellar and interstellar, interaction red-shift 8=5922
 supernova remnants CTA₁ and HB₃ struct. and spectral indices, 81.5 and 178 MHz 8=10191
 survey of emission at 178 MHz using pencil-beam radio telescope 8=19225
 synchrotron emissivity, correction 8=23604
 T = 3°K background radiation 8=10083
 Taurus A (Crab Nebula) at 1420 MHz, occultation obs. 8=5917
 Taurus A, discrete source, obs. of flux density at 2.11 mm 8=19226
 3C sources flux intensity and spectral indices, 86 and 38 Mc/s 8=10303
 3C79 and 3C192, structure obs. 8=23603
 3C84, 3C273, 3C274, 3C279, flux and linear polarization at cm. wavelength 8=10302
 3C 273, optical polarization 8=19229
 3C273, photographic obs. 8=10175
 3°K blackbody, evidence for singularity 8=23466
 Venus, microwave obs. from Mariner 2, anal. 8=5957
 Vir A, discrete source, obs. of flux density at 2.11 mm 8=19226
 W49 galactic source 8=10249
 X-ray emission and stellar accretion 8=10310
 X-ray sources, galactic, 1964-65 survey 8=10252
 zenith temp. at wavelength 3.2 cm 8=23754
 H, nebulae vels. from $n_{106} \rightarrow n_{104}$ line obs. 8=10233
 H II regions, higher-order high-quantum H recombination lines 8=23569
 OH emission from H¹¹ regions, mechanisms 8=10258

Cosmic radiations, radiofrequency—contd

- OH galactic, brightness and temporal variation of emission 8=10253
 OH in H I regions, excitation temp. of 18-cm line 8=10299
 OH radical interstellar absorpt. 8=23581

Cosmic rays

- anisotropic stage and determ. interplanetary inhomogeneity parameters 8=23688
 distribution over sphere and acceptance vectors of detectors 8=894
 11-year cycle, and solar wind props. 8=14874
 energization of charged particles by arbitrarily moving spherical magnet 8=19769
 energy spectrum, Kosmos 53 obs. 8=19089
 galactic, low energy, intensity obs. from balloon flights 1961-65 8=2770
 galactic, modulation by solar activity 8=10419
 in galactic mag. field, transverse e.m. waves effect 8=5850
 hard X-ray fluxes from Mars, Venus and Jupiter, upper limits 8=23670
 as high-energy particle source 8=7004
 and interplanetary features, large-distance 8=10088
 interstellar matter heating and ionization by 25 MeV subcosmic rays and star form. 8=10245
 interstellar path length calc. from p/He⁴, d/He⁴ and He³/He⁴ + He³ ratios 8=11676
 at last geomagnetic field reversal, rel. to faunal extinction 8=23435
 and magnetic fields 8=23585
 measurement by "automatic interplanetary stations" 8=19090
 measurements by space vehicles 8=5849
 in meteorites, radioactive particles distrib. in meteorites calc. 8=10367
 in meteorites, tracks, identification 8=20596
 Monte Carlo simulation of EAS, possibility of distinguishing primary 8=11667
 nuclei, rigidity spectra obs. 8=20603
 neutrinos, solar, use in search for (νe)(νe) scatt. 8=14871
 ν, μ production, 7500 m.w.e. 8=3590
 ν rate at 8800 m.w.e., meas. and obs. 8=3591
 plasma, synchrotron and gyromag. relativistic, amplification dependence on polarization 8=21345
 progress in elementary particle and cosmic ray physics, book IX 8=15875
 quark production in galaxy, search 8=3604
 quarks, unit and fractional charges in region $m_s > m_p$, search at 3200 m above sea 8=15888
 radial density gradient and rigidity dependence obs. at solar minimum 8=5970
 space flux obs. rel. to predictions on basis of balloon ionization chamber obs. 8=11666
 solar, enhancement obs. 8=23319
 solar high energy particles in new cycle, ground-based neutron monitoring 8=23723
 solar, and polar cap absorption 8=14736
 solar, low energy cut-off dependence on latitude in geomag. field 8=897
 in solar system, energy changes rel. to energy balance in solar wind 8=14872
 space weathering of lunar and asteroidal surfaces 8=19246
 storm, Feb. 1962, rel. to interplanetary structure 8=2833
 stream of fast particles, spectra of plasma and e.m. waves induced by stream instability 8=19305
 T = 3°K background radiation 8=10083
 X-ray bursts, correl. with polar aurora 8=18939
 X-rays, celestial, polarization 8=2802
 B^a solar neutrino flux dependence on heavy element composition 8=5968
 B^b solar neutrino flux dependence on rate of the reaction He³(He³, 2p)He⁴ 8=5969
 OH radiation, polarization, and of amplifying medium 8=19916

absorption

- atmospheric, spectrography 8=20623
 auroral, noise pulsations obs. 8=2639
 intensity data, barometric pressure correction 8=893
 interstellar matter, effect on composition and energy spectrum, calc. 8=11668
 mass coefficient, solar-cycle variation, Climax and Chicago neutron monitors 1953-65 8=7024
 muons, energy spectrum incident on medium rel. to spectrum within medium 8=15889
 muon spectra and change ratio at sea-level at zenith angle of 45° 8=900
 nucleons, energies > 10¹¹ eV, elim. of contradictions by hypothesising a passive baryon state 8=15907
 π attenuation length 8=899
 range fluctuations for muons of energy up to 10⁶ GeV 8=15906

apparatus

- See also Particle detectors.
 anisotropy beyond geomagnetic field, response of function 8=895
 charge determ. of heavy particles 8=20598
 Cherenkov r.f. pulses associated with EAS, antenna det. 8=20597
 counters, secondary production in shielding material 8=902

Cosmic rays--contd**apparatus--contd**

- detectors, acceptance vector concept introduced 8=894
dielectric plastic particle detector using rate of chemical etching 8=11331
emulsion chamber, 10^{13} eV interactions at height 2640m 8=627
extensive air showers, detect. and meas. 8=7006
galactic and solar, OGO data analysis system 8=5847
gas discharge counter, satellite-borne 8=19089
gas proportional counter array to distinguish p and π , about 100 GeV 8=7009
ground-based neutron monitors, in earth-centred system, directions of viewing 8=20593
Haverah Park E.A.S. array description 8=7019
installation at Tyan'-Shan', for study of pion and proton strong interacts. 8=15881
ionization calorimeter at depth of 130 m.w.e., for high-energy muon study 8=15876
liquid scintill. for e density and time-of-arrival meas. of E.A.S. 8=7008
multiplate spark chamber, simplified system 8=624
n monitors, lifetime of n inside 8=15877
primary, high energy gamma quanta, obs. 8=15879
proportional counters and electronic systems for obs. in space 8=5848
scintillation counters for e density digitalization in E.A.S. 8=7007
scintillator, plastic, non-linear response 8=7005
with solar-energy power units, optimization 8=15880
spark chamber assembly for muon flux meas. in EAS 8=15883
spark emulsion chamber for photon, e cascades 8=20594
spectrometer, high-transmission, nuclear charge of primary rays 8=15878
"telescope", giant, 250 sq. km., Australia 8=10091

composition--

- chemical, solar flare origin 8=20603
heavy nuclei energy spectrum during solar min. 1965 8=3742
interstellar absorption affects, calc. 8=11668
heavy long-lived particles, search for in air showers 8=15887
low energy spectra, June 65, rocket determ. 8=3743
massive elementary particle search 8=11661
oblique component, coupling coeffs. determ. 8=20609
primary, charge, and energy spectra, 200 MeV to 5 GeV/nucleon, Cerenkov-scintillation counter 8=11665
primary, flux of nuclei, time var. obs. 8=20611
primary, high energy gamma quanta, obs. 8=15879
primary, nuclear component, investig. by satellite 'proton-2' 8=15893
quarks, negative evidence 8=11474
quark search at sea level 8=20402
search for quarks of charge $\geq \frac{1}{2}e$ 8=15742
stars in photographic emulsion at high altitude 8=15882
teaching misconceptions 8=7027
in terrestrial radiation belt, Kosmos 53 obs. 8=19089
H, low energy det. summer 1966 8=11676
He, low energy det. summer 1966 8=11676
O and elements of lower atomic number, low energy det. summer 1966 8=11676

alpha-particles

- rigidity spectra obs. 8=20603
He isotopes, production 8=20607

deuterons

- flux, lower limit from $p + p \rightarrow d + \pi^+$ reaction 8=19092

electrons

- atmosphere, upper, energy absorption at different levels 8=18972
at energies > 12 GeV, rel. to models and related astrophysical quantities 8=11660
energy losses in interstellar transit 8=23492
extraterrestrial, spectrum and origin, 70-2000 MeV 8=3745
fluctuation of numbers in EAS, expt. analysis 8=15897
fluctuation of numbers in EAS, theoretical analysis 8=15896
flux meas. and recording, balloon apparatus 8=20601
flux meas. and sign ratio, review 8=7010
galactic and prod. of background X-radiation. 8=19095
galactic secondary spectrum rel. to prod. and confinement in galaxy and halo 8=19198
high energy, proton 1 and 2 obs. 8=20604
intensity diurnal var. near poles, low-energy, obs. 8=913
positron-electron ratio, energy dependence in primary cosmic radiation in 1965 8=5843
positrons, evidence for secondary origin 8=19093
primary, energy spectrum 10-40 MeV obs. 8=15890
primary, 25-600 MeV 1964-66 obs. 8=11664
secondary electrons, upper atmosphere, flux and energy spectrum calc. 8=11669
secondary, low-energy, at balloon altitudes 8=7020
spectra prod. by cosmic ray collisions with interstellar matter 8=19094
synchrotron, Compton scattering of virtual photons 8=3571

mesons

- atmospheric correlations with counting rate 8=3753
change during magnetic storm 8=11673

Cosmic rays--contd**mesons--contd**

- diurnal intensity wave at high latitudes 8=20626
 K/π ratio from muonic intensity 8=896
pions, strong interact. in 100 to 1000 BeV range, installation for study 8=15881
 π -N interactions, recoil p transverse momentum and four-momentum transfer obs. 8=11589
 π -p distinction with gas proportional counter arrays 8=7009

muons

- electron pair production in medium and low Z elements 8=7178
energy spectrum, study by electron-photon showers, for large zenith angles 8=15892
fluctuation of numbers in FAS, expt. analysis 8=15897
fluctuation of numbers in EAS, theoretical analysis 8=15896
flux at 8800 m.w.e., meas. and obs. 8=3591
flux meas. in EAS using spark chamber, at 20m water equiv. 8=15883
geomagnetic field defl. from primary direction, telescope obs. correction programme 8=20619
incident on dense material, absorpt. curve and energy spectrum 8=15889
 μ pair prod. 8=15909
muon spectra and charge ratio at sea-level at zenith angle of 45° 8=900
muons and atmospheric coefficients near geomag. equator, intensity 8=11671
 ν induced and atmospheric, 7500 m.w.e. 8=3590
nonelectromagnetic interacts. shown by cascade shower initiation 8=15891
positive-to-negative charge ratio at sea-level, 3-360 GeV 8=20606
production process of $> 10^{12}$ eV μ , angular distrib. obs. 8=15886
range fluctuations, energy up to 10^6 GeV 8=15906
solar daily, variation at a depth of 60 m water equivalent 8=7023
spectrum 3-1000 GeV/c obs., agreement with π prod. theory 8=20605
study with complex installation inc. ionization calorimeter, at depth of 130 m.w.e. 8=15876
underground, energy spectra 8=15885
underground penetration, invest. using scintillator stack 8=15884

neutrons

- air-land interface, density obs. 8=20620
annual variations, atmospheric temperature effect 8=914
coupling coeffs. determ. 8=20608
energy spectrum at sea level, 20-4000 GeV 8=15894
flux in atmosphere, energy range thermal -100 eV, Yakutsk balloon obs. 8=907
ground-based monitors, in earth-centred coordinate system, directions of viewing 8=20593
intensity sudden var., correl. with solar minima 8=20638
lifetime monitors 8=15877
and magnetic storms 8=7011
monitor yield functions, Gross transform and nucleonic component m.p.p.'s during solar min. 8=20595
multiplicity during solar increase of January 28, 1967, obs. 8=915
multiplicity, low latitudes, 1 GY monitor obs. 8=906
multiplicity monitor, 1965 obs. 8=901
secondary flux after solar event November 15, 1960, Atlas ballistic flight obs. 8=2623
solar-diurnal var., Antarctic (1963-64) 8=20635
spectrum, 0.05-2.0 MeV near sea-level 8=20602
27 day cycle, quasi-spiral variation with solar activity 8=912

photons

- aerial γ -spectrometer, calibration 8=20364
 γ background due to inverse Compton scattering of $3^\circ K$ photons by galactic electron rays 8=23487
 γ -ray beyond atmosphere, obs. 8=19096
gamma-ray intensity in an expanding universe, calculation 8=10085
high energy, due to inverse Compton scattering of universal microwave photons in Crab nebula 8=14795
intensity, vertical, rel. to depth of atmosphere, hard γ obs. 8=20639
OSO 1 high energy expt. 8=908
primary, large air shower prod. 8=11662
primary γ spectrum, effects of decaying nucleon isobars and hyperons 8=23489
synchrotron, Compton scattering of virtual photons 8=3571
X-radiation, due to galactic e interaction with cosmic black body radiation 8=19095
X-ray background between 4 and 40 keV, diffuse 8=10282
X-rays, proportional counters and electronic systems for obs. 8=5848

protons

- anti-protons abundance upper limit in low energy galactic radiation 8=14730
atmospheric, secondary, and re-entrant albedo from balloon and satellite obs. 8=3751
large angle elastic scatt., contrib. of statistical scatt. 8=15836

Cosmic rays—contd**protons—contd**

- low-energy, elektron satellites recording 8=20610
 momentum 24 BeV/c, nuclear reactions, energy and ang. characts. 8=16074
 π -p distinction with gas proportional counter arrays 8=7009
 primary, cross-section for inelastic interact. with air nuclei 8=16075
 radial intensity gradient obs. from the orbit of Earth 8=5970
 recoil, in N-N interact., transverse momenta and four-momentum transfer 8=898
 solar, low energy cut-off dependence on latitude in geomag. field 8=897
 solar low energy cutoff diurnal vars. and pitch angle distributions 8=20631
 solar, precipitation over polar caps, nonuniformity obs., Feb. 1965 8=905
 strong interact. in 100 to 1000 BeV range, installation for study 8=15881
 spallation reactions for Li, Be, B formation 8=3922
 C interaction cross section at $E_{\pi}=10^{10}$ - 10^{12} eV, Proton 1 satellite obs. 8=16080

effects and interactions

- albedo, re-entrant, intensity calc. from balloon obs. 8=903
 atmosphere, high energy shower, combined optic and e.m. pulse production 8=3750
 barometric coefficient calc. allowing for variations in primary spectrum and cut-off rigidity 8=909
 cascades in Pb-Fe absorber, 'multiplicative effect' of EAS 8=904
 emulsion chamber, 10^{13} eV interactions at height 2640m 8=627
 extensive air, radio pulses due to slow electron movement in atmospheric elect. field 8=15900
 Fermi gas model for nuclear reactions not confirmed by 10^3 BeV cosmic ray obs. 8=20777
 fireball hypothesis for meson resonances, obs. 8=20622
 interstellar medium, e spectrum prod. calc. 8=19094
 K^0/π^+ ratio in collisions, calc. including η prod. 8=20617
 lunar surface, neutron emission 8=19240
 meteorites, nuclear particle tracks obs. of intensity 8=20599
 μ pair prod. on nucleus 8=15909
 N-N interact., transverse momenta of recoil p's 8=898
 nucleons, energies $> 10^{11}$ eV, elim. of contradictions by hypothesising a passive baryon state 8=15907
 nucleons, prod. photons, distrib. of fraction of primary energy transferred 8=16103
 neutron multiplicity monitor, 1965 obs. 8=901
 nucleus-nucleus collisions, prod. by primaries 8=16126
 π -N interactions, recoil p transverse momentum and four-momentum transfer obs. 8=11589
 π prod. of μ , rel. to μ spectrum at sea level 8=20605
 pion, prod. photons, distrib. of fraction of primary energy transferred 8=16103
 π^+ prod. in very high energy nuclear interactions obs. 8=20618
 particle groups, in EAS, shower prod. ability 8=15899
 protons, secondary, and re-entrant albedo from balloon and satellite obs. 8=3751
 with relic radiation 8=10089
 secondary particles, transverse momenta data compared with predictions of hydrodynamic theory 8=15908
 secondary production in shielded counters 8=902
 solar modulation effect 8=11676
 solar, rel. to electron density and radio absorpt., in ionosphere, 1961 ionosphere, report 8=2655
 stars in photographic emulsion at high altitude 8=15882
 300 BeV, cascade process in Fe obs. with ionization calorimeter 8=20621
 C^{14} prod. near sea level obs., meson, photon, n induced 8=20620
 Fe ion tracks in olivine 8=8768
 H^2 - 3 production in atmosphere, balloon obs., June 1965 8=3752
 Na^{22} prod. meas. for atm. exchange studies 8=18857

jets. See Cosmic rays/showers and bursts.

origin

- e ~ p charge difference, cosmological consequence 8=23480
 electrons, extraterrestrial, and spectrum 70-2000 MeV 8=3745
 extragalactic, interpretation of spectrum 8=10092
 meteorite data, early history of solar system 8=23493
 X-ray sources, spectral and location meas. 8=2835

primary

- asymptotic directions, calc. 8=20613
 charge composition and energy spectra, 200 MeV to 5 GeV/nucleon, Cerenkov-scintillation counter 8=11665
 composition and propagation in interstellar space 8=10090
 electron energy spectrum, 10-40 MeV obs. 8=15890
 electrons at energies > 12 GeV, rel. to models and related astrophysical quantities 8=11660
 electron flux using balloon obs. 8=20601
 electrons, spectrum and origin, 70-2000 MeV 8=3745
 electrons, 25-600 MeV 1964-66 obs. 8=11664
 energy estimation 8=3747
 energy spectrum obs., 10^{10} - 10^{14} eV 8=20600

Cosmic rays—contd**primary—contd**

- energy spectrum var. 8=20612
 flux of nuclei, time var. obs. 8=20611
 galactic, anisotropy in intensity distribution 8=23488
 galactic electrons and protons, 70 MeV to 2 GeV, solar modulation obs. 8=11679
 galactic escape rate 8=23491
 galactic, evolution of element abundances 8=23490
 galactic, solar modulation and p and He source spectra 8=2771
 galactic and solar, solar modulation theory and e component obs. 8=23717
 γ background due to inverse Compton scattering of $3^{\circ}K$ photons by galactic electron rays 8=23487
 γ spectrum, effects of decaying nucleon isobars and hyperons 8=23489
 heavy nuclei and solar cycle modulation, Texas, March 1962 8=3744
 high energy gamma quanta, measuring instrument 8=15879
 intensity analysis, role of worldwide vertical cut-off rigidity grid 8=11672
 intensity evaluation from nuclear particle tracks in meteorites 8=20599
 interstellar and plasma interactions, theories review 8=23578
 measurements by "automatic interplanetary stations" 8=19090
 modulation, solar, from neutron monitor data 8=7021
 Monte Carlo analysis of EAS distinguishes p from Fe 8=11667
 μ telescope direction obs., geomag. field defl. correction 8=20619
 neutrino max. energy calc. 8=14796
 neutron, monitor, yield functions, Gross transform and nucleonic component m.p.p.'s during solar min. 8=20595
 nuclear charge, high-transmission spectrometer 8=15878
 nuclear component, investig. by satellite 'proton-2' 8=15893
 nuclei, intensity vars. with A, 1964-65, rel. to solar generation 8=11680
 nuclei, tracks in plastic solids 8=3741
 photon, large air shower prod. 8=11662
 radiation in 1965, positron-electron ratio, energy dependence 8=5843
 satellite elektron, obs., 30 Jan 1964 and 9 Feb 1965 8=19088
 solar electrons > 40 keV and protons > 500 keV 8=2850
 solar heavy nuclei accel. rel. to ionizing capacity increases obs. 8=11663
 solar injection into magnetosphere 8=23721
 solar modulation, neutron monitor and direct space obs., 1958-65 8=11677
 solar protons and electrons, interplanetary diffusion 8=23686
 stellar-diurnal var. correction for solar-diurnal amplitude-phase modulation 8=7026
 superhigh energy ($E_0 > 10^{15}$ eV), rel. to EAS spectrum 8=15898
 in terrestrial radiation belt, Kosmos 53 obs. 8=19089
 X-ray background between 4 and 40 keV, diffuse 8=10282

showers and bursts

- air showers above 10^{12} eV, sidereal time variation 8=20616
 cascade showers non. e.m., initiated by muons nuclear, reactions 8=15891
 e density digitalization and core location, scintill. counters 8=7007
 e.m. showers, muon initiated, lateral and ang. distrib. of particles 8=15903
 energy spectrum of neutrons at sea level, 20-4000 GeV 8=15894
 EAS axis-detector dist. rel. to shower size and age param. 8=20615
 EAS, calc. of longit. and transverse development, inc. fluctuations 8=15901
 EAS, Cherenkov radiation density fluctuation at sea level calc. 8=7013
 EAS, detect. and meas. 8=7006
 EAS, development in upper atmos., expt. compared with theory rel. to π^0 prod. 8=15904
 EAS with fixed numbers of e and μ , characts. and energy flux densities 8=15895
 EAS, fluctuations of muon and electron numbers, expt. 8=15897
 EAS, fluctuations of muon and electron numbers, theory 8=15896
 EAS in lower atmos., contrib. of leading particle undergoing interacts. with fluctuations 8=15902
 EAS, meas. of coherent r.f. emission in meter wavelength range 8=15905
 EAS, Monte Carlo simulation, p and Fe primaries compared 8=11667
 EAS, nuclear-active parts. rel. to generation of cascade in absorber 8=904
 EAS, radio pulses det. at large zenith angles 8=3748
 EAS, radio pulses due to slow electron movement in atmospheric elect. field 8=15900
 EAS, shower prod. ability of particles in non-Poisson groups 8=15899
 EAS spectrum for $N_s > 10^7$, rel. to superhigh energy primary rad. 8=15898

Cosmic rays—contd**showers and bursts—contd**

- EAS theory and cloud-chamber obs. 8=7016-18
 due to extra-galactic primary photons 8=11662
 fluctuations rel. to principle components, simulation 8=3749
 Haverah Park E.A.S. array description 8=7019
 heavy long-lived particles, unsuccessful search 8=15887
 high energy, detection by combined optic and e.m. pulse 8=3750
 jets, primary energy estimate by $\langle \log \cot \theta \rangle$, effect of secondary momentum and ang. distrib. 8=20614
 jets, transverse momenta of recoil p in N-N interact. 8=898
 jets, centre of mass system velocity, estimation 8=3747
 jets, 2-centre fireball model, wider applic. 8=3746
 liquid scintill. for e density and time-of-arrival meas. of E.A.S. 8=7008
 muons penetrating underground, invest. using scintillator stack 8=15884
 progress in elementary particle and cosmic ray physics, book IX 8=15875
 radio emission from extensive air showers, mechanism 8=7012
 radio pulses from air showers, theory 8=7014
 radio pulses, atmospheric electric field as possible cause 8=7015
 shower electrons in Cu, Fe, Al and graphite, calc. of integral spectra 8=16059

variations

- air showers above 10^{12} eV, sidereal time variation 8=20616
 anisotropy associated with magnetic storms 8=11673
 anisotropy in galactic space, 10^{10} – 10^{12} eV 8=19087
 annual, attributed to solar corona asymmetry 8=3755
 atmospheric correlations with counting rate 8=3753
 barometric coefficient calc. allowing for variations in primary spectrum and cut-off rigidity 8=909
 classification of variations and origin, criticism 8=20624
 cut-off rigidity correl. with McIlwain parameter 8=20629
 cut-off rigidity, radiation belt effects 8=20630
 cyclic, with solar activity 8=20632
 data on properties of interplanetary space, 11-year cycle 8=19283
 diurnal anisotropy magnitude variation 8=11675
 diurnal, intensity, diffusion 8=11674
 diurnal, study of periodic fluctuations during quiet sun period 1962-64 8=910
 electrons, low energy, diurnal intensity variation new poles, obs. 8=913
 equator of intensity, location 8=20628
 Fermi accel., ionization loss and energy spectra 8=11670
 Forbush decrease Sept., Oct. 1962 8=20633
 Forbush decrease effect, rocket obs. 8=3743
 galactic electrons and protons, 70 MeV to 2 GeV, solar modulation obs. 8=11679
 γ -rays, hard, vertical intensity rel. to atmospheric depth 8=20639
 intensity modulation, interplanetary 8=19091
 intensity monthly average, data rel. to solar activity 8=20636
 latitude effect, stratosphere meas. (1964-5) 8=20627
 local atm. pressure correction 8=3754
 magnetic charges in dipole field, allowed cone 8=19031
 in magnetic storms, nuclear component Forbush decreases obs. 8=15910
 magnitude of diurnal anisotropy 8=11675
 mesons, diurnal intensity wave at high latitudes 8=20626
 muon solar daily, at depth of 60 m water equivalent 8=7023
 muons, atmospheric coeff. at Hong Kong 8=11671
 n component solar diurnal var., Antarctic (1963-64) 8=20635
 neutron component, atmospheric temperature effect 8=914
 nuclei with A, 1964-65, rel. to solar generation 8=11680
 periodic, simultaneous amplitude-phase modulation 8=7025
 primary component, energy spectrum 8=20612
 primary flux of nuclei, time var. obs. 8=20611
 radionuclides, cosmogenic, in Pearce River and Harleton chondrites, deductions 8=14858
 review, book on cosmic ray physics 8=15875
 rigidities, vertical cut-off, worldwide trajectory derived and appl. to expt. meas. 8=11672
 solar cycle effect from IGY data 8=3754
 solar-cycle, mass absorption coeff. Climax and Chicago neutron montiros, 1953-65 8=7024
 solar-diurnal, correl. with type IV radio bursts 8=19298
 solar diurnal and semidiurnal, seasonal changes 8=916
 solar flare effects, var. with solar activity 8=20634
 solar modulation from neutron monitor data 8=7021
 solar modulation, neutron monitor and direct space obs., 1958-65 8=11677
 solar proton low energy cutoffs, diurnal and pitch angle distributions 8=20631
 spatial-rigidity distrib., analysis (1965) 8=20625
 spectrography by atm. absorpt. 8=20623
 stellar-diurnal correction for solar-diurnal amplitude-phase modulation 8=7026
 study of, zonal harmonic, spherical analysis and diurnal var. methods 8=7022
 sudden intensity change, correl. with solar activity minima 8=20638

Cosmic rays—contd**variations—contd**

- 27-day cycle, correl. with solar and geomagnetic activities 8=20637
 27 day cycle, quasi-spiral variation with solar activity 8=912
 27-day, effect of solar plasma stream 8=911
 underground, 60 m.w.e. London, rel. to atmospheric temp. 8=11678
 variations from 1954 to 1958 to 1965 8=14737

Cosmogony. See Cosmology.**Cosmology**

 Magnox ZR-55, heat-treated, behaviour in 350-450°C range 8=5078
 in mantle of Earth, due to thermal grad. 8=14539
 metals, and high-strain fatigue, correlation of data 8=2060
 Nimonic 80A, damage and recovery by annealing, 600-750°C 8=5083
 nonlinear viscoelasticity, form of generalized function 8=60
 nuclear fuel, effect on coated particle 8=20900
 plane creep of free surface in viscous fluid, kinematic reversibility conds. 8=22281
 plastics, solids, under hydrostatic press. and vol. decrease with time 8=22280
 poly- α -methylstyrene, monodisperse, tensile 8=5094
 polyethylene, high-density, follows a Ramberg-Osgood type law 8=22408
 polymers, unoriented crystalline, mechanisms 8=13619
 polyvinyl chloride films, rheo-optical properties during experiments 8=2076
 polyvinyl chloride, mechanism of Andrade creep 8=13624
 pressurized shell, near sealed opening effect of stress-strain rate relationship 8=10560
 rate, effect on cavity growth mechanism 8=8801
 of rocks, temp. and stress effects, rel. to isostasy and tide damping 8=14559
 shallow trusses and arches, nonlinear creep buckling 8=22278
 shells, inelastic, membrane, with rotation symmetry, creeping at finite deformations 8=10571
 stainless steel, type 310, creep-rupture props. to 2000°F 8=17755
 steel, austenitic, liquid Na environment on secondary and tertiary 8=22359
 steel, austenitic type 304, creep-rupture props, influence of N and other elements 8=17754
 steel, carbide transformations during creep 8=17081
 steel, stainless with high N content, at cryotemps. rel. to dislocation behaviour 8=17784
 strain of a polycrystal, contribution of grain boundary sliding 8=8802
 viscoelasticity, generalized function 8=61
 voids formation and competition from sintering processes 8=8800
 Al, stressed, thermally cycled, temp. after-effect 8=13534
 Al-Al₃Ni eutectic, microstructural stability, during creep 8=4842
 Al-Ti alloy, tensile, at 250°C 8=8813
 BeO polycrystals, high temp. obs. 8=13539
 Cr alloys, influence of ceramic environment 8=13543
 Cu, at 650-700°C rel. to deformation at 77 and 4.2°K 8=17824
 Cu, films, elastic lattice strains 8=13548

Creep—contd

- Cu films, high temp, mechanism of grain boundary cavity formation 8=13547
 Cu, tubular specimens, at const. and variable loads 8=17776
 Fe, crystalline, strengthening by step-wise low temp. creep 8=2054
 Fe-Mn-N alloys, resistance rel. to effects of stress changes 8=5064
 Fe-Ni alloy, phase-hardened, condition for thermal stability 8=17066
 Fe-Ni alloy, rapid heating effect during reverse martensitic transform. on high temp. stability 8=17065
 HK-40 alloy, creep-rupture props. to 2000°F 8=17755
 In, high-temp., pressure dependence 8=8852
 MgO grain shape change 8=13584
 MgZn, plastic deformation, test 8=5081
 Mo, 950°C to 1385°C, 3500 to 12 000 lb/in² stress 8=13588
 Nb, effect of O and C on strength at 800-1200° C over stress range 1500-50 lb/in² 8=13593
 Nb-Ta-W alloys, influence of carbide and boride additions 8=22384
 Nb-W alloys, influence of carbide and boride additions 8=22384
 Ni, at 700°C rel. to deformation at 77 and 4.2°K 8=17824
 Ni, crystalline, strengthening by step-wise low temp. creep 8=2054
 Ni-base alloy, temperature cycling effects 8=2066
 Ni-1% Cr alloy, prestrain effect 8=13600
 Ni, recrystn. models criticism 8=8857
 Ni, strength increase after thermomechanical treatment 8=13601
 Ni-Al₂O₃ alloys, dispersion-strengthened 8=22388
 Ni-20Cr-2ThO₂ alloys, fracture 8=8858
 Pb, stress sensitivity at low stresses, article discussion 8=17825
 Pb-Tl alloys, superplasticity 8=13603
 Si-Fe alloy, effect on dislocation structure and ductility, low temp. 8=13571
 Si-Fe, dislocation structure changes 8=8734
 SiC, polycrystalline 8=22393
 SiC, 'self-bonded', delayed creep 8=22391
 Th, during fission 8=8866
 U, α and β mono- and poly-crysts., mechanisms 8=8867
 U containing small alloying additions, strength 8=8868
 U-C alloys, around UC comp., high-temp. creep and hot extrusion 8=22396
 Zn-Al, alloy, superplastic, deformation behaviour 8=5090
 Zn-Al, alloy, superplastic effect of stress, temp. and heat-treatment 8=5090
 α -Zr, polycrystalline, at steady-state rel. to strain-rate dislocation-velocity dependence 8=4986
 Zr and alloys, behaviour rel. to vacancy diffusion 8=4964
- Critical constants, thermal**
 ferromagnets, behaviour theory 8=13978
 ferromagnetic metals, anomaly in elec. resist. near T_c 8=13985
 gas, critical, sound attenuation 8=12688
 gas, sound attenuation near critical point 8=16706
 for heat capacity meas. from 1.2 to 300°K 8=22116
 Ising model, transport eqns 8=10669
 liquid-gas critical point, transport coeffs. 8=21745
 mixtures, shear viscosity nonlinear effect 8=8163
 particle distrib. function near crit. pt. 8=12964
 physical-cluster theory 8=4654
 supercritical fluid, thermodynamic props. calc. 8=12575
 surface tension near crit. pt., quasichem. approx. 8=21635
 thermal cond. and sp. ht. meas., 0.05 to 2°K 8=22112
 thermodynamics of critical pt., liq.-vapour systems 8=16916
 transport coeffs. in gas critical region 8=4490
 Al films, organic molecular inclusions, enhancement of critical temp. 8=12965
 Ar, thermal conductivity near critical point 8=12683
 CO₂, near critical point, forced convection heat transfer 8=16915
 Ga, superconducting boundary scattering rel. to critical temp. shifting 8=13747
 He-n-butane system, gas-gas equil. with crit. temp. above crit. temps. of components 8=12979
 He*, density measurement near critical point to test $\beta(\delta + 1) + \alpha^2 \geq 2$ 8=259
- Critical mixtures.** See Solutions.
- Critical opalescence.** See Phase transformations; Solutions.
- Crowdions.** See Crystal imperfections/interstitials.
- Cryopumping.** See Vacuum pumps; Vacuum technique.
- Cryoscopy.** See Freezing; Low-temperature production; Low-temperature technique.
- Cryostats**
 continuous flow for mag. reson., room temp. to 4.2°K 8=10793
 cryogenic liquids, differential density meas. 8=19347
 cryopump, design and performance 8=15134
 cryopump for ultrahigh vacuum 8=7951
 demagnetization, for Mössbauer effect expts. 8=1642
 electron irradiation damage meas. apparatus 8=17692
 for e. s. r. spectra at liq. He temps, effects of illumination 8=15135

- Statistics**—contd
 for ferromagnetic resonance meas. at liq. He temp. 8=6226
 Joule-Thomson refrigerator, for n diffraction at liq. N temp. 8=8501
 for ~100kbar studies at liq. He temps. 8=3112
 for -190 to +200°C temp. range, and suitable for ferromag. resonance meas. 8=253
 for Raman spectra of crystals. 8=22941
 sample holder, two degrees of freedom 8=18292
 semiconductor detectors in low temp. work 8=3113
 using charcoal adsorption pumps for liq. He⁴ and He³, without mech. vacuum pump 8=15133
 variable temp., for magneto-optical studies 8=5592
 Ge(Li) detectors, liquid N₂ automatic cooling 8=11310
 He, liquid, for use with torque magnetometer down to 4.2°K 8=15140
 He⁴ liquid, for 0.9°K 8=15146
- Superconductors.** See Superconducting materials and devices.
- Crystal chemistry**
 borates, classification 8=13119
 cerite and whitlockite, isotypy 8=4778
 diamond, valence force potentials for calculating cryst. vibrs. 8=16968
 geometrical basis, props. of net planes 8=13116
 intermetallic cpds. of CsCl structure, defect formation energies rel. to comp. and ordering 8=17623-4
 ions with incomplete shells, spectra calcs. rel. to chemical structure analysis 8=13033
 iron oxide scale, hematite phase physico-chemical state 8=17201
 isomorphous replacements 8=13120
 metallides, isomorphous substitution of atoms in crystals 8=17195
 minerals of murmanite-lomonosovite group 8=17198
 multisublattice, cation distrib. rel. to stoichiometric restrictions and solid soln. parameters 8=4775
 neptunite, oxidation state of Fe, by Mössbauer effect 8=8369
 organic, studies in USSR, review 8=8368
 pyrochlores 8=13117
 rare-earth germanides and silicides, 5:4 and 5:3 compositions 8=8554
 rare-earth-manganese cpds., prep. by amalgam process and structures 8=17203
 semiconductors and stoichiometric vacancies 8=17197
 silicates, and structural anal., review 8=8466
 of sulphosalts 8=17204
 transition metal thionibates, MNb₂S₄ 8=8560
 transition metals, 5th and 6th periods, valency structure 8=16967
 trimethylplatinum(IV) iodide and methylsodium, reaction product identification 8=14382
 Ag-Cu-Sn system, electronic phases rel. to chemical displacements 8=17002
 β-AlB₁₂ containing <2%Si, prep., stoichiometry and structure 8=17199
 AlBe₂₃, prep., stoichiometry and structure 8=17199
 Al₂Be₃Si₂O₁₈, crystalchemical analysis and structure refinement 8=17338
 B hydrides, rel. to electron deficient valencies 8=13118
 BaCa₂Al₂(Si, Al)₁₂O₃₀·2H₂O, crystalchemical analysis and structure refinement 8=17338
 3CaO·Al₂O₃·3CaSO₄·32H₂O, and structure 8=13253
 Ca₁₀(PO₄)₆(Cl)₂, single crystals, conversion to Ca₁₀(PO₄)₆(OH)₂ by hydrothermal bomb, method 8=4776
 CaZr(Hf)₄O₉ system of type RTiO₃ structure, structure and stability relations 8=1719
 Ce(III) exchange fawcites, and crystal structure 8=8515
 CeAlO₃, chemically homogeneous prep. and structure determ. 8=17355
 Ce-Ni-Si system, ternary cpd. formation, comp. and structures 8=17200
 CeO₂, non-stoichiometric, defect structure model 8=22166
 Ce₂Si₃, γ-phase stabilization with additives 8=8264
 Co complex, trans-dichloro(1,4,8,11-tetraazaundecane) cobalt (III), isomerism 8=7512
 CoCl₂:MCl (M=Rb, K, Na, Li), symmetry changes rel. to CoCl₂ conc. 8=9516
 CuFeS₂, from Fe⁵⁷ Mössbauer spectrum 8=1649
 Cr(ONO)₃(H₂O)₃·1.5 KNO₃, formation and struct. in crystalline state and in soln. 8=9518
 CsMnCl₃, and structure 8=13138
 EuAl borate, nonstoichiometry 8=8410
 GdB_x, (x=4, 6), X-ray investigation 8=17384
 H₂O* in HClO₄·2H₂O, HCl·2H₂O and HCl·3H₂O 8=17196
 HgX₂-TiX₂ (X=I, Br, Cl) systems, cpds. formed 8=17085
 KCa₂(Be, Al)₂Si₂O₁₀·0.8H₂O, crystalchemical analysis and structure refinement 8=17338
 KMnCl₃, and structure 8=13138
 La telluride phases 8=17202
 LaB₆, X-ray investigation 8=17384
 LiMSiO₄ and related sulphates, (M=Al with Ga and Ge substitution) 8=17013
 Mn₃GaC_{1-x}, non-stoichiometric effects on mag. props. 8=22819
 Mn₂SiC_x, non-stoichiometric effects on mag. props. 8=22819
 MgAl₂O₄ fibres and platelets in growth process 8=21956
 NaI(Tl) growth from melt, effect of Cl⁻ ions 8=14327
- Crystal chemistry**—contd
 NaMnCl₃, and structure 8=13138
 Nd telluride phases 8=17202
 Ni_{0.5}Fe_{0.5}O₄, oxygen stoichiometry rel. to magneto-crystalline anisotropy 8=9385
 PaCl₃, stoichiometry and structure 8=13283
 Pr telluride phases 8=17202
 Pu(N and S) cpds., rel. to use as nuclear fuel 8=12017
 RGe-Si system, (R=Gd, Tb, Dy, Ho and Er), 5:4 stoichiometry and mag. props. 8=4779
 R-Ni-Si, (R=rare-earth), system, ternary cpd. formation, comp. and structures 8=17200
 RbMnCl₃, and structure 8=13138
 Sb₂S₃, dielectric props., lattice structure anal. rel. to anomalies 8=9217
 Sb₂S₃ and SbSI, anomalous dispersion of permittivity and stoichiometry, microwave freq. 8=9217
 U(N, P and S) cpds., rel. to use as nuclear fuel 8=12017
 YB_x, (x=4, 6, 12), X-ray investigation 8=17384
- Crystal classes.** See Crystallography; Crystal structure, atomic.
- Crystal counters.** See Counters, crystal.
- Crystal electron states**
 See also Colour centres.
 adiabatic potential of complex system, calc. using perturbation theory 8=13626
 absorption edge in strongly anisotropic substs. 8=9482
 alkali halides band params., e energy loss obs. 8=8938
 alkali halides, e⁺ bound state 8=13694
 alkali metals, electron-ion pseudopotentials 8=22427
 alkali metals, interionic potential modified in conduction electron presence 8=4671
 alkali metals, resistivity and thermopower under pressure using pseudo-atom model 8=9010
 alloys, additivites 8=5446
 alloys, ordered, grain boundary theory 8=17258
 alloys, structure using pseudo-atom model 8=8910
 Anderson and s-d exchange models, comparison 8=8886
 anthracene, carrier decay from pulsed photoconductivity meas. 8=2267
 anthracene rel. to carrier prod. 8=22434
 anthracene, exciton annihilation and autoionization 8=17890
 anthracene, space-charge-limited currents, temp. dependence 8=17859
 anthracene, u. v. irradiated, fluorescence and photoconductivity rel. to carrier generation 8=2266
 antiferromagnets in strong mag. fields, correlation functions 8=18369
 aqueous solution, frozen, electron hole pairs 8=8950
 atoms embedded in electron gas, statistical model calcs. 8=22486
 binary crystals, one-dimensional, electronic states by MO-LCAO method 8=2091
 bound states of cond. electrons and mag. impurity atoms, "soluble" case 8=17848
 carriers, hot, thermoelectric effect analyzed as Bernoulli effect 8=13629
 colour centres excit. and recomb. near fundamental absorpt. limit 8=9580
 conduction electrons energy spectrum in ferro- or antiferromagnets, near Curie temp. 8=5099
 conduction electron scattering by impurity with unity spin 8=22426
 conduction electrons, theory of interaction with a strong hypersonic flux 8=17854
 conduction in dilute alloys, density around an impurity 8=5112
 conductivity electrons, dynamics during interband mag. breakdown 8=5100
 conference Työlsand, Sweden 1966 8=8191
 corundum, complexes of bound impurity ions, group-theoretical classification 8=8887
 coupled electron-phonon system, transport theory, variational approach 8=2080
 crystallization and mag. ordering of electron gas 8=22484
 cubic crystal field on covalence 8=17875
 current carrier mobility, effect of sonic wave 8=22415
 current carrier scatt. by impurities, kinetic eqn. 8=22423
 deep-trap impurities rel. to host absorpt. spectrum 8=17865
 density of energy levels rel. to scattering centre distrib. 8=5108
 diamond, charge density calcs. by OPW method 8=8927
 diamond monovacancy distortion by Jahn-Teller effect, mol. model 8=17605
 diamond, theory of hole motion in mag. field 8=22436
 1,4-dibromonaphthalene, triplet states 8=2467
 disordered system, exact expression for average propagator 8=17850
 disordered systems, comments on Gubanov's theory 8=17849
 drift mobility experiments rel. to trapping effects 8=8896
 durenene, doped, energy transfer 8=18637
 d-transition, formulae of Slater-Koster interpolation procedure 8=8885
 e and hole mobility and density in phosphors, Hall effect meas. 8=8898
 effective mass theory using one-electron Green's function 8=8921

Crystal electron states—contd

- electron diamagnetism, case of inhomogeneous mag. moment, thermodynamics 8=17896
 electron density, complex distrib. 8=8883
 electron-electron correlation and instabilities 8=22788
 electron-impurity interactions, h.f. elec. cond., calc. 8=2999
 electron-impurity interactions, master eqns. 8=2998
 electron-impurity interactions, one-particle evolution eqns. 8=2997
 electron momentum distrib., rel. to Compton scatt. of X-ray 8=17907
 electron-phonon density fluctuations, non-linear excitation mechanism 8=9070
 electro-optical effects and e transitions rel. to cryst. anisotropy 8=9495
 electronic band structure, approx. calculations 8=13650
 electronic conductors, magnetic field effects 8=13635
 electronic processes in low mobility solids, Conference Sheffield, England April 1966 8=5101
 electronic theory of adhesion 8=2046
 electron transmission through periodic pile by Schrödinger equation 8=3406
 electroreflectance use for band struct. meas. 8=9494
 epitaxial films, propag. of growth striae 8=17129
 epoxy resin, polymerization, interpretation of elect. resistivity meas. 8=18707
 exchange coupling, effect of multiplicity of mag. ions 8=22412
 excitation by absorption and scatt. expts. 8=5095
 F-centre wave functions calc. 8=13646
 ferromagnetic s-f interaction, ground state energies 8=17898
 finite translations in solid-state physics 8=13648
 Franz-Keldysh effect, spectral broadening representation 8=17853
 grain growth, excessive, during recrystallization after deformation, mechanism 8=17259
 graphite, pi-electrons, study by optical absorpt. 8=18511
 ground-state energy of Anderson Hamiltonian 8=13627
 Hamiltonians, symmetric, order of levels 8=13625
 heated-electron distribution, energy relaxation, role of two-phonon processes 8=8893
 Heine-Abarenkov model potential, screening reformulation 8=5107
 helicon propag., low-field, band structure effects, perturbation calc. 8=5140
 helicon relaxation of electron spins 8=17901
 high-permittivity crystal, conduction theory 8=8897
 high pressure modification of electronic spectra 8=8914
 hot-electron diffusion theory for space-charge-limited current flow 8=9129
 ice, low frequency optical spectra, interpretation using crystal lattice model 8=13326
 indene polyassociates, conjugated, photoelectric emission 8=13938
 insulating thin films, effective mass, meas. 8=8944
 insulators, electron, hole and exciton binding to dislocations 8=5349
 inverse overlap matrix, cluster expansion 8=5096
 Kondo problem, perturbation instabilities 8=22869
 Kondo scattering problem, ground state 8=5098
 Landau electrons, exact dynamics 8=8891
 Landau levels near singular or saddle point, quantization and magnetoacoustic effects 8=22439
 luminescence, delayed, apparatus for decay time study, used on organic substs. 8=9579
 magnetic alloys, effect of electrons of opposite spins on elec. resistivity 8=22432
 magnetic structure representation analysis 8=13951
 magnetic subs., symmetry-adapted basis states for energy level calc., comp. program 8=17877
 magnetic symmetry groups, representation 8=5111
 magnetoresistance, negative transverse, in low-temp. inelastic scattering by optical phonons 8=8892
 many-electron model, rudimentary 8=22413
 metal crystal oxide film growth rel. to ionic and electronic currents 8=5710
 metal, electron density near chemisorbed atom or molecule 8=8908
 metal, free-electron, impurity screening, preasymptotic form 8=8907
 metals, band struct. and interatomic exchange effects on spin fluctuations 8=2092
 metals, containing impurities, energy spectrum 8=2077
 metals, coupled cyclotron and spin waves 8=13682
 metals, configuration and orbital compressibility rel. to shock waves 8=8225
 metals, disordered, electron-phonon interaction 8=13630
 metals, electronic optical transitions, self-consistent theory 8=5394
 metals, form. of bound states with localized spins 8=5168
 metals, helicoid instability of sound oscs. 8=5139
 metals and impurities possessing spin, scatt. and exchange interact. of electrons 8=8899
 metals, Kondo spin-compensated impurities, low temp. props. 8=8882
 metals, localized spin and singlet bound state 8=8884

Crystal electron states—contd

- metals, oscillatory size effects with arbitrary quasi-particle dispersion law 8=22441
 metals, positron momentum distrib. relax. 8=8973
 metals, structure using pseudo-atom model 8=8910
 metal surface impedance changes on acoustic wave generation by r.f. e.m. radiation 8=180
 minority carrier lifetime of MOS capacitor from transient response 8=9177
 minority carriers, space charge effects on mobility, diffusion and recombination 8=22429
 Mott and Wigner transitions and excitonic phases 8=2083
 naphthalene-d₈-naphthalene-h₈ mixed crystals in triplet state, e.s.r. =18433
 nearly free electrons, linear response rel. to skin effect in layer lattices 8=5115
 negative absorption rel. to collision broadening of spectral lines 8=2395
 nonadiabatic transitions 8=13039
 non-adiabatic transitions between bound states 8=21054
 normal process relaxation times, from thermal cond. data 8=22424
 one-dimensional mixed crystals, by matrix method 8=2090
 paramagnetic impurities in metals, ground-state and low-temp. props. 8=22440
 Permalloy, magnetoresistance and effect of 3d orbital degeneracies 8=13724
 phonons and excitons, excitation by strong elect. field 8=17889
 phonon drag effect, contribution to thermomagnetic phenomena 8=5103
 phonon-electron interaction, piezoelectric rel. to nonlinear phonon damping 8=2079
 phosphors hole processes, F-centres luminesc. meas. 8=8888
 piezoelectric, charge carrier motion, kinetic power theorem 8=22672
 p-n junction characteristics, band gap variation rel. to hydrostatic pressure 8=5304
 polar semiconds., mobility and temp. of electrons or holes 8=17856
 in polyacene solid solns., energy transfer, 1965-66 bibliography 8=14162
 positron annihilation in pure Fermi gas, ladder-graph approx. 8=22492
 positrons, complex bound systems 8=6812
 pyridazine, singlet-triplet transitions 8=9573
 quasi-particle excitation attenuation, ferrite temp. theory 8=2120
 radioactive atoms spacial effect on electron and positron emission, wave mechanical treatment 8=17910
 rare gas solids, free carrier mobility 8=17863
 review 8=8881
 rhombohedral, laws of dispersion, at symm. points of Brillouin zone 8=8918
 rutile, electronic mobility at high pressures 8=2087
 scattering theory for muffin-tin ionic potentials 8=8895
 screening around ion cores in electron gas 8=22485
 semiconducting films, thin, electron-phonon interactions at low temps. 8=22428
 semiconductor, degenerate, meas. of band-tail spreading energy 8=13781
 semiconductor diodes, minority carrier lifetime, mag. field effect 8=13853
 semiconductor, electron exchange eqns., between surface and vol. zones 8=22431
 semiconductor, graded-band-gap, electronic transport 8=9083
 semiconductor non-linear props. governed by electron-phonon interactions 8=18004
 semiconductor, screened electron-phonon interact. rel. to carrier mobility 8=9075
 semiconductor trap level conc. deter. using thermo-stimulated conductance 8=18012
 superconductor, type II, two-band model props. 8=13736
 semiconductor with negative bulk differential cond., stationary state 8=13782
 semiconductors, Beers law and absorpt. of charge carriers 8=5102
 semiconductors, carrier temp., electric field depend. 8=8900
 semiconductors, compensated, electron mobility rel. to ionized impurity scattering 8=9080-1
 semiconductors, coupled cyclotron and spin waves 8=13682
 semiconductors, displacement of energy levels by interactions 8=5109
 semiconductors, double injection, effects of diffusion and thermal generation 8=22419
 semiconductors, effects of electron-lattice interaction on free-carrier magneto-optics 8=8890
 semiconductors, elec. characts. of diffusion layers 8=22418
 semiconductors, electron-hole gas, correlation energy 8=8889
 semiconductors, electronic band parameters determination from optical and magneto-optical properties 8=9493
 semiconductors, elemental, hot-carrier microwave conductivity 8=13779
 semiconductors, extrinsic, carrier thermalization, recombination mechanism 8=18010

Crystal electron states—contd

semiconductors, free carriers, magnetic resonances in higher harmonics 8=5223
semiconductors, g-factor and valence band spin-orbit splitting, laser induced, determ. 8=9094
semiconductors, helicoid instability of sound oscs. 8=5139
semiconductors, hot-electron Faraday effect 8=22420
semiconductors hot e diffusion rel. to current instability 8=13773
semiconductors, hot e relax. times, effect on bulk-microwave oscillators 8=22422
semiconductors, multilayer, ultrasound amplification by carrier drift 8=17855
semiconductors, polar, charge carrier scatt. by optical phonons 8=13628
semiconductors, polar, electron temp. approx. 8=13775
semiconductors, polar, hot electron mobility 8=22430
semiconductors, randomly doped, hole-electron pairs regeneration-recombination 8=13632
semiconductors, rel. to electro-acoustical attenuation theory 8=1845
semiconductors with non-uniform charged ion conc., Hall effect, mobility and magnetoresist. 8=22421
spatial correlation of valence electrons distorted by core electron correlation 8=17851
spins, nuclear or ionic, ferromagnetic s-f interaction, ground state energies 8=17898
spins, nuclear or ionic, indirect interaction derivation from ground state energies 8=17897
steady current in strong electric fields 8=22425
superconductivity, electronic mechanism, pairing criterion 8=17943
superconductors, quantum generation and phonon detection 8=17954
superconductors with overlapping bands, nonmagnetic impurity effect 8=2147
superconductors with strong electron-phonon interaction, thermal props. 8=17508
tetragonal, lattice Γ_q^* , laws of dispersion, in symm. points of Brillouin zone 8=8917
transition-metal monophosphides 8=22847
transition metals, itinerant electron correlation and ideal Lorenz number 8=8905
transport phenomena involving low temp. optical phonon scattering, theory 8=8894
transport theory for strong electric fields 8=2078
tunneling anomalies, zero-bias, temp., voltage and mag. field depend. 8=13860
two valence systems, model potential rel. to excited impurity states 8=23035
Urbach's rule, interpretation 8=14172
vibration spectra, molecular, by inelastic electron tunnelling 8=13633
vibrational excitation, relaxation 8=17866
walk-counting method for c. p. lattices rel. to energy bands and impurity states 8=8604
water, positron lifetime, temp. depend. 8=16871
Wurster's blue perchlorate 8=14288
wüstite, hole mobility obs. 1000-1300°C 8=13697
zero bias anomalies due to paramagnetic impurities, theory 8=13784
Ag, free and bound, γ -scatt., Thomas-Fermi model 8=17703
Ag, magnetoresistance, electron scattering effects 8=22511
Ag-Cu-Sn system, electronic phases rel. to chemical displacements 8=17002
Ag-Zn alloys, ϵ -phase, Zn thermodynamic activity dependence on density of states 8=22109
Al, helicon resonance determ. of high field Hall coeff. rel. to holes 8=5169
Al, phonon damping at low temp. due to electron-phonon interact. 8=17477
Al, pure, thermopower meas. rel. to electronic diffusion and phonon drag contributions 8=5382
Al, thermal conductivity 2.5-33.5°K 8=22132
Al-Mg alloys, Mg atom clustering, electronic origin 8=13636
AlSb, Te and Se donors, photoexcitation spectra 8=22953
Ar, free-carrier drift-velocity studies 8=8119
Au films on MoS₂, epitaxially grown under u. h. vacuum, defect structure 8=17125
 β' -AuZn, inter- and intraband transitions rel. to optical props. 8=2402
B compounds, ferromagnetic, electronic configuration 8=13658
Ba, band structure rel. to optical properties 8=5598
BaCl₂:Sm²⁺, phonon annihilation in ⁵D₁ and ⁵D₀ states 8=9600
BaF₂, additively coloured, phonon-assisted colour centre fluorescence 8=14306
Bi alloys electronic band structure from quantum oscillatory phenomena, 1.2-4.2°K 8=13659
Bi, band structure from quantum oscillatory phenomena, 1.2-4.2°K 8=13659
Bi, fixed charge, screening-charge density 8=8924
Bi, free and bound, γ -scatt., Thomas-Fermi model 8=17703
Bi, phonon dragging obs. using thermal e. m. f. and Nernst effect 8=22435
Bi, superconducting modification, e energy gap 8=2155
Bi thin films, quantum and classical dimension effects 8=22516

Crystal electron states—contd

Bi-Sb alloys, energy spectrum meas. 8=5104
Bi₂(Te, Se)₃ system, effective mass from reflectivity meas. 8=2096
CaCO₃, X-irrad., electron-hole trapping 8=5105
CaF₂, additively coloured, phonon-assisted colour centre fluorescence 8=14306
CaS, SrS, Ce:Sm, trapping rel. to i. r. flash stimulation obs. 8=9511
CaWO₄:Nd³⁺, spin-phonon interaction 8=14121
Cd, anisotropic electron-phonon scattering probabilities, evidence from galvanomagnetic props. 8=8901
Cd band structure, non-local pseudopot. calc. 8=2111
CdF₂, carrier mobility 8=18029
CdI₂(Pb) phosphoresc. and fluoresc. excit., e transitions 8=9605
CdS film, carrier conc. and electron mobility 8=13852
CdS hexagonal, band calc. by orthogonalized-plane-wave analysis 8=2097
CdS, photo-Hall mobility and scatt. 8=17860
CdS, temp. dependence of mobility for u. s. amplification rel. to electron trapping 8=2081
CdS trapping spectrum, effect of optical radiations and water vapour 8=5396
CdSb, alloyed with Au, acceptor level depth 8=22456
CdSe:Mn, photoconductivity rel. to Mn deep donor level 8=2259
CdSe(S), band structure rel. to optical props. 8=8928
Cd(S:Se) band gap and defect centres ionization energy, 100-300°K 8=2261
p-CdTe, trap levels from thermostimulated currents 8=2260
Cl in alkali-chlorides, K-absorption and q. s. s. 8=2410
Co complex, tris-dipyridyl Co(III) perchlorate, trihydrate, ⁵⁷Co²⁺-doped, 8=2082
CoB, transfers of electronic states 8=5461
CoSi, semimetal band structure 8=2098
Cr, antiferromag., band structure by Green's function 8=2348
Cr₂Si, band structure, superconductivity 8=5216
Cu alloys, electron-phonon interactions and high temp. resistivity 8=9003
Cu alloys with non-mag. impurities, elec. field gradient 8=9458
Cu, helicon wave excitation by a. c. 8=5147
Cu, magnetoresistance, electron scattering effects 8=22511
 α -Cu-Ag alloys, Hall coeff. and resistivity, interpretation 8=13641
CuCl from X-ray spectra obs. 8=9522
CuCl₂·2H₂O, unpaired, wave function calc. 8=18376
Cu-Cr alloys, low-temp. theory and magnetoresistance obs. 8=17933
CuO from X-ray spectra obs. 8=9522
Cu₂O band struct. rel. to absorpt. and refl. spectra obs. 8=9524
Cu₂O from X-ray spectra obs. 8=9522
Cu, QSS energies, isochromat and X-ray spectra compared 8=2414
CuX, (X=Cl, Br and I), band structures 8=2190
 β -CuZn, inter- and intraband transitions rel. to optical props. 8=2402
Eu, band structure rel. to optical properties 8=5598
Fe borides, phosphides and carbides, transfers of electronic states 8=5461
Fe, electronic sp. ht. by band model 8=4932
Fe-based alloys, charge screening 8=13661
Fe-group ions, e. p. r. spectrum calcs. allowing for electron-phonon interaction 8=9410
Fe(III) porphyrins, energy levels of Fe³⁺ from zero-field splitting 8=2469
Ga, effective mass in ab plane by ultrasonic cyclotron resonance 8=2099
Ga, r. f. size effect, temp. and freq. dependence 8=9099
Ga, velocity of open-orbit electrons 8=13640
GaAs, carrier concentration rel. to elastic constants 8=13575
GaAs density-of-state effective mass 8=5256
GaAs, i. r. spectral reflectivity rel. to free carriers 8=2418
GaAs, laser-heated, band pinch effect 8=13662
GaAs-GaP 50% alloy, charge transport 8=18038
GaAs, O₂ doped, high electric field domain behaviour 8=9103
Ga_{1-x}In_xAs alloys, electroreflectance rel. to band structure 8=2419
Ga_{1-x}In_xAs alloys, optical energy gap variation 8=18040
Ge, carrier lifetime, determination through self-associated cyclotron resonance 8=13831
Ge, conduction electron g-tensor from k-p theory 8=9110
Ge diodes, minority carrier lifetimes and reverse current, anisotropic press. 8=9163
n-Ge, effect of dislocations on galvanomag. props. 8=22592
Ge films, thin, piezoabsorption, above fundamental energy gap 8=22986
n-Ge, i. r. spectral reflectivity rel. to free carriers 8=2418
n-Ge, lattice mobility at low temps. 8=8902
n-Ge, phonons stimulated emission by supersonic electrons, 4.2°K 8=5257

Crystal electron states—contd

- n-Ge, small-field d.c. conduction in presence of large microwave field 8=13811
- Ge, photoexcited carriers, observed trapping parameters, rel. to Hall number anomalies 8=13637
- Ge, photon emission from indirect band-to-band Auger recombination 8=14221
- Ge, velocity field charact. of electrons 8=22590
- H, Mott transition and excitonic phases 8=2083
- HgTe, carrier model rel. to Hall coeff. and magneto-resistance 8=2200
- I₂, insulator-metal transition from diatomic bond destruction under high pressure 8=2084
- In, density, nearly-free-e model and photoemission obs. 8=13718
- InAs, optical second-harmonic generation by laser interact. with drifting carriers 8=5610
- InSb, electron drift velocity and mobility calc. 8=9112
- n-InSb, electron shielding rel. to impurities 8=2202
- InSb, electron-TO- and electron-LO-phonon interactions 8=13817
- InSb, helicon wave propag. 8=5141
- InSb, Landau levels, electron-hole pair effects 8=5113
- p-InSb, lifetime of nonequilibrium carriers, influence of illumination on 8=5271
- p-InSb, 90% compensated, hole density and deep level activation energy, 55–130°K 8=13822
- InSb, thin films, electron mobility rel. to temp. 8=8323
- InSb-oxide-metal structure, osc. tunnel conductance induced by L.O. phonons 8=13862
- K, helicons, surface impedance near cyclotron edge 8=13686
- KBr, electron transport props. in high fields at low temps. 8=2264
- KBr:In, impurity C excitations delocalization mechanism, obs. 8=8903
- KCl self-trapped holes temp. depend., e.p.r. obs. 8=8742
- KCl, tunneling states of OH⁻ 8=2101
- KBr:Tl hole processes, F-centres luminesc. meas. 8=8888
- KCl:Ag, Pb and Tl, self-trapped holes temp. depend., e.p.r. obs. 8=8742
- KCl:Tl, induced local 3p states on Cl⁻ ions nearest Tl⁺, calc. 8=8930
- KCl:Tl, optical and thermal electrons roles in recomb., photostimulated luminesc. 77–300°K 8=9617
- KCl:Ag relax. process temp. depend., colour centres e.p.r. absorpt. obs. 8=8743
- KCl, M₁-centres 8=2003
- KCl, U₂-centre, electronic structure rel. to correlation effects 8=13459
- KFeF₃, exchange and spin-orbit coupling 8=22881
- KI:In, impurity C excitations delocalization mechanism, obs. 8=8903
- Kr, free-carrier drift-velocity studies 8=8119
- LaBr₃, multiphonon orbit-lattice relaxation 8=13334
- La-Ce film, gapless supercond., resonant scattering 8=5205
- LaCl₃, multiphonon orbit-lattice relaxation 8=13334
- LaF₃, multiphonon orbit-lattice relaxation 8=13334
- LaF₃:Nd³⁺, Yb³⁺, energy transfer 8=14328
- Li alloys, conduction spin-lattice relaxation time 8=9430
- LiF, importance in theoretical detm. of elastic constants 8=17812
- LiF, thermal activation energies 8=18609
- Mg, electronic structure from optical properties 8=14239
- Mg₂Ge, and selection rules for transitions and intervalley scattering 8=22437
- Mg₂Si, and selection rules for transitions and intervalley scattering 8=22437
- Mg₂Sn, and selection rules for transitions and intervalley scattering 8=22437
- MnB, transfers of electronic states 8=5461
- Mn₂Fe₃O₄, hopping of electrons, meas. via dielec. loss peaks 8=14050
- Mo, anisotropy of effective masses, cyclotron resonance 8=2126
- Mo, features from electron field emission 8=5411
- Mo, optical props. rel. to conduction band transitions 8=9553
- Mo, superconducting, energy gap anisotropy, u.s. investigation 8=9048
- Na, electron-self-energy, phonon contrib., numerical calc. rel. to temp. 8=17862
- NaCl self-trapped holes temp. depend., e.p.r. obs. 8=8742
- NaCl, theory of hole motion in mag. field 8=22436
- NaCl, thermal activation energies 8=18609
- NaCl, valence band, three-centre corrections 8=2104
- NaCl:Ag and Pb, self-trapped holes temp. depend., e.p.r. obs. 8=8742
- NaCl:Ag relax. process temp. depend., colour centres e.p.r. absorpt. obs. 8=8743
- NaF, thermal activation energies 8=18609
- NaNO₃, X-irrad., electron-hole trapping 8=5105
- Nb, helicon resonances near H₂ 8=9049
- Ne energy levels, radiative lifetimes, population mechanism 8=1171
- Ne, free-carrier drift-velocity studies 8=8119
- Ni, band theory and low energy electron diffraction 8=2105
- Ni, density of states from soft-X-ray spectrum studies 8=8940

Crystal electron states—contd

- Ni, electronic band structure and de Haas-van Alphen effect 8=9360
- Ni, electronic sp. ht. by band model 8=4932
- Ni₃Ga, density of states curve in Fermi region, mag. susceptibility 8=9359
- O, and D_{3h} double groups, basis functions calc. 8=5097
- Pb, dislocation-electron interactions, temp. independence 8=17864
- Pb, phonon spectrum, energy shifts, observed by electron-tunneling 8=2085
- Pb, supercond., crit. energy gaps and thresholds from far i.r. absorpt. 8=18555
- Pb, two band conduction 8=2107
- β⁻PbIn, inter- and intra-band transitions rel. to optical props. 8=2402
- PbSe, forbidden band width and temp. depend. 8=5272
- p-PbSe, hole mass and valence band, from free carrier Faraday rot. 8=2445
- Pb_{0.85}Sn_{0.15}Te, thermal and optical energy gaps 8=2446
- Pb_{0.93}Sn_{0.07}Te, thermal and optical energy gaps 8=2446
- PbTe, anomalously high-mobility from Hall meas. rel. to sample prep. 8=2138
- PbTe, helicon-phonon coupling at 4.2°K 8=18063
- PbTe, stimulated emission of phonons, obs. 8=9115
- Pb-Tl alloys, electron-phonon coupling and phonon spectra, electron tunnelling studies 8=22555
- PdNi alloys, dilute, elec. resist. rel. to s electron scattering in d band, mag. susceptibility 8=13634
- Pd-Ni alloys, s-electron-paramagnon scattering 8=9015
- Pt, free and bound, γ-scatt., Thomas-Fermi model 8=17708
- Pt/rare-earth alloys, conduction electron polarization 8=17857
- Pt, two band conduction 8=2107
- S, orthorhombic, electron hopping transport and orbital overlap 8=18064
- S, orthorhombic, hole and electron traps 8=8904
- S, orthorhombic, transient space-charge perturbed currents 8=18171
- Sb, effective mass and drift vel. rel. to Doppler effect obs. 8=22488
- Sb₂S₃ trap levels and recomb. centres, photocond. obs. 8=22698
- Sb-Sn alloys, second set of holes, magnetoconductivity tensor evidence 8=2086
- Se, polycrystalline, hexagonal, local (conduction) levels, X-ray-induced 8=18236
- Si, B-doped, deformed in elec. fields, hole relax. times at low temps. 8=18074
- Si, carrier lifetime, determination through self-associated cyclotron resonance 8=13831
- Si deposited on corundum, carrier mobility 8=5281
- Si e distrib. from autophotoemission energy 8=22726
- Si, drift mobility, e-phonon scatt. 8=22438
- Si, effects of elec. field on B acceptor states 8=2208
- Si, effective mass, intrinsic concentration 8=5119
- Si, hot carrier drift velocity, Stratton theory 8=9130
- Si, minority carrier lifetime from transient response of MOS capacitor 8=9179
- Si, p-type, hole velocity depend. on elec. field and hole density 8=13832
- Se, vitreous, electron and hole drift mobilities, temp. depend. 8=13639
- Si, photoexcited carriers, observed trapping parameters, rel. to Hall number anomalies 8=13637
- SiO₂, electron Hall effect 8=9124
- Sm²⁺ in host lattices 8=14332
- SnO₂, electron scattering polar optical modes 8=22611
- SnTe, i.r. reflectivity rel. to free carrier dispersion theory 8=2457
- SrF₂, additively coloured, phonon-assisted colour centre fluorescence 8=14306
- Te, effective masses from cyclotron resonance 8=22490
- Te in Bi, distribution coeff. and donor valency 8=22517
- Te, p-band absorption at 4°K 8=8945
- Te, magnetoabsorption meas. 8=23016
- Th, N₂, (x = 1, 3; y = 1, 4), from elec. props. 8=2139
- Ti³⁺ in SrTiO₃, ground state 8=9445
- Ti₂O₃, effective mass, calc. from magnetic susceptibility data 8=5120
- TlCl, holes, transient magnetoresistance 8=9020
- Tl₂O₃ layers, effective mass in conduction band from optical meas. 8=23017
- U cpds., systematics 8=17852
- UO_{2-x} and U₂O_{7-y}, carrier mobility investigation 8=18090
- VN, from X-ray diff. intensity meas. 8=22414
- V₃Si, band structure, superconductivity 8=5216
- V₃Si type compounds, in cubic phase, rel. to elastic consts. temp. depend. 8=13611
- W, features from electron field emission 8=5411
- W, phonon drag effects below 2.6°K 8=5106
- W, two band conduction 8=2107
- Xe, band structure, deform. potential and exciton states 8=2108
- Xe, free-carrier drift-velocity studies 8=8119
- YFe garnet, hopping of electrons, meas. via dielec. loss peaks 8=14050
- Y-Tb alloys, conduction electron and Y ion, exchange interaction 8=2299

tal electron states—contd

- Zn band structure, non-local pseudopot. calc. 8=2111
- Zn—base alloys, study from Hall coefficient 8=17941
- Zn, g factor determ. by de Haas—van Alphen meas. 8=2110
- Zn, Cd_{1-x}Sb, hole mobility rel. to elec. and thermoelec. props. 8=2131
- Zn, K $\beta_{2,s}$ band fine structure 8=23027
- ZnS, band structure rel. to optical props. 8=8928
- ZnS e and hole mobility, Hall effect obs. 8=8898
- ZnS phosphors, carrier redistrib. among traps under i.r. irradi., obs. 8=9135
- ZnS trapping levels and recomb. mechanisms 8=9258
- ZnS—Cu electroluminescent phosphor, filling of traps during electric field excitation 8=14314
- ZnS:Mn, Cl, rel. to electroluminescence i.r. enhancement 8=5678
- ZnSe, electron mobility rel. to prep. by direct fusion 8=2210
- ZnTe films, electroabsorpt. rel. to determ. of reduced effective mass 8=18566

and structure

- alkali halides, two-photon spectroscopy theory using two-band model 8=22935
- b. c. c. transition metals, isochromat spectroscopic invest. 8=17876
- Bloch functions, transform. props., in k.p perturbation theory 8=13649
- compressibility of metals under high. press., effects 8=17724
- conduction, and electron effective mass from double resonance data 8=17874
- conduction electron in external field, one-band approx. 8=17871
- conductivity mechanism 8=17917
- disordered linear chain, new calc. by density of states vs energy function expression 8=22450
- effective masses for nineteen elements 8=13651
- electron density in perfect lattice, one with single vacancy and one with impurity 8=22443
- energy gap, and critical current of superconducting film with current flowing 8=22528
- excitonic insulator, transport props., elec. cond. 8=13652
- excitonic insulator, transport props., thermal cond. 8=13653
- ferromagnetic metal, band model 8=22764
- forbidden bands and electron reflection, dependence on crystal thickness 8=2095
- graphite, critical points from temp.-modulated reflectance meas. 8=14200
- group theory and crystal symm., calcs. 8=8906
- Hall coefficient, weak-field, new computation method 8=13645
- h. c. p. alloys of later 4d and 5d transition metal series, from mag. susceptibilities 8=18296
- hydrocarbon chains, effective masses estimation 8=17873
- interband interaction and spontaneous polarization of crystal lattices 8=9210
- interband transitions in optical range, pseudopotential Fourier components determ. 8=17869
- itinerant-electron magnetism 8=9287
- for LEED intensities, treatment 8=5110
- magnetoresistance, mag. breakdown by Kubo formula 8=13954
- metal to insulator transitions 8=22451
- metals, interband transitions due to Bragg reflection 8=22442
- mixed crystals, persistence and amalgamation types 8=22452
- non-conductors, calc. from spectra 8=8915
- non-transition metals, rel. to superconductivity 8=17868
- perovskite oxides in paraelectric and ferroelectric phases, optical props. 8=18504
- point change model and covalence theory 8=17875
- polymers, relevance of theory to conduction and optical studies 8=17872
- population anal., computer program 8=17878
- p-quaterphenyl polycrystals, thermally stimulated currents 8=13906
- principles and pseudopot. 8=8912
- P, red, energy levels from X-ray spectroscopy data 8=9559
- p-type semiconductors (Ge, GaAs, GaSb, InAs, ZnTe), Faraday rotation, band transitions 8=14216
- rare-earth sesquisulphides 8=9119
- reflectance, modulated, at oblique incidence for analysing band structure 8=14168
- rare-earth metals, heavy, mag. ordering and electronic props. 8=22466
- semiconductor films, effective density of electron states per unit volume 8=22448
- semiconductor with InSb-type valence band, statistics 8=22449
- semiconductor, two-band model in intense photon field 8=17867
- semiconductors, Green's function method 8=8913
- semiconductors, piezoelectric, stimulated Brillouin scattering. 8=17495
- semiconductors rel. to quantum efficiency 8=13907
- semiconductors, transitions and saturation effects, rel. to laser theory 8=15475

band structure

- semiconductors, two-photon absorpt. coeff. formulation 8=18516
- spin density wave in mag. field, one-band model 8=13980
- spin-polarized, exchange effects 8=13655
- superconducting films, energy gap dependence on mag. field 8=22529
- superconductivity, gapless, induced by metallic contact, I-V curves interpret. 8=13739
- superconductivity theory, cryst. lattice study 8=22534
- superconductors, energy gap eqn., linearized, boundary conditions 8=13726
- superconductors, gapless, expts. 8=13744
- superconductors, incomplete inner bands 8=17951
- temperature dependence of self-energy of electron interacting with acoustic phonon 8=13647
- transition metal alloys 8=22444
- transition metal compounds, broad band versus d-level semiconductors 8=17886
- Π -VI compounds, obs. and calcs., review 8=8911
- tunnel transitions between bands, theory 8=17879
- wurtzite, symmetrized combinations of plane waves 8=13666
- A'B₃ VII type crysts., prohibited zone width, temp. depend. 8=22453
- AB-type mixed crysts., dependence on comp. 8=13667
- Ag alloys, thermopowers interpret. rel. to resistivity and band structure 8=18213
- Ag, anomalous skin effect theory, in i.r., verification 8=14192
- Ag 2-band model for calc. of dielectric constant and polarizability 8=18498
- AgPd alloy, localized states from permittivity obs. 8=13656
- Al, APW calcs, systematic numerical error 8=17883
- Ar, solid, band gap, hole effective mass and exciton params. obs. 8=9194
- AuMn, spin-disorder resist., anisotropic 8=14064
- AuPd alloy, localized states from permittivity obs. 8=13656
- Au-V alloys, s-d interaction from elec. resistivity and mag. susceptibility meas. 8=13657
- Bi, calculation of experimental data 8=22454
- Bi, relativistic calcs. using augmented plane wave method 8=8925
- Bi, rel. to oscillatory nature of resistivity voltage dependence 8=17928
- Bi, subjected to press., variation of e energy spectrum parameters 8=17880
- Bi tunnel junction, conductance maxima rel. to band structure 8=13859
- Bi tunnel junction, semimetal-insulator, phonon-assisted tunnelling, band-edge energies 8=22455
- Bi, valence-band maximum location from recombination and phonon dispersion expts. 8=13660
- Bi—Sb alloy, Shubnikov-de Haas effect vanishing under pressure 8=22514
- Bi_{1-x}Sb_x, (0 < x \leq 0.15), from galvanomag. props. at 77°K 8=22518
- Bi₂Te₃, calc. using pseudopotential method 8=17881
- BN, cubic, band struct. calc. 8=8922
- CdSb, Te donor level energy position 8=9097
- CdSAs₂, conduction band structure 8=8929
- Co-Be alloy, ferromag. props. rel. to transfer of electron states 8=14018
- CoF₂, magnon sidebands rel. to polarized absorpt. spectra 8=22974
- Cr, antiferromag. energy gap rel. to i.r. reflectivity temp. depend. dip. 8=22874
- Cr, electronic structure, photoemission investigation 8=22457
- Cr—Fe alloys, Cr rich, energy gap rel. to antiferromag. ordering 8=8931
- Cu, momentum distrib. of annihilation radiation, Brillouin zone boundary effect 8=13691
- Cu, rel. to lattice spacing 8=22458
- Cu—Al alloy, momentum distrib. of annihilation radiation, Brillouin zone boundary effect 8=13691
- Cu, APW calcs, systematic numerical error 8=17883
- CuCl band struct. and spin-orbit splitting, calc. 8=8932
- Cu₂O band struct., APW calc. 8=8933
- Fe, b. c. c., density of states 8=22460
- Fe, rel. to X-ray K and L emission bands fine struct., obs. 8=18527
- Fe—Be alloy, ferromag. props. rel. to transfer of electron states 8=14018
- FeF₂, near i.r. spectrum, rel. to magnon sidebands 8=18525
- GaAs, interband magneto-optical absorpt. meas. at 2°K, 77°K and room temp. 8=22985
- GaP, from interband piezoabsorpt. 8=18529
- GaSb, from Faraday rotation, spectral emittance and Hall effect 8=22587
- p-GaSb at 4.2°K, by magnetoresistance and Hall effect meas. 8=13803
- Ge acceptor impurity states and valence-band in mag. field 8=22991
- Ge, amorphous, valence-band wave function, and i.r. absorpt. bands 8=22987
- Ge, complex, and real energy-lines 8=9125

Crystal electron states—contd**band structure—contd**

- Ge, double group k, p expansions, approx. symmetry relations 8=22461
- Ge, and electroreflectance spectra, at int. pts. in interband transitions 8=13663
- Ge, interband electro-optical props., electro-absorption 8=22595
- Ge, interband electro-optical props., electroreflectance 8=22596
- p-Ge:Ga, impurity photoconductivity spectra, nature of oscs. 8=13912
- In, and Fermi surface and Knight shift 8=22463
- InSb, acceptor impurity states and valence-band in mag. field 8=22991
- InSb, hot electron polar scattering 8=13638
- InSb interband magnetoabsorption polaron induced anomalies, Coulomb effect 8=22818
- InSb, shallow donor levels, in mag. field 8=22462
- La, density of states, periodic table position 8=8936
- Lu, density of states, periodic table position 8=8936
- Nb, by modified OPW method 8=8939
- Nb-Re alloys rel. to paramag. susceptibility, obs. 8=22759
- Nb, superconducting, anisotropic energy-gap meas. by tunnelling 8=22552
- Ni-Be alloy, ferromag. props. rel. to transfer of electron states 8=14018
- Pb, superconducting, energy gap pressure dependence 8=22557
- Pb, superconducting, tunnelling meas. of energy gap, 1.3 to 4.2°K, at high pressures 8=22554
- PbS, and electronic props., investigation 8=22465
- PbSe, and electronic props., investigation 8=22465
- p-PbTe, doped, interband interactions of light and heavy holes rel. to Lorenz number 8=9116
- Pd, density of electronic states from X-ray spectroscopy of alloys 8=17884
- Pt, cyclotron effective mass, anisotropy and mass enhancement 8=22487
- ReO₃ metal, optical props. including effective mass and band models, 0.1-22 eV 8=14258
- Sb tunnel junctions, conductance maxima rel. to band structure 8=13859
- Sc, and density of states by cellular method 8=8942
- Sc₂In phase, magnetization meas. and press. depend. of Curie point 8=17885
- Se Green's function method 8=8913
- Se, relativistic KKR-calculations 8=22468
- Si, amorphous, valence-band wave function, and i.r. absorpt. bands 8=22987
- Si Brillouin zones symm. elements obs. by e⁻ annihilation 8=13690
- Si, complex, and real energy-lines 8=9125
- Si, effects on photoelectromag. effect 8=13916
- Si, impact ionization, transition probability 8=13665
- Si p-n junctions, anisotropic stress effects 8=13847
- Si, localized state energies rel. to neutral divacancy 8=9123
- n-Si:As, electric props. 8=13830
- SnTe 8=8943
- Te Green's function method 8=8913
- Te, relativistic KKR-calculations 8=22468
- Tl, and density of states by cellular method 8=8942
- Tl₂ rel. to X-ray K and L emission bands fine struct. obs. 8=18527
- TiFe_{1-x}Co_x alloys, ⁵⁵Co Knight shift constant rel. to electronic structure 8=14156
- TiO₂ (rutile), vac. reduced, sp. ht. below 4.5°K, rel. to impurity band model 8=13380
- USn₃, interband mixing effects on Sn¹¹⁹ n.m.r. 8=18474
- Yt, and density of states by cellular method 8=8942
- ZnS Green's function method 8=8913
- Zr, and density of states by cellular method 8=8942

excitons

- alkali halides, self-trapped, triplet state, rel. to intrinsic recomb. rad. 8=2476
- amorphous solids, theory 8=13669
- anthracene, band theory and photoconductivity meas. 8=13671
- anthracene, distinction by recombination luminesc. meas. 8=18632
- anthracene, recombination luminescence in mag. field 8=18630
- anthracene, rel. to carrier formation and charge transport 8=17858
- anthracene, rel. to low temp. reflection spectra anomalies 8=23030
- anthracene, rel. to polarization of triplet factor group states 8=2494
- anthracene, singlet-exciton collisions 8=17891
- anthracene, triplet diffusion and triplet-triplet interaction delayed fluoresc. obs. 8=23066
- anthracene, triplet dynamics, spectroscopic approach 8=13672
- aromatic molecular crystals, theory 8=13671
- aromatics, triplet excitons props. theory 8=22479
- benzene molecular crystal, lowest states, Faraday effect and spin-orbit interaction calc. 8=9568
- benzene, vibr. exciton spectrum 8=9567

Crystal electron states—contd**excitons—contd**

- dielectrics, transitions in 2-photon stimulated luminesc. 8=9583
- disordered molec. crystals, theory of exciton bands 8=8949
- energy spectrum in crystals with complex band structure 8=13668
- excitation by strong elect. field 8=17889
- exciton-photon coupling and retarded interactions in molecular crystals 8=22473
- Faraday effect in exciton absorpt. region in strong mag. field 8=18491
- Frenkel, collective properties, Bose operator represent 8=5122
- insulating (excitonic) phase in semiconductors and semimetals, anisotropy effects 8=9192
- insulating phase in presence of normal impurities, excitonic props. 8=8951
- insulators, binding to dislocations 8=5349
- insulators, optical absorpt. from exciton resonances 8=8947
- insulators, rel. to lattice Raman scattering theory 8=2397
- interchange symmetry concept 8=4118
- lattice scattering in molec. crystals. 8=8948
- luminescence rel. to annihilation and bound complexes 8=9582
- metals, rel. to infinite hole mass 8=5129
- molecular crystals, excitation spectrum and ground-state energy 8=18479
- molecular crystals, weak-coupling theory of vibr. struct. 8=5126
- molecular, form of bands of light absorpt. and reflection 8=5127
- rel. to Mott and Wigner transitions, phases 8=2083
- Mott exciton in strong mag. field, energy depend. on transverse momentum 8=5125
- multielectron theory in semiconductors 8=22478
- naphthalene, rel. to polarization of triplet factor group states 8=2494
- naphthalene in solid solution of PMMA, triplet-triplet annihilation 8=2114
- nonpolarizing, multielectronic theory 8=5124
- organic mol. crystals, meas. and obs. 8=8952
- phenazine, rel. to polarization of triplet factor group states 8=2494
- polyphenyls, spin-spin interactions 8=2374
- radiation damping of exciton states 8=22477
- rare-gases, Faraday effect theory, for weak mag. field 8=5130
- reflection and transmission coeffs. at lowest exciton level calc. from polariton model 8=22480
- semiconducting II-IV compounds with wurtzite structure, creation rel. to intrinsic absorpt. edge 8=5224
- semiconductors, condensate form, and absorpt. of light 8=5128
- semiconductors, intrinsic, transitions in 2-photon stimulated luminesc. 8=9583
- semiconductors, superfluidity 8=22476
- spectra, rel. to crystal thickness 8=22475
- triplet, coherent and incoherent migration 8=22474
- the triplet state, conference Beirut Lebanon (1967) 8=16347
- 2-photon transitions to exciton states in semiconductor, oscillator strengths 8=8953
- vibronic coupling, rigid-lattice model of molec. crystals. 8=13670
- Wannier-Mott capture by shallow traps, in nonpolar crystals 8=5123
- Würster's blue perchlorate, triplets rel. to susceptibility and transition heat 8=22763
- rel. to X-ray absorpt. spectra 8=9492
- Ar, solid, binding energy and reduced mass obs. 8=9194
- CdS, absorpt. spectrum, structure rel. to line shift 8=13673
- CdS, electroabsorption, exciton effects 8=22965
- CdS, emission intensity of lines, variation rel. to excitation intensity, 4.2°K 8=22964
- CdS, pure crystals, submission to excitation of 50 keV electrons 8=14311
- CdS, splitting of exciton lines by uniaxial stress 8=14273
- CdSe, splitting of exciton lines by uniaxial stress 8=14273
- CdS(Se) semiconductor lasers, free exciton annihilation 8=11088
- CoF₂, optical spectrum 8=22974
- CuBr, rel. to luminescence 8=23052
- CuCl, absorpt. spectrum and e and hole masses, 4.2°K 8=9523
- CuCl, dissociation energy and rel. to absorpt. spectrum oscils. 8=8932
- CuCl, from two-photon absorption spectrum 8=2412
- CuCl luminesc. and weak absorpt. rel. to exciton complexes 8=9525
- CuCl rel. to emission line lifetimes, 4.2-300°K 8=9526
- CuCl, rel. to luminescence 8=23052
- CuCl rel. to photocond. and absorpt. spectra, 4°K 8=9251
- CuI, rel. to luminescence 8=23052
- Cu₂O, nature 8=8933
- Cu₂O absorpt. spectrum, uniaxial press. and n. irradi. effects obs. 8=9521
- Cu₂O rel. to exciton-phonon interactions, n=1 line profile, 4.2-112°K 8=9527

Crystal electron states—contd**excitons—contd**

- CuO₂, photoionization, assoc. absorpt. coeff. calc. 8=9529
 n-Ge, impact ionization rel. to elec. breakdown on carrier photoinjection 8=18050
 Ge, obs. with optical wavelength wobbles 8=5573
 I₂, intermediate triplet excitons props., theory 8=22479
 InSb, Landau levels, electron-exciton interaction modifications 8=5113
 KCl, rel. to reflectivity spectra and absorpt. constant 8=14230
 KI-NaI, (-RbI), (-KCl) solid solns., exciton absorpt. tail and peaks 8=22994
 MoS₂, thin anisotropic, delocalized excitons from magneto-absorpt. study 8=13674
 PbI₂ on different substrates, absorpt. and refl. spectra 8=13675
 PbI₂, effective mass from optical absorpt. and photo-conduction meas. 8=2444
 RbI:Ti, formation, and luminesc. 8=5131
 Si, bound, rel. to absorption 8=5132
 Si, obs. with optical wavelength wobbles 8=5573
 Xe, and band structure and deform. potential 8=2108
 ZnO, semiconductor lasers, free exciton annihilation 8=11088
 ZnO single crystal, transmission spectrum, rel. to exciton absorpt. and exciton-phonon complexes 8=14272
 ZnO, splitting of exciton lines by uniaxial stress 8=1427
- Fermi level**
 Hartree-Fock approximation, thermal, consequences at zero temperature 8=8919
 metals, spin susceptibility, dynamic, Fermi liquid theory 8=22447
 recombination through centres, effect of high mag. field 8=2223
 Ag-Au alloys, mag. susceptibility, and electronic sp. ht. 8=13970
 Al-Al₂O₃-Au tunnel structures, interface trapping 8=5381
 Al-CaWO₄-Au tunnel structures, interface trapping 8=5381
 Bi, quantum variation at high mag. field 8=17882
 Cu-Au alloys, α -phase, mag. susceptibility, and electronic sp. ht. 8=13970
 GaAs, influence of volume dope 8=8934
 GaAs:Zn, rel. to Zn diffusion coeff. 8=1918
 n-GaSb, Shubnikov-de Haas oscs., beating effects 8=9102
 HgSe, inversion-asymmetry splitting rel. to magneto-resistance 8=2100
 Nb₃Sn, motion rel. to normal-state susceptibility, resist. and elastic const. temp. depend. 8=5118
 PbO layers, vapour-deposited 8=8941
 Ti₂O₃ layers, effect on free carrier absorpt. from optical meas. 8=23017
 V₃Ga, motion rel. to normal-state susceptibility, temp. depend. 8=5118
 V₃Si, motion rel. to normal-state susceptibility, temp. depend. 8=5118
 n-ZnO, neutron irradi., transmuted-centre spectroscopy 8=2109

Fermi surface

- graphite, pressure effects 8=8926
 magneto-oscillatory components of electron transport kinetic coeffs. 8=8916
 magnetoacoustic resonance effects in metals in inclined mag. fields 8=1844
 metallic surface, oscillations of impedance, quantum spectroscopy 8=2094
 metals, ground state of magnetic impurity 8=8909
 one-dimensional case, impulse-distribution ("sharpness") 8=129
 oscillatory free energy for nearly free electrons and their mag. props. 8=2088
 positron annihilation rotating specimen method meas. 8=13689
 transition metals, electron-magnon interaction 8=2300
 Al, range of g-factors, conduction e.s.r. 8=5522
 Au films, optical absorption edge due to quantum transition from d-band 8=5585
 AuAl₃, topological props. 8=5116
 BCS theory of superconductivity, Freidrichs-Berezin transformation reformulation 8=5190
 Be, de Haas-van Alphen data, non-local pseudopotential model 8=8923
 Bi, effect of deformation on electron spectrum 8=17870
 Bi-Sb alloys, energy spectrum meas. 8=5104
 Cd, non-local pseudopot. calc. 8=2111
 Cr-Mn alloys, density of states rel. to paramag. susceptibility, obs. 8=22759
 Cr-Os alloys, density of states rel. to paramag. susceptibility, obs. 8=22759
 Cr-Ru alloys, density of states rel. to paramag. susceptibility, obs. 8=22759
 Cu, from magneto res. and transverse effect data 8=13713
 Cu, rel. to positron annihilation ang. depend. 8=22493
 Cu, thin films, electronic structure from thermopower size-effect 8=13903
 α -Cu-Ag alloys, rel. to Hall coeff. and resistivity interpretation 8=13641
 Eu metal, and antiferromagnetism 8=22459
 Fe, shape in para- and ferro-magnetic states 8=2089

Crystal electron states—contd**Fermi surface—contd**

- Ga, study, by u.s. geometric reson. 8=8935
 In, and band structure and Knight shift 8=22463
 Li, by positron annihilation 8=8937
 Mg, from de Haas-van Alphen studies 8=2102-3
 Mo, investigation by cyclotron resonance meas. to 1.6°K and 9.7 GHz 8=13664
 Mo, r.f. size effect 8=22464
 Mo, rel. to that of W 8=17887
 Mo-Re alloys, density of states rel. to paramag. susceptibility, obs. 8=22759
 Na, distortion rel. to lattice dynamics model calcs. 8=1838
 Na, from positron annihilation and enhancement factor 8=8975
 Ni, X₂ hole pockets, study by de Haas-van Alphen effect 8=2106
 Pb, calc. from Kohn anomalies 8=5114
 Pt, s- and d-like carriers, from de Haas-van Alphen effect 8=22752
 Re-Os alloys, theory of superconducting transition temp. h.p. anomaly 8=17972
 Rh, and de Haas-van Alphen effect 8=13643
 Sb, anisotropy, rel. to mag. resistance anisotropy 8=5432
 Sb, and Seebeck coefficient 8=22467
 Sc, calc. by cellular method 8=8942
 p-Sb₂Te₃, de Haas-van Alphen susceptibility meas. 8=9293
 Th, from de Haas-van Alphen studies 8=2294
 Ti, calc. by cellular method 8=8942
 W, "jacket" orbits and cyclotron resonance 8=13688
 W, rel. to that of Mo 8=17887
 Yt, calc. by cellular method 8=8942
 Zn, from cyclotron resonance meas. 8=13725
 Zn, non-local pseudopot. calc. 8=2111
 Zr, calc. by cellular method 8=8942
- plasma**
 alkali halides plasmon energy, e energy loss obs. 8=8938
 cathode metal electrons, plasma frequency rel. to vacuum arc voltage 8=16426
 coupled plasmon-particle excitation in electron gas 8=17900
 density waves in electron-hole plasma, classical study 8=2118
 electron gas collective description in generalized r.p.a. rel. to plasmon freq. 8=5143
 electron gas, electron-plasmon coupling approx., single-particle spectrum 8=5144-5
 electron-hole decay meas. by double-pulse variable-delay circuit 8=15177
 graphite, pyrolytic, two-stream instability, dispersion relations 8=8968
 Gunn effect domain, conductivity, temporary increase 8=5142
 Gunn effect, domain field distrib. for inhomogeneous doping 8=13783
 helicon waves, h.f. phase sensitive detection 8=5138
 helicon waves in solids 8=8965
 helicon waves, interaction with adjacent drift current, theory 8=2119
 high density, lifetime in semiconductor, obs. 8=13685
 insulator/semiconductor interfacial magnetoplasma wave instability 8=2116
 metal foil scattered radiation at plasma frequency 8=8958
 metal, giant oscillations, electron scatt. effect 8=5136
 metals in quantized mag. field, sound-like waves in electron plasma 8=17895
 metals, plasmon satellite in soft X-ray spectra, theoretical interpretation 8=13680
 micro plasma generation rel. to material damage in lasers 8=403
 plasmon excitation, mean free path of fast electrons 8=2117
 plasmons, two-phonon decay 8=17899
 polythene film, laser-produced formation mechanism 8=23034
 resonance emission process, quantum theory 8=8961
 semiconducting rod, lifetime and density distrib. 8=9069
 semiconductor bulk oscillator by self-excitation of plasma waves 8=18098
 semiconductor, collision induced instability 8=8964
 semiconductor crystal, conditions for oscillations generation 8=8957
 semiconductors, current oscs., growth rate calc. 8=13774
 semiconductor, electron-hole, excitation of l.f. waves 8=13683
 semiconductors, intrinsic, pinch effect and its mag. field dependence 8=9072
 semiconductors, ionization waves theory 8=18056
 semiconductors, Landau damping and phonon, plasmon and photon wave dispersions 8=9093
 semimetals, m.h.d. waves, plasma-phonon 8=5135
 surface plasmon, indirect coupling of photons 8=13684
 white tin films, plasmon energy-loss function from optical data analysis over 0.1 to 27.5 eV energy region 8=2456
 Ag, by photoexcited electrons, discrete energy loss 8=2279
 Al 15 eV loss, dependence of damping on scattering angle and crystal size 8=2121

Crystal electron states—contd**plasma—contd**

- Al, 50 kV electron mean free path for plasmon excitation, diffraction condition effect 8=13696
- Al, fine particles, surface oscillation 8=8967
- Al foils, oscillatory modes at surface, energy rel. to intensity 8=8946
- Al foils, plasmon excitation cross-sections by electrons 8=8966
- Al, produced by laser beam, energy spectra of ions 8=2122
- Bi, Alfen waves, high mag. fields 8=5146
- Bi, Alfvén wave damping, theory 8=8963
- Bi, two-stream instability, dispersion relations 8=8968
- CdS, longitudinal optical phonon-plasmon coupling 8=14206
- Cu, films, oscillations, interband transitions 8=5117
- GaAs, coupled optical-phonon-plasmon modes rel. to Raman scattering 8=22984
- n-GaAs, Raman scatt. by mixed plasmon-phonon modes, polarization and intensity obs. 8=5599
- n-Ge, electron hole plasma, helical density waves and oscillator effect, theory 8=17903
- Ge, pinch effect and breakdown in pure material 8=8956
- p-HgTe, i.r. reflection in region of plasma minimum 8=5262
- n-HgTe, magnetoplasma reflection at 296 and 85°K 8=13815
- InAs, light scattering by plasmons and Landau levels of electron gas 8=22990
- InSb, appl. of ionization wave theory, predictions of instabilities 8=18056
- InSb, n- and p-type, current instability under crossed electric and magnetic fields 8=2201
- n-InSb, magnetic-field-free electron-hole, and gigahertz radiation 8=8969
- n-InSb microwave emission during plasma formation 8=22600
- InSb θ pinch effect, 250°K 8=13821
- InSb, waves, X-ray scattering 8=5148
- KCl(Br) foils, resonance absorption of P-polarized light 8=2123
- MgO, optical props. rel. to plasma and electron energy losses 8=9550
- Na, electron sea polarization enhancement factor from positron annihilation 8=8975
- Na, random electric field stabilization 8=16599
- Na and K, helicon waves, nonlocal damping 8=17904
- Pd, by photoexcited electrons, discrete energy loss 8=2279

polarons

- antiferromagnetic crystal, magnetic polaron suggested 8=9068
- bound, ground-state energy 8=5133
- ferroelectric of 'light plane' type, interaction with spin waves 8=22481
- Hall mobility from perturbation treatment of Kubo's formula 8=13678
- Hall mobility temp. variation in Holstein model 8=8954
- hopping conduction, Hall effect theory 8=17998
- ionic crystal, single phonon electron lattice interaction 8=5134
- ionic, cyclotron resonance 8=2125
- low-mobility theory, range of validity extension 8=17892
- piezoelectric, motion at zero temp. 8=13677
- piezoelectric, strong coupling limit 8=8955
- α -quartz, polaron spectrum 8=2115
- rutile, rel. to carrier props. 8=17894
- semiconductors, intrinsic, rel. to interband magneto-optic absorpt. 8=18493
- theory 8=17893
- variational ansatz, theory based on Fröhlich's Hamiltonian 8=13676
- AgBr, internal states detection using piezo-optical transmission 8=13679
- in AgCl absorpt. edge structure 8=22955
- BaTiO₃, optical props. of small polarons 8=18505
- BaTiO₃, small, rel. to reflectivity and conductivity 8=5587
- CoO, hopping and narrow-band conduction 8=18059
- CoO, hopping model for elec. conduction 8=18060
- CoO, semiconducting, in near and far i.r. absorpt. 8=23008
- α -Fe₂O₃, hopping model for elec. conduction 8=18060
- InSb, abnormalities of donor spectrum in magnetic field 8=13817
- InSb, rel. to anomalies in interband magnetoabsorpt., Coulomb effect 8=22818
- KBr, cyclotron resonance 8=2124
- LaCoO₃, optical props. of small polarons 8=18505
- LaCoO₃, p- and n-type, rel. to optical absorpt. 8=2434
- NiO, hopping model for elec. conduction 8=18060
- NiO, hopping and narrow-band conduction 8=18059
- NiO, semiconducting in near and far i.r. absorpt. 8=23008
- SrTiO₃, optical props. of small polarons 8=18505

surface

- b.c.c. (100), calc. using tight binding approx. 8=5121
- conduction electrons, scattering by localized charges, meas. 8=22640
- f.c.c. (111), calc. using tight binding approx. 8=5121
- linear-atomic-chain models, Hartree-Fock calc. 8=17888
- in linear chain with next-nearest-neighbour interactions, existence of localized states 8=22470
- metals, electron states near boundaries 7=2113

Crystal electron states—contd**surface—contd**

- metallic interfaces, electron-gas model, exchange-correlation and lattice potentials effects 8=2112
- semiconductors, 1/f noise theory 8=13787
- semiconductor, rel. to voltage rectification across potential barrier 8=13786
- superconductor, e.m. wave absorpt. 8=9022
- AB-type mixed crystals, MO-TBA method 8=13667
- Al foils, plasma oscillatory modes at surface, energy rel. to intensity 8=8946
- BaTiO₃ doped with Sb₂O₃ 8=13790
- Co-hexagonal lattice, (001) surface, calc. using tight binding approx. 8=5121
- p-Ge, complicated hole energy spectrum, effect on low field transport props. 8=18055
- Ge, on clean surface, study of origin 8=13814
- PbO layers, vapour-deposited, elec. behaviour 8=8941
- Se, vitreous, electronic processes in photocrystallization 8=22471
- Si, from charges in oxide coating 8=22469
- Si, from field effect kinetics study 8=22472
- Si shallow donors ground and optically excit. states calc. 8=9126
- Si-SiO₂ interface, thermal oxidation, effect of Na impurity 8=14384
- Crystal energy.** See Bonds; Crystals; Solids/structure.
- Crystal fields.** See Crystals/internal fields.
- Crystal imperfections**
- See also Colour centres.
- alloys, deformed f. c. c., intrinsic stacking-fault tetrahedra formation 8=22215
- alkali-halide crystals, containing CO₂, NO₂, NO₂, SO₂ impurities, local vibr., i.r. absorpt. spectra 8=14197
- alkali-halides, divalent cation impurities and dipolons, conc. correlations 8=8701
- alkali halides, etch figures of fission fragments, flat bottomed 8=8707
- alkali halide, induced i.r. absorption by substituted alkali or halide ions 8=9481
- alkali halides, radiation defect formation 8=13487
- alkali iodides, e.s.r. of Se⁻ and SSe⁻ impurities 8=14123
- anthracene rel. to delayed fluoresc. decay time, vars., 2-300°K 8=23065
- anthracene, vapour- and melt-grown 8=21942
- atom impurity, velocity, anharmonic contrib. 8=13035
- binary cpds., inorganic, point defects rel. to stoichiometry 8=8689
- brass, 70-30, deformation texture development rel. to stacking fault frequency, pole figure 8=17777
- conductors, macroscopic defects, detect. by elec. tests 8=8706
- carbons, soft, structural defects, heat treatment 8=1955
- cold worked, impurities rel. to modulus effect 8=22332
- corundum, complexes of bound ions, group-theoretical classification 8=8887
- defects annealing in crystals, observation 8=1933
- diamond, etch pits and trigons 8=1725
- diamond, particle-counting effect 8=6647
- diamond, trigon origin in defects and relation to growth failure 8=4787
- diffusion kinetics, pressure influence 8=8669
- disordered molec. crystals, theory of exciton bands 8=8949
- disordered, one-dimensionally, close-packed structures with stacking faults, diffraction theory 8=8476
- distortions, non-spherical, diffraction contrast 8=8688
- disturbed lattices, dispersion dynamics 8=1834
- doping, non-uniform, effect on Gunn domain propag. 8=13783
- excited impurity states from model potential of two-valence electron systems 8=23035
- f. c. c. lattice, monatomic, impurity-induced i.r. absorpt. 8=9480
- f. c. c. materials, interpretation of defects in field ion images 8=22196
- ferromagnet, Heisenberg, with magnetic impurity, diffuse inelastic neutron cross section 8=9319
- ferromagnets, non-mag. impurities, local magnetization calc. 8=13987
- field-ion images, from asymmetric specimens, streak contrast 8=8452
- foils with stacking fault, fine structure of weak electron diffraction beams 8=1781
- gas bubble collisional coalescence in solids 8=4695
- grain boundary gas bubbles, equilib. conditions 8=1986-9
- grain boundaries, growth of pores rel. to tensile stresses 8=17676
- grain-boundaries, high-angle, development of island model 8=22218
- grain-boundary precipitates, growth kinetics 8=13445
- hardening, atomic block theory, existence of extremums of property impurity curves 8=8803
- h.c.p. metal (Y and rare earths) hydride habit and deformation planes 8=8728
- ice cavities filled with air, vapor and brine, migration under temp. gradient 8=1991
- ice, spiral air bubbles, formation 8=4989
- impurities and current carrier scatt., kinetic eqn. 8=22423

Crystal imperfections—contd

impurities, effect on force constants 8=1952
 impurities, effect on phonon spectrum 8=1960
 impurities in crystals with stoichiometric vacancies, thermodynamic model 8=17614
 impurities, trace, effects in X-ray diff. topography 8=18791
 impurity atoms, vibrational and optical props. from impurity, density of conduction e states in dilute alloy 8=5112
 impurity ion, lowering of Slater parameters 8=8700
 inclusion, cuboidal, diff. contrast 8=8688
 inclusions, influence on ductile fracture with rotation 8=17729
 insulators, meas. by complex dielectric constant method of trace characterization 8=18757
 intermetallic cpds. of CsCl structure, formation energies rel. to comp. and ordering 8=17623-4
 ionic compounds, stacking fault energies 8=13441
 irradiated material, coalescence, dislocation loops and pores 8=17632
 lattice with one substitutional impurity, electron density calc. 8=22443
 laser-beam thermal effects in transparent crystals 8=4926
 lattice defects conc., effect on diffusion, using radionuclides 8=22141
 lattice dynamics, influence of defects: appl. of new formalism 8=13312
 metal, impurity microsegregation on liq. stream interaction with solidification front 8=17224
 metal, impurity screening, preasymptotic form 8=8907
 metal oxide, hypostoichiometric, partially ordered defects, statistical model 8=17600
 metals, b.c.c., radn. effects rel. to production, and diffusion 8=17702
 metals, cause of increase in positron lives 8=2127
 metals, electrostatic energy calc. of growth and deformation stacking faults 8=8201
 metals, h.c.p., deformation planes after dehydrogenation and hydride habit planes 8=8728
 metals, mechanical properties, rel. to stacking faults 8=22305
 metals, quenched, rel. to Bauschinger effect 8=5020
 microscopic exam., optical and electron 8=17269
 Nimonic 80A grain boundary cavities rel. to creep props., 600-750°C 8=5083
 nonstoichiometric compounds, point defects, thermodynamic considerations 8=1934
 optical absorption in diatomic chain, impurity effect 8=9477
 optical, e-microscope and diffraction studies, technique and limitations 8=17597
 p-n junctions electrical breakdown due to 8=9150
 paramagnetic crystals, impurity centres, absorpt. and emission of light 8=5574
 in Permalloy films, caused by plastic deform., effect on mag. anisotropy 8=14031
 phosphors, Tb³⁺ activated, radiative transition probabilities in Tb³⁺ 8=4683
 physical acoustic, principle and methods: the effect of imperfections, book III A 8=17485
 point defects, rel. to bulk and local elastic constants 8=22260
 point defect location by X-ray diff. topography 8=17602
 point defect, rel. to thermodynamic characts. calcs. 8=13362
 point defects and disorder, effects on vibrs. of crystals 8=13327
 point defects, influence of force-const. changes on lattice dynamics 8=13319
 point defects, interaction with dislocation ribbons, elastic-modulus effect 8=17603
 point defects, long range effects on dislocation-free crystal growth 8=4797
 point defects, rel. to mag. after effects in ferromag. mats. with domains 8=18321
 polyethylene, fold-surface struct. 8=17214
 polyethylene, point defects, molecular mechanics 8=1938
 potash feldspar, Rb impurities effect on Al-Si order 8=17618
 quartz impurities on annealed semiconductor surfaces 8=9087
 scattering of long wavelength neutrons, mathematical formulation 8=22167
 Schottky defects, energy of formation 8=8692
 semiconducting devices, internal structural defects, testing by electrical methods 8=18100
 semiconductors, differentiation of lattice defect types 8=9067
 semiconductors, displacement of energy levels by interactions 8=5109
 n-type semiconductors, effect on transport props. 8=5226
 semiconductors, impurity redistrib. during thermal oxidation 8=18015
 semiconductors, impurity redistribution for out-diffusion 8=5229
 semiconductors, micro-inhomogeneities 8=18013
 space charge conduction for studying 8=5158
 stacking fault energies, extrinsic to intrinsic relative magnitudes, in f.c.c. solids 8=17666
 stacking-faulted, electron-diff. image calcs. 8=13234

Crystal imperfections—contd

stacking faults, X-ray diff. image 8=13442
 stacking faults in close-packed AB₃ superlattices 8=17667
 static distortions, Borman effect from diffuse scatt. 8=13415
 steel, austenitic, B impurity distribution 8=13040
 steel, stainless, grain boundary CrC precipitation, e probe obs. 8=17677
 steel, stainless, inclusion counting by e probe micro-analyser 8=17616
 steel, stainless, n-irradiated, voids obs. 8=22251
 steel, structural, rel. to temper brittleness reversibility 8=17626
 steel surface, mechanically worked, stacking faults obs. by e-microscopy 8=17675
 steel, surface segregation of Cr obs. by Auger electron emission 8=22730
 steel, surface segregation of S obs. by Auger electron emission 8=22730
 steel, surface segregation of Sb obs. by Auger electron emission 8=22730
 steels, intergranular fracture 8=22222
 striations, due to temp. fluctuations, in flux growth 8=13449
 structural defects in epitaxial thin films, role in nucleation 8=1735
 superconductors, type II, lattice defects of flux lines 8=13734
 transitions of electrons, theory 8=13039
 vibrational modes associated with defects 8=4900
 walk-counting method for c.p. lattices rel. to energy bands and impurity states 8=8604
 wustite, Mg doping and grain size dependence of Seebeck coeff. rel. to p to n transition 8=5387
 X-ray detect. by pseudo-Kossel lines, obs. 8=17598
 X-ray scattering by Coulomb displacement fields of defects, kinematic theory 8=13223
 Zircaloy-2, grain boundary effects in deformation 8=13447
 Ag alloys, dilute, stacking-fault energy from extended node meas. 8=17669
 Ag, effect on temp. dependence of heat capacity 8=13368
 Ag, on hydrogen embrittlement 8=22307
 AgBr microcrysts., rel. to impurities and surface reactions 8=8698
 AgCl, state of Fe impurity ions 8=1657
 AgCl + CdCl₂, state of Fe impurity ions 8=1657
 AgI, state of Fe impurity ions 8=1657
 Ag-Ni alloys, f.c.c. stacking and twin faults 8=4988
 Ag-Zn alloys, deformed, stacking faults and twin-fault probability 8=17668
 Al, e-irradiated, deformation at 20°K rel. to dislocation model with defect barriers 8=13523
 Al, grain boundary sliding, isothermal shear test 8=22221
 Al, lattice defects recovery after tensile deformation 8=22184
 Al, n-irradiation damage and recovery rel. to impurity doping effect 8=1953
 Al, quenched, interaction of point defects with dislocation 8=8690
 Al, stacking fault energy calcs. using pseudo-potentials 8=17673
 Al, stacking fault removal induced by n irradi. 8=17670
 Al, stage I recovery atomic recoil energy dependence from e-irrad. data 8=4961
 Al, sub-boundaries in single crystals grown from melt, direct observation 8=17678
 Al surface, mechanically worked, stacking faults obs. by e-microscopy 8=17675
 Al alloys, lattice defects recovery after tensile deformation 8=22184
 Al-Ag alloys, stacking faults, in GP zones and matrix rel. to plasticity 8=8821
 Al and AlM, (M = Mg, Ga, Ag), e-irradiated, stage II and III recovery temp. and impurity conc. dependence 8=1935-6
 Au-Cd binary system, point defect segregation at melting rel. to comp. 8=17624
 Al-4% Cu, deformational instability rel. to defects 8=8816
 Al-Mg alloys, Mg atom clustering, electronic origin 8=13636
 Al-Zn, lattice defects and aging phenomena 8=13536
 Al-Zn-Mg, lattice defects and aging phenomena 8=13536
 Al₂O₃, irradiation damage on exposure to 5 × 10²¹ fast neutrons cm⁻² 8=22244
 Au, collapsed tetrahedra and stacking fault energy 8=22216
 Au, effect on temp. dependence of heat capacity 8=13368
 Au, quenched, defect behaviour and slip channel formation on plastic deformation 8=17663
 Au, quenched, stacking fault tetrahedra as vacancy sinks 8=13443
 Au-Pt alloys, annealed, rel. to X-ray diff. "tails" 8=17341
 Be, n-irrad. induced, obs. of clusters by long-wavelength n-scatt. meas. 8=22177
 BeO, twinned, twin boundary decoration by n-irrad. at high temps. 8=22199
 Bi films, condensed, structure defects 8=8705
 Bi, Ag¹¹⁰ diffusion, dependence on crystallographic direction 8=13407

Crystal imperfections—contd

- Bi-Sb films, 2-layer, struct. defects by Moiré method 8=22186
 CdS rel. to luminesc. centres 8=8741
 CdS: Au, photosensitive carrier e.s.r. 8=2362
 CdSe: Mn, photoconductivity rel. to Mn deep donor level 7=2259
 CeO₂, non-stoichiometric, defect structure model 8=22166
 CdTe, rel. to absorption edge 8=5603
 Co alloys, f. c. c., rel. to ageing effects after cold-working 8=17622
 Co complex, tris-dipyridyl Co(III) perchlorate, trihydrate, ⁵⁷Co²⁺-doped, electron exchange 8=2082
 Co-M alloys (M = Cr, Fe, Ni, Cr-Ni), structural defects and precip. 8=17621
 Co-Cr 10% alloys intrinsic stacking faults, cubic-hexagonal interface, contrast effect 8=8459
 CoO: Li, Co interstitials, contribution to defect structure rel. to conductivity 8=1956
 CsCl-structure alkali halides, Schottky defects, energy of formation 8=8694
 CsF: Na⁺, impurity displacement calcs. 8=8243
 Cu, cold worked, impurities rel. to modulus effect 8=22332
 Cu crystal, slip band development on n-irradiation 8=22212
 Cu, defect concentrations from cyclic stressing at room temp., resist. studies 8=17604
 Cu, deformation texture development rel. to stacking fault frequency, pole figure 8=17777
 Cu, effect on temp. dependence of heat capacity 8=13368
 Cu, fatigued at low strain amplitude, surface slip lines and interior planes 8=17774
 Cu films, grain boundary cavity form. during high temp. creep 8=13547
 Cu foils, ion irradi., agglomerates formation and density 8=13417
 Cu foils, ion irradi., analysis of type and configuration of clusters 8=13416
 Cu, neutron-irradiated, annealing effect on lattice parameter 8=1937
 Cu polycrystals, grain boundary cavities 8=13448
 Cu, rel. to quench hardening 8=22334
 Cu, stacking fault energy calcs. using pseudo-potentials 8=17672
 Cu-Al alloy, stacking faults in β'-martensite phase 8=17674
 CuCl, and Czochralski growth 8=4804
 CuI, defect struct. and catalytic props. 8=22169
 Cu-Ni alloys, stacking fault density, conc. depend., by X-ray analysis 8=17671
 75 Cu-25 Ni laminate on Cu core in coinage composite, voids in bond degradation mechanism 8=22329
 Cu₂O rel. to n=1 exciton line profile, 4.2-112°K 8=9527
 Cu-Sb alloys, stacking fault X-ray meas. 8=17672
 Fe, coarse grained polycrystalline, under tensile deformation 8=1985
 Fe, form. of cloud group of inclusions by Al deoxidation 8=22183
 Fe, intergranular weakness rel. to fatigue damage 8=5060
 Fe, point defects recovery after low-temp. deform. 8=13418
 Fe, (Al, Ga, Si, Ge, Sn, Sb) impurities, magnetization distribution 8=9349
 FeCl₂: Fe³⁺, Mn²⁺, impurity spin resonance at low temps. 8=14108
 FeCo alloy, grain boundary theory 8=17258
 FeO, defect structure rel. to conduction mechanism at high temps. 8=18166
 Fe-Rh alloys, structural defects, phase transformations 8=9395
 GaAs, impurity effect on ultrasonic absorpt. subject to infrared radiation 8=13352
 GaAs, impurity photoionization, quantum defect study 8=2207
 GaAs, Zn-diffused, precipitates 8=17617
 p-Ge, bombardment-produced defects at low temps. 8=22170
 Ge, rel. to absorption edge 8=5603
 Ge, effect on dust elec. charge 8=13812
 Ge, impurity photoionization, quantum defect study 8=2207
 in Ge, As and Sb impurities, excitation spectra, under uniaxial compression 8=13424
 Ge: Li(P), impurity vibrational modes rel. to i.r. absorpt. 8=9532
 HfO₂, structural 8=9198
 InSb, Corbino magnetoresistivity effect 8=5266
 K halides, monatomic impurities rel. to phonon scattering 8=4904
 KBr, impurity anion form. conditions 8=8745
 KCl, electric breakdown, directional, single crystals 8=18167
 KCl, γ-irradiated near room temp., defect production and annihilation 8=8696
 KCl: Ag point defects rel. to Ag colour centres form. obs. 8=8746
 KCl: Ag: OH point defects rel. to Ag colour centres form. obs. 8=8746
 KCl: Ag: Sr point defects rel. to Ag colour centres form. obs. 8=8746
 KCl: Be⁺, substituent behaviour from ionic thermocurrent spectra 8=8702

Crystal imperfections—contd

- KCl(Br): Li⁺, impurity displacement calcs. 8=8243
 KCl: OH⁻, cooling to 0.36°K by adiabatic depolarization of OH⁻ 8=1874
 KH₂PO₄, after reactor and fission fragment irradi. 8=8773
 KI, analysis of TI impurities 8=17237
 KI: Ti⁺, Ti⁺ clustering from absorpt. and emission spectra at 77°K 8=23056
 KX: Cu⁺, (X = Br, Cl, I), lifetime of excited Cu⁺ 8=23057
 Li, point defects, thermo- and electrotransport 8=22157
 Li ferrite, X-ray topography of defects 8=8708
 LiF, lattice distortion around V_K centre, ENDOR study 8=2009
 LiF, radiation defect formation 8=13487
 Mg aluminate spinels, defect structure and mech. props. 8=22187
 Mg, stacking fault energy calcs. using pseudo-potentials 8=17673
 Mg₂Cd, antiphase boundaries, size, shape and orientation 8=17679
 MgO, grain boundary sliding strain prod. 8=13584
 MgO, impurity distribution 8=13450
 MgO lattice, Mn impurity, h.f.s. of spectrum 8=14238
 Mn ferrites, Mn³⁺ clustering, influence on elec. props. 8=13720
 Mn steel, effect of multiple γ = (ε, ε') transformations on structural defects 8=17785
 Mn-Fe spinels, Mn-rich, Mn³⁺ clustering effect on ferromagnetic resonance linewidth 8=18396
 NaCl-type crystals, lattice distortion by impurities and n.m.r. line splitting 8=9455
 NaCl: Ag phosphors, photo-excited F-colour centres, microdefect interactions 8=2013
 NaCl: Be⁺, substituent behaviour from ionic thermocurrent spectra 8=8702
 NaCl: Cd, aggregation of divalent impurities 8=13425
 NaCl: CaCl₂ + NaOH crystal, dielectric loss maxima and conductivity 8=5164
 NaCl: Mn²⁺, lattice defect effect on hyperfine interactions 8=18431
 NaCl, pure and doped, pot. differences due to plastic deform. temp. dependence 8=16978
 NaCl with Sr, Cd, Ag, Ca and TI impurities, rel. to F-centres stability 8=8751
 NaI(Tl) crystals, Pb⁺ impurity effect on particle detector props. 8=6646
 Nb, superconducting, defects produced on n-irradiation 8=2169
 NH₄Br, Cu²⁺ doped, e.p.r. 8=14102
 NH₄ClO₄, lattice defects, enthalpy of formation 8=2128
 Ni, surface segregation of S obs. by Auger electron emission 8=22730
 NiO, nonstoichiometric, defect model 8=13826
 Ni₂Sn, antiphase boundaries, size, shape and orientation 8=17679
 Pa, Fe impurity atom, range of spin perturbation 8=1655
 Pb-Sn alloys, degenerate structure and fault formation on solidification 8=4785
 Pb-Sn alloy polycrystalline, atomic block theory of hardening investigation 8=8803
 Pb-Sn, Na conc. at grain boundaries 8=8344
 Se, oxygen impurity and crystallinity on photosensitivity spectrum 8=18237
 Si, deep-level impurities, interact. with lattice defects, other impurities, and i.r. absorpt. 8=22607
 Si, electron-beam heated, triangular macrodefect, X-ray topography 8=1862
 Si, epitaxial layers, "hillock" formation 8=17619
 Si epitaxial layers, stacking faults, cause and cure 7=8736
 Si, extrinsic faults, climb 8=22217
 Si, impurity diffusion anomaly 8=13427
 Si, impurities testing by non destructive neutron activation method 8=18086
 Si, impurity photoionization, quantum defect study 8=2207
 Si, paramag. centres produced along proton range 8=8704
 n-Si, e-irradiated, elec. props. rel. to impurity and irradiation-temp. dependence 8=5282
 n-Si, n-irradiated, elec. props. rel. to defect structure and annealing 8=5283
 p-Si thermally quenching effects on 8=18084
 Si web dendrite, stacking faults, contrast in X-ray topographs 8=1983
 Si, Au-diffused, precipitates formation 8=17620
 Si, B-doped, impurity redistrib. during thermal oxidation 8=18015
 Si, B-doped by ion bombardment, B distrib. profiles 8=18071
 Si: B, "internal" impurity spectrum, conc. depend. 8=13428
 Si: Li, e irradi. prod., and annealing at 20°C, 1 MeV 8=22604
 Si: Li, radiation defects, effect on annealing rate 8=2067
 Si: P, defect production on e-irradiation rel. to spin-lattice relax. 8=18434
 Si, P-doped, irradi., annealing of the Si-E centre 8=2209
 Si: Sb, melt-grown, tetrahedral defects 8=1958
 Sn alloys, dilute, microsegregation nodes and cellular solidification substructures 8=16919
 SrCl₂, pure and Y³⁺ (Na⁺) doped, rel. to ionic conduction and diffusion mechanisms 8=8983

Crystal imperfections—contd

- SrCl₂, reaction intermediate with F₂ 8=14124
 SrF₂, Gd³⁺ impurity centres, temp. effects 8=8703
 SrO, defect structure studies 8=22171
 Te, low-angle subgrain boundaries and dislocation motion 8=8737
 TiC, B-doped, TiB₂ precip. as defects 8=4967
 Ti₂O₃ single crystal, impurity segregation during growth from melt 8=4817
 TiCl₃, Schottky defects, form. and motion from conductance meas. 8=9200
 UO_{2+x} lattice defects rel. to thermochem. props. 8=23113
 W, neutron irradi., rel. to elec. resist. and hardness 8=2141
 W, point defects due to n-irrad., migration in annealing 8=17601
 W, stacking faults, electron micr. obs. 8=1984
 YFe garnet rel. to domain configs., obs. 8=22863
 Y₂O₃ grain-boundary segregation and final-stage sintering 8=13444
 Zn, damage caused by electric spark discharge machining 8=1959
 Zn, stacking fault energy calcs. using pseudo-potentials 8=17673
 Zn-0.03 at.%Cd, Al, Cu or Ag, substructure rel. to impurity distrib. coeff. 8=17296
 ZnO single crystal, γ -irradiated 8=22168
 ZnS, polytype families, from recurrent slip 8=8564
 ZnSe crystals, recombination centre parameters 8=18627
 α -Zr, deformed, form. of polygonized sub-structure 8=22219
 (Zr,Hf)_{0.955}N, defect structure by chem. and lattice studies 8=17434

dislocations

- alkali halides, and optical birefringence 8=18501
 alkali halides, Peierls stress estimation 8=1968
 alloys with coherent, ordered, stressed precipitates, motion, derived mechanism 8=1978
 alloys, deformed f. c. c., rel. to intrinsic stacking-fault tetrahedra formation 8=22215
 alloys, Nimonic type, stability of structures 8=17643
 alloys, ordering, and antiphase boundaries rel. to plastic deformation 8=17634
 alloys, worked, superconducting, distrib. rel. to critical current density 8=9029
 anisotropic crystals, stresses of piecewise straight type, forces at bend, and motion 8=17628
 anthracene 8=17648
 austenitic stainless steel foil, formation of loops 8=17654
 β -brass, hexagonal networks 8=22204
 calcite, topographical study 8=13436
 climb forces 8=4972-3
 continuum theory, boundary problems 8=17636
 Cottrell atmos. formation around dislocations, kinetics rel. to strain ageing 8=4969
 crack nucleation from pile up, criterion 8=17744
 deformation twin growth, effect on 8=13124
 dipole accumulations in planes, rel. to dilatation 8=8714
 dissociation width dependence on dislocation velocity in f. c. c. crystals 8=17638
 distribution effects on crystal volume changes 8=17631
 in Earth's mantle, velocities rel. to deformation 8=14544
 edge, direct viewing 8=1962
 edge, X-ray diffr. contrast exam. 8=13207
 electron microscope pictures, computer generation 8=8709
 f. c. c. crystals, configuration of ions near edge dislocation 8=22191
 f. c. c. crystals, new configurations 8=22190
 f. c. c., equilib. configuration of dissociated jogs 8=8718
 f. c. c. metals, elastically anisotropic, shear stresses of tilt boundaries of {111}, 1/2 {110} dislocations 8=22195
 f. c. c. structure, sequence of partials 8=13429
 faulted dipoles, contrast calcs., and stacking-fault energy meas. 8=8717
 ferromagnet, elastic and magnetic fields around dislocation 8=18316
 ferromagnets, relaxation by two-magnon scattering 8=14078
 field-ion micrograph interpretation of contrast from dislocation loops 8=17633
 flexible, equilib. shape under internal and external stress influence 8=1961
 force on dislocations emerging at free surfaces 8=22188
 geometrical eqn. of Hollander, criticism 8=8712
 graphite:ICl, impurity-dope effects on anelasticity 8=13541
 graphite, rel. to electronic props. 8=5384
 ice, and plastic deformation 8=4977
 insulators, binding with electrons, holes and excitons 8=5349
 internal friction rel. to optical properties of dielectrics 8=14165
 ionic crystals, NaCl-type, dissociation on {110} planes 8=22192
 in ionic mats, rel. to necessary conds. for plastic deformation 8=13511
 irradiated material, coalescence, dislocation loops and pores 8=17632
 lattice disturbed by dislocation, model 8=17307
 layer structures, enhanced chemical reactivity at

Crystal imperfections—contd**dislocations—contd**

- linear defects, imaging in 'spectral' position, with X-rays 8=4968
 loops from contrast in field-ion micrographs 8=17633
 loops, elastic interact. rel. to plastic flow velocity 8=8720
 loops in superlattices, computer analysis 8=8719
 martensite carbon strength rel. to thermally activated deformation 8=22351
 metals, dynamics rel. to repeated discontinuous yielding 8=22274
 metals, elastically anisotropic f. c. c., shear stresses and energies of $\frac{1}{2}$ {110}, {111} edge, new data 8=17640
 metals, f. c. c., formation and configurations of faulted dipoles 8=8716
 metals, rel. to fatigue crack growth model 8=17740
 metals, hexagonal, stress fields due to dislocation pile-ups on anisotropic treatment 8=1963
 motion, thermally activated, in periodic internal stress field 8=8711
 motion, uniform, at transonic and supersonic velocities 8=8713
 movement in ionic crystal, radiation of electromagnetic and acoustic waves 8=17637
 nodes, equilib. of pinned triple node, and stable configs. of single node 8=17635
 nucleation on external and internal surfaces 8=1964
 nylon, dislocation motion interpretation of plastic flow rates 8=2074
 partial, central, of triple ribbons, anomalous contrast 8=13428
 Peierls barrier calcs. from Frenkel-Kontosova model 8=17642
 piezoelectric, fields, and of linear charges 8=5375
 pile-ups, associated to amplitude-dependent internal friction 8=13496
 polyethylene, mechanism for deformation 8=2072
 problems in theory, present status and prospects for advance 8=22193
 quartz, screw, optical striations 8=4982
 ruby, examination by X-ray topography 8=13434
 screw, image evaluation using kinematical theory of e-diffr. 8=22194
 screw type, effect on cryst. growth 8=13131
 semiconductors, effect of non-uniformity on kinetic phenomena 8=13780
 solid containing multiple spectrum of dislocation obstacles, thermally activated motion 8=22189
 solid, internally stressed, mobility 8=8715
 steel Armco, rel. to work hardening 8=5067
 steel, austenitic stainless, in different fatigue stages, structure 8=22205
 steel EI702, effect on deformation 8=13570
 stress-assisted diffusion theory and strain ageing 8=4969
 symmetry considerations 8=13430
 sucrose 8=4983
 thermodynamic force 8=17641
 thick plate surface loops rel. to sinusoidal surface temp. cycling 8=17630
 two-phase materials, equilib. eqns. for pile-ups 8=17639
 widths in anisotropic b. c. c. crystals 8=4970-1
 work of core tractions, importance rel. to total energy, and meaning 8=17629
 Zorski theory, extension to superfluid vortex 8=10807
 Ag, Bordoni relaxation 8=22197
 Ag crystals, well-annealed, stress at which dislocations multiply 8=13545
 Ag, effect of impurity 8=8722
 AgCl, etching 8=1965
 Al, annealed, helices and large loops, X-ray topography 8=17647
 Al, e-irradiated, deformation at 20°K rel. to dislocation model with defect barriers 8=13523
 Al foil, dynamic behaviour on deformation continuously observed 8=13433
 Al, formation during slow heating and cooling 8=8723
 Al, Frank sessile loops transform. to perfect loops on n irradi. 8=17670
 Al, quenched and degassed, form. of loops 8=1966
 Al, quenched, nucleation rates for loops 8=17645
 Al, void annealing by self-diffusion along dislocations 8=13432
 Al, zone-refined, densities and configs. during slow heating and cooling 8=22198
 Al alloys, multiplication, transmission electron microscope obs. 8=13435
 Al-2%Mg alloy, network knitting on stress-induced climb 8=17644
 Al-Mg-Zn alloys, rel. to ductility, inc. precipitate zones and boundaries 8=17646
 α -Al₂O₃, sintered, non-basal, Burgers vectors 8=1967
 Au crystals, well-annealed, stress at which dislocations multiply 8=13545
 Au, quenched and aged, structure 8=22185
 Au-Cd alloys, quenched and aged, structure 8=22185
 Au-Zn alloys, quenched and aged, structure 8=22185
 BaTiO₃, -90° domain boundary interactions 8=8724
 Be single crystals, formal during growth and deformation 8=1969

Crystal imperfections—contd

dislocations—contd

- BeO, emergence on crystallization and effect on crystal growth 8=1736
 BeO, n-irrad. at high temps., loops 8=8761
 BeO polycrystals, high temp. obs. 8=13539
 BeO, twinned, n-irrad. decoration at high temps. 8=22199
 Bi crystals, multiplication 8=8732
 Bi₂Te₃, diffusion of Cu, etch pits of Cu along dislocations 8=1914
 Cd, slip planes in plastic deformation 8=8725
 Cd, vapour-grown, rel. to growth patterns 8=4803
 CdS, growth of bulk crystals, containing 10³ dislocation/cm² 8=17228
 CdS, rel. to shift of exciton spectrum lines 8=13673
 CdS, vapour grown, origin obs. 8=8726
 Co, on Cu, pseudomorphic deposits 8=21881
 Cr on Ni, pseudomorphic deposits 8=21886
 CsI, charge density and behaviour 8=17649
 CsI, density, isothermal annealing effect 8=17650
 CsI etching 8=1727
 Cu crystals, plastically deformed, distrib. rel. to dispersed phase effect 8=4974
 Cu crystals, well-annealed, stress at which dislocations multiply 8=13545
 Cu, density, effect on mechanical props. 8=13550
 Cu, explosively deformed, structure 8=17651
 Cu, mobility rel. to shear stress 8=1970
 Cu, neutron irrad., pinning 8=1974
 Cu, n-irradiated, small loops, type 8=13437
 Cu, n-irrad., with vacancy dislocation loops, thermally activated motion 8=22189
 Cu, p-irradiated, platelets of interstitial atoms rel. to loops 8=22202
 Cu, rearrangement role in elastic mod. recovery after deform. 8=22337
 Cu single crystal in stressed condition, dislocation arrangement, electron microscope obs. 8=22201
 Cu, resist. and density, expl. determ. 8=9004
 Cu, screw, charge density redistribution, electric field gradient 8=5176
 Cu and Cu-Si solid solutions, motion, nature of obstacles 8=22200
 Cu-Al solid solution validity of Cottrell-Stokes law 8=8721
 Cu₃Au alloy, low order, loops, and stacking faults 8=8695
 Cu-Al-Zn alloys, rel. to phonon scattering 8=22203
 Cu-4.6 at.% Ga, density increase causing thermal conductivity decrease 8=8658
 Cu-Ga solid solution validity of Cottrell-Stokes law 8=8721
 Cu-Ni-Co alloys, movement from critical shearing stress temp. dependence 8=1971
 Cu₂O, plastic deformation by motion of a {100} dislocations on {100} glide planes 8=22327
 Fe, b.c.c., screw dislocation core structure 8=4976
 Fe, crystalline, rel. to strengthening by step-wise low temp. creep 8=2054
 Fe, H-charged internal friction rel. to H interstitial-dislocation binding 8=4965
 Fe on hot Cu, rel. to pseudomorphic growth 8=21880
 Fe, moving, frictional forces 8=22206
 α-Fe, rel. to plastic deform. and strength 8=4975
 Fe, purified, motion studied by amplitude-dependent internal friction and induced modulus defect 8=13557
 Fe-Al 40 oil quenched alloy, influence of ordering 8=13438
 FeCl₃-graphite cpd. 8=1972
 Fe-Ni-Cr aged alloy validity of Cottrell-Stokes law 8=8721
 Fe-3%Si, movement in elastic deform. 8=17661
 α-Fe₂O₃, whiskers on Fe 8=17250
 Fe₃O₄, fine grained, coercivity 8=9343
 Fe-3.5 at.% V alloy moving, frictional forces 8=22206
 GaAs, rosette structure temp. dependence, 20-800°C rel. to doping effects 8=17809
 GaAs, vapour grown, twins and stacking faults obs. 8=1982
 GaSe, on basal planes, visualization with established optimal etchant 8=1973
 n-Ge, edge, rel. to surface recombination changes 8=22591
 Ge, edge-type, cyclotron resonance study 8=9106
 n-Ge, effect on galvanomagnetic props. 8=22592
 Ge films, charge-carrier mobility, scattering in bulk material 8=9107
 Ge, Hall effect, optical effects 8=1979
 Ge, investigation by Borrmann's method: appl. of asymmetric exposures 8=17655
 Ge lattice, rel. to structure of kinks and steps 8=8727
 Ge point contact diode, etch pits due to plastic deform. 8=5326
 Ge, screw and edge damping in internal friction 8=22370
 n-Ge single crystal, effect on electrical properties 8=18053
 Ge, n-type, space-charge cylinders, overlapping phenomena 8=17656
 Ge, thin foils, arrangements after crystallization 8=1975
 KBr, dynamic characts. by internal friction method 8=8730

Crystal imperfections—contd

dislocations—contd

- KBr, mobilities, temp. depend. 8=8729
 KBr, n. m. r. rel. to type and orientation of dislocation 8=14146
 KCl, absorpt. of ultrasound, rel. to freq. 8=8630
 KCl crystal, density dependence on compressive force obs. 8=8731
 LiF, mobility, effect of hydrostatic pressure 8=1976
 LiF single crystals, sub-grain boundaries by limited projection topography 8=13446
 LiF, surface layer structure, props. after annealing 8=8378
 MgO:Ba, effect on Ba diffusion 8=4954
 Mo crystals, velocity-stress relations from strain-rate sensitivity of flow stress 8=17657
 Mo, etch pitting 8=4978
 Mo, impurity effects on strain hardening 8=22380
 Mo, mobility rel. to amplitude depend. of internal friction 8=22209
 N₂ solid, electron microscope investigation 8=8465
 NaBr, n. m. r. rel. to type and orientation of dislocation 8=14146
 NaCl, crystal etching by formic acid 8=17658
 NaCl crystal density dependence on compressive force obs. 8=8731
 NaCl, mobility, photoexcitation 8=4979
 NaCl, quenched, structure on {100} faces 8=22207
 NaCl, structure on light impulse exposure 8=17659
 NaCl:Ag rel. to F-centres thermal stability, microspectrophotometry obs. 8=8749
 NaI, density, isothermal annealing effect 8=17650
 NaNO₃ and cryst. growth, obs. 8=21957
 Nb crystals, structures, chemical and electro-etched, optical microscope obs. 8=22208
 Nb foil, density and flow stress, effects of grain size 8=4980
 Nb, mag. flux lines interaction, 4.2°K 8=22210
 Nb, mobility rel. to amplitude depend. of internal friction 8=22209
 Nb, superconducting, rel. to n-irradiation 8=2169
 Ni, crystalline, rel. to strengthening by step-wise low temp. creep 8=2054
 Ni, density deformation-dependence and upper temp limit 8=2064
 Ni, effect on mag. susceptibility. 8=22830
 Ni, polygonization rel. to recrystallization 8=4808
 Ni alloys, effect on γ' particles form. 8=21993
 Ni-base alloy, fatigued at several temps. 8=4981
 Ni:Al₂O₃, sintered, movement resistance rel. to flow stresses 8=2048
 Ni-60 at.% Co, density increase causing thermal conductivity decrease 8=8658
 Ni₃(MnCo) ordered alloy validity of Cottrell-Stokes law 8=8721
 Ni-Mn-Fe order alloy validity of Cottrell-Stokes law 8=8721
 Ni₃Mn order alloy validity of Cottrell-Stokes law 8=8721
 Ni₃Si alloy with coherent ordered stressed precipitates, motion mechanism 8=1978
 NiO, etch pits, shape and size rel. to etching time 8=1977
 O₂ solid, electron microscope investigation 8=8465
 Pb, dislocation-electron interactions, temp. independence 8=17864
 Pb, superconductive, rel. to structure of intermediate stage 8=22556
 PbSe_(1-x)Te_x, from etching 8=1689
 Pt, annealed, rel. to relax. effect of internal friction at low temps. 8=22211
 Sb crystals, multiplication 8=8732
 Si containing oxygen, effect on precip., X-ray diff. obs. 8=13073
 Si, diffusion of B, motion rel. to coefficient 8=1925
 Si, diffusion of P, motion rel. to coefficient 8=1925
 Si, Hall effect, optical effects 8=1979
 Si, motion under e-bombardment during e-microscope investigations 8=17660
 Si, prod. in region of indentation in brittle fracture area 8=5084
 Si, rosette structure temp. dependence, 20-800°C rel. to doping effects 8=17809
 Si:B rel. to Li drift mobility, obs. 8=20200
 Si-Fe alloy, structure and ductility, low-temp. creep effects 8=13571
 Si-Fe, structure changes during creep 8=8734
 Si:Ga rel. to Li drift mobility, obs. 8=20200
 SiO₂-openings, diffusion induced dislocations, arrangement rel. to transistor simulation 8=8733
 Ta, impurity effects on strain hardening 8=22380
 Te, loop-lengths from u.s. wave absorpt. meas. 8=8619
 Te, theory and plastic behaviour 8=4984
 β-Ti, rel. to diffusion behaviour from thermo- and electro-transport meas. 8=17589
 U, α and β mono- and poly-crysts., rel. to creep mechanisms 8=8867
 US single crystals, slip behaviour 8=17834
 W, impurity effects on strain hardening 8=22380
 W, pinning, rel. to strain amplitude 8=1980
 Zn, basal dislocation mobility meas. 8=8735

Crystal imperfections—contd**dislocations—contd**

- Zn, behaviour on basal slip rel. to Al impurity effects 8=17836
 Zn, in compression along [0001] axis, strain, mobility and density 8=22214
 Zn, density, effect of Cd additions 8=17295
 Zn, etch pits at dislocations 8=4985
 Zn, etch-pit revealing technique 8=13439
 Zn, slip planes in plastic deformation 8=8725
 Zn, surface corrosion pitting at dislocation sites 8=13440
 Zn, and vacancies rel. to isotope effect in self-diffusion 8=4959
 ZnS, hexagonal, rel. to electroluminescent intensity distrib. 8=18621
 ZnS, single crystals, grown from melt 8=21969
 α -Zr, polycrystalline, rel. to steady-state creep 8=4986
 β -Zr, rel. to diffusion behaviour from thermo- and electro-transport meas. 8=17589

interstitials

- alkali halides, cations, dielec. props. calc. 8=1948
 calculation of the properties of vacancies and interstitials, conference 8=22165
 diffusion, isotope effect, model 8=1901
 diffusion, isotope effect, model 8=1902
 f. c. c. metal, recovery kinetics, model 8=2015
 impurities rel. to Ising mag. problem 8=1951
 metal-interstitial systems, phase boundary motion and polyphase diffusion 8=17035
 metal wires, recording accurate Snoek spectra at low freq. 8=8786
 metals, b. c. c., diffusion of impurities 8=17558
 Ba silicate glasses, γ -ray effects 8=13479
 CaF_2 , behaviour of F^- during reduction of Dy^{3+} 8=1949
 $\text{CoO}:\text{Li}$, Co interstitials, contribution to defect structure rel. to conductivity 8=1956
 Cu, migration kinetics at low temps. 8=8699
 α -Fe, and vacancies, calcs. 8=22179
 Fe, H-charged internal friction rel. to H interstitial-dislocation binding 8=4965
 Fe, metallic, C impurity effects on Mössbauer spectrum 8=20704
 Fe-V-C Snoek peak, anomalous obs. 8=13559
 Ge, impurity of Cu, irradi. induced, obs. 8=2027
 H, in Fe, anomalous behaviour at low temps. 8=22182
 KBr, vol. expansion, X-irrad. induced, by relax. at Frenkel defects 8=13486
 KCl, vol. expansion, X-irrad. induced, by relax. at Frenkel defects 8=13486
 KX, (X = Cl, Br, I), H_2O mols. 8=4953
 Li_2^+ mol-ion in LiF , stability study 8=22181
 Mo, impurity effects on strain hardening 8=22380
 Mo, n-irradiated and annealed, and vacancy loops identification 8=17610
 Nb-Hf, (-W), (-Mo) alloys, interstitial solid solubilities of O, N, C 8=17015
 Pt, annealed, effect on further damage on e-irradiation at 90°K 8=1947
 Si, Li-donor ground state, chemical splitting 8=1950
 Ta, impurity effects on strain hardening 8=22380
 W, impurity effects on strain hardening 8=22380
 W, and vacancies, calcs. 8=22179
 V, calcs. 8=22179

vacancies

- alkali halides, entropy of vacancy pair formation, calc. 8=1943
 alkali halide, impure, generation during electrolysis 8=9718
 aluminium alloy, age-hardenable, vacancy conc. calc. 8=1941
 calculation of the properties of vacancies and interstitials, conference 8=22165
 copper sulphide (digenite), cubic high temp., defect equilibria obs. 8=1942
 cubic, migration energy, calcs. 8=22173
 diamond-like solids, Jahn-Teller effect for single vacancy 8=8691
 diamond monovacancy distortion by Jahn-Teller effect, mol. model 8=17605
 f. c. c. lattices, diffusion calcs. using Debye model 8=22172
 fluorite-related systems, gross anion sub-stoichiometry, statistical aspects 8=22175
 formation and migration energy rel. to Debye temp. 8=1865
 inorganic substances, formation enthalpy calcs. 8=22176
 ionic cpds., prep. with ordered vacancies by exchange reactions 8=23082
 lattice with one vacancy, electron density calc. 8=22443
 mechanism for thermal mass transport 8=4947
 metals, Debye temp. rel. to energies of form. and migration 8=17509
 metals, f. c. c., self-diffusion coeffs. allowing for divacancies 8=8681
 phosphates, γ -irrad., O vacancies 8=22913
 relaxation of elect. and mechanical modes in NaCl structure allowing for 1st and 2nd neighbours 8=22174
 relaxation energy in cubic crystals 8=1939
 rutile, partially reduced, defect nature from e.p.r. study 8=18436

Crystal imperfections—contd**vacancies—contd**

- semiconductors with stoichiometric vacancies, crystalline, chemical and thermal props. 8=17197
 Ag, diffusion rate calc. using Debye model 8=22172
 Ag-Au alloys, flow, effect on tracer diffusion coeff. 8=4948
 AgCl single, Fe ions enter into complexes with vacancies 8=8215
 Al diffusion rate calc. using Debye model 8=22172
 Al, vacancy cluster nucleation 8=1944
 Al-Mn 1.04% dilute alloy, solute atom-vacancy binding energy 8=8693
 Au-Ni alloys, in modulated structure formation 8=17044
 Al-Zn alloys, n-irradiation effect on Guinier-Preston zone formation 8=17274
 Au, and divacancy behaviour from elec. resistance meas. on quenching and annealing 8=1945
 Au, annealing, three different experiments 8=13421
 Ba silicate glasses, γ -ray effects 8=13479
 CaWO_4 , rel. to self-diffusion of Ca 8=13408
 CdTe, metal vacancies formation energies rel. to Te-Te covalent bonding 8=17608
 Cs halides, defect form. energies and migration energy barriers 8=13422
 CsCl, Schottky defect energies for $\text{Pm}3\text{m}$ and $\text{Fm}3\text{m}$ structures 8=22178
 Cu, diffusion rate calc. using Debye model 8=22172
 Cu, quenched, annihilation kinetics 8=1946
 Cu_3Au alloy, low order, clustering 8=8695
 Cu-Be alloys, Guinier-Preston zone formation, conc. and ageing dependence 8=17606
 Cu-Be alloys, quenched and aged, role in solute clustering 8=17607
 α -Fe, and interstitials, calcs. 8=22179
 Fe-Ni alloys, annealed, rel. to X-ray diffr. "tails" 8=17341
 Fe-Si alloys, ferromagnetic after-effect from annealing of vacancies 8=5466
 Ge, n-type, rel. to quenching expts. 8=4962
 HfO_2 , elec. cond. meas. 8=13419
 HgTe, metal vacancies formation energies rel. to Te-Te covalent bonding 8=17608
 KBr, conc. changes during electrolytic coloration at 460-670°C 8=17609
 $\text{K}_2\text{SO}_4:\text{Mn}^{2+}$ 8=22910
 $\text{Li}_2\text{O}_3\text{Fe}_2\text{O}_4$, scattering of phonons on lattice distortions, non-stoichiometric vacancies 8=8660
 LiH, gap modes 8=22180
 LiI, gap modes 8=22180
 MgFe_2O_4 , scattering of phonons on lattice distortions, non-stoichiometric vacancies 8=8660
 MgFe_2O_4 , anionic, (produced by chem. reduction), rel. to thermal conductivity 8=17543
 Mo, n-irradiated and annealed, and interstitial loops identification 8=17610
 MoS_2 , detect. by etch-decoration method 8=4963
 MoS_3 surfaces, detection, and monatomic steps 8=4730
 NaCl:Mn, ratio of concentrations of nnn to nn complexes at low temp. 8=13420
 NiAl, ordered b. c. c., supersaturation on quenching 8=17611
 P_2O_5 , γ -irrad., O vacancies 8=22913
 Pt, annealed, effect on further damage on e-irradiation at 90°K 8=1947
 Pt, deuteron-irradiated, damage and recovery rel. to vacancy behaviour 8=8697
 Pt, and divacancies and self-diffusion from quenching and recovery expts. 8=17612
 Pt, n-irradiation damage and recovery rel. to defect doping effect 8=1953
 Pt-Rh alloy, formation and recovery, quenched 8=13423
 Si, diffusion of P, enhancement by vacancy generation 8=1926
 Si, localized state energies rel. to neutral divacancy 8=9123
 ThC_x , nonstoichiometric contribution to resistivity rel. to conc. 8=2140
 Zn, and dislocations rel. to isotope effect in self-diffusion 8=4959
 ZnFe_2O_4 , anionic, (produced by chem. reduction), rel. to thermal conductivity 8=17543
 ZnFe_2O_4 , scattering of phonons on lattice distortions, non-stoichiometric vacancies 8=8660
 $\text{ZnS}:\text{Tm}$ rel. to Tm luminesc., Zn vacancies, obs. 8=8434
 ZnTe, metal vacancies formation energies rel. to Te-Te covalent bonding 8=17608
 Zr and alloys, diffusion rel. to creep behaviour 8=4964
 W, and interstitials, calcs. 8=22179
 W, doped, annealed, evidence for voids 8=17613

Crystal properties

- Cauchy relations, deviation rules from expt. 8=5004
 conductivities, appl. in low-temp. elec. termination 8=15137
 ionic, polarization theories 8=9186
 laser-beam thermal effects in transparent crystals 8=4926
 metallic lattice, collision of atom, accommodation coeff. 8=22238
 molecular rigid-body motion rel. to triclinic coordinates 8=8231

Crystal properties—contd

- packing calc., phase problem, new approach 8=13311
- physical, correlation with space group 8=13164
- rare earth cobalt compounds with CaZn_2 structure, and mag. props. 8=22753
- symmetry dependence 8=4858
- transition-metal molybdates, and structure 8=13296
- volume changes rel. to non-uniform dislocation distrib. 8=17631
- Ar, optics and dielectrics 8=2238
- Bi-MnBi eutectic single crystal, growth dependence 8=8402
- GaS, thermal stability 8=21786
- KCl:KBr solid soln, ion shift in lattice due to different sizes 8=17378
- KCl:OH⁻, cooling to 0.36°K by adiabatic depolarization of OH⁻ 8=1874
- ZnS, effective ionic charge calc. 8=17304

Crystal structure

Crystal structure—contd

microstructure—contd

graphite, pyrolytic, X-ray study 8=13134
 graphite, spheroidal, in Fe-C, Ni-C, Co-C, Au-C and Fe-C-Si alloys 8=13156
 hastelloy X-280, thermomechanical effects 8=17288
 ice, grain orientation, in growth from melt 8=21924
 Inconel 600, twin and grain boundaries free energy ratios, from e-micros. exam. 8=17287
 lamellar mixtures of 2 c.p. phases, by e-microscopy 8=21974
 lucite, disintegration under tension and strength, obs. 8=17843
 Makrolon films, spherulites and non-amorphous struct. form., 180°C 8=8473
 metal surfaces, ionic corrosion 8=13522
 metals, texture study by magnetores. and Hall effect 8=8454
 muscovite, superstructure when heated in vacuum 8=17285
 oligomers, reticulate crystalline nature from X-ray and thermomechanical tests 8=17192
 18Ni(250) maraging steel, banding effect on mechanical props. 8=8463
 orientation depend. of grain size, X-ray meas. 8=8832
 phase-contents and grain size distrib. by e micro-probe 8=17260
 polyethylene, crystallinity degree, X-ray and density obs. 8=8472
 polyethylene, fold-surface packing from moiré patterns 8=17299
 polyethylene, point defects, molecular mechanics 8=1938
 polymers, rel. to orientation birefringence temp. dependence 8=9577
 polymers, polylamellar habits 8=1766
 polymers, from ultrathin sections 8=17297
 poly(4-methylpentene-1), fold-surface packing from moiré patterns 8=17299
 polyoxymethylene, fold-surface packing from moiré patterns 8=17299
 precipitates in thin foils, electron-microscope images 8=13152
 reflection patterns, Kikuchi-like, by scanning electron microscope 8=8446
 reflection patterns, Kikuchi-like, by scanning electron microscopy, comments on interpretation 8=8447
 steel, annealed low-carbon and cold-rolled, orientation distrib. function of crystallites 8=21923
 steel, austenite grain size, high temp. microscope obs. 8=13157
 steel, continuous casting, alternating e. m. fields 8=4847
 steel, Cr-Ni stainless, intercrystalline corrosion 8=8460
 steel grain size rel. to mech. strength, hot working effects 8=22356
 steel, low-carbon, sheets, rolling and annealing textures 8=17799
 steels, carbon, volume fraction analysis, X-ray diffraction 8=8464
 surface, from reflection of atom and ion beams 8=13201
 surface growth spirals on crystals from molten salts 8=4838
 Teflon, disintegration under tension and strength, obs. 8=17843
 texture, cold-rolled and recrystallization, appl. of n diffraction 8=17278
 thoria gel, crystallite size obs. 8=12960
 trace characterization-chemical and physical, symposium NBS, USA, Oct. 1966 8=8437
 Udimet 700, Ni-base, sigma phase 8=13158
 vinyl plastic, disintegration under tension and strength, obs. 8=17843
 Zircalloys-2 and -4, effect of grain size on terminal solubility and thermodyn. activity of H₂ in these and α -Zr 8=8249
 Ag surfaces, ethylene, CO and H catalytic oxidation effects, obs. 8=18706
 Al alloys, during and after hot working 8=21979
 Al alloys, wrought-, strength and ductility rel. to ingot structure 8=5046
 Al, during extrusion, recovery and recrystallization 8=4841
 Al foils, by transmission electron microscopy 8=4840
 Al rods, polycrystalline, texture changes rel. to mech. forming processes 8=22308
 Al, rolled, texture representation by biaxial pole figures 8=17778
 Al, rolling and recrystn. textures 8=21938
 Al, rolling and recrystallization texture orientation relationships 8=1755
 Al vacuum condensates, annealing effects 8=4741
 Al, wires, deformed, double fibre texture rel. to orientation 8=4832
 Al-Al₃Ni alloy, stability of eutectic stressed at elevated temps. 8=4842
 Al-4wt.%Cu alloy, microanalysis of precip. phases by e-microscopy and energy analysis 8=17276
 Al-Li alloys, neutron irradi., grain boundary migration 8=8456
 Al-Mg alloy, dependence on plastic deformation and ageing 8=17004

Crystal structure—contd

microstructure—contd

Al-Si eutectic alloy, modified 8=13155
 Al-10%Zn alloy, n-irrad., pre-precipitation rate at 78°K 8=21980
 Al-Zn eutectoid alloy, superplasticity rel. to grain boundary shear 8=17766
 Ag on Mo, moiré fringes, dynamical effects 8=21977
 Ar, thin solid films, electron diffraction study 8=8313
 Au electrodeposits, pores and cryst. struct. 8=21981
 B distrib. in austenitic steel, from obs. of He gas bubbles after n-irrad. 8=13040
 BaTiO₃, cold-conductor-ceramic, working mechanism, electron microscopic investigation 8=21982
 BaTiO₃, grain growth inhibition 8=2244
 BeO, effects of SiC and MgO additions on grain growth 8=22315
 BeO, n-irrad. at high temp., dislocation loops 8=8761
 Bi₂S₃ evaporated films 8=17126
 C, glassy, X-ray scattering, small-angle, rel. to pore structure and conc. 8=21983
 Cd, texture study by magnetores. and Hall effect 8=8454
 Co, micromosaic block size and misorientation in zone-melted crystals, impurity depend. 8=8470
 CoAl-Co eutectic, mechanical props. 8=17770
 Co-Cr 10% alloys, cubic-hexagonal interface, contrast effect 8=8459
 Cr electrodeposits, epitaxy rel. to internal stress development, obs. 8=22325
 Cu, cold-rolled and recrystallization texture, study by n-diffraction 8=17278
 Cu, rel. to deformation texture development, pole figure 8=17777
 Cu, hot worked, grain struct. prod., obs. 8=21984
 Cu, powders, X-ray study 8=4844
 Cu, rolled high purity crystals, orientation distribution 8=1756
 Cu, rolled, texture representation by biaxial pole figures 8=17778
 Cu, rolling texture development at room temp. and -196°C 8=22328
 CuFe₂Mn₂O₄, tetragonal distortion 8=17205
 Cu-Zn alloys, rolling textures, -196° to 275°C 8=21985
 Er₂O₃ foils, grain boundary energetics by transmission e-microscopy 8=21986
 Fe, coarse grained polycrystalline, changes under tensile deformation 8=1985
 Fe, cubic lattice, microcontours, wide temp. range, in vacuo 8=2053
 Fe and Mg multilayered films, X-ray diffraction 8=1758
 Fe, technical, during fatigue tests 8=13566
 Fe-whiskers, ferromag. nucleation, theor. investigation 8=18335
 Fe whiskers surfaces, scanning e microscope obs. 8=17281
 Fe-(9.75-11.66%)Al alloys, nature of K-state 8=9005
 Fe-Au-Cu, ordered G.P. zones 8=8461
 FeCo alloy, grain boundary theory 8=17258
 Fe-Cr-N ternary system, and nitrides 8=4845
 Fe-Cr-N ternary system, diagrams and phase reactions 8=4846
 FeCl₃-graphite cpd. 8=1972
 FeCo superstructures in (Fe, Cr)Co, (Fe, Mn)Co and Fe(Co, Ni) alloys 8=1757
 Fe-12 at.%Ni alloy, finely dispersed system, rel. to particle size and oxidation 8=17280
 Fe-Ni base alloy: 9 at.%Cu, changes on ageing 8=1759
 Fe-Ni-Al-Ti alloy, after thermomech. treatment 8=21987
 Fe-Ni-Ti alloy, changes during martensite ageing 8=17064
 α -Fe₂O₃ whiskers on Fe 8=17250
 Ga-Fe system phases, obs. 8=21749
 InSb, layer distrib. effect on Corbino magneto-resistivity 8=5266
 Ir films, ultra-thin, vacuum-deposited, by e-diffr. and microscopy 8=17292
 Li colloidal aggregates in LiF, e. p. r. study 8=9431
 MgAl₂O₄, hot-pressed, rel. to mech. props., quadratic multivariable analysis 8=21991
 Mg₂Cd, direct obs. of antiphase boundaries, size and shape 8=17679
 Mg-Fe mixed hydroxides, dehydration effects, obs. 8=17023
 Mg-Mn ferrite composition microinhomogeneities 8=21990
 Mo, micromosaic block size and misorientation in zone-melted crystals, impurity depend. 8=8470
 Nb with precip. nitride 8=8274
 Nb-Zr alloy with precip. nitride 8=8274
 Ni, a. c. electrodeposited from NiCl₂ soln., obs. 8=22035
 Ni alloys, growth, distrib. and shape 8=21993
 Ni-base alloys, melt-refractory contact regions 8=9694
 Ni-base alloy, fatigued at several temps., structural charges 8=4981
 Ni-base superalloys, metallurgical props. 8=4850
 Ni-bearing steels, martensitic during ageing 8=1762
 Ni, changes under supersonic air streams at 900°C 8=17290
 Ni films, condensed polycrystalline 8=17286
 Ni layers, electrolytically deposited, orientation rel. to deposition inhibitor effect 8=1805
 Ni, twin and grain boundaries free energy ratios, from e-micros. exam. 8=17287

Crystal structure—contd**microstructure—contd**

- Ni:Al₂O₃, sintered, compressive strength grain size dependence 8=2048
 Ni₃Cr alloy, short-range order parameters from n-diffr. data 8=17291
 Ni₃(Fe, Mn), Ni₃(Fe, Cr), Ni₃(Mn, Cr), (Ni, Co)₃Mn, (Ni, Co)₃Fe_{0.5}Mn_{0.5} analysis of superstructure 8=1763
 NiFe₂O₄, thin films 8=2343
 NiMn, tetragonal, order twins and antiphase boundaries 8=17289
 Ni₃Sn, direct obs. of antiphase boundaries, size and shape 8=17679
 Pb stearate, optimization for X-ray diffraction 8=14254
 Pb-0.4wt%Mg alloy, G. P. zone formation in early stage of ageing 8=22389
 Pb-Sn alloys, lamellar stability on solidification 8=4785
 Pb-Sn, Na conc. at grain boundaries 8=8344
 PbSe_{1-x}Te_x, from etching 8=1689
 Pt₃-Co alloy, ordered, field-ion microscope study 8=1764
 Pu containing sample preparation for electron probe microanalysis 8=4831
 Pu, electrorefined, recrystallization and concurrent plastic deformation, 24-115°C 8=21961
 Sb₂S₃ evaporated films 8=17126
 Si, channeling of 2 MeV protons 8=2034
 Si web dendrite, X-ray topographs, stacking fault contrast 8=1983
 SiC, from thermal decomp. of methyl trichlorosilane, texture 8=21994
 Si-WSi₂-Si, epitaxial struct. 8=17257
 Sn vacuum condensates, annealing effects 8=4741
 Sn-Bi alloys, dendrite morphology 8=4825
 Ta films, ultra-thin, vacuum-deposited, by e-diffr. and microscopy 8=17292
 Te, low-angle subgrain boundaries 8=8737
 ThO₂-UO₂, in-reactor, from thermal simulation expts. 8=1130
 Ti alloy, VT15, solution-treated and aged, by e-microscopy 8=17293
 Ti-Al-Co alloys, rel. to Ti-rich corner 8=4851
 Ti-3 wt.% Fe alloy, quenched from β -phase, martensite study 8=21859
 U-M alloys, (M=Fe, Al and Si), irradiated, phase comp. changes rel. to resistivity meas. 8=8283
 U-1.5wt% Mo, transforms rel. to cooling rate from γ phase, obs. 8=8285
 UO₂, columnar grains, in thermal cond. meas. at high temps. and large temp. gradients 8=8665
 UO₂, columnar grains, obs. 8=21997
 UO₂, irradiated 8=8469
 UO₂, in-reactor, from thermal simulation expts. 8=1130
 US crystals, precipitation phenomena 8=21862
 US single crystals, transmission electron microscopy obs. 8=17834
 V₂V_{1+x} alloys, chalcogenide grain boundaries from etching technique 8=17102
 W, grain boundary porosity, effect of non-metallic trace additions 8=17835
 W, fast n irradi., changes rel. to changes in mech. props. 8=21998
 W, micromosaic block size and misorientation in zone-melted crystals, impurity depend. 8=8470
 W sheet, thermochemically deposited sheet, effect of deformation on grain structure 8=8471
 W, thermochem. deposited, effect of F impurities on high temp. grain stability 8=17294
 W wires, on secondary recrystallization, from electron optical meas. based on emission 8=1765
 Zn, effect of Cd additions 8=17295
 Zn, texture study by magnetores. and Hall effect 8=8454
 Zn-0.03 at.% Cd, Al, Cu or Ag, substructure rel. to impurity distrib. coeff. 8=17296
 α -Zr, deformed, form of polygonized sub-structure 8=22219
 α -Zr, effect of grain size on terminal solubility and thermodyn. activity of H₂ in this, Zircaloy-2 and Zircaloy-4 8=8249
 Zr rich alloys, effect of rolling temp. on texture developed 8=22399
 Zr-Nb alloy/oxide system 8=14390
 ZrO₂, Y₂O₃ and MgO-stabilized, rel. to stress relief mechanism 8=17839

 α -Mn, non-centrosymmetric, Bijvoet differences rel. to temp. effects in X-ray diffr. 8=13273
 Ne crystals, lattice constants, thermal expansion and isothermal compressibility 8=1803
 Ne, at 0°K, calc. from interact. pot. of gas 8=1468
 Ni, lattice distortion under supersonic air streams at 900°C 8=17290
 Ni, lattice parameters of powders, ferromagnetic props. 8=14033
 Ni layers, electrolytically deposited, lattice deformations rel. to deposition inhibitor effect 8=1805
 α -O₂, rel. to mag. props. 8=17406
 α -O₂, n-diffr. study 8=4882
 Pd films, obliquely deposited, effect of atom mobility 8=8296
 Pt films, obliquely deposited, effect of atom mobility 8=8296
 Se, α -monoclinic and hexagonal modifications, refinement 8=13288
 Se, hexagonal, atomic displacement rel. to conductivity 8=1808
 Se, non-centrosymmetric, Bijvoet differences rel. to temp. effects in X-ray diffr. 8=13273
 Si, elastically distorted, X-ray topography 8=13198
 Si epitaxial films on Ge(111) surfaces, LEED struct. obs., 870°K 8=17140
 Si epitaxial films on Si(311) surfaces, LEED struct. obs., 870°K 8=17140
 Si, implanted Sb, Ga, As, In and Xe location and lattice disorder, obs. 8=17414
 Si, lattice location of implanted group III elements 8=22160
 Si(111), LEED study of Ni induced surface structure 8=4732
 Si, lattice theory of third order elastic consts. 8=13261
 Si wafers, orientation, by proton channelling 8=8376
 Si, with diffused B (and P), appl. of dynamical theory of X-ray scattering 8=13412
 Sn films, obliquely deposited, effect of atom mobility 8=8296
 Te, bond distances, Mössbauer effect 8=4887
 Te films, vac. -evaporated, forbidden reflexes in e-diffr. 8=17141
 Te, isomorphous, non-centrosymmetric, Bijvoet differences rel. to temp. effects in X-ray diffr. 8=13273
 Xe, at 0 K, calc. from interact. pot. of gas 8=1468
- alloys**
 Armco iron, parameters by X-ray flat film back reflection technique 8=8521
 binary, interatomic energies from short-range-order meas. by diffuse scattering 8=17331
 ordered alloy containing antiphase domains, X-ray diffr. 8=4863
 ordered, effect of symmetry on field ion images 8=4881
 rare-earth germanides and silicides, 5:4 and 5:3 compositions 8=8554
 solid solution, field ion emission patterns, computer simulation 8=8453
 steel, high-C, α' and κ' -martensite 8=17373
 steel, low-C, rapidly annealed to 700°C, quench-ageing at 240°C 8=17806
 Al-Cu-Mg, atomic diffusion within lattice on ageing 8=17041
 ζ -Ag-Ga, lattice spacings on addition of Cd 8=17335
 AuAg order rel. to optical consts., 276-1200 nm 8=22958
 Au-Cd alloys, quenched and aged 8=22185
 AuCu order rel. to optical consts., 276-1200 nm 8=22958
 AuCu₃ order rel. to optical consts., 276-1200 nm 8=22958
 Au-Mg system 8=17043
 Au-Ni spinodal, re-calc. 8=13245
 Au-Pt alloys, annealed, defects rel. to X-ray diffr. "tails" 8=17341
 Au-Zn alloys, quenched and aged 8=22185
 Cu-Al, martensites 8=4871-2
 Cu-Sn, of metastable states during eutectoid transform. 8=17055
 Fe-Al, paracrystals from X-ray powder patterns rel. to comp. and annealing treatments 8=17368
 Fe-20 at. %Al, structure factor variations for electrons with accelerating voltage 8=13260
 Fe-C steel, atomic displacements from X-ray diffr. meas. 8=17371
 Fe-Co, lattice parameters of powders, ferromagnetic props. 8=14033
 FeCr, σ -phase, atomic ordering and co-ordination rel. to mech. props. 8=17030

Crystal structure, atomic—contd**alloys—contd**

- Fe-N alloys, martensite lattice meas. 8=8522
 Fe-N, quenched, X-ray diffraction and interferometry study 8=8522
 Fe-Ni alloys, annealed, vacancies rel. to X-ray diffr. "tails" 8=17341
 Fe-Rh, parameters, structural defects, phase transformations 8=9395
 Mo steel, orientation relationship and coherency between Mo_2C and ferrite matrix 8=17369
 2NbAl, σ -phase, atomic ordering and co-ordination rel. to mech. props. 8=17030
 Nb-Ni-Al, M phase 8=17403
 Ni-Fe films, lattice contractions by electron diffraction 8=1806
 Ni₃Mo ordered, symmetry effects on field ion image 8=4881
 Ni-Ti, changes on martensite transformations 8=21851
 Pb₂Sn₃-Te, lattice parameters, redeterm. 8=22037
 PtCo ordered, symmetry effects on field ion image 8=4881
 PuZr peritectoid reaction, 615°C 8=8279
 ReAl₃ 8=8555
 Sb-Sn oxidation products, by e-diffr. 8=13287
 Tb-Y solid solns., 77-300°K 8=22040
 TcAl₃ 8=8555
 Ti-Al alloys, dilute, hydride formation in thin foils 8=17016
 UN-ThN pseudobinary system 8=22044
 V-Fe-Si, D phase 8=17403
 Y-Al, X-ray powder photographs 8=22045
 ZrM₂-H₂ system cpds., (M = Cr, V, Mo), by X-ray diffr. 8=4723

inorganic compounds

- Al₂S₃-type phases, binary, containing transition elements, atomic ordering 8=17419
 actinide cpds., group IVA-VIA, with NaCl structures, lattice constants 8=4867
 alkali-halide crystals, i.r. absorpt. spectra, local vibrs. of mol. impurity ions 8=14197
 alkaline beryls, dependence on tempering at 600-1200°C 8=17345
 alkaline earth silicides with BaGe, BaSi, BaSn, CrB, SrGe, SrSn 8=8557
 aluminosilicate frameworks, Si-O and Al-O tetrahedral distances 8=21795
 analyt. method of representing structure 8=13246
 b.c.c. metals, lattice rotations, axisymmetry flow, computer solution 8=8373
 botryogen 8=4876
 chlorapatite 8=17352
 chrysotile asbestos, microfibres and lattice parameters from electron microscopy 8=1796
 ferric oxyhydroxide, by Mössbauer absorpt. spectroscopy 8=17370
 ferrites, hexagonal, type Ba₂Me_x²⁺Fe₂O₇, and stacking sequences 8=17342
 fluorapatite 8=17352
 fresnoite, Ba₂TiSi₂O₈, cell dimensions from X-ray powder data 8=18506
 garnet-type cpds., Sn⁴⁺ coordination from Sn¹¹⁹ Mössbauer effect 8=17415
 goethite dehydration and haematite/magnetite formation rel. to c.c.p. orientations 8=4875
 goethites, by Mössbauer absorpt. spectroscopy 8=17370
 halogens, space groups dependence on electron density 8=17328
 hambergite, integrated intensities, expt. tests of general formula 8=13480
 haradaite, SrVSi₂O₇, and Si-O bond lengths 8=17416
 hauyne, polysynthetic structure 8=17348
 hydroxyapatite 8=17352
 ice V 8=17377
 intermetallic cpds., bond length dependence on hybrid character of bond orbitals 8=13004
 kernite, by X-ray diffraction 8=8542
 labradorite, supersatellite reflections 8=13255
 lamprophyllite, (Ba, Sr, K)Na(Ti, Fe)TiSi₂(O, OH, F)₃ 8=17344
 Laves structure formation rel. to MgM₂, (M = Cu, Zn, Ni) 8=13071
 lepidocrocite, by Mössbauer absorpt. spectroscopy 8=17370
 leucophanite 8=13252
 magnetic structure representation analysis 8=13951
 manganese vanadate, determ. of O₂ parameters and degree of conversion 8=8534
 meliphanite 8=17351
 metallic lattices stability rel. to highest density principle 8=17329
 metallic lattices stability rel. to space-filling and coordination number 8=17330
 methylammonium chromium alum, rel. to Lipson classification 8=22017
 mica, lattice spacing, particle size effects 8=17301
 oxiodates of Sr, Ca and Cd 8=8558
 pascoite, Ca₃V₁₀O₂₈, 17H₂O, and refinement 8=17350
 perovskite-type crystals, lattice dynamic modes rel. to atomic displacements 8=17332
 potash feldspar, Al-Si order and Rb impurity effect 8=17618
Crystal structure, atomic—contd
inorganic compounds—contd
 pyrosmalite 8=17393
 α -quartz, integrated intensities, expt. test of general formula 8=13480
 α -quartz, structure factor ratios by Pendellösung method 8=13291
 rare-earth aluminides, RAl, rel. to DyAl and CeAl structures 8=1789
 rare-earth aluminides, RAl₃, closest-packing super-structures 8=17410
 rare earth-aluminium systems, binary 8=13286
 rare-earth metal-aluminium system, closest-packing superstructures 8=17410
 rare-earth cobaltides, RCo₃, and mag. props. 8=13967
 rare-earth cobaltides RCo₅, rel. to Curie temp. dependence 8=18350
 rare-earth-gallium compounds 8=1812
 rare-earth nickelides, R₂Ni 8=13247
 rare-earth oxide, R₂O₃-M₂O₃, (R=rare earth, M=Nb, Ta or Pa) 8=1802
 rare earth sulphate hydrates, X-ray and thermo-gravimetric analysis 8=17385
 rare-earths, stability and axial ratios 8=4866
 rinkite, and rel. to analogous silicates 8=8543
 spinels, equilibrium order-disorder 8=13282
 stishovite, effect of press. on parameters, and compression curve 8=22039
 thortveitite, (Y, Sc)₂Si₂O₇ 8=9447
 transition metal chalcogenides, MM₂X₄, M(M') = trans. metal, X = S, Se, Te 8=13294
 transition-metal molybdates, and props. 8=13296
 transition metal thionitobates, Mn₂S₄ 8=8560
 triclinic mica polytypes giving monoclinic diffr. patterns, symmetry enhancement phenomena 8=13290
 X-ray diffraction powder patterns, 80 substances 8=17327
 Ag(1) complex, monothiosemicarbazidesilver(1)chloride and mol. structure 8=22013
 Ag₃AsS₃, xanthoconite 8=13248
 Ag₂C₄H₄N₂ClO₄, X-ray diffraction 8=17333
 AgCl, rel. to electron distrib. 8=17334
 Al-serpentine, hexagonal 8=17336
 AlB₁₀, analysis by convolution mol. method 8=8507
 AlB₁₀, by convolution mol. method 8=17337
 Al₂Be₂Si₂O₈, structure refinement 8=17338
 α (AlFeSi) 8=8508
 Al₂O₃, distortion due to n-irrad. 8=22245
 Al₂O₃, lattice expansion rel. to n irrad. 8=13249
 Al(OH)₃, nordstrandite, by X-ray powder analysis 8=17339
 Al-Si, interaction with precipitates 8=13431
 AlTiMO₆, (M=Nb, Ta, Sb), and fluorescence 8=4879
 As₂Se₃, refinement by NQR method 8=17340
 Au₇Mg₂₃ phase 8=13251
 β -AuMn, change to f.c.c. structure on cold working 8=1704
 BaCa₂Al₂(Si, Al)₁₂O₃₀·2H₂O, structure refinement 8=17338
 Ba₂Me_x²⁺Fe₂O₇, hexagonal ferrites, and stacking sequences 8=17342
 Ba₂Si₂O₈, multiple chain structure 8=17343
 (Ba, Sr, K)Na(Ti, Fe)TiSi₂(O, OH, F)₃, lamprophyllite 8=17344
 BaTiO₃, micro electron diffr. investigation 8=8510
 Ba₂TiSi₂O₈, fresnoite, cell dimensions from X-ray powder data 8=18506
 Ba(UO₂AsO₄)₂·nH₂O, metaheinrichite, e-diffr. meas. 8=17360
 Bi single, backward elastic scattering of 5 MeV protons and 20 MeV α particles 8=20801
 BiFeO₃, and mag. structure from time-of-flight n-diffr. 8=17346
 Bi₂GeO₂₀, ferroelec. 8=13254
 Bi-O system, new tetragonal phase 8=17347
 Bi₂O₃-WO₃ and Bi₂O₃-MoO₃ system, and comp. of phases 8=17047
 BiOCl, lamellar crystals, and 'thinning' effect on electron diffr. 8=1784
 Ca aluminate hydrates, lamellar 8=8511
 Ca₂B(OH)₄ modifications 8=17353
 CaCO₃ (calcite), lattice parameters, precision, and thermal expansion 8=22015
 CaH₂IO₆·3H₂O 8=8558
 Ca(IO₃)₂·6H₂O 8=8558
 CaMg₂B₃(OH)₅·2H₂O, inderborite 8=17349
 CaNa₂(CO₃)₂·2H₂O, pirssonite, by X-ray diffr. 8=1785
 3CaO·Al₂O₃·3CaSO₄·32H₂O 8=13253
 Ca₂Sb₂O₇ (x = 1, 2, 3; y = 4, 5, 6), X-ray powder diffr. patterns 8=14363
 Ca₂V₁₀O₂₈·17H₂O, pascoite, and refinement 8=17350
 CaWO₃·Yb³⁺, symmetry of Yb³⁺ on charge compensation by Na⁺, e.p.r. study 8=18413
 CaYb₂O₇, rel. to Ca ferrite isomorphism 8=4870
 CbBe₃, data 8=17426
 (1-X)CdCr₂S₄·XCdCr₂Se₄ system, and mag. props. 8=1400
 CdH₂IO₆·3H₂O 8=8558
 CdI₂, two new polytypes with uncommon space-group symmetry 8=1786
 Cd₂Sb₂O₇ (x = 1, 3; y = 4, 6), X-ray powder diffr. patterns 8=14363
 CdS, Se_x films from vacuum deposition, structure 8=4748
 Cd[SC(NH₂)₂]SO₄·2H₂O rel. to S bridging 8=8514
 Cd[SC(NH₂)₂]SO₄·2H₂O 8=8513

Crystal structure, atomic—contd

inorganic compounds—contd

- CdTiS₂, new semicond. cpd, unit cell and space group 8=17354
 Cd₂V₂O₇ 8=8512
 CeAlO₃, chemically homogeneous 8=17355
 CeC₂, high-temp. lattice parameter 8=21785
 Co(III) complex, chloropentamminecobalt(III)dichloride, re-determination 8=22016
 Co complex, decammine-μ-peroxo-dicobalt pentanitrile 8=17356-7
 CoBr₂·2H₂O 8=1798
 CoCl₂·MCl (M=Rb, K, Na, Li), symmetry changes rel. to CoCl₂ conc. 8=9516
 Cr(CO)₆ 8=8516
 Cr(CO)₆, space group R factor, significance tests 8=8517
 CrO₂K₂, γ and n irradiated, e.s.r. 8=18417
 CrO₂(NH₄)₂, γ and n irradiated, e.s.r. 8=18417
 CrTiMO₆, (M=Nb, Ta, Sb), and fluorescence 8=4879
 CsUF₆, and isomerism with KOF₆ 8=1787
 Cs₂[UO₂Br₄] 8=17359
 Cu(II)azide, single-crystal X-ray exam. and refinement 8=22018
 Cu complex, dipotassium bis(glycylglycinate)cuprate(II) hexahydrate 8=17363
 Cu complex, N-salicylidene-glycinato-aquocopper(II) hemihydrate 8=8518
 CuCr₂Se₄, ionic config. from neutron diff. and elec. trans. props. 8=1788
 Cu_{1-x}Mg_xFe₂O₄, lattice constants on quenching in high oxygen pressure furnace 8=2516
 Cu₂Mn₃O₄, cation distrib. determ. 8=17364
 α-Cu₂P₂O₇ 8=17367
 Cu₂Se₂, umangite 8=17366
 CuTiF₆·4H₂O 8=17365
 Cu(UO₂AsO₄)₂·2H₂O, meta-zeunerite, e-diff. meas. 8=17360
 DyAlO₃, X-ray diff. 8=8544
 Fe carbonyl tolane complex, by X-ray analysis 8=4874
 Fe complex, tetracarboxyl (fumaric acid) iron racemate 8=1790
 Fe martensite, atomic displacements 8=4877
 Fe oxyhydrates, computation of bond distances and angles 8=22022
 Fe oxides, computation of bond distances and angles 8=22022
 Fe-C martensite, static atomic displacements by X-ray diffractions 8=4878
 Fe₂C₂, Hägg iron carbide 8=17372
 FeCl₃·6H₂O 8=1791
 FeCr₂Se₄, lattice parameters, rel. to d-orbital interaction clarification 8=5391
 FeLiO₂, Q₁₁ (or β) phase, X-ray diff. results rel. to periodic antiphase model 8=17386
 Fe-Mn carbides, cell volume obs. 8=22019
 Fe₂Mn₃O₄, cation distrib. determ. 8=17364
 Fe₂Mn_{1-x}TO₃, (T = rare earth), and mag. props. dependence on x value (0 to 1) 8=22851
 Fe₂(MoO₄)₃ 8=8526
 Fe₂(MoO₄)₃, refinement and structure formation 8=17374
 FeO, stoichiometric cpd. 8=13259
 δ-Fe₂O₃ (hydrate) 8=22023
 Fe₃O₄, diffraction of slow electrons at octahedral surface 8=8520
 GaAs, Sn doped, lattice parameter meas. 8=2191
 GaTiMO₆, (M=Nb, Ta, Sb), and fluorescence 8=4879
 Gd phosphate-vanadates 8=14330
 GdCl₃ 8=8523
 HCl·2H₂O, and H bonding 8=8504
 HCl·2H₂O and HCl·3H₂O, rel. to proton hydration 8=17196
 HCl·3H₂O, and H bonding 8=8505
 HClO₄·2H₂O, rel. to proton hydration 8=17196
 H₂O, dynamics in Na₂S₂O₆·2H₂O and Li₂S₂O₆·2H₂O crystals. 8=8537-8
 H₂O dynamics in Na₂S₂O₆·2D₂O, deuteron m.r. 8=8539
 HfSiO₄, synthesis and X-ray study 8=8524
 Hg(CN)₂·0.80 tetrahydrofuran, morphology 8=1794
 Hg(OH)F 8=17376
 Hg₂S₂Cl₂, confirmation and refinement 8=13264
 HgX₂-TLX, (X = I, Br, Cl) systems, cpds. formed 8=17085
 IBr, and refinement 8=22027
 In₂(MoO₄)₃ 8=8526
 InTiMO₆, (M=Nb, Ta, Sb), and fluorescence 8=4879
 Ir₂Se₃, Rh₂S₃ and Rh₂Se₃, octahedron pairs 8=1807
 KAg₂I₆, rel. to ionic mobility 8=17379
 2K₂CO₃·3H₂O 8=8528
 KCa₂(Be, Al)₂Si₂O₈·0.8H₂O, structure refinement 8=17338
 K₂Ca(SO₄)₂·H₂O, syngenite 8=13268
 KCl monocrystals, slow electron patterns 8=8527
 KCl:KBr(36:64), ion shift in lattice due to different sizes, from diffuse scatt. 8=17378
 K₂Cu(CN)₄, and refinement 8=17361
 K₂CuFe(CN)₆, tetragonal, X-ray analysis, i.r. and e.s.r. spectra 8=13265
 KF monocrystals, slow electron patterns 8=8527
 KH₂PO₄, anomalous incoherent scattering of thermal neutrons in Laue-case 8=13267
 KMnCl₃·2H₂O 8=17411
 K₂MoO₄·F_x·H₂O (x=1, 2, 3; y=5, 4) 8=17381
 K₂NiFe(CN)₆, cubic, X-ray analysis, i.r. and e.s.r. spectra 8=13265

Crystal structure, atomic—contd

inorganic compounds—contd

- K₂PtCl₆, lattice images with electron microscope 8=8500
 KSO₃NH₂, by neutron diff. meas. 8=4897
 KTh₂(PO₄)₃ 8=17382
 K(UO₂AsO₄)₂·3H₂O, abernathyite, e-diff. meas. 8=17360
 La phosphate-vanadates 8=14330
 La telluride system, six phases, and their crystal chemistry 8=17202
 La₂WO₆, lattice constants determ. 8=5709
 Li ferrite, FeLiO₂, Q₁₁ (or β) phase, X-ray diff. results rel. to periodic antiphase model 8=17386
 Li fluorophlogopite, 4-layer, new mica polytype 8=8531
 α-Li₂AlF₆, at room temp. 8=17390
 LiBaH₃, and deuterated cpd., n-diff. study 8=17391
 LiBO₂, β and γ high-press. forms 8=8269
 Li₂EX, E=Cu, Ag, Au; X=Al, Ga, In, Tl, Si, Ge, Sn, Pb, Sb, Bi 8=22028
 LiF, lattice distortion around V_K centre, ENDOR study 8=2009
 LiF:Fe³⁺ system, mag. resonance studies of crystal field distortions 8=13005
 LiN₃, rel. to NaN₃ and Sr(N₃)₂ 8=17387
 LiNaSO₄ 8=8530
 Li₂O-ZB₂O₃, refinement by least squares of 3-dimensional data 8=17389
 Li₂S₂O₆·2H₂O, rel. to H₂O dynamics 8=8538
 Ln₂O₃S₂, rare earth oxydisulfides 8=4883
 Lu phosphate-vanadates 8=14330
 LuTiMO₆, (M=Nb, Ta, Sb), and fluorescence 8=4879
 Mg[B₄O₅(OH)₆]·6H₂O 8=13270
 MgCr_{2-x}Mn_xO₄, tetragonal distortion of Jahn-Teller type study by X-ray and neutron diff. 8=13269
 MgGa_{2-x}Mn_xO₄, tetragonal distortion of Jahn-Teller type study by X-ray and neutron diff. 8=13269
 MgMn₂O₄, cation migration at high temps. rel. to lattice energy calcs. 8=4955
 MgM₂, (M = Cu, Zn, Ni), Laves structure formation 8=13071
 MgO, absolute structure factor meas. 8=17392
 MgO, distortion due to n-irrad. 8=22245
 MgO, lattice expansion rel. to n irradi. 8=13249
 MgO, line in middle of Kikuchi band, many-beam dynamical theory 8=13272
 α-Mg₂P₂O₇ 8=17367
 Mg₂Si, Renninger effect rel. to X-ray reflections 8=13271
 Mg(UO₂AsO₄)₂·nH₂O, novacekite, e-diff. meas. 8=17360
 Mn complex, μ-hydrido-μ-diphenylphosphido-bis (tetracarboxyl-manganese) 8=1799
 Mn complex, tetramethylammonium Mn(II) chloride, by X-ray diff. 7=1795
 Mn ferrite, Mn rich, lattice parameter temp. dependence (293-4, 5°K) rel. to comp. 8=17394
 MnBr₂·2H₂O 8=1798
 Mn₂Fe(CO)₁₄ 8=8533
 MnFe₂O₄, cation distrib. in sample from aq. soln., by n-diff. 8=13274
 MnMoO₄, preliminary data 8=17395
 Mn₃Sb₂O₆, X-ray powder diff. patterns 8=14363
 Mn_(1-x)V_x(Mn_{1-x}V_{x-1})₂O₄, determ. of O₂ parameters and degree of conversion 8=8534
 MnYb₂S₄, a spinel, mag. and structural study 8=5436
 Mo₂C, rhombic modifications and polymorphic transitions 8=8561
 MoCl₃-graphite, by single-crystal electron and X-ray diff. 8=1797
 Mo₂NiB₃, rel. to analogues 8=17396
 MoS₂ polytypes by e-diff. 8=17397
 (MoV_{1-x})₂O₅, (0≤x≤0.30) 8=17425
 NOSO₃Cl 8=13275
 Na tetraborate, Na₂O·4B₂O₃ 8=8541
 Na₂Ca₂Si₂O₉, by X-ray powder diff. 8=22030
 Na₂CdSi₂O₆, lattice struct., obs. 8=22031
 NaCl monocrystals, slow electron patterns 8=8527
 NaCl, structure factors and Debye-Waller factors at 300, 202 and 70°K 8=8535
 NaCl, thermal diffuse scattering contribs. to X-ray reflection intensities rel. to electron density distrib. 8=13277
 NaCl, X-ray structure amplitudes, statistical exam. 8=4885
 Na₂Fe₂O₆ 8=8540
 Na₂Ge₂Sn₂O₁₅(OH)₂, and refinement 8=17402
 NaN₃, and phase transformations 8=17387
 Na₄P₂O₇·10H₂O, improved dimensions 8=17400
 Na₂S₂O₆·2H₂O, rel. to H₂O dynamics 8=8538
 α-Na₂Si₂O₅, new refinement 8=13278
 Na₂SiO₃, improved dimensions 8=17400
 Na₂Si₂O₇, rel. to silicate sheet type 8=1801
 Na₂SnSiO₄ 8=17401
 NaTi₂Al₂O₁₂, from X-ray analysis 8=1800
 Na₂Ti₂O₁₅ 8=22029
 Na₂Tl, structure and bonding model 8=8536
 Na₂Tl, rel. to Tl-Tl bonding 8=17399
 Na₂Zr₂F₃₁, and refinement 8=13276
 Nb complex, (C₂NH₂)₂[NbCl₄O], deviation from superposition structure 8=13279
 Nb₂S₃ 8=22032
 Nd telluride system, six phases, and their crystal chemistry 8=17202

- Cu, cubic texture formation during recrystallisation 8-4809
- Cu, deformed with tension, recrystallization at low temp. 8-17230
- Cu, and mech. props., rel. to plastic deform. at low temps. 8-8403
- Cu-Be-Ag alloys, nucleation of precipitates 8-17040
- CuFe₂Mn₂O₄, tetragonal distortion 8-17205
- Cu₂P monocrystals in Sn, and structure 8-21948
- Cu-Zn, dendritic under optimal cooling 8-4822
- Fe-whiskers, nucleation 8-18335
- Fe-whiskers, nucleation mag. field strength investigations 8-5467
- Fe-Cr-Ni-Nb steel, recrystallization obs. 8-21950
- Ge semiconducting films, by zone-melting 8-8320
- Ge, thin foils, dislocation arrangement obs. 8-1975
- InSb, thin films, electron beam re-crystallization, electrical props. 8-8323
- KCl(ZnCl₂)-H₂O, interphase equil., by labelled Zn atoms 8-21933
- (K, Na)(Br, Cl) solid soln., constitutional supercooling, convection cells 8-8417
- Li disilicate, from Li₂O-SiO₂ glasses 8-21953
- N₂ from molten Li, supercooling 8-12814
- NH₄Cl(ZnCl₂)-H₂O, interphase equil., by labelled Zn atoms 8-21933

Crystallization—contd

- NaCl(ZnCl₂)-H₂O, interphase equil., by labelled Zn atoms 8-21933
- Ni, cold-worked, nucleation 8-8397
- Ni, during creep, models criticism 8-8857
- Ni, rel. to polygonization 8-4808
- Ni, weakly deformed, recryst. nucleation 8-8421
- NiCrWTi steel solidifying at high temp., diagrams and results 8-8423
- PbB₂O₃, interface temp. of crystallizing melt 8-21960
- Pu, electrorefined, recrystallization and concurrent plastic deformation, 24-115°C 8-21961
- Ra-Ba mixed crystals., Ra as radioactive tracer 8-21962
- Re, cube texture formation, electron microscopic observations 8-13129
- Se, vitreous, photo-cryst., electronic processes 8-22471
- α -SiC on diamond, directed 8-8428
- Sn, recrystallization, autoradiography 8-13142
- SnO-SiO₂ glasses, and decomposition 8-21965
- Zn crystallite nucleation rates rel. to prior adsorpt. on W emitter 8-1746
- Zn crystals in rod form. prep. 8-8431

Crystallography

- See also Electron diffraction crystallography; Neutron diffraction crystallography; X-ray crystallography.
- achievements in USSR, 1917-1967 8-2874
- anomalous transmission, thermal vibr. contrib. 8-8492
- antisymmetry 8-13113
- classification of 8795 substances by space group, etc. 8-8474
- films, Debye-Waller factor from freq. spectrum 8-13024
- groups of quasi-symmetry (P-symmetry) 8-8366
- groups of symmetry and kinds of antisymmetry, classification scheme 8-1718
- homometric structures 8-13161
- impurity capture coefficient for elementary step 8-8386
- indices of planes in twinned crystals., transform. formulae 8-1722
- isogyres, special forms and props. 8-17193
- lattice generalization and classification 8-17306
- non-crystallographic symmetry problem, linear analysis 8-8475
- oriented cutting of single crystals without external facing 8-13149
- single crystal studies, rotating head apparatus 8-8361
- symmetry groups up to 3-dimensions, geom. symbols 8-8365
- symmetry, theory and applications review 8-8364
- trial structure generation rel. to mol. symmetry and space groups 8-17302

Crystals

- See also Liquid crystals.
- alkali halide, box model 8-1627
- amplification of sound in crystals, effect of elec. field 8-1846
- charges acquired by rubbing with metals 8-18158
- diatomic, force consts. and cohesive energies 8-8192
- inert-gas matrices with trapped mols., rotation-translation coupling 8-8230
- interchange symmetry concept 8-4118
- ion removal from square lattices 8-21791
- Ising model, transport eqns. near critical point 8-10669
- lattice energies of heavy ionic crystals 8-21794
- methyltrichlorosilane, thermal-decomp. and texture of SiC formed 8-21994
- non-linear, tuning for second harmonic in laser beam 8-3322
- particles, fast, charged, reversibility 8-2016
- quantum mechanics, possible use for crystal construction 8-21790
- single, bremsstrahlung reflection spectrometry 8-6794
- Al, as neutron monochromator 8-854
- Cu, as neutron monochromator 8-854
- Cu, recrystall. and cold-rolled textures, study by n diffraction 8-17278
- D⁺ ion channeling, transparency model 8-22243
- HiCuSi single crystals. 8-4777
- KBr, structure factors, and electron distrib. in K and Br ions 8-17861
- KF-SnF₂-H₂O system 8-4781
- KH₂PO₄, anisotropic, analysis of stimulated Raman effects 8-9543
- K(Ta-Nb), characterization by electrooptic obs. 8-9199
- PbGe, as neutron monochromator 8-854
- ThCu₂Si₂ single crystals. 8-4777
- electron states. See Crystal electron states.
- etching
- anthracene 8-8381
- apophyllite, a-face structures 8-17220
- corundum, in H, orientation meas. by optical back reflection 8-17206
- diamond, synthetic, rates on different forms, comparative study 8-21929
- etchants for crystal defect studies, table 8-17597
- feldspar, plagioclase, electron microscopy study 8-21930
- ferrite hexagonal, in 1:1 HCl at 90°C, etch steps height used as standard for electron microscope calibration 8-8450
- particle detector using chemical etching 8-11331

Crystals—contd
etching—contd

- photoetching techs. rel. to precise and fine treatment of integrated circuit fabrication 8=18096
polyethylene, with fuming HNO_3 , after irradi. 8=17216
polyethylene, HNO_3 oxidation technique 8=17214
sucrose, dislocations 8=4983
technique for control of slip and bowing 8=8385
II-VI compounds, new optical-quality etch 8=21928
AgCl dislocations 8=1965
Al, electropolished, thermal etch pits formed during cooling 8=17117
Be, and polishing by metallographic technique 8=4790
BeO polycrystals, etch pitting obs. 8=13539
Cd, prep. and figure-types 8=1726
CdS, in KOH(NaOH) soln., sensitization to light 8=14294
CsI, dislocation, inhibitor ions role in prod. of pits 8=1727
Fe, thermal, in vacuum, around transformation point of α to γ 8=17652
GaSe, optimal etchant for visualization of dislocations on basal planes 8=1973
Ge, by I vapour, reflection coeff. from surface 8=8382
n-Ge, in HNO_3 -HF- CH_3COOH 8=4791
Ge, metallic, rel. to facet forming planes 8=1728
Ge point contact diode, etch pits due to plastic deform. 8=5326
Ge, vac. thermal etching 8=17217
InSb crystal, selective, in HCl solns. of FeCl_3 8=8383
InSb, metallic, rel. to facet forming planes 8=1728
 $\text{KCa}_2\text{H}_2\text{Si}_2\text{O}_8$ (apophyllite), on basal cleavages, rot. 8=8384
Li ferrite, self-decoration effect 8=1729
LiF, with Fe^{3+} soln., rel. to surface morphology 8=1724
Mo, dislocations, etch pitting 8=4978
 MoS_2 , rel. to detect of vacancies 8=4963
NaCl, etch-pit morphology changes on cleavage faces due to water 8=1731
NaCl, use of formic acid 8=17658
NaF, universal etch 8=1730
Nb, dislocation structures, chemical and electro-etched, optical microscope obs. 8=22208
NiO, dislocation etch pits, shape and size rel. to etching time 8=1977
 $\text{PbSe}_{1-x}\text{Te}_x$, dislocation revealing 8=1689
Se, hexagonal, etch pits 8=1990
Se phase identification in V_2V_{1-x} alloys 8=17102
Si films, etch rates in H_3PO_4 , influence of H_2O content 8=17218
Si, in HNO_3 -HF- CH_3COOH 8=4791
Si, in H_2O -amine-complexing agent 8=4792
Si, n-type, etching in aq. h.f. solns. 8=17219
Si, substrate, SiO_2 and Si_3N_4 elimination, epitaxial growth 8=13128
Si and SiO_2 surfaces, use of F^{18} in HF etches for fluoride chemisorption obs. 8=18697
Si, through windows in SiO_2 8=17245
Si, vac. thermal etching 8=17217
 SiC , use for polarity study 8=21999
 Si_3N_4 films, etch rates in H_3PO_4 , influence of H_2O content, and use of SiO_2 mask 8=17218
 SiO_2 film, rel. to temp. of deposition 8=21889
 SiO_2 films, etch rates in H_3PO_4 , influence of H_2O content, and use as mask for etching Si_3N_4 8=17218
 SiO_2 films, on Si, after exposure to electron beam 8=22609
Te phase identification in V_2V_{1-x} alloys 8=17102
 YMnO_3 , ferroelec., for visibility of domain structure 8=2247
Zn, etch pits at dislocations 8=4984
Zn, etch-pit technique, revealing dislocations 8=13439
- excitons.** See Crystal electron states/excitons.
- faces**
alkali halides, cleavage surface, adsorpt. of water vapour 8=17166
angles of prisms, measurement of 8=11124
anthracene, morphology 8=8381
cleaving device, in ultra-high vac. 8=21926
diamond (111), epitaxial growth of SiC 8=8428
diamonds, synthetic, growth hillocks on (100) faces 8=17213
diamond, trigons rel. to growth failure 8=4787
diamond twins, (111) faces, micromorphology 8=1723
dislocation-free growth rel. to long range action of local active centres 8=4797
oriented crystals prep., lapping machine attachment 8=21918
polyethylene, fold-surface struct. 8=17214
polyethylene, surface struct. 8=17215
surface reflection of atom and ion beams rel. to micro-structure 8=13201
thermodynamic classification of surface and ang. depend. of free surface energy 8=8377
X-ray topography, apparatus 8=17262
Ag(III), exam. by LEED rel. to secondary emission 8=17212
AgBr, microcrystals, effect of solvolysis on growth 8=4786
Be, polishing and etching by metallographic technique 8=4790
(nC_2H_7)₄NBr, non centrosymmetric, morphology 8=22054
Cr, oxidation rel. to Cr_2O_3 , epitaxial growth 8=4828
Cu, fatigued at low strain amplitude, surface slip line behaviour 8=17774

Crystals—contd
faces—contd

- Cu films, epitaxial, topographical changes on exposure to H_2 - O_2 combination at 325°C 8=8318
Cu single crystals, thermal smoothing 8=4788
GaAs, prep. for epitaxial deposition 8=9104
Ge, metallic etching rel. to facet forming planes 8=1728
InSb, metallic etching rel. to facet forming planes 8=1728
LiF, surface layer structure, props. after annealing 8=8378
LiF, surface morphology, after etching in Fe^{3+} soln. 8=1724
MgO, primary step growth obs. by direct transmission microscopy 8=4789
NaCl, cleavage, etch-pit morphology changes due to water 8=1731
NaCl, nucleation density of Au on cleavage surface 8=4742
NaCl, (100) surface, study with LEED 8=17116
Ni(III), oriented growth of Ni_3S_2 , e-diffr. study 8=17254
NiO, LEED study 8=8379
Pt, epitaxial growth on NaCl(100) face and CaF_2 (111) face 8=4752
Si, electrical decoration of solid surfaces, new method 8=8380
W, work function of Cs 8=13926
Zn single crystals, stress-wave cleavage 8=21927
- growth**
See also Crystallization; Zone melting and refining.
acetoxine, (CH_3)₂C:NOH from benzine soln., up to 2.5 cm., props. 8=8396
anthracene, vapour- and melt-grown, purity and perfection 8=21942
apatite crystallites, carbonate effects on morphology during growth 8=1720
apophyllite, a-face structures 8=17220
arsenolite epitaxial growth on fluorine rel. to temp. of As_2O_3 vapour and CaF_2 8=17252
benzene sulphanyl chlorides, parasubstituted, single crystals 8=13133
composite growth from melts 8=4647
conference, Moscow, July 1966 8=8362
corundum, weighing up to 1 kg, hydrothermally produced 8=8400
Czochralski, radial solute segregation 8=4815
dendrite tip instability 8=8432
diamond, in catalyst-metal system, graphite impurity crystal growth problem 8=1737
diamond, trigons rel. to growth failure 8=4787
diamond twins, from micromorphology of (111) faces 8=1723
diamonds, nucleation evidence 8=21945
1,2-diphenyl benzene, solidification kinetics into under-cooled melt 8=8401
diphenyl, layer-spiral, influence of constant electric field 8=21949
dislocation-free, rel. to long range action of local active centres 8=4797
f. c. c. dendrites, twin configs. 8=17247
ferrites, nucleation of magnetic domain walls 8=2339
films, nucleation mechanism, role of structural defects 8=1735
flame-fusion method, automatic control system 8=4795
flux method, striations due to temp. fluctuations 8=13449
flux technique with localized cooling 8=13143
in gels, large crystals. 8=21934
glass, contamination-nucleated growth at bubble surfaces 8=21937
graphite, pyrolytic, formation mechanism and structure 8=13134
graphite, spheroidal, in Fe-C, Ni-C, Co-C, Au-C and Fe-C-Si alloys 8=13156
ice from melt, preferred orientation 8=21924
ice, hollow tubes and needles of controlled size 8=8413
ice, in H_2O or NaCl solns., by butane evap. sub-cooling, rates 8=13137
ice in supercooled water and aq. sucrose solns., velocities 8=17236
ice, in supercooled water, ultrasound effects 8=22102
lanthanides, recrystallization and work-hardening characts. 8=5089
large and single with focused light 8=8389
metal films, epitaxial on NaCl and KCl in vacuum, electron diffraction and electron microscope obs. 8=13147
metal, impurity microsegregation on liq. stream interaction with solidification front 8=17224
metallic, depend. on supercooling, theory of expt. method 8=8419
metals, extraction from molten state, thermal regime 8=8175
microscopic rates of growth, determ. in single crystals. 8=17226
models, analysis, for slightly supersaturated solns. 8=21935
multicomponent chains, kinetics 8=8390
naphthalene, zone melting, ultrasound effect 8=13139
niobates, single crystals, Czochralski technique 8=21958
numerical technique for calc. 8=4793
with plane faces, from soln., rates for rough and perfect interfaces 8=8388

Crystals—contd
growth—contd

- PVC single crystals of low mol. wt. 8=17300
polyethylene, supercooled liquid, nucleation rel. to temp. 8=1533
poly-3-methyl-butene-1, isotactic, single crystals and structure, obs. 8=8599
polyoxymethylene, epitaxy and molec. struct. 8=17255
polypropyleneoxide, isothermal, calorimetric study of kinetics 8=4811
polythiomethylene due to radiation effect on trithiane 8=17184
rare-earth sesquioxides, by Verneuil method; radiation effects and optimum conditions 8=4813
rare-earth sesquisulphide single crystals. 8=9119
rate, by analogue computer simulation 8=8387
ruby, by floating zone tech. with resistance heating 8=21939
sapphire, filaments from melt 8=21973
silicate glasses containing fluorides 8=8357
single and large, with focused light 8=8389
from solution at low supersat., error anal. of rate meas. 8=8393
solutions, stirred, diffusive and kinetic processes 8=8391
sphalerites faces in polar direction rel. to surface polarization calc. 8=8392
spirals on crystals, grown from molten salts 8=4838
steel, preferential, secondary grains, during annealing 8=17283
step, capture coeff. of impurities 8=8386
surface processes in electrocrystallization 8=13131
theoretical rate versus rel. supersat. curve, using least squares method 8=13130
thermodynamic surface anal., and ang. depend. of free surface energy 8=8377
triglycerides, long-chain, rates and kinetics 8=8412
vanadites, rel. to elec. transport props. 8=4819
vanadium (III) tris(salicylaldehydes) and tris(salicylaldehydes) complexes 8=16343
vapour deposition, nucleation obs. by mass spectra 8=17155
verneuil method, plasma heat transfer 8=21936
Verneuil tech., high temp., by arc melting 8=4799
wurtzites faces in polar direction rel. to surface polarization calc. 8=8392
Ag films on mica, W substrate nucleation 8=13087
AgBr, microcrystals, effect of solvolysis on faces 8=4786
AgBr microcrystals, rates and defect formation 8=8698
Al, pure thin single crystals by strain-annealing from zone-refined Al 8=8398
Al-Cu alloy, dendrite structure at chill surfaces 8=4821
Al-Cu alloys, dendrite arm spacing rel. to coarsening effect 8=4820
AlK alum., rel. to supersaturation, at low supersaturation 8=21940
 α - Al_2O_3 , n-irrad. induced growth along a and c axes 8=13132
Ar, effect on dielec. and optical props. 8=2238
Au film on MoS_2 , epitaxial, under u. h. vacuum and defect structure 8=17125
Au films, on NaCl, high vacuum 8=21878
Au films on NaCl, high vacuum, model 8=21879
Au, uniform microcrystals, from hydrosols 8=1745
Be single crystals, formation of dislocations 8=1969
BeO, rel. to screw-dislocation appearance 8=1736
Bi, in furnace using zone cooling 8=4802
Bi, large crystals, from supercooled melt 8=17227
Bi, mode rel. to cleavage planes 8=17243
Bi-MnBi eutectic single crystal, rel. to semimetal and ferromag. props. 8=8402
Bi, Te doped, rel. to distribution coeff. and donor valency 8=22517
 $\text{Ca}_{10}(\text{PO}_4)_6(\text{Cl})_2$, single crystals, conversion to $\text{Ca}_{10}(\text{PO}_4)_6(\text{OH})_2$ by hydrothermal bomb. method 8=4776
Cd, vapour-grown, patterns from screw dislocations 8=4803
 CdCO_3 , and e. p. r. study rel. to antiferromagnetism 8=18372
 CdF_2 , and phys. props. 8=8409
 CdS , closed system vapour growth from Cd and S 8=17228
 CdS , improved furnace, rel. to fluorescence 8=1739
 CdS , from liq. Cd soln. 8=17229
 CdS , S₂ annealing pressure effect on resist. homogeneity 8=8980
 CdSb , mono and polycrystalline 8=13698
 CeO_2 , single crystal, for lasers and optical components 8=1740
Co films, electrolytically deposited, rel. to structure and props. 8=13999
 CoCO_3 , and e. p. r. study, antiferromagnetism and resonance 8=18372
CoO by arc-transfer, ambient atmos. and Li doping effects obs. 8=4806
Cr electrodeposits epitaxy rel. to internal stress development. obs. 8=22325
Cu films, epitaxial, and activity and topographical changes on exposure to H_2 - O_2 combination at 325°C 8=8318
Cu-phthalocyanines from vap. phase 8=21946
CuCl, clear crystals, in gels 8=8405
CuCl, Czochralski technique, and imperfections 8=4804
CuCl, for optical modulators 8=8407
CuCl, in silica gel, technique 8=21944

Crystals—contd
growth—contd

- CuCl , single crystals, flux method 8=17231
 Cu_2Cl_2 , by diffusing Cl^- ions into gel 8=8406
 CuF_2 , layer growth conditions 8=17232
 Cu_2P monocrystals in Sn, and structure 8=21948
 $\text{Cu}_2\text{NbS}_4(\text{Se}_4)$ 8=8408
 CuSO_4 , from aqueous soln. under X-irrad. 8=21947
 $\text{Cu}_2\text{TaS}_4(\text{Se}_4)$, and optical props. 8=8408
EuAl borate, nonstoichiometry 8=8410
Fe, form. of cloud group of inclusions during deoxidation of liq. Fe with Al 8=22183
Fe films, electrolytically deposited, rel. to structure and props. 8=13999
Fe-Ni-Co-Al-Ti alloys, added Si, Se and Te effects rel. to coercivity and energy 8=22805
 $\text{Fe}(\text{NH}_4)_2(\text{SO}_4)_2 \cdot 6\text{H}_2\text{O}$, isothermal, high mag. field effect 8=8411
 α - Fe_2O_3 whiskers on Fe 8=17250
 Fe_3O_4 , by arc-transfer, ambient atmos. and Li doping effects obs. 8=4806
GaAs, epitaxial, from Ga soln. 8=4829
GaAs, epitaxial, use of SiCl_4 8=13146
GaAs, epitaxial deposition in Ar 8=17253
GaAs epitaxial films, propag. of growth striae 8=17129
GaAs, high-mobility, grown by liquid-phase epitaxy 8=22589
GaAs-Ge heterojunctions, by iodine process 8=5312
GaP, large crystals, from soln. 8=17234
GaP, vac. deposited, polymorphism 8=21883
GaP, vapour growth, effect of substrate orientation 8=13136
GdFe garnet, epitaxial on YAl garnet by chem. vapour deposition 8=13099
Ge, epitaxial films, prep. by pyrolysis of hydrides 8=17130
Ge, epitaxial growth in open iodine process 8=17131
Ge, thin, from liq. films, structure obs. 8=1741
Ge tubes, by pulling from melt 8=9111
 $\text{GeSe}_{0.75}\text{Te}_{0.25}$, prep. and props. 8=2197
He, solid, electron microscope investigation 8=8465
 He^4 , hexagonal, for birefringence meas. 8=15155
HfC, by arc melting Verneuil tech. 8=4799
 $\text{Hg}(\text{CN})_2 \cdot 0.80$ tetrahydrofuran, morphology and atomic structure 8=1794
HgS, by vapour phase method 8=21955
 $\text{Hg}_2\text{S}_2\text{Cl}_2$, by vapour phase method 8=21955
InAs diode laser prod. 8=11106
InAs epitaxial film on GaAs, orientated growth 8=17132
InAs, epitaxial, preparation and properties 8=1749
InAs-GaAs heterojunctions, by iodine process 8=5312
InOF, by reaction of In_2O_3 and InF_3 at 1000°C 8=8414
n-InP, effect of As doping on electrical properties 8=9113
InSb, epitaxy on single crystal substrate 8=17133
InSb films 8=13091
InSb films, epitaxial, electron diffraction study 8=21884
InSb, mechanism for single crystals using temp.-gradient zone melting 8=21951
 $\text{K}_{0.4}\text{Li}_{1.6}\text{NbO}_3$, single crystals, ferroelec. 8=21952
 $\text{KAl}(\text{SO}_4)_2 \cdot 12\text{H}_2\text{O}$, isothermal, high mag. field effect 8=8411
 $\text{KBr} \cdot \text{NO}_3$, CO_3^{2-} , SO_4^{2-} and SeO_3^{2-} , impurity anion form. conditions 8=8745
KCl, from aq. soln., effect of PbCl_2 8=8415-16
KCl, from soln., distrib. of Pb^{2+} impurities 8=17238
KI with TI impurities using vacuum furnace 8=17237
 KNO_3 , hydrothermal synthesis, 2-3 mm in size 8=8418
 $\text{KTaNb}_2\text{O}_{10}$ and effect of comp. on elec. resistivity 8=22503
 KTaO_3 , hydrothermal synthesis up to 1 mm in size 8=8418
 LiCe_2WO_4 , hydrothermal synthesis 8=21954
 LiF , with various Li isotope ratios, control using Stockbarger-Bridgman method 8=1742
LiH rel. to colour centre form. obs. 8=8748
 $\text{LiNd}(\text{WO}_4)_2$, hydrothermal synthesis 8=21954
 $\text{LiPr}(\text{WO}_4)_2$, hydrothermal synthesis 8=21954
 MgAl_2O_4 fibres and platelets, and crystal chemistry 8=2195
 MgO , primary step growth obs. by direct transmission microscopy 8=4789
 MgO whiskers, ductility obs. 8=13586
 MgO whisker, by vapour-liquid-solid, evidence 8=13144
 $3\text{MgO} \cdot \text{B}_2\text{O}_3$:Ge:Mn phosphors and luminesc. obs. 8=9621
 $\text{MgSO}_4 \cdot 7\text{H}_2\text{O}$, epsomite, left form predominance origin 8=17241
 Mg_2SiO_4 , forsterite, by flame fusion method 8=17242
Mn ferrites, (and mixed with Zn), intermed. phases in formation 8=17087
 MnCO_3 , and antiferromagnetism and resonance 8=18372
 Mn_3O_4 by arc-transfer, ambient atmos. and Li doping effects obs. 8=4806
Mo film on insulating substrates, heteroepitaxial 8=17134
 N_2 solid, electron microscope investigation 8=8465
 NaClO_3 , rel. to supersaturation, at low supersaturation 8=21940
 $\text{NaD}_2(\text{SeO}_3)_2$, ferroelectric 8=8420
 $\text{Na}_2\text{Fe}_2\text{O}_9$ 8=8540
 $\text{NaH}_2(\text{SeO}_3)_2$, ferroelectric 8=8420
 $\text{NaI}(\text{Ti})$, effect of Cl^- ions on activator distrib. 8=14327
 NaNO_3 , and dislocations, obs. 8=21957
 NaNO_3 , epitaxial, rel. to dielec. props. 8=2239
Ni films, electrolytically deposited, rel. to structure and props. 8=13999
Ni, weakly deformed, recrystallization nucleation 8=8421

Crystals—contd

growth—contd

- NiBr₂, surface-spikes, and impurities conc. 8=4807
 Ni-Fe ferrite, using arc image furnace 8=8422
 NiMn₂O₄, single crystals. 8=21959
 NiO by arc-transfer, ambient atmos. and Li doping effects obs. 8=4806
 Ni₃S₂ on Ni(III), oriented, e-diffr. study 8=17254
 O₂ solid, electron microscope investigation 8=8465
 PO₄, in static system, pH effects 8=17239
 PbB₂O₆, interface temp. of crystallizing melt 8=21960
 PbS, in silica gel near ambient temperatures 8=1743
 Pb-Sn alloys, composite growth from melt 8=4648
 PbZrO₃, coprecipitation meas. 8=1744
 Pt, refinement by annealing in air 8=4812
 Pt, uniform microcrystals, from hydrosols 8=1745
 Rb, vapour-deposition on Ag wire 8=13140
 Sb, mode rel. to cleavage planes 8=17243
 Se, hexagonal from orthorhombic, by polymorphic transition 8=8426
 Se, hexagonal single crystals, from supercritical NH₃ 8=8425
 Se, monoclinic by precipitation from solution in CS₂ 8=4814
 Si, epitaxial, effect of surface perturbations 8=17256
 Si epitaxial films on α -alumina, rel. to elect. props. 8=9121
 Si epitaxial films on Ge(111) surfaces, LEED struct. obs., 870°K 8=17140
 Si, epitaxial films, prep. by pyrolysis of hydrides 8=17130
 Si epitaxial films on Si(311) surfaces, LEED struct. obs., 870°K 8=17140
 Si epitaxial layers, "hillock" formation 8=17619
 Si films on W substrate by vacuum evaporation 8=4758
 Si, homoepitaxial, vacuum deposition, low temp. 8=1697
 Si, ingot prod. by Czochralski method 8=13141
 Si on insulators, epitaxy 8=8328
 Si, large area p-n junctions, by epitaxial growth technique 8=5316
 Si, radial solute segregation in Czochralski growth 8=4815
 Si on sapphire by chemical-vapour deposition, electron microscopy obs. 8=4826
 Si, single crystals, on cleaved planes, faults investigation 8=17244
 Si, substrate, SiO₂ and Si₃N₄ elimination, epitaxial growth 8=13128
 Si, through windows in SiO₂ 8=17245
 Si, variable capacitance diodes, low temp. epitaxial growth 8=13856
 α -SiC on diamond, directed 8=8428
 SiC, single crystal films on Si 8=1748
 β -SiC, from soln., C transport kinetics 8=17246
 SiC, vapour-liq.-solid and melt growth 8=21963
 SiO₂, epitaxial systems, vapour deposition 8=13148
 SiO₂ films deposited on n-type Si 8=4757
 SiO₂, film, in microwave discharge 8=4755
 SiO₂ isolation structures, fabrication rel. to integrated circuits 8=21964
 Si-WSi₃-Si, epitaxial struct. 8=17257
 Sn single crystals, by Webb-dendrite method 8=4824
 Sn, whiskers and filamentary growths on film due to d.c. 8=13145
 Sn-Bi alloys, dendrite morphology 8=4825
 Sr_{1-x}Ba_xNb₂O₆, Czochralski technique 8=21966
 TaC, by arc melting Verneuil tech. 8=4799
 ThO₂, single crystal, for lasers and optical components 8=1740
 TiO₂, by chem. transport with TeCl₄ 8=8429
 TiO₂, from the melt, single crystals 8=4817
 TlI, CsI stabilized 8=5640
 U-Cr alloys, martensite nucleation and growth in β - α transform., temp. dependence 8=4717
 US, mechanism, groove etching 8=21862
 β -US₂, single crystal prep. 8=4818
 Y, recrystallization and work-hardening characts. 8=5089
 YFe garnet, epitaxial on YAl garnet by chem. vapour deposition 8=13099
 Zn, effect of mech. vibr. 8=8430
 Zn ferrites, (and mixed with Mn), intermed. phases in formation 8=17087
 Zn, in rod form, prep. by recrystn. 8=8431
 ZnO, vapour phase 8=21970
 ZnS, cubic, epitaxial growth by evaporation in ultra-high vac. 8=21893
 ZnS, from melt, 1850°C, 50 atm Ar press. 8=21969
 ZnS, S³⁵ incorporation, radioactive 8=5000
 ZnS, Tm, and luminesc. rel. to Zn vacancies, obs. 8=8434
 ZnSb and ZnSb-CdSb mixed crystals, mono and polycrystalline 8=13698
 ZnSe, by direct fusion and electron mobility 8=2210

imperfections. See Crystal imperfections.

internal fields

- alkali metals, interionic potential modified in conduction electron presence 8=4671
 alkaline metals, strain critical systems 8=13524
 calcium fluoxytantalate: Eu³⁺, Sm³⁺, crystalline field parameters of ions 8=16973
 chemical shifts from n.m.r. resolution 8=4670
 cubic, lattice energy distrib. and its variation with compression or expansion 8=13000

Crystals—contd

internal fields—contd

- diamond lattice, second order dipole moments 8=1629
 electron momentum distrib. by Compton X-ray scattering 8=17907
 e. p. r. linewidth calc. by methods of moments 8=14086
 f. c. c. lattices, second order dipole moments 8=1629
 hyperfine fields in crystals, with mag. ordering 8=1630
 impurity ion, lowering of Slater parameters on electron exchanges 8=8700
 inhomogeneity effects on n. m. r. quadrupolar satellites 8=22917
 ion 3d⁵ configs. splitting by octahedral field 8=1654
 ionic complexes, overlap contrib. to elec. field gradient 8=21801
 ions with incomplete shells, spectra calcs. from field-theory 8=13033
 d⁷ ions in tetragonal fields, anal. of e.p.r. and optical spectra 8=21798
 lanthanides in fields of cubic symmetry, composite fⁿd configurations theory 8=21799
 lattice strain and Raman-active vibrations rel. to elasticity and piezoelectricity 8=5013
 magnetic hyperfine, sign determ. by Mössbauer-Faraday effect 8=13007
 magnetic impurity, Anderson and Kondo Hamiltonians for impurity orbitals 8=13008
 metals, electrostatic energy calc. by plane wise summation 8=8201
 metals, hexagonal, stress fields due to dislocation pile-ups on anisotropic treatment 8=1963
 metals, mag. moments nonlinear quantum pseudo-resonance 8=1631
 mixed cryst., impurity-host intermol. pot. energy rel. to coupling 8=17865
 molecular, lattice energy calcs. 8=13012
 molecular, strain tensors temp. dependence 8=13508
 parameters determ. using spin-lattice relaxation 8=18445
 periodic, stress thermally activated dislocation motion 8=8711
 polar, thermal eqn. of state, linear model 8=13013
 rare-earth ions, electric multipole interactions 8=16977
 rare-earths, theory of antisymmetric exchange 8=16972
 rectangular prismatic uniformly magnetized, demagnetizing fields 8=5454
 rutile-type with (nd)² ions, field theory explanation of e. s. r. spectra 8=9411
 Scheelites, pot. rel. to tetragonal rare earth centres optical and e. p. r. spectra 8=1637
 self-energy expressed as a continued fraction 8=10613
 62 \leq Z \leq 74, recoil implanted in polarized Fe-, Co- and Ni-environment, hyperfine fields 8=13034
 spin-orbit coupling, crystalline field with magnetic point group symmetry 8=1632
 tetrathiomolybdates 8=2438
 tetrathiotungstates 8=2438
 transition metal ions, octahedral complexes, electric quadrupole transitions 8=16976
 transition metal ion theory, recent Japanese work 8=16992
 transition metal cpds., thermodynamic and optical calcs. discrepancy correction 8=4669
 transition-metal fluorides, MO calc. of 10 Dq 8=4667
 weak octahedral field, matrix elements for config. d⁴ 8=13006
 III-V cpds., antishielding effects 8=14157
 AgCl, van-der-Waals dipole-dipole coeffs. 8=1625
 Ag-4.09% Cu, Ag and Cu binding energies 8=13029
 Ag-Cu-Sn system, electronic phases rel. to chemical displacements 8=17002
 Au-Fe solid soln., magnetic ordering rel. to electric hyperfine interactions 8=2289
 BaTiO₃, fine-grained, high permittivity, theory 8=22664
 CaFe₂O₄, hyperfine splitting rel. to spin relax. from Mossbauer studies 8=21804
 Ca₂Fe₂Si₂O₁₂, Fe³⁺ 3d⁵ configs. splitting 8=1654
 CaF₂:Sm³⁺, tetragonal field, energy levels 8=13009
 CaF₂:Yb³⁺, polarization effects in cubic cryst. field 8=21800
 CaO: Mn²⁺, impurity ion hyperfine coupling constant temp. dependence 8=8196
 CaWO₄:Ce, charge-compensated sites, local elec. fields 8=9418
 CaWO₄:Yb³⁺ 8=14205
 CdS, elec. field and photo-Hall mobility 8=17860
 CdS, piezoelec., field distrib. determ. by optical probe 8=18033
 Ce³⁺-activated phosphors 8=18600
 Co(H₂O)₆³⁺ and Co(NH₃)₆³⁺ thermodynamic and optical calcs., discrepancy correction 8=4669
 Co-Ni alloys, effective field distribution at Co⁵⁹ nuclei 8=8195
 Co-Pd alloys, (8.3 to 0.03 at. % Co), effective mag. field at Co⁵⁹ nuclei 8=5463
 Cr³⁺ in tungstates (ZnWO₄-type), third crystal-field constant meas. 8=16974
 Cu alloys with non-mag. impurities, elec. field gradient 8=9458
 CuCl₂.2H₂O, dipolar mag. field at proton site 8=18378

Crystals—contd

internal fields—contd

- Cu(HCOO)₂·4H₂O, magnetic props. and transitions 8=5501
 CuSO₄·5H₂O, proton conductance 8=8982
 Dy-Al-garnet hyperfine splitting of lowest 2' state of Dy 8=9301
 ErCl₃·6H₂O hyperfine splitting of lowest 2' state of Er 8=9301
 Eu, hyperfine field from conduction-electrons 8=1633
 Eu-M₂ (M = Pt, Pd, Zn, Rh), mag. hyperfine field Mossbauer studies 8=18334
 EuAl borate 8=8410
 EuF₃ 8=14214
 EuPd₃, mag. hyperfine field Mossbauer studies 8=18334
 Fe²⁺, cubic, magnetically induced electric field gradients, theory 8=21803
 FeBr₂, hyperfine structure at 78°K and 4°K Mössbauer effect obs. 8=13025
 FeCl₂, hyperfine structure at 78°K and 4°K, Mössbauer effect obs. 8=13025
 FeCl₃, hyperfine structure at 4°K, Mössbauer effect obs. 8=13025
 FeCl₂·2H₂O, antiferromag., exchange interaction rel. to magnetization process 8=2349
 FeCr₂S₈, effective fields in Fe⁵⁷ Mössbauer spectra 8=1647
 Fe(H₂O)₆²⁺, thermodynamic and optical calcs., discrepancy correction 8=4669
 FeI₂, hyperfine structure at 78°K and 4°K, Mössbauer effect obs. 8=13025
 Fe-In binary sy tem, γ-Fe field contraction, and δ, α expansion 8=8160
 Fe(NCS)₂·4Py, electric field from Mössbauer effect 8=8213
 FeSiF₆·6H₂O, hyperfine interactions from Mössbauer spectra 8=8220
 FeSiF₆·6H₂O, pure and diluted crystals, ligand field behaviour and mag. susceptibility 8=18297
 Gd, hyperfine field from conduction-electrons 8=1633
 H₂, ortho, in solid para-H₂, field splitting by n. m. r. obs. 8=13010
 H₂ solid, 1.6-4.2°K, magnitude of splittings for J=1 rot. manifold deduced from n.m.r. data 8=14141
 Ir¹⁹³ in Ar-rare-earth cpds. 8=1634
 KBr, van-der-Waals dipole-dipole coeffs. 8=1625
 KCl, van-der-Waals dipole-dipole coeffs. 8=1625
 KI, van-der-Waals dipole-dipole coeffs. 8=1625
 LaCl₃·Gd³⁺ 8=16975
 LiBH₄ and LiBD₄ 8=18466
 LiF:Fe³⁺, system, crystal field distortions, resonance obs. 8=13005
 MgAl₂O₄ rel. to optical transition variation with temp. 8=23000
 MnCsCl₃·2H₂O, parameters for Mn²⁺ ion from absorpt. spectrum 8=8197
 NaCl, pure and doped, pot. differences due to plastic deform. temp. dependence 8=16978
 NaI, elastic tensor of gradient elec. field induced by uniaxial stress, n. m. r. obs. 8=13014
 Na_{0.33}V₂O₅, model of electron transport 8=22601
 Nd ethylsulphate, parameters determ. using spin-lattice relaxation 8=18445
 NiF₂, thermodynamic and optical calcs., discrepancy correction 8=4669
 Ni(H₂O)₆²⁺ and Ni(NH₃)₆²⁺ thermodynamic and optical calcs., discrepancy correction 8=4669
 Ni₂Mn alloy, magnetic field at Mn⁵⁵ 8=1635
 Pa, large magnetic moment associated with Fe impurity atom, spin perturbation 8=1655
 Pd-Fe alloy containing H, hyperfine fields and isomer shifts temp. dependence by Mössbauer effect 8=13020
 Pr³⁺, field splitting and exchange interaction with electrons rel. to metal magnetism 8=2292
 PrCl₃, exchange charge effects 8=13011
 Pr₂(SO₄)₃·8H₂O, Pr¹⁴¹ n.m.r. meas. 8=14155
 RbFeF₃, effective fields in Fe⁵⁷ Mössbauer spectra 8=1647
 Sb impurity in Fe or Ni, internal nucl. 8=8198
 Sb Menshutkin complexes, electric field gradient, asymmetry parameter temp. depend. 8=21802
 Sb¹²⁴ implanted in Fe, hyperfine 8=8199
 Sn, oscillatory rel. to Knight shift 8=5566
 SrO:Mn²⁺, impurity ion hyperfine coupling constant temp. dependence 8=8196
 Ti³⁺ in SrTiO₃, electronic structure 8=9445
 Tm, crystalline elec. field determ. by Mössbauer-effect 8=8203
 TmN, exchange effects, e. p. r. study 8=2376
 TmT₃ (T = transition element), Mössbauer effect determ. of elec. field splittings 8=16979
 VO₂, V⁴⁺ electronic structure, field theory explanation of V⁵¹ n. m. r. spectra 8=9411
 Y_{3-x}Ca_xFe_{5-x}Sn_{0.12}, Mössbauer effect of Fe⁵⁷ 8=4677
 YFe garnet, transitions rel. to reflectivity 8=5642
 YFe garnet:Yb³⁺, behaviour on anomalous sites 8=22860
 Y₃Fe_{5-x}Cr_xO₁₂, symmetry by ferromagnetic resonance 8=1636
 Y₃Fe₅O₁₂:Ho³⁺, Faraday effect obs. 8=14271
 YGa garnet, transitions rel. to reflectivity 8=5642
 YbCl₃·6H₂O hyperfine splitting of lowest 2' state of Yb 8=9301

 Bi, condensed on a surface, 2-4°K, phonon spectrum 8=2155
 CCl₄, dissolved coronene and triphenylene mols. deform., phosphoresc. obs., 77°K 8=1577
 CaF₂, additively coloured, phonon-assisted colour centre fluorescence 8=14306
 CaF₂:Yb³⁺, anisotropy of spin-lattice relax. for Kramers doublets 8=9414
 CaO:Mn²⁺, orbit-lattice interaction from lattice vibration amplitude 8=8196
 CaWO₄:Nd³⁺, spin-photon interaction 8=14121
 CdO, lattice vibrations, influence on u.v. reflection 8=9514
 Ce ethyl sulphate, Schottky anomaly and spin-phonon coupling 8=8636
 Ce ethyl sulphate, spin-phonon scatt. in mag. field rel. to thermal cond. 8=13393
 ClO₂⁻, ClO₂⁻ vibr. in alkali halides 8=22968-9-70
 CoO, dynamics and mag. excitations 8=22086
 Cr₂O₃, acoustic spin waves, studied by neutron scattering 8=14065
 CsCl, theoretical study, using shell model, sp. ht. and dispersion curves 8=8610
 Cu, f.c.c., angular forces in lattice dynamics model 8=8612
 Cu, phonon freq. determs. at 49 and 298°K 8=8611
 Cu-Al-Zn alloys, dislocation-phonon scattering rel. to thermal conductivity meas. 8=22203
 Cu-Mn alloys, Cu⁶³ n.m.r. and spin-lattice relax. 8=9464
 α -Fe, phonon dispersion relation at room temp. 8=1835
 Fe, phonon motion of mag. atoms, studied by polarized neutron scatt. 8=14012
 α -Fe, phonons and magnons, dispersion relations 8=13331
 Fe-N quenched alloys, martensite distortion 8=8522
 α -Fe-O₂, new type of antiferromagnetic resonance 8=2360
 FeV₂O₄, vibration, effect of deformation 8=8614
 GaAs, coupled optical-phonon-plasmon modes rel. to Raman scattering 8=22984
 GaP, dielectric dispersion and phonon line shape 8=14215
 H, solid, ortho, low lying excitation and ground state configuration 8=8267
 He, b.c.c., phonon freq. calcs. and thermodynamic props. 8=1836
 He, solid, by n-scattering at 2.9°K and 125 atm. 8=1837
 He³, solid, nuclear relaxation, 0.3-0.04°K, spin-lattice interaction 8=3130
 He⁴, phonon dispersion measurements on single crystals 8=10815
 In film, transverse phonon generation by microwave excitation 8=4903
 InSb, electron-TO- and electron-LO-phonon interactions 8=13817
 InSb, freq. of transverse oscillations along symmetry axes, by X-scattering meas. 8=8613

Crystals—contd

lattice mechanics—contd

- InSb, In¹¹⁵, Sb¹²¹, ¹²³ nuclear spin-lattice relax. rates 8=9471
 InSb, nuclear spin-lattice relax. temp. dependence 8=9472
 K halides, phonon scattering by monatomic impurities 8=4904
 KBr, U-center local mode absorption 8=1831
 KBr:O₂⁻, effect anharmonic vibrations on isotopic displacement of luminescence 8=22937
 KBr:Sm²⁺, one-phonon sideband of 6890 Å transition at 7°K 8=9614
 KCl, effective lattice freq. and F-centre half-width calcs. 8=4993
 KX, (X = Cl, Br, I), rel. to U centre electronic structure 8=2001-2
 K₃Cr(CN)₆, spin-phonon transition probabilities, meas. 8=5544
 KDF₂, vibrations, i.r. absorpt. study 8=5617
 K₄Fe(CN)₆, 3H₂O, ferroelectric phase transition, Mössbauer test for dynamical model 8=22667
 KHF₂, vibrations, i.r. absorpt. study 8=5617
 KI(Cl), phonon dispersion curves by X-ray analysis 8=1333
 KMF₃, (M = Mg, Mn, Co, Ni) rel. to i.r. reflectance spectra 8=2426
 KI-NaI, (-RbI), (-KCl) solid solns., rel. to absorpt. edge 8=22994
 KMF₃ (M = Mg, Mn, Co, Ni, Zn, Mg/Ni), i.r. transmission spectra rel. to multiphonon processes 8=2427
 KMgF₃, vib. anal. and assignments 8=2428
 KNiF₃, vib. anal. and assignments 8=2428
 KZnF₃, vib. anal. and assignments 8=2428
 Kr, solid, phonons anharmonic effects 8=17481
 Kr, solid, zero-point energy, effect of long-range 3-body forces 8=22083
 Kr, solidified, vapour pressure, binding energy and mean vibration freq. 8=16960
 LaBr₃, multiphonon orbit-lattice relaxation 8=13334
 LaCl₃, multiphonon orbit-lattice relaxation 8=13334
 LaF₃, multiphonon orbit-lattice relaxation 8=13334
 Li_{0.5}Fe_{2.5}O₄, phonon scattering by lattice distortions rel. to vacancies 8=8660
 MgF₂, phonons, dispersion relns. 8=13335
 MgF₂:V²⁺, phonon-terminated stimulated emission in vibronic sideband 8=2489
 MgFe₂O₄, phonon scattering by lattice distortions rel. to vacancies 8=8660
 MgO, surface modes of vibrations 8=17482
 MgO:Co²⁺, anisotropy of spin-lattice relax. for Kramers doublets 8=9414
 MgO:Fe²⁺(Ni²⁺), microwave phonon-impurity ion interactions 8=9450
 Mn²⁺ in Mn(Mg)SO₄·4H₂O, e. p. r. temp. dependence and spin-lattice relax. 8=9432
 MnF₂, rel. to i.r. spectra 8=14241
 MnF₂, phonon processes, selection rules 8=13318
 MnHg, thermal vibration amplitudes at 298°K 8=8236
 N₂O, i.r. absorpt. bands rel. to isotopic mols. and crystal lattice vibrations 8=14251
 Na, quasiharmonic calc. 8=1838
 NaCl, effective lattice freq. and F-centre half-width calcs. 8=4993
 NaHF₂, vibrations, i.r. absorpt. study 8=5617
 NaMg[Cr(C₂O₄)₃]·9H₂O, vibronic spectra 8=14247
 NaNiF₃, vib. anal. and assignments 8=2428
 Ne, self-consistent phonon theory, phonon spectrum and bulk thermodynamic props. 8=13336
 Ne, solid, zero-point energy, effect of long-range 3-body forces 8=22083
 Ni ferromag. reson. linewidth anisotropy, rel. to direct relax. to lattice, 25.92 and 9.42 GHz 8=2355
 NiCr₂O₄, vibration, effect of deformation 8=8614
 OCS, i.r. intensity of librational mode 8=14201
 Pb, compared with collective atomic motion in liq. state 8=12796
 Pb, phonon dispersion relations at 80 and 300°K 8=1839
 Pb, phonon-frequency distrib. and ht. capacity 8=1868
 Pb, phonons, freq. and wave vector connection, rel. to dispersion relns. 8=17483
 Pb, supercond., phonon spectrum change by lattice distortion 8=22559
 Pb, thermal vibration spectra, experimental 8=8607
 PbS(Te), by n-spectroscopy 8=13337
 Rb, compared with collective atomic motion in liq. state 8=12796
 RbMnF₃, rel. to i.r. reflectance spectra 8=2426
 RbMnF₃, vibr. modes 8=2449
 SO₂ hydrate, solid, l.f. vib. spectra of H₂O mols. 8=1840
 Se, vibrational props., i. r. spectra rel. to reflectivity and transmission 8=8615
 Si, vibr. freq. spectrum 8=8616
 Sn, compared with collective atomic motion in liq. state 8=12796
 β-Sn, freq./wave-vector phonon dispersion relations at 110°K 8=4907
 Sn, grey, phonon spectrum from inelastic scattering of cold neutrons 8=4905
 β-Sn, group-theoretical vibrational analysis 8=4906
 SnTe, by n-spectroscopy 8=13337
 SrF₂, additively coloured, phonon-assisted colour centre fluorescence 8=14306

Crystals—contd

lattice mechanics—contd

- SrO:Mn²⁺, orbit-lattice interaction from lattice vibration amplitude 8=8196
 SrTiO₃, ferroelectric phonon lifetime, at low temps. 8=4908
 SrTiO₃, optical-phonon freq., electric field depend. 8=5370
 Te, thermal vibration spectra, experimental 8=8607
 (Ti-Be) oxide, energy absorbers of superhigh-freq. vibs. 8=10458
 (Ti-Mg) oxide, energy absorbers of superhigh-freq. vibs. 8=10458
 UO₂, spin lattice interaction, first-order phase transition theory 8=22886
 UO₂, spin-lattice interaction, ground-state and spin-wave excitations 8=18437
 V:Fe⁵⁷, Mössbauer effect, recoil-free fraction and Doppler shift meas., localized modes 8=13338
 W, phonon drag effects below 2.6°K 8=5106
 Xe, solid, zero-point energy, effect of long-range 3-body forces 8=22083
 Xe, solidified, vapour pressure, binding energy and mean vibration freq. 8=16960
 YFe garnet interaction of microwave phonons with domain walls 8=22087
 ZnFe₂O₄, phonon scattering by lattice distortions rel. to vacancies 8=8660
 ZnO:Ni(Co), lattice-vibration effects 8=9563
 ZnS-phosphor, vibrational structure in stimulation spectrum 8=2459
 ZnS:Ho³⁺, lattice-activator energy transfer rel. to blue luminesc. centres, obs. 8=9643
 ZnS, Se_{1-x}S_x, LO and TO optical phonons 8=4909
 ZnS:Sm²⁺, lattice-activator energy transfer rel. to blue luminesc. centres, obs. 8=9643
- orientation**
 b.c.c. metals, lattice rotations for axisymmetric compressions, flow, computer solution 8=8373
 brass, rolled, texture representation by biaxial pole figures 8=17778
 corundum, H etched, meas. by optical back reflection 8=17206
 determ. from Kikuchi patterns, rapid method 8=13122
 determination, visual X-ray method 8=8371
 rel. to electro-optical effects in strongly anisotropic crystals 8=9495
 ferromagnetic films, controlled, rel. to coercive force 8=9333
 graphite, polycryst., effect on Young's modulus, comment 8=22319
 growth orientation in vapour deposited layers, "evolutionary selection" 8=13086
 ice, preferred, in growth from melt 8=21924
 from Kossel patterns, rapid method 8=21921
 lapping machine attachment for prep. oriented crystals 8=21918
 and lattice parameters from Kossel lines 8=21920
 from Laue photographs using vector analysis 8=22003
 Laue X-ray refl. method, puncture collimator 8=17322
 magnesia, hot-pressed, preferred 8=8375
 polymers, biaxially oriented, function plot rel. to spherical harmonic expansion coeffs. 8=17462
 polymers, crystallite randomization, nondestructive methods 8=8440
 polymers, preferred, polarized-fluorescence experiment, mathematics 8=1721
 steel, low-carbon, sheets, rolling and annealing textures 8=17799
 Weissenberg camera correction technique 8=17208
 X-ray diffraction orienting device 8=17207
 X-ray production dependence in e-microscopy 8=17266
 Ag, stability under plane compression 8=17662
 Al, effect on X-ray production on p-bombardment 8=4995
 Al, rolled, texture representation by biaxial pole figures 8=17778
 Bi₂Te₃ alloys, sintered 8=21922
 C fibres, preferred 8=1664
 CdS, polycrystalline, inversions in bulk crystals and thin films 8=8374
 Cu, effect on X-ray production on p-bombardment 8=4995
 Cu, rolled, texture representation by biaxial pole figures 8=17778
 InSb films, growth, structure 8=21884
 KI, reorientation of O₂, 1.5-4.2°K 8=13123
 Li film on W and Re faces, effect of film thickness and substrate orientation on work function 8=18256
 Nb-Mo alloy single crystals, rel. to plastic deformation, -196°C -250°C 8=17819
 n-Si rel. to anodic passivity in NaOH 8=2533
 Si, directional effects in proton scatt. 8=2034
 Si wafers, by proton channelling 8=8376
 Sn, condensed at low pressure, e diffraction pattern anomaly 8=13154
 Ti hydrides, disligning by plastic straining 8=4782
 Ti-Al alloys, dilute, hydride formation in thin foils 8=17016
 W, effect on X-ray production on p-bombardment 8=4995
 W, vapour deposited from WCl₆, rel. to work function 8=18248
 W, rel. to work function and phase changes of adsorbed N₂ on e-impact 8=21913

- Crystals—contd**
orientation—contd
 Zr rich alloys, basal plane normals, rel. to texture developed by rolling 8=22399
polarons. See Crystal electron states/polarons.
twinning
 anthracene, morphology 8=8381
 diamond twins, (111) faces, micromorphology 8=1723
 f. c. c. dendrites, twin configs. 8=17247
 fracture, twin-induced stress needs 8=5028
 growth, processes control of deformation twins 8=13124
 metals, h. c. p., process on {10 $\bar{1}2$ }, structural mechanism 8=13126
 p-aminobenzoic acid 8=8570
 polythiomethylene, radiation effect on trithiane 8=17184
 procedure for solving structure 8=4857
 quartz, synthetic, artificial twinning during plate sawing 8=17210
 steel, high-carbon, rel. to carbide formation mechanism during tempering 8=17073
 transformation formulae for indices of planes and directions 8=1722
 Au and Pd films, formation of twins during diffusion 8=13127
 BeO, twin boundary and dislocation decoration by n-irrad. at high temps. 8=22199
 Bi, due to deformation, rel. to elec. resistance change in deformation 8=5052
 Cu-2%Be alloy, and precip. on ageing 8=17625
 Fe-1.82%C, {110} twins in bct martensite 8=21925
 Fe-4.4%Si, direct observation of formation 8=13125
 Fe-4.5%Si, growth obs. on Neumann bands by high-speed photography 8=4783
 GaAs, vapour grown, twins and stacking faults obs. 8=1982
 InS, on growth and e-irradiation, rel. to phase transformations 8=17209
 Mg, second-order (10 $\bar{1}1$)-(10 $\bar{1}2$) twins, irrational habits 8=4784
 Mg-9 wt.% Al alloy, in age hardening mechanism 8=13583
 NiMn alloy, tetragonal, ordered 8=17289
 Rh₄(CO)₁₂ obs. 8=17412
 VO₂, and domain structure in low temp. monoclinic phase 8=4889
 Zn crystal, kinetics in deformation at 8-10°K 8=17211
- whiskers**
 corundum plates, elec. domains, and elec. effects rel. to formation 8=21972
 grown from solder terminations, in electrotransport process 8=8433
 polycrystalline metals, appl. in high strength materials 8=21971
 straining devices, two, for low temp. 8=22258
 α -Al₂O₃, sizing and orientation method 8=17248
 Al₂O₃, structure and mech. props. rel. to size and geometry 8=5050
 Cd, growth from vapour on Cd substrate, and orientation 8=1747
 Cu-Fe, mixed, (from CuCl/FeCl₂ reduction) growth mechanism and strength 8=17249
 Fe, ferromag. nucleation, theor. investigation 8=18335
 Fe, surface struct., scanning e microscope obs. 8=17281
 α -Fe₂O₃ on Fe, morphology and growth 8=17250
 GaP, vac. deposited, polymorphism 8=21883
 In₂Sn, grown from Sn-In solder terminations 8=8433
 KCl, origin of Bragg spots 8=17380
 MgO, evidence for growth by vapour-liquid-solid mechanism 8=13144
 MgO growth, ductility obs., growth 8=13586
 β -SiC, elastic modulus 8=22392
 SiC, and field emission 8=9272
 Sn, electrodeposited, growth during storage 8=17251
 Sn, growth on film due to d. c. 8=13145
 Sn, grown from Pb-Sn solder terminations 8=8433
 Sn, superconducting, intrinsic thermodynamic fluctuations from depressions of supercurrent and T. 8=22560
 SrTiO₃, superconducting semiconductor films and whiskers, transition temps. 8=9056
 Zn, growth from vapour on Zn substrate, and orientation 8=1747

- bodies, elastic/visco-plastic, compressible, plane strain condition 8=10573
- brass, Bauschinger effect recovery mechanisms 8=17775
- brass, 70-30, rel. to texture development, pole figure 8=17777
- buckling of microfibrils in matrix due to cooling, phenom. and effect on strength 8=22289
- ceramics, basic mechanism, survey 7=17726
- circular plate yield-point load sealing an incompressible fluid 8=45
- creep of cylinder, thick walled, under internal press. 8=17731
- cylinder, hollow, changes in geometry during compression 8=10563
- cylindrical wafers, radial and axial press. grads. when between compression plates 7=19394
- EI-702 steel, effect on mechanism of precipitation 8=17078
- EI702 steel, metallographical investigation of mechanism 8=13570
- eigenmodal, under all-round dead loading, in elastic-plastic continua 8=19399
- of elastic bodies, meas. with double-pass interferometer 8=20092
- elastometers, multiaxial, stress/strain relns. 8=5010
- granular materials, impact cratering 8=8253
- graphite, cracking with increasing stress, stress-strain relations 8=5053
- graphite by n irradi. and bromination, 200°C 8=8764
- graphite, nuclear grade A, and anomalous strength 20-2200°C 8=8829
- h.c.p. metal (yttrium and rare earths), deform. planes and hydride habit planes 8=8728
- heat, metallurgical problems 8=22277
- initial finite deform. of simple elastic structures, effect on natural vibs. 8=15031
- liquid drops, shear, second-order theory 8=7993
- martensite carbon strength rel. to thermally activated deformation 8=22351
- measurement in rotating systems 8=10780
- membranes, tensile instability for large deformations. 8=13503
- metal, probability of fracture 8=17736
- metals, effect of u.s. vibration superimposed on static compressive load 8=8795
- metals, quenched, Bauschinger effect 8=5020
- microinhomogeneous bodies rel. to couple stress theory 8=42
- polycarbonate films, rel. to chem. structure 8=22403
- polyethylene, dislocation mechanism 8=2072
- projectile, impact on rigid target, direct anal. of dynamic behaviour 8=17728
- rolling contact fatigue, identification of potential failure nuclei 8=17749
- shallow trusses and arches, nonlinear creep buckling 8=22278
- shell, axisymmetric cylindrical, effects of anisotropy 8=19388
- shells, cylindrical under piecewise pressure, ring forces and moments, and energy losses 8=41
- shell, truncated conical, thin, buckling under uniform static press. 8=19382
- single crystals, explosive 8=17029
- spherulites, ringed, rel. to light scatt. patterns 8=9491
- steel, change in coercive force 8=14015
- steel, maraging, 15 and 18%Ni, influence of small cold deformation preceding ageing, discussion 8=17801
- toroidal shell, perturbation theory 8=10543
- twins, growth processes control 8=13124
- viscoelastic, nonlinear, relation to stress 8=2929
- Zircaloy-2, grain boundary effects 8=13447
- Ag-Ni alloys, f.c.c., stacking and twin faults 8=4988
- Al alloys, tensile, rel. to lattice defect recovery 8=22184
- Al, at high strain rates 8=13533
- Al circular foils, pressure effects 8=5044
- Al, e-irradiated, at 20°K rel. to dislocation model with defect barriers 8=13523
- Al foil, dynamic behaviour of dislocations, continuously observed 8=13433
- Al, quenched, Bauschinger effect 8=5020
- Al, rel. to (111)-(001) fibre texture formation 8=5045
- Al, shear along slip direction, stress-strain curves 8=17761
- Al single crystals, high strain rates 8=22310
- Al, tensile, rel. to lattice defect recovery 8=22184
- Al-Al₂O₃, dispersion strengthened, mechanism from rolling texture analysis 8=8812
- Al-4%Cu, deformational instability 8=8816

Deformation—contd

- Al-Cu-Cd alloys, before and during ageing, effects on precip. 8=17039
 Al_2O_3 , n-irrad. effects on lattices, thermal cond. etc. 8=22245
 AuAg alloy recovery and ordering rel. to optical consts., 276-1200 nm 8=22958
 AuCu alloy recovery and ordering rel. to optical consts., 276-1200 nm 8=22958
 AuCu₃ alloy recovery and ordering rel. to optical consts., 276-1200 nm 8=22958
 Be single crystals, dislocations formation, slip directions, fracture 8=1969
 Bi, and twinning, and meas. of elec. resistance 8=5052
 Bi, effect on electron spectrum 8=17870
 CdS rel. to luminesc., absorpt. and refl. spectra, obs. 8=9606
 CdSe rel. to luminesc., absorpt. and refl. spectra, obs. 8=9606
 Co alloys, f. c. c., ageing effects after deformation 8=17622
 Cr-Ni steel, behaviour 8=5085
 Cu, at 77 and 4.2°K rel. to creep at 650-700°K 8=17824
 Cu, Bauschinger effect recovery mechanisms 8=17775
 Cu, cyclic, coarse slip and crack form. and propag., obs 8=22330
 Cu, explosive formation, residual strains and hardening 8=13564
 Cu, quenched, Bauschinger effect 8=5020
 Cu, rel. to texture development, pole figure 8=17777
 Cu, tension deformed, recrystallization 8=17230
 Cu wire, drawing process with lubricant under externally generated pressure 8=2052
 Cu-Al alloy solid solution, latent heat of 8=13551
 Cu-Ni alloy solid solution, latent heat of 8=13551
 Cu-Zn alloy solid solution, latent heat of 8=13551
 Fe, armco, preliminary, effect on strain ageing 8=17786
 Fe, low-temp., point defects recovery 8=13418
 Fe, microcontours, during fatigue testing 8=2053
 FeCo, causing micro-strain and -hardness 8=13596
 Fe-Ni-C martensites, ferrous, rel. to hardness change 8=22352
 Fe-Ni-Si-C steel, effect of martensite ageing 8=22357
 FeV₂O₄, effect on lattice vibration 8=8614
 para-H₂, solid, stress-strain curves at 4.2°K, mech. constants 8=5074
 and He^{3,4}, relative abundances, implications of Brans-Dicke theory 8=23478
 K, thermally activated at low temps. 8=1957
 Li, under diffusive mass transport 8=22157
 Mg alloy, hydro-explosive loads 8=17815
 Mg, by plane-strain compression rel. to anisotropy 8=17814
 Mg-Li alloy, by plane-strain compression rel. to anisotropy 8=17814
 MgO, n-irrad. effects on lattices, thermal cond. etc. 8=22245
 Mg-Th alloy, by plane-strain compression rel. to anisotropy 8=17814
 Mo, structure and low-temp. ductility, deform. -induced changes 8=13589
 Ni, at 77 and 4.2°K rel. to creep at 700°K 8=17824
 Ni, intermittent, upper temp. limit from Cottrell formula 8=2064
 Ni, weakly deformed, recrystallization nucleation 8=8421
 Ni₃Co, causing micro-strain and -hardness 8=13596
 NiCr₂O₄, effect on lattice vibration 8=8614
 Ni₃Mn, causing micro-strain and -hardness 8=13596
 Ni-2ThO₂, dispersion-strengthened, cyclic behaviour 8=13597
 Si, B-doped, by uniaxial compression in elec. fields, rel. to hole relax. time 8=18074
 Si, elastically distorted, X-ray topography 8=13198
 n-SiC, α -phase, rel. to piezoresistance constants 8=18073
 Sn, supercond., effect on u. s. absorpt. 8=5213
 Ta, effect of Nb and Mo additions 8=8862
 Ta-Mo alloys, mechanism rel. to pure Ta 8=8862
 Ta-Nb alloys, mechanism rel. to pure Ta 8=8862
 Ti, mechanisms, low-temp. 8=8864-5
 Xe, solid, potentials, band structure and exciton states 8=2108
 Zn, at high strain rates in hardening process 8=17837
 Zr-H alloys, thermally-activated mechanisms 8=13613
 Zr-O alloy crystals, rate-controlling mechanism at 77-473°K 8=13614
- de Haas-van Alphen effect**
 See also Diamagnetism; Magnetic properties/diamagnetic.
 oscillations from free energy studies of nearly free electrons 8=2068
 Shubnikov-de Haas effect, additional oscillation due to $4\pi M = B - H_0$ 8=22446
 Shubnikov oscillations, resistance jumps, galvanomagnetic charact. 8=22445
 Be, Fermi surface, non-local pseudopotential model 8=8923
 Bi and Bi alloys, 1.2-4.2°K 8=13659
 Bi-Sb alloys, electron energy spectrum meas. 8=5104
 Mg, rel. to Fermi surface 8=2102-3
 Ni, and electronic band structure 8=9360
 Ni, rel. to band structure and Fermi surface 8=2106

de Haas-van Alphen effect—contd

- Pt, Fermi surface determ. for s- and d-like carriers 8=22752
 Rh, and Fermi surface 8=13643
 p-Sb₂Te₃, susceptibility meas. 8=9293
 Sn, dHvA susceptibility oscillation meas. rel. to Knight shift 8=5566
 Th, rel. to Fermi surface location 8=2294
 Y obs. 8=5434
 Zn, g factor determs. 8=2110
 Zn, in (0001) plane, freq. meas. 8=5435
- Delay lines, ultrasonic.** See Acoustics; Ultrasonics.
Delbrück scattering. See Photons/scattering.
Demagnetization. See Magnetization process.
Dember effect. See Photoelectromagnetic effects.
Demonstrations. See Teaching/demonstrations.
Dendrites. See Crystallization; Crystals/growth.
Densitometry
 He-I mixture, thermal diffusion meas. 8=7942
- Density**
 alkali nitrates and thiocyanates, fused 8=1556
 earth, interior distrib. 8=18826
 stellar gradient inversion, in convection zone 8=2778
 GaSb-GaAs alloy, pressure-sintered, densification and thermoelectric props. 8=4697
 Na borate glasses, and ht. of soln. and refractive index changes under high pressure 8=1715
- gases**
 mass of large volumes, determ. by direct weighing 8=7890
 methane-tetrafluoromethane system, and principle of corresponding states 8=7912
 with shock wave, corrections to Crook's soln. for density, temp. and vel. of gas 8=16667
 CO₂ near critical point, admixture density distrib. 8=21744
 NO, 200°-2000°K and at 1000 bar 8=7918
- liquids**
 densimeter, temp. sensitive, magnetic float 8=4544
 hydrostatic weighing, high precision procedure 8=14920
 methane-propane mixtures, at low temp. and high press. 8=12819
 plasma, spectroscopic 8=16538
 propanol-H₂O mixtures, with NaCl in soln. 8=4606
 Ag-Bi molten alloys with segregation tendencies 8=12812
 Ag-Pb molten alloys with segregation tendencies 8=12812
 Cs, 100-750°C 8=12813
 HeII near critical point, obs. 8=19702
 He³-He⁴ mixtures, dilute, molar density, 1.25-0.025°K 8=6230
 K-Na alloys, 0 to 300°K 8=21624
 K, 0 to 300°C 8=21624
 Li, 400-1125°C 8=12813
 Mg fused electrolyte, NaCl, KCl, CaCl₂ additives, obs. 8=23143
 Na, 0 to 300°K 8=21624
 NaCl solutions at 25°C using temp. sensitive magnetic float densimeter 8=4544
 Ne, at press. to 1000 atmos. 8=21555
 Rb, 50-800°C 8=12813
- solids**
 graphite slabs, meas. of isodensity curves by X-ray absorpt. 8=22317
 packed particles, bulk density, rel. to size and mass ratio, and degree of mixedness 8=17017
 parahydrogen, at up to 400 atmos. 8=16928
 polycapromide, correl. with melting temp. and nature and cond. of filters 8=21914
 Al₂O₃, decrease rel. to n irrad. and annealing 8=13249
 B₂O₃ glass, permanent densification by hydrostatic press. 8=22314
 BeO, hot-pressed, effect of adsorbed sulphate and fluoride 8=21821
 MgO, decrease rel. to n irrad. and annealing 8=13249
 SiO₂ film, rel. to temp. of deposition 8=21889
- Density measurement**
 cryogenic liquid mixtures, differential method 8=19347
 gas solns., up to 1 part in 10⁶ meas. 8=16803
 liquids, simultaneously with dielec. const. 8=1582
 magnetic float densimeter, temp. sensitive 8=4544
 plasma, ion-cyclotron instability threshold 8=7834
 polyacrylonitrile, atomic-pile-irradiated, changes 8=17709
 single small particles, determination by floating in liquid 8=6006
 soil, by γ -ray back-scatter 8=23231
 solids, hydrostatic weighing principle and technique 8=19348
 water at high press. from propag. meas. 8=21623
 He⁴, near critical point 8=259
- Desorption.** See Sorption.
Detonation
 See also Explosions; Shock waves.
 Chapman-Jouguet pressures, simplified calc. 8=23124
 chemistry, buffered equilb. 8=23123
 converging waves propag. 8=19540
 diverging wave, motion of gas 8=4461
 explosive hydrodynamic theory appl. 8=6146
 explosive liquids, by cavitation 8=171
 gas, collapsed cylindrical waves 8=7907
 in gas, self-similar motions 8=4462

Detonation—contd

- imploding, non-uniform self-propag nature 8=15059
- liquid, explosive, low velocity initiation, effect of shape and material of container 8=10720
- in liquids, during gap testing, wall interacts. rel. to shock initiation 8=15057
- nitroglycerine, low velocity, mechanism 8=21582
- nitroglycerine, shock initiation 8=6148
- nitromethane-acetone solns., wave front turbulence 8=6145
- oxyhydrogen mixtures, waves, induction zone obs. at low initial pressures 8=170
- pressure meas. in kbar range 8=6149
- propane-O₂-N₂ mixtures, velocity meas. 8=172
- reflected waves, detect. with ionization gauge circuit 8=3041
- unsteady flow behind, friction and heat transfer effects on transition to steady flow 8=15058
- waves interaction with flow field rel. to rocket motors combustion instability 8=10721
- waves in medium with variable initial densities 8=3039
- waves, rebounding, trajectory: analytical determination 8=169
- wave, spherical, distrib. of flow properties behind 8=15061
- C-H-N-O explosives, calc. of detonation props. 8=23122
- 2C₂H₂+SO₂ mixture, continuous combustion in annular channel rotation of spinning luminesc. heads 8=23121
- T-D gas mixture, propagation of thermonuclear detonation wave 8=21482

Deuterium

- \bar{p} annihilation in H₂ and D₂, rates rel. to initial state 8=20537
- autoionization, kinetic energy 8=12443
- autoionization process, calc. using H atom model 8=21034
- combination with H₂, gas torque effect on heated cylinder 8=1320
- crystal-structure changes during transitions in ortho- and para-states X-ray exam. 8=13263
- diffusion in Pd and Pd alloys, at 0° to 100°C 8=17582-3
- discharge lamp, constant-current power supply 8=19714
- dissociative attachment of e, survival prob. 8=1310
- dissolved in α -Zr, thermodynamic props. 8=8252
- electron transport coeff. 8=21521
- flash lamp pressure and voltage gradient effects 8=15522
- in gases, neutron spectrometry 8=9765
- gas, rotational relaxation, high temp. u.s. obs. 8=1251
- ionization, temporal growth and secondary ions, 0.2-40 keV, deceleration in Ag foil 8=2020
- laser action in electrical discharge containing D 8=12398
- magnetic drift vel. and deflection coeff. for slow electrons 8=7712
- neutron capture, cross-section 8=6988
- ocean content as water mass parameter 8=23238
- π^0 photoproduction, as test of symmetry in e.m. current 8=670
- polycrystalline, sound velocity meas. and elastic constant calcs. 8=17499
- p polarized beam scatt., 300-700 MeV, polarization parameter 8=6927
- p scatt and T = 1/2 state of He³ 8=3739
- in solar system, origin 8=19236
- solid and liquid, Raman spectra, intensity anomaly 8=9536
- solid, pressure changes on phase transitions 8=4711
- solid, Raman spectra anomalies rel. to mol. vibrations 8=9535
- solution in liquefied inert gases, absorption spectra 8=12887
- thermal conductivity, hot-wire cell meas., 30°-100° C, 120-150 torr 8=16700
- thermal cond. of O- and n-D₂, at 18.5, 19.8 and 21.1°K 8=7930
- water, atmospheric, tracer 8=2503
- Zeeman effect, Lamb shift and quantum electro-dynamics 8=1158
- D-neopentane exchange, effects of desorption, diffusion and surface exchange 8=23083
- D-T gas mixture, propagation of thermonuclear detonation wave 8=21482
- D₂ line, wing broadening, expt. 8=16194
- D⁺ ion source, polarization increase 8=10915
- D polarized beam prod. by charge exchange 8=15352
- D', critical angles for channeling in thin Au films 8=17704
- D'-rare gas collision, polarization of Lyman- α radiation 8=21004
- p-D₂ prep. by preferential adsorption 8=17158
- D₂ collisions with inert gases, total scatt. cross-sections 8=7634
- D₂ in liq. Ar, induced rot.-translation spectra 8=1564
- D₂ in liq. Ar, induced rot.-translation spectra 8=1564
- (o-D₂, He) system, translation-rotation energy transfer calc. 8=12374
- D₂-He, thermal conductivity, normal composition variation 8=7924
- D₂-HT mixture, thermal diffusion 8=4495
- D₂O, neutron spectra, time depnd. 8=6948
- D₂⁺ chemical reactions with He, cross section 8=14348
- ²D⁺ in Ge, channelling props., diff. calc. 8=13485
- D₃⁺ ions, reactions with alkanes and alkenes, energy transfer and deactivation 8=1358

Deuterium—contd

- HD, liquid, n.m.r. proton transitions 8=8133
 - HD-D₂ system, thermal diffusion factor 8=1494
 - in NH₃ system, isotopic disproportionation equilibria 8=2505
 - O + D₂ → OD + D reaction, e.s.r. detect. 8=14375
 - α -Ti-D₂ system, thermodynamic props. 8=21858
- Deuterium compounds. See Hydrogen compounds.**
- Deuterons**
- See also Cosmic rays/deuterons; Nuclear reactions due to/deuterons.
 - angular distrib. in Bi^{10,11}(α , d)C^{12,13} 8=1100
 - ang. dist. in Cu^{63,65}(He³, d)Zn^{64,66}, 18 MeV 8=3970
 - binding energy calc. using nonrelativistic sum rules from pot. scatt. 8=11641
 - blocking effects in Au films 8=22241
 - 3-body treatment, with n-p, p-e interactions 8=11639
 - channeling in crystals, transparency model 8=22243
 - disintegration on Au, Rh, Cu, C, Coulomb and nuclear forces 8=11934
 - electrodisintegration differential cross sections, resonance prod. 8=11640
 - ion source for tandem accelerator 8=6694
 - μ d + Y₂ → μ Y₂ + d, rate compared with μ p + Y₂ + μ Y₂ + p 8=12115
 - n-d scatt., Fadeev eqns. and n-n low energy parameters 8=15841
 - in nuclear emulsion nuclei interaction with 9 GeV protons, emission, obs. 8=15867
 - optical potential, from (d, p) stripping 8=1087
 - p + p → π^+ + d, 5 GeV/c cross-section meas. 8=20525
 - production, in He³ + γ → d + p, with Cabibbo-Radicati sum rule 8=6999
 - production, high-momentum 8=3735
 - (\bar{d}) singlet, detect. from reaction Be⁹(p, \bar{d})Be⁸ 8=871
 - singlet state rel. to Be⁹(p, d)Be⁸ 8=20787
 - D⁺ transmission through thin films 8=22242
 - H²(p, 2p), 9 and 10.5 MeV, decay mechanism 8=875
 - Sb^{117,119,121}(He³, d) spectra 8=3971

effects

Pt, damage and recovery rel. to vacancy behaviour 8=8697

interactions

- d- α 42 MeV α projectile, d break-up, spectrum 8=15868
 - D(d, p)T, 8 energies 2.1-14.1 MeV, p polarization obs. 8=11642
 - d-d, use of neutrons for deuterium plasma diagnosis 8=1404
 - d + He³ → He³ + pp, pick-up and charge-exchange 8=6990
 - d-He⁴, 1 MeV, rel. to 2.19 MeV level of Li⁶ 8=20675
 - D(p, γ)He³, cross-section from p μ d wave function 8=11593
 - D(p, p)d, polarization and phase shift at 3.00 MeV 8=6993
 - d-T reaction, n yield 8=874
 - D(t, n)He⁴, as polarized n generator 8=15844
 - K⁺d total cross section at 1.2 GeV/c, I = 0 peak rel. to K → K⁺(890) channel coupling 8=15804
 - K⁺d → $\Sigma^+\pi^0$, 815-, 915-, 1015- and 1115 MeV/c incident K⁺ momenta 8=20574
 - n-d, 14.1 MeV, coincidence meas. 8=11643
 - n + D → p + 2n, counter telescope for energy and ang. distrib. 8=11646
 - pd, at about 2 GeV/c, final state p $\bar{d}\pi^+\pi^-$ 8=15827
 - p + d → B + d and B-N scatt. factor 8=3736
 - p-d, low-energy, resonance charge exchange meas. 8=828
 - p photo-absorpt. sum rule 8=3577
 - π^+ + d → M + d, and M-N scatt. factor 8=3736
 - π^+ + d → p π^0 + p + neutrals, 2.7 GeV/c search for ϵ^0 8=11488
 - T(d, n)He⁴ rel. to polarized d beam prod. 8=11602
 - T(d, n)He⁴, as polarized n generator 8=15844
 - t-d prod. of n with t in Zr or Ta, yield decrease diffusion mechanism theory 8=6921
 - tritium targets, life under bombardment in accelerator 8=11290
 - H²(d, n)H³, below 400 keV, polarization of n emission obs. 8=20582
 - H²(He³, γ)Li⁵, 2-5.5 MeV, resonances obs., applic. of S-matrix theory 8=20581
 - H²(N¹⁴O¹⁵(N¹⁵)), 30 MeV lifetimes of mirror states of O¹⁵ and N¹⁵ 8=3793
 - H²(p, 2p)n, 9 and 10.5 MeV 8=875
 - He³(d, p)He⁴, p polarization and asymmetry 8=7002
 - K⁺d, total cross-sections, new structures 8=796
- photodisintegration**
- Franz-Stech theory 8=16056
 - γ + d → p + n differential cross section, 100-420 MeV 8=873
 - p polarization obs., 170-450 MeV 8=20533
 - π -exchange contribution 8=872
- polarization**
- beam prod. from T(d, n)He⁴ 8=11602
 - e-d scatt. rel. to e helicity and as a test for T invariance 8=20375
 - Lamb shift, 3-body e, p, n treatment 8=11639
 - tensor polarization degree (P₃₃) obs. 8=6994
 - in d- α double scatt., and phase shifts 8=876
 - p-d scatt. obs. 21.7 MeV 8=878
 - p-d scatt., 1.5-11.5 MeV, phase-shift analysis 8=877
 - C¹², 6-10 MeV, scatt. analysis 8=1089
 - Ni¹⁰⁰ scattering, and asymmetry of ang. distrib. of products 8=16110

neutrons—contd
scattering

- See also Protons and antiprotons/scattering, proton-deuteron.
- elastic, spin-orbit effects in optical-model anal. 8=879
- linked-cluster expansion for optical pot. 8=6991
- on nuclei, elastic, tensorial effects in optical model 8=7222
- nuclei, elastic, with tensor spin-orbit interaction 8=3951
- stripping theory 8=3953
- d- α , double scatt., polarization and phase shifts 8=876
- d- α , 3-14 MeV, negative parity states of Li^6 8=11651
- d + α , phase shifts, and odd parity P level in Li^6 8=15869
- (p,n)p, $E_0 = 9$ MeV 8=6989
- e-d quasielastic scatt., forward angle obs. 8=6806
- e-d, for study of e helicity and as test for T-invariance 8=20375
- γ d, sum rule for magnetic and quadrupole moments 8=6992
- γ d, sum rules for forward scatt. 8=6992
- n-d counter telescope for energy and ang. distrib. 8=11646
- n-d Fadeev eqns., sensitivity to n-n parameters 8=15841
- n-d, Hamada potential, variational calc. 8=885
- n-d, length calc. using N-N non-local separable pot. 8=11647
- n-d, length calc. using pair pot. 8=881
- n-d length, obs. anomaly rel. to 3N binding energy 8=11648
- n-d, second quantization formalism appl. 8=11853
- n-d, soln. of Fadeev eqns. 8=11403
- nuclear, differences parameter, energy depend. 8=11918

- SiN films deposited on metal-coated substrates, resistivity and breakdown strength 8=13870
- SiO capacitors, rel. to impurities in vapour source 8=18202

Dielectric devices—contd

- SiO capacitors, thin film, heating effects 8=9233
 SiO capacitors, thin-film, heat treatment 8=22676
 SiO₂ films, pyrolytically grown, conductivity mechanism 8=13872
 SiO₂ films, MOS capacitors, noncrystalline structure electronic conduction 8=9234
 SiO, thin film capacitors, a.c. electrical breakdown 8=2253
 Ta₂O₅ film capacitors, prep. methods 8=13097
 Ta₂O₅-SiO thin film capacitor, prep. and props. 8=9232
 ZnO, polycryst. containing 3% Bi₂O₃, doped, semiconducting and semi-insulating props. 8=18205

Dielectric loss. See Dielectric phenomena; Dielectric properties of substances.

Dielectric materials

- ADP, antiferroelectric, nuclear and e.p.r. studies 8=22671
 alkali halides, nonlocalized dipoles, weak field, low freq. third harmonic generation 8=22653
 anthracene, Hall and drift mobilities of carriers 8=18178
 anthracene, hole injection from electrolyte and space-charge-limited current 8=18177
 crystals with high permittivity, electrical conductivity theory 8=8897
 discharges occurring in gaseous occlusions, amplitude spectrums 8=18157
 dyestuffs, organic, elec. energy storage 8=18176
 elastic, thermodynamic pots. at finite deforms. 8=10541
 electrical insulation and dielectric phenomena, conference, Pocono Manor USA (1966) 8=18154
 electron and ion emission on laser light interaction 8=18272
 exciton resonances, optical absorption 8=8947
 Franz-Keldysh effect, spectral broadening representation 8=17853
 glasses, meas. of losses at 40 Gc/s 8=22649
 glasses in PbO-Al₂O₃-B₂O₃-SiO₂ system, elec. props. temp. and comp. dependence 8=18170
 heterogeneous absorbing medium, realization by oxide absorbent of s.h.f. oscillation energy 8=13867
 inhomogeneous, reflection of e.m. waves 8=10951
 liquids and solids with gas inclusions, permittivity formulae 8=13868
 liquids, thermal convection, elec. field effects 8=21659
 magnetically ordered, two-magnon Raman scattering 8=9487
 mica, LEED obs. of electric dipoles on cleaved surface 8=22650
 nonlinear propag. of laser beam 8=22931
 nonlinear, self-modelling wave beams 8=10835
 paper, insulation, elec. discharge, d.c. detection and meas. 8=21242
 plastics, for specialised applications 8=13876
 polarization as a function of electron displacement 8=15193
 polyethylene, degradation by partial discharge 8=21214
 polymers, anelastic and dielectric effects, book 8=22658
 polymethylmethacrylate, effect of impulse γ -neutrons on permittivity 8=18180
 polymethylmethacrylate, temp. depend. of conformation transitions and dipole moment 8=17111
 space charge conduction, review 8=18002
 stearic acid multi-monolayers thin film, electrical properties 8=13878
 thermal conductivity, temp. dependence meas. 8=17539
 transparent, damage due to laser light 8=8755
 u.s. absorption in crystals with high impurity concs. 8=17491
 Al-Al₂O₃-Au film system, contact barrier height determ. by photoelectric meas. 8=18277
 Al₂O₃, breakdown field strength, thickness variation 8=22651
 Al₂O₃ films, pyrolytically grown, conductivity mechanism 8=13872
 BaTiO₃-Cr₂O₃ systems, phase transformations 8=17045
 CeO₂ crystals, conduction mechanism from electrolyte reduction study 8=18164
 In₂O₃ films, pyrolytically grown, conductivity mechanism 8=13873
 KBr, ionic, structure factors and electron distrib. 8=17861
 KCl, dark currents, space-charge-limited electron 8=18168
 NaCl:Co, props., 90-200°C, 30 c/s-100 kc/s 8=13869
 NaNO₂, infrared dielectric dispersion and apparent ionic charges 8=22670
 NiO films prep. and thin film triodes 8=22602
 TiO₂, current rise due to injection during elec. ageing, hypothesis 8=18194
 TiO₂, effect of H₂O and NH₄Cl traces on ϵ' and ϵ'' 8=18174
- Dielectric measurement**
 agar agar, and soft materials, complex permitt., microwave 8=22659
 capacitance, absolute meas. by cross capacitor 8=15169
 capacitors, reference, temperature characteristics 8=10820
 cavity resonator for 32 GHz, 4.2°-300°K 8=18150
 complex ϵ meas. at microwaves 8=6399
 complex permittivity variations 8=265
 concentration of a solution, continuous, using reactance meter 8=5733
 crystals, anisotropic, mech. method 8=18160

Dielectric measurement—contd

- extremal values recording for excluding fluctuations and errors 8=15167
 liquids, as function of temp. and press. 8=1582
 losses in solids, at v.l.f., meas. using oscs. of solid on torsion suspension 8=2235
 low-loss media, properties, using dipole surface waves 8=13864
 permittivity and loss tangent, automatic, by transformer bridge method, 50 Hz-200 kHz 8=6241
 on polystyrene, mobility and dipole moments of polar mol. solutes 8=9205
 rock, moist, in laboratory 8=13899
 semiconductor diodes, capacitance obs. at h.f. and v.h.f. 8=13850
 semiconductors permittivity of microwave freq. 8=5277
 thin films on metal surface, detection apparatus 8=8299
 Br, liquid, 20°C, improved method 8=4596
 a(Fe₂O₃)+b(Cr₂O₃)+X₁(NiO)+K₂(ZnO) type ferrites, complex const. microwave system 8=9371
 Ge-Si alloyed heterojunctions, capacitance over 77°-273°K 8=2217
 Sn films, in u.v. reflecting power, and optical constants deduced 8=5638
- Dielectric phenomena**

 agar agar, and soft materials, complex permitt., microwave meas. 8=22659
 air plasma, permittivity and conductivity variations with freq. and electron density 8=4346
 argon plasma, permittivity and conductivity variations with freq. and electron density 8=4346
 benzene, adsorbed on silica gel, change in dielec. behaviour on gel purification 8=1663
 fluids, constant derived from radiation stress theory rel. to refractive index and thermodynamic props. 8=16615
 light wave interaction in nonlinear medium 8=18487
 lossless, inhomogeneous, dispersive media, e. m. pulse propag. 8=3250
 low frequency, anomalous charging and discharging currents 8=13866
 packed powders with fluids, permittivity 8=22648
 plasma, dielectric response function rel. to turbulent stationary state theory 8=12559
 plasmas, scatt. of e. m. waves by dielect. const. fluctuation 8=21338
 plasma, two temp., permittivity analysis 8=7742
 'polarization' current 8=21706
 polarization as function of e displacement 8=15193
 poly(tetramethylene oxide), during crystallization 8=17240
 random continuum, h. f. spherical wave elect. field component correl. functions 8=15390
 slabs with large permittivity modulation parametric props of 8=18206

gases

- nonpolar, Clausius-Mossotti function, effect of molec. interaction 8=12693
 rare-gas binary mixtures, frequency-depend. dielec. constant 8=12692
 Co(CO)₃NO, microwave determ. of dipole moment 8=12185
 He-CF₄ compressed mixtures, rel. to nonresonant absorpt. and dispersion 8=1486
 NH₃, Lorentz-Lorentz rel. 8=1477

liquids and solutions

- absorption at 2 and 4 mm wavelengths, meas. 8=21709
 alanine, α and β , increments and relax. wavelengths, comparison 8=8098
 alcohols, tertiary, association consts. determ. 8=12908
 aliphatic alcohols, domain theory 8=4550
 benzene, electron-injection from tunnel junction, effective barrier 8=257
 binary mixtures rel. to elec. cond. 8=4609
 chloroform-triethylamine system 8=18649
 Conference, London May 1967 8=6255
 cyclohexane, electron-injection from tunnel junction, effective barrier 8=257
 n-decanol in non-polar solns., microwave relax. 8=21711
 dimethyl sulfoxide, base-catalysed titration and ionization 8=4610
 electrolyte solns. in alcohols 8=8100
 electrolyte solns., dielec. friction 8=8099
 electrostatic purification 8=1543
 ethylenimine, dipole moments meas. by benzene solvent method 8=1583
 gas inclusions, ellipsoidal, permittivity of mixture, formulae 8=13868
 n-hexane, elec. cond., u.v. and γ radiation 8=21714
 n-hexane, as function of temp., press. and density 8=1582

Dielectric properties of substances—contd**liquids and solutions—contd**

- Kerr cell system, high voltage transient waveform meas. 8=6240
 metals, liquid, reln. between pair pots. and radial distrib. functions of ions 8=16787
 methylmethacrylate copolymers with styrene and p-chlorostyrene, relax. 8=12906
 microwave constant, precision meas., corrections to earlier method 8=16874
 nitrate melts, binary mixtures of Ca(NO₃)₂ and MnO₃ (M = Na, Cs, Rb, K), supercooled, relax. processes 8=1586
 nitrobenzene, h. p. effect 8=21713
 nitrobenzene, laser prod. permittivity vars., obs. 8=21712
 oils, blended, power factor calc. from ion content 8=21708
 oil, mineral, prebreakdown luminosity waves 8=4598
 orienting field and dipole polarization 8=8102
 phenols, association consts. determ. 8=12908
 piezo-optic coefficients by pulsed u.s. light diffraction, 24 liquids obs. 8=8064
 piperine, supercooled, dipole polarization relax. time obs. 8=21710
 polar liquids, longitudinal electrostatic waves, theory 8=4600
 polar, proton shielding, role of reaction field 8=12782
 polarizable liquid, correction to Stoke's law for charged sphere 8=12723
 poly-L- γ -benzyl glutamate helices in soln. 8=21705
 poly(ethylene oxide) in benzene soln. 8=12390
 poly(hexene-1 sulphone), dielec. meas. and relax in soln., poly(2-methylpentene-1 sulphone), dielec. meas. and relax in soln., dipole moment obs. 8=1584-5
 polymethylpolysiloxanes, microwave 8=4597
 poly-DL-phenylalanine helices in soln. 8=21705
 poly(tetramethylene oxide) in benzene soln. 8=12390
 prebreakdown impulse current meas. apparatus 8=8115
 propanol-H₂O mixtures, with NaCl in soln. 8=4606
 semiconductors, complex permittivity 8=265
 space charge distrib., after passage through a filter 8=12910
 static electricity in liquids 8=12907
 urea aq. soln., dielec. dispersion 350-3600 MHz 8=8103
 water, electrification accompanying bursting of air bubbles 8=8117
 water, permittivity meas. at 8.6 mm from 1°-60°C 8=16873
 Al acetylacetonate in benzene, microwave absorpt. 8=16872
 Al acetylacetonate in benzene solution, electrical polarization and microwave absorption 8=12905
 Ar, charge transport temp. dependence 8=18161
 Bi, const $\epsilon_1 + it_2$, and optical consts 8=12877
 Br, 20°C, 8.2-18 GHz, dielectric constant 8=4596
 BrC(CH₃)₃, Br₂CNO₂ const. and loss rel. to mols. relax., 9GHz, 10 and 200 kHz 8=18179
 Cd, const $\epsilon_1 + it_2$, and optical consts 8=12877
 ClC(CH₃)₃, Cl₂CNO₂ and ClSi(CH₃)₃ const. and loss rel. to mols. relax., 9GHz, 10 and 200kHz 8=18179
 Cr acetylacetonate in benzene, microwave absorpt. 8=16872
 H₂O, permittivity at 0.85 mm 8=1581
 H₂O, permittivity, 1.2 to 1.6 mm 8=21707
 He, electron-injection from tunnel junction, effective barrier 8=257
 Hg, const $\epsilon_1 + it_2$, and optical consts 8=12877
 NaNO₃, fused, complex permittivity 8=8101
 Pb, const $\epsilon_1 + it_2$, and optical consts 8=12877
 Zr acetylacetonate in benzene, microwave absorpt. 8=16872
- solids**
 alkali halides, nonlocalized dipoles, weak field, low freq. third harmonic generation 8=22653
 alloy, very dilute constants at Fermi level at low temp. 8=1659
 anatase, permittivity rel. to that of rutile 8=18173
 anilines, disubstituted, constant and loss in r.f. region 8=5357
 anthracene, Hall and drift mobilities of carriers 8=18178
 antiferroelectric, permittivity and losses investigated at 37Gc/s 8=18196
 butyl phthalate, relax. compared with spin-lattice relax. 8=9459
 carrier concentration and mobility determ. by surface charge density meas. 8=18152
 ceramic insulators in thermal neutron flux 8=12010
 concrete, heat resistance, elect. insulating props. dependence on temp. and atmosphere 8=13900
 constants cavity resonator meas. at 32 GHz, 4.2°-300°K 8=18150
 Conference, London May 1967 8=6255
 crystals, ionic, permittivity, static and high frequency, calc. from polarization theories 8=9186
 cyanethylacetylcellulose relax. rel. to acetate and cyanethyl groups motion, -160-200°C 8=22662
 cylinders, between reflecting planes, e.m. vibrations 8=10699
 diamond crystal, permittivity calc. 8=5354
 dicalcium strontium propionate, Ca₂Sr(C₂H₃CO₂)₆, structure in paraelectric phase 8=4891

Dielectric properties of substances—contd

solids—contd

- dielectrics, internal friction of dislocations rel. to optical props. 8=14165
 dielectric-coated semicond., equilib. config. and charge distrib. 8=13788
 dipole waves as means of props. determ. 8=13864
 elastic, homogeneously deformed and uniformly polarized, lattice theory 8=13177
 elastic, lattice theory rel. to fluorites 8=13178
 electrical insulation, thermal breakdown under radioactive radiation 8=9190
 electronic processes in low mobility solids, conferences, Sheffield, England, April 1966 8=5101
 excitonic insulator, anisotropy effects 8=9192
 ferrites, influence of ultrasound 8=9370
 ferrites, polycrystalline, relaxation rel. to temp. 8=22644
 gas inclusions, ellipsoidal, permittivity of mixture, formulae 8=13868
 ice, impure, dispersion obs., above -190°C 8=18188
 insulating films, effective mass meas. 8=8944
 insulating films with ionic space charge, conduction process 8=2232
 insulating materials, time dependence of electric breakdown 8=22646
 insulators, dislocation binding with electrons holes and excitons 8=5349
 insulators, e-irradiated, space-charge effects 8=9185
 insulators, hot-electron diffusion theory for space-charge-limited current flow 8=9129
 insulators, lattice Raman scattering theory 8=2397
 ionic, constants and change with hydrostatic pressure 8=5348
 ionic matrix, dipole moment of trapped polar impurity 8=2236
 methylmethacrylate-methylacrylate copolymers, relaxation 8=5358
 molecular crystals, permeability in rel. to polarization operator 8=18480
 molecular crystals, permeability, quantum field theory 8=5347
 multilayer coatings for white light interferometry 8=6540
 permittivity of randomly inhomogeneous anisotropic media 8=19715
 p-n junctions, capacitance rel. to doping 8=18106
 p-n junction with deep donor impurities, capacitance, theory 8=18102
 polyalkyl methacrylates, absorption 8=9203
 polybromoprene polarization rel. to mol. motion, obs. 8=22660
 polycarbonate films, BaTiO_3 and organic cpds., loaded 8=22661
 polychloroprene polarization rel. to mol. motion, obs. 8=22660
 polyethylene, irradiated, at melting point 8=9201
 polyethylene terephthalate, e-irradiated, space-charge effects 8=9185
 poly- γ -benzyl-DL-glutamate, rel. to mol. motion 8=2241
 polymethylmethacrylate, stereoblock, low-temp. 8=18175
 polystyrene, behaviour rel. to molec. weight 8=5360
 polystyrene, rel. to polar molecule solutes 8=9205
 polystyrenes, v. low temp. 8=5359
 polysulfone films, BaTiO_3 and organic cpds., loaded 8=22661
 polyvinylacetate, behaviour rel. to molec. weight 8=5360
 polyvinylchloride, plasticized, dipole-group losses rel. to conformation 8=8360
 porous, permittivity model for cell level 8=18149
 quartz, permittivity as a function of X-ray irradiation 8=13871
 Rochelle salt, permittivity and permeability 8=5371
 rutile, permittivity rel. to that of anatase 8=18173
 sapphire, mech. meas. method 8=18160
 shellac wax, surface charge obs. 8=13892
 silica glass, dielect. loss at low temp., OH^- conc. and irradiation effects 8=18172
 slab, moving, rel. to reflection and transmission of e. m. waves, parallel polarization 8=19836
 space symmetry and induced polarization 8=9206
 TFE-HFP copolymers, γ -irrad. effects 8=9202
 thin films, tunnel and Schottky currents rel. to thickness fluctuations 8=5345
 toluene glow discharge prod. polymer films, obs. 8=21894
 tracking resistance at l. v., dry test using trigger discharge 8=2240
 transport props, low-mobility, exptl. determ. 8=18151
 triglycine fluoroberyllate, under hydrostatic press. 8=9221
 Ag, constant, and bilinear optical polarizability calc. 8=18498
 AgCl, ultrasonic field effect on conductivity 8=2237
 AgPd alloy, localized states from permittivity obs. 8=13656
 Al_2O_3 , amorphous and polycryst., $-\text{Im}\epsilon^{-1}$ and charact. energy-loss spectra 8=13695
 Al_2O_3 and e beam evaporation 8=22652

Dielectric properties of substances—contd

solids—contd

- Al_2O_3 films, chem. deposited 8=4740
 Al_2O_3 , produced by anodic oxidation of Al in presence of hydrated oxide 8=18729
 Ar, charge transport temp. dependence 8=18161
 Ar, crystalline, constant dependence on growth parameters 8=2238
 As-S glasses, dielectric constraints and dissipation factors, obs. 8=9193
 As_2S_3 , amorphous, carrier mobilities from conductivity studies on e-irradiation 8=18162
 AuPd alloy, localized states from permittivity obs. 8=13656
 $\text{Ba}(\text{NO}_3)_2 \cdot \text{H}_2\text{O}$, single crystal, meas. of coeff. in range $80-3000^{\circ}\text{K}$ 8=5051
 BaTiO_3 , ceramic, grain size dependence 8=13881
 BaTiO_3 , field depend. of dielect. consts. at 58.2 GHz 8=13879
 BaTiO_3 , single crystal and polycrystalline, dynamic polarization 8=18183
 BiFeO_3 with $\text{Pb}(\text{Ti}, \text{Zr})\text{O}_3$, solid solutions, at high temp. and freq. 8=13885
 $\text{BrC}(\text{CH}_3)_2\text{Br}_2\text{CNO}_2$, consts. and loss rel. to mols. relax., 9GHz, 10 and 200kHz 8=18179
 $\text{CaF}_2\text{:GdF}_3$, surface-layer relax. 8=18163
 CaF_2 , MgF_2 , Na_3AlF_6 , thin films, rel. to i. r. antireflectant suitability 8=2435
 CdF_2 8=8409
 CdS , thin crystals, capacitance changes under d.c. bias 8=9195
 CdSe , and optical constants 8=23026
 CeO_2 , transients and non-ohmic behaviour 8=9196
 $\text{ClC}(\text{CH}_3)_2\text{Cl}_2\text{CNO}_2$, and $\text{ClSi}(\text{CH}_3)_2$ const. and loss rel. to mols. relax., 9GHz, 10 and 200kHz 8=18179
 CoO:Li , ($\text{Li}^+-\text{Co}^{3+}$) dipole relax. losses rel. to free hole movement 8=18165
 CoO:Na , ($\text{Na}^+-\text{Co}^{3+}$) dipole relax. losses rel. to free hole movement 8=18165
 Cu formate tetrahydrate, sp. ht. and entropy at anti-ferroelectric transition pt. 8=8638
 EuS, magnetically ordered, magnetointernal field emission obs. and model 8=5428
 EuSe, magnetically ordered, magnetointernal field emission obs. and model 8=5428
 FeO , elec. props. at high temp. rel. to defect structure 8=18166
 GaAs, microwave, resonance behaviour 8=13799-802
 Ge-Hg, relax. phenomena 8=2230
 HfO_2 and e beam evaporation 8=22652
 HfO_2 films, and appls. 8=22654
 HgI_2 crystal, polarisation vs field strength under light excitation 8=5373
 InAs, calc. from light absorpt. by free carriers, 300°K and 80°K obs. 8=18536
 KD_2PO_4 , dynamic props. due to deuteron intrabond jumping 8=9212
 KH_2PO_4 , dielectric const. just above transition temp., freq. and temp. depend. 8=22666
 KH_2PO_4 , paraelectric, proton dynamics 8=9214
 KMF_3 , ($\text{M} = \text{Mg}, \text{Mn}, \text{Co}, \text{Ni}$), constants from i. r. reflectance spectra 8=2426
 $\text{K}(\text{Ta-Nb})$ crystals, permittivity with temperature variation 8=9199
 $\text{LiH}(\text{SeO}_3)_2$, const. and spontaneous polarization 8=18190
 LiNbO_3 , single crystal, up to 9 GHz 8=9216
 LiTaO_3 , single cryst. 8=8853
 MgO , electron donor props. at surface, study via adsorbed nitro-cpds. 8=8343
 Mn ferrite, Maxwell-Wagner dielec. dispersion meas. 8=22647
 NaCl , polarization under shock load, obs. 8=5353
 NaCl:Ca , interpretation of obs. relaxations 8=22656
 $\text{NaCl:CaCl}_2 + \text{NaOH}$ crystal, loss maxima, and conductivity 8=5164
 NaCl:Co , 90- 200°C , 30 c/s-100 kc/s 8=13869
 NaNbO_3 , dipole interaction and electronic polarizabilities 8=22655
 NaNbO_3 , loss, d. c. cond. and permittivity, temp. depend. 8=2239
 Pb , interband transitions 8=14253
 $\text{PbTiO}_3\text{-PbZrO}_3\text{-PbMg}_{1-x}\text{W}_{1-x}\text{O}_3$ system, domain orientation processes 8=5367
 PbZrO_3 , l.f. study, rel. to temp. 8=5368
 RbMnF_3 , constants from i. r. reflectance spectra 8=2426
 ReO_2 metal, optical props. including dielectric const., range 0.1-22 eV 8=14258
 S, orthorhombic, transient space-charge perturbed currents 8=18171
 SbSI , anomalous dispersion of permittivity and reson. absorpt. of microwaves 8=9218
 Sb_2S_3 , anomalous dispersion of permittivity and reson. absorpt. of microwaves, temp. depend. 8=9217-8
 Se films, vitreous, space-charge-limited currents and high elec. field effect 8=13828
 Si crystal, permittivity calc. 8=5354
 SiN films deposited on metal-coated substrates 8=13870
 SiO_2 film deposited from SiCl_4 -water vapour reaction 8=21889

electric properties of substances—contd**solids—contd**

- SiO₂, vacuum deposited insulating layer, instability 8=9175
 Sn film, white, constant contrib. from optical data analysis over 0.1 to 27.5 eV energy region 8=2456
 SnO₂, constants rel. to electron scattering polar optical modes 8=22611
 Ta₂O₅ and e beam evaporation 8=22652
 TiO₂, effect of H₂O and NH₄Cl traces on ϵ' and ϵ'' 8=18174
 TiO₂ films with large ionic space charge, conduction process 8=2233
 TiO₂:V⁴⁺, modes rel. to paramag. impurities, multiple electron-spin echoes 8=22657
 TiO₂-x (reduced rutile), relaxation processes at 1.2 to 50°K 8=5355
 Tl halides, consts., temp. and press. depend. 8=13874
 TiCl₃, space-charge polarization capacity, and conductance 8=9200
 ZnO, polycryst. containing 3% Bi₂O₃, doped, semiconducting and semi-insulating props. 8=18205
 ZnS/Cu, Cl, complex constants and luminance, comparison during thermoluminescence 8=13875
 ZnS:Mn films polarization effects in electroluminesc., obs. 8=9638
 ZnSe, and optical constants 8=23026
 ZnTe, and optical constants 8=23026
 ZrO₂ and e beam evaporation 8=22652

solids, ferroelectric. See Ferroelectric materials.**electric relaxation.** See Dielectric phenomena; Dielectric properties of substances.**electric strength.** See Electric strength.**differential analysers.** See Calculating apparatus.**differential equations**

- boundary layer, Laplace transform. solutions 8=6021
 conformal transformation use and relaxation net construction 8=19352
 of diffusion, nonlinear, stability of solns. of simple stationary wave type 8=3008
 first-order, coupled, for waves in inhomogeneous warm magnetoplasma 8=16532
 ith order, numerical solutions, accurate and stable 8=6594
 Laplace, soln. of boundary Dirichlet problem 8=19369
 linear, matrix algorithm for soln. 8=14931
 Maxwell's, soln. for moving source and progressive wave formalism for homogeneous medium 8=3252
 nonlinear, general computational form 8=19357
 nonlinear Lie-series soln. technique 8=10996
 parabolic for 2-dimens. boundary layer, soln. by finite difference procedure 8=19634
 parametric resonance, transition from linear to non-linear state 8=6018
 partial, for probability density of quantum statistical mechanics 8=19447
 polymer chains, hierarchy of eqns. 8=12383
 residual gases in ultrahigh vac. systems, press. eqns. 8=16723
 restricted three-body problem, props. of soln. of first-order variational eqns. 8=10094
 2nd order, existence of forced periodic solutions 8=6019
 second order at a turning point, classification and reduction 8=6020
 Sturm-Liouville, one dimensional upper bounds to eigenvalues 8=2882
 third-order system for oscillations, critical Lyapunov case 8=6120
 Thomas-Fermi, soln. improved by flexible choice of boundary conditions 8=20936
 transformation of non-linear into equivalent linear 8=19359
 WKB, generalized approx. for binding energies of inner atomic electrons 8=4050

diffraction

- crack, penny-shaped, plane longitudinal wave 8=2924
 edge, in arbitrary anisotropic medium 8=6549-50
 elastic waves, by parabolic cylinder, wave function expansions and perturb. method 8=19525
 elastic waves by spherical cavity, anal. in shadow zones 8=19518
 elastic waves in cylindrical wedge 8=10706
 elastic waves, Fraunhofer phenomena 8=15043
 liquid Kelvin waves at corner 8=12758
 liquid surface waves, by a wedge 8=9815
 sampling theorem, axial form 8=24
 shock wave, in fluid by supersonic wedge 8=21492
 shock waves by wedge, corner conditions 8=10716
 theory as singular perturbation problem, matched asymptotic expansions 8=25

acoustic waves

- acoustic holography, with inclined planar reference 8=10744
 convex boundary with propagation velocity change 8=10704
 convex surfaces, smooth, variable curvature, asymptotic theory 8=6382
 elastic tube, semi-infinite, in moving medium 8=3062
 holography account 8=195
 plane, by grating of cylindrical cavities in elastic medium 8=19570

diffraction—contd**acoustic waves—contd**

- ray representation, extension into shadow zone, feasibility 8=10747
 split-beam sound field, propag., ray representations 8=19567
 wall material, choosing type and distribution 8=6185
 by wedge, Sommerfeld's problem soln. for multipole fields 8=10746

acoustic waves, ultrasonic

- crystals, off e. m. waves 8=22942
 line source, vel. pot. on surface of elliptic cylinder, as test of Kellers creeping waves 8=19569

electromagnetic waves

- anisotropic medium subject to u. s. waves 8=22942
 by anisotropically conducting plane ("radial grid") 8=19852
 at arbitrary obs. point behind screen, Kottler theory 8=373
 Babinet's princ. in anisotropic medium 8=374
 by circular aperture in non-planar screen 8=15400
 on conducting half-plane 8=10953
 by conducting half-plate, Wiener-Hopf soln. 8=19849
 by conducting strip in layered medium, rel. to e. m. prospecting for ore deposits 8=23214
 by conical horn, geometrical calc. and obs. 8=19847
 convex surfaces, smooth, variable curvature, asymptotic theory 8=6382
 creeping wave excit. by mode conversion of critically incident ray 8=19826
 at curved interface, rel. between creeping and lateral waves 8=19846
 cylindrical grating, excitation by rotating charge 8=6380
 dipole field by conducting half plane 8=3258
 dipole field, by two spheres 8=15404
 dipole radiation, by ideally-conducting wedge 8=19851
 elementary particle behaviour 8=20279
 Fraunhofer, validity of Babinet's principle 8=22008
 Fresnel and Fraunhofer eqns., derivation by resolving field into angular distribution of plane waves 8=19853
 by half-plane in arbitrary medium, Wiener-Kopf eqns., uncoupling 8=372
 half-plane, conducting, in a layered medium 8=6385
 inhomogeneous medium, appl. of Huygens' principle 8=19854
 integral eqns. for open screens 8=19855
 matrix operators in diffr. problems 8=19843-4
 microwaves, by cylindrical objects 8=19845
 plane, by a rectangular cylinder, numerical solution 8=15399
 radiating functions, pseudo-radiation conditions for derivatives 8=381
 rectangular aperture, side-lobe contribution 8=10954
 scattering from finite edges, geometrical diffr. theory 8=19859
 scattering, specular, geometrical diffr. theory modification 8=19860
 skew grating, Riemann-Hilbert soln. 8=3257
 strip current approx. by Fresnel integrals 8=19862
 surface waves, at junction of half-planes with anisotropic and isotropic conductivity 8=6384
 transhorizon tropospheric propagation, book 8=14630
 by u. s. waves, in anisotropic medium 8=10952
 waveguide, surface wave on semi-infinite anisotropically conducting plane 8=15402
 Wiener-Hopf functional eqns. 8=6381
 X-rays, dynamical theory, appl. to holography 8=530

electrons. See Electron diffraction.**light**

See also Holography.

- in anisotropic media due to acoustic waves 8=9476
 annular and disc-like objects, images under partially coherent illumination 8=11188
 Bragg detect. in acoustic freq. mixing 8=10732
 Bragg type, by chirped acoustic wave, pulse compression of 240 nsec r.f. pulse 8=8618
 Chinese characters, patterns rel. to recognition 8=6556
 coherent beam, energy flow near focus 8=6499
 coherence function depend. 8=20100
 Cornu's spiral, support of Young's theory 8=6557
 creeping waves in shadow of elliptic cylinder, test with acoustic line source 8=19569
 Debye-Sears, with ultrasonic field, line intensity calc. 8=11190
 by elec. and mag. anisotropic media 8=515
 Fresnel of apertures under partially coherent illumination 8=6559
 Fresnel pattern correl. in signal det. 8=14935
 Fresnel zone patterns, variable 8=507
 Fresnel zone plate generation 8=6551
 holograms, inexpensive method 8=6569
 holograms, point, as optical elements 8=6568
 holograms, quantity reproduction process 8=11209
 holographic interferometry appl. to plasma meas. 8=7779
 holographic interferometry in electrochem. 8=2528
 holographic moire fringes, use in flow visualization in aerodynamics 8=6572
 holography, birefringent beam splitting device 8=3379
 holography and spatial filtering, new applications 8=11119
 image of diffuse object using coherent illumination, noise-like structure 8=11217

Diffraction—contd**Light**—contd

equations modeling spatially variable stochastic

processes 8=4496

Graham's law, range of validity 8=12708

Graham's laws reviewed 8=12707

ideal gas mixtures, tensor matrix calc. 8=16718

influence on Townsend discharge 8=12395

inter-diffusion, study using electrodeless discharge in gas

chromatography 8=14452

Lorentz gas, non-analytic density behaviour of

coeff. 8=16720

methane-Ar-H₂ system, unsteady diffusion, mean conc.-

time history 8=12712

mixtures, coeff. meas. by cataphoresis 8=12704

mixtures with internal freedom, thermodynamic

treatment 8=21528

multicomponent coeffs. in reacting gases 8=1490

multicomponent mixtures 8=1491

noble gases, binary mixtures, coeffs. as function of temp.

and conc. 8=16719

plasma, weakly ionized, across mag. field, effect of

boundary conditions 8=16502

plasmoid, laser-produced, across mag. field and super-

imposed on oscilln. 8=16505

resistance to relative motion 8=16686

smoke from high stacks, time-average ground

concentration 8=14614

spheres inside diffusers, resultant forces acting and

parameters affecting them 8=16717

ternary mixtures, validity of Stefan-Maxwell

eqns. 8=12710

transport coeffs. from inelastic collisions 8=7939

turbulent, convectionless, above small evaporating water

surface 8=14638

van der Waals gas, Yang-Lee distrib. of zeros 8=12671

Ar self diffusion coeff. and atoms interaction-energy,

77.5-121°K and 294°K 8=1489

Diffusion in gases—contd

- Ar, self-diffusion in critical region 8=16716
- Ar-C₂H₂ mixture, temp. dependence 8=7941
- Ar-Kr mixture, temp. dependence 8=7941
- Au, vapour press. from Knudsen effusion 8=12999
- CsCl(g) effusion, ang. number distrib. 8=12706
- D, electron transport coeff. 8=21521
- H, electron transport coeff. 8=21521
- He atoms, diffusion of metastable He atoms 8=4494
- He, of CF₄, nonresonant absorpt. and dispersion in compressed mixtures 8=1486
- Hg plasma ambipolar coeff., 10⁻⁸ torr 8=21377
- Hg vapour through rare gas, demonstration 8=12711
- Kr⁸⁵ in multicomponent mixtures 8=1491
- Kr-CO system, binary, unlike interactions 8=7943
- Kr-NO system, binary, unlike interactions 8=7943
- Kr-O₂ mixture, temp. dependence 8=7941
- N₂-He mixtures, diffusive separation obs. 8=19537
- Ne-Ar mixtures, coeff. meas. by cataphoresis, 300-650°K 8=12704
- Ne, e-ion determ. 8=12451
- O₂ and org. vapours interdiffusion, and diffusion into N₂ 8=14452
- O₂-SF₆ mixtures, temp. dependence 8=7941
- Xe¹³³ in multicomponent mixtures 8=1491

thermal

- column, expt. test of theory 8=16715
- flames, turbulent, thermal equil. meas. 8=7946
- gas mixtures in chem. equil. 8=9661
- isotope mixtures, theory and meas. 8=1492
- isotope separation apparatus 8=16237
- loaded-sphere gases, kinetic theory 8=4495
- multicomponent mixtures 8=12713
- separation of mixtures in chem. equil. 8=21526
- ternary systems, approach to steady state 8=21527
- transport coeffs. from inelastic collisions 8=7939
- Ar-N₂, factors, meas. by new design swing separator 8=1488
- CO₂-N₂O, separation in column 8=7945
- Cs-He mixture, Enskog-Chapman kinetic theory 8=21525
- D₂-HT mixture 8=4495
- H₂-air mixture, for free convection flows 8=4491
- H₂-CO₂, factors, meas. by new design swing separator 8=1488
- H₂-He mixture, composition depend. of factor 8=1493
- HD-D₂, factor obtained by Murphey (1947) 8=1494
- He-air mixture, for free convection flows 8=4491
- He-I mixture, optical meas. 8=7942
- He³-HD, loaded sphere-smooth sphere model 8=12705
- He⁴-HT, loaded sphere-smooth sphere model 8=12705
- He-Ne, factors, meas. by new design swing separator 8=1488
- UF₆, thermal diffusion factor meas. 8=7944

Diffusion in liquids

- See also Flow/liquids.
- acetonitrile-d₃, rotational diffusion, n.m.r. meas. 8=8140
- chain mol., rotary diffusion const. 8=16816
- concentration-dependent, coeffs. meas. 8=12835
- concentration-dependent, variational formulation 8=16812
- convective, in stagnation flow with imperfect semi-permeable membrane, rel. to reverse osmosis 8=12841
- cryogenic liqs, correl. with thermal cond. and viscosity 8=15132
- deoxidation product growth and separation, collision model 8=18658
- diffusion-controlled processes, kinetics 8=4555
- dispersion of matter in non-Newtonian flow 8=1506
- dye injected into turbulent pipe flow, numerical soln. for mixing 8=21576
- film falling down vertical wall 8=1541
- glass melt, diffusion of Ne bubbles 8=4554
- glycerol, molecular, from n scatt., theory of p motion 8=21609
- n-hexane-nitrobenzene, diffusion in crit. separation region 8=21644
- iron-silica deoxidation product growth and separation, collision model 8=18658
- low-temperature, interferometric meas. 8=8035
- measurement, by filter paper diaphragm 8=12839
- metals, mutual diffusion, absolute rate and corresponding states theories 8=21642
- metals, self-diffusion coeff. using Enskog dense-gas formulation 8=12837
- metals, self diffusion, model using ion pair pot. and number density 8=12833
- metals, self-diffusion, temp. depend. 8=12831
- molecular, from n scatt., theory of p motion 8=21609
- non-electrolytes, mechanism, study by dielectric constant method 8=12834
- polymeric, of low molecular weight 8=1540
- polymethacrylic acid solns. 8=12817
- polystyrene+solvent system, diffusion anomalies 8=12829
- precipitation deoxidation kinetics, collision model 8=18658
- n-propanol molecular, from n scatt., theory of p motion 8=21609
- rotational const., by transient elec. light scatt. 8=8073
- self-diffusion in simple liqs. 8=8032
- solutions, surface diffusion interactions affecting electrocrystallization 8=9719-21

Diffusion in liquids—contd

- in sphere, diffusivity and solubility with error anal., calcs. 8=16813
- surface active monolayers on H₂O substrate, reduction in gas desorption 8=12830
- translational, meas. cell model 8=8034
- volume and surface, models, for cryst. growth 8=21935
- water, molecular diffusion coeffs. of dissolved H and He 8=12828
- water-triethylamine, diffusion in crit. separation region 8=21644
- Ag, diffusion of metal solutes, theory 8=12832
- Ag liquid, of Ru, Fe and Co 8=12836
- Al melt, of Au, coeff. from radiographic obs. 8=4646
- AlK alum, cryst. growth from soln., model 8=21940
- Bi-Sn eutectic alloys, of type 304 stainless steel, dissolution kinetics, convective-diffusion study 8=4558
- in CCl₄, of cyclo-pentane-hexane and heptane, translational diffusion, expt. and theory 8=16814
- CaCl₂ aq. soln., phenomenological coeffs. 8=12924
- Cu, electro, small additions of Sn, Sb, Ni 8=1916
- Fe-C alloys, of N. at 1600°C 8=16815
- HCl aq. soln., phenomenological coeffs. 8=12924
- HClO₄ aq. soln., phenomenological coeffs. 8=12924
- HNO₃ aq. soln., phenomenological coeffs. 8=12924
- H₂O, molec. dia. from diffusion meas. 8=21606
- H₂O vapour, in cation exchange membranes 8=8040
- He³, spin rel. to Rice theory of nearly ferromagnetic Fermi liquids 8=10800
- LaCl₃ aq. soln., phenomenological coeffs. 8=12924
- Na silicates, of Na, self 8=8036
- NaCl aq. soln., phenomenological coeffs. 8=12924
- NaClO₃, cryst. growth from soln., model 8=21940
- Sn, diffusion of metal solutes, theory 8=12832
- TlCl molten, self diffusion of Tl⁺ 8=21643

thermal

- aqueous bromide solns., partition coeffs. 8=4559
- aqueous bromide solns., Soret effect 8=4557
- equation, method of solution 8=4556
- freezing, in rel. to Stefans problem 8=8176
- horizontal diffusion column, description and results 8=12838
- integral characteristics for particular regions 8=8033
- n-propanol, soln. of bromoform, coeff. by heterodyning light 8=4553
- water-ethyl alcohol mixture, separation meas. 8=12838
- CCl₄ + cyclohexane system, flow-cell meas. of Soret coeff. 8=1542
- CS₂, solution of acetone, coeff. liq. heterodyning light 8=4553
- KCl solns., self 8=21640
- Na²² in KCl solns., self 8=21640
- NaCl and Na²²Cl solns., self 8=21640

Diffusion in solids

- See also Permeability, mechanical
- acceleration by irradiation, mechanism 8=1903
- alkali silicate glass, validity of Nernst-Einstein eqn. 8=8354
- Arrhenius plot, study of inherent curvature 8=13401
- Auger electron emission technique for obs. 8=22730
- b. c. c. structures, theory application 8=17551
- binary interstitial solutions, equations 8=17556
- binary systems, coeff. conc. and temp. dependence 8=17554
- in catalysts 8=14402
- concentration distribution near idealized contact spot 8=22143
- concrete, of water, between 50 and 95°C, further comments 8=22148
- creep, diffusional mechanisms 8=22279
- cristobalite, diffusion of He and Ne 8=8247
- crystalline mixtures, thermal, rel. to elec. conductivity 8=22144
- data analysis 8=17550
- data correlation as periodic function of atomic number 8=17549
- doping, concentration distributions 8=1899
- effect of lattice defects conc., using radionuclides 8=22141
- electric fields, effect on diffusion, expt. 8=22145
- F-centre, lecture demonstration 8=13452
- flat boundary interfaces, "absolute" methods 8=8666
- forced in 3D region with uniformly moving boundary 8=13403
- gas bubble collisional coalescence 8=4695
- gas diffusion apparatus 8=8668
- glass, surface layer, rel. to distrib. of alkali ions 8=22146
- grain boundary gas bubbles, equil. conditions 8=1986-9
- grain boundary models, exptl. comparison 8=22142
- graphite, diffusion and escape of captured fission Xe 8=11975
- graphite, of fission products Xe and I 8=12015
- graphite, permeability for gaseous fission products 8=4950
- group-III elements in Si, hot implantation behaviour, comp. with group V in Ge 8=22160
- group V elements in Ge, hot implantation behaviour, comp. with group III in Si 8=22160
- interstitial, isotope effect, model 8=1901-2
- iron meteorites, tritium loss by solar wind hydrogen 8=10370

Diffusion in solids—contd

- isotope thermotransport effects theory 8=1904
 magnetite, self-diffusion of O_2 8=22151
 mass transfer by evaporation-diffusion between solids 8=8673
 measurement, MOS-C-V method 8=13896
 metals and alloys, ferromagnetic 8=17560
 metals, b.c.c., coeffs. by internal friction meas. 8=17557
 metals, b.c.c., of interstitial impurities 8=17558
 metals, b.c.c., rel. to radn. effects and imperfections produced 8=17702
 metallic couples, interdiffusion kinetics description from computer programme 8=1906
 metals, Debye temp. rel. to activation energy of diffusion 8=17509
 metals, f.c.c., Arrhenius plot analysis allowing for divacancies 8=8681
 metals, rel. to electron-concentration concept 8=17559
 metal-interstitial system, polyphase diffusion and phase boundary motion 8=17035
 metals, sintering, surface, vol. and grain boundary 8=21832
 migration of interphase boundaries, effect of coefficient 8=1900
 minerals, thermal diffusivity from 300° to 1100°K at 1 atm 8=22131
 multiphase couples, interface comps., motion and lattice transformations 8=17552
 naphthalene, polycrystalline, self-diffusion 8=4960
 penetration curve variations due to evaporation 8=1905
 polyethylene, drawn and undrawn, of organic vapours 8=8349
 polymethylmethacrylate, O_2 diffusion, meas. by quenching of phosphorescence 8=8687
 polyvinyltoluene + phosphors, solid solns, diffusivity of CO_2 8=20386
 porcelain, electrotechnical, of Ag, rate temp. dependence 8=17584
 rare gases, plane or spherical solids, eqns. 8=13404
 refractory metals, of C, investigation over wide temp. range 8=17586
 rubber vulcanizates, of liqs. 8=1932
 semiconductors, impurity redistribution 8=5229
 solid solns., crystalline, theory, and time evolution of X-ray and thermal neutron scattering 8=8667
 of solute atoms, to dislocations rel. to strain ageing 8=4969
 steels, of carbides rel. to surface friction and wear stability 8=17788
 steel, of Cr, experimental obs. in 950–1265°C range 8=4951
 substitutional alloys, thermal, mass transport by vacancy mechanism 8=4947
 ternary curves using a second integration of the Fick law, anal. 8=17555
 thermal diffusivity, heat resistant materials, theory 8=13405
 thermal, method of meas. 8=1898
 transition metals, b.c.c., theoretical critique 8=17590
 transition metal systems, b.c.c., binary inter-diffusion 8=17577
 tridymite, diffusion of He and Ne 8=8247
 vacancies in f.c.c. lattices, Debye model 8=22172
 wires, sintering by surface diffusion, theory 8=13051
 X-ray microanalysis, fluoresc. effects obs. 8=17553
 zeolites containing H_2O , ethane diffusion 8=8685
 Zircaloy-2, of H_2 , thermal, rel. to terminal solubility 8=8250
 Zircalloys-2 and -4, of H_2 , rel. to terminal solubility and partitioning in these and α -Zr 8=8249
 zirconium carbide powders, of Xe^{133} , activation energy rel. to struct. 8=8686
 Ag, diffusion of Xe from recoil fission of U 8=3981
 Ag, polycrystalline, of In, as impurity 8=8670
 Ag, polycrystalline, of Sb, volume and grain-boundary 8=17563
 Ag, self in crystal containing alumina 8=1909
 Ag, vacancies, Debye model calc. of rate 8=22172
 Ag-Au alloys, of tracers, coeff. rel. to activity-coeff. and vacancy flow effect 8=4948
 AgBr, migration of photoexcited holes, obs. 8=1908
 AgCl, Ag diffusion under pressure 8=1910
 AgI, under high pressure gradient 8=1907
 AgMg, silver-rich, of Ag, re-examination 8=17561
 β -AgMg, stoichiometric, simultaneous diffusion of Ag and Mg 8=17562
 α -Ag₂S mixed conductor, of Ag ions rel. to conduction processes 8=22500
 Al, of Ag. 8=22147
 Al, diffusion removal of Mg, and oxidation 8=18670
 Al of Mo 8=1911
 Al, of Pd, Ag, Cd, In and Sb 8=8671
 Al, pure, n.m.r. meas. of coefficient 8=4949
 Al, rapid self-diffusion along dislocations rel. to void annealing 8=13432
 Al, vacancies, Debye model calc. of rate 8=22172
 Al-AlO interface, ionic diffusion 8=1912
 Al-Mg alloys, diffusion removal of Mg, and oxidation 8=18670
 Au, of Ag, grain-boundary, electrical field effect 8=17568
 Au and Pd films, formation of twins 8=13127
 Au, vacancies, Debye model calc. of rate 8=22172

Diffusion in solids—contd

- Au/Ni-Cr, contacts and conductive paths forced diffusion 8=8993
 Au-Pt system, chem. diffusion coeff., X-ray meas. 8=1913
 BeO neutron irradi., diffusion of Li^9 8=8672
 Bi, of Ag¹¹⁰, dependence on crystallographic direction 8=13407
 BiTe, electrotransport of Ag, Au and Cu, 150 and 250 A/cm² \leq 400°C 8=17564
 BiTe:I, I electrotransport, obs. 8=17564
 Bi₂Te₃ of Cu, etching technique investigation 8=1914
 C of Th, tracer-level, rel. to structure 8=1915
 Ca-Bi eutectic melt, displacement of inactive marks during diffusion 8=17565
 CaO, of water vapour, rel. to sintering kinetics, 920–1123°C 8=21833
 CaWO₄, of Ca 8=13408
 CdTe-HgTe, mass transfer by evaporation-diffusion 8=8673
 Co⁶⁰, diffusion studies 8=17575
 Co-Pt binary solns, interdiffusion coeff. conc. dependence, by X-ray analysis 8=17570
 Cr, self-diffusion 8=17566
 CsI, self-diffusion of Cs¹³⁴ in single crystals and polycrystalline samples 8=8674
 CsI, self-diffusion of I^{131} in single crystals and polycrystalline samples 8=8674
 Cu, of Ag, grain-boundary, electrical field effect 8=17568
 Cu: Cu-12.5 wt.% Al multiphase couple, interface comps., motion and lattice transformations 8=17552
 Cu, diffusion of Au, detect. by deuteron elastic scatt. 8=8675
 Cu in InAs 8=17011
 Cu, surface self-diffusion coeff. temp. dependence, 600–1030°C 8=17567
 Cu, vacancies, Debye model calc. of rate 8=22172
 Cu-Mn alloys interdiffusion kinetics, by X-ray microprobe 8=22149
 Cu-Ni diffusion pairs, pore migration during counter-current diffusion 8=17569
 Cu-Ni, Kirkendall and Frenkel effect 8=8676
 75 Cu-25Ni laminate on Cu core in coinage composite, inter-diffusion in bond degradation mechanism 8=22329
 Fe, b.c.c., O atoms, solubility and migration energy 8=22150
 α -Fe, of C 8=17572
 Fe, of Cr, experimental obs. in 950–1265°C range 8=4951
 Fe, distribution of additions during oxidation 8=1917
 Fe, electromigration of dissolved H_2 8=8677
 Fe in γ -phase, self, effect of traces of Sn, Sb, Pb and Bi 8=1930
 Fe, of H, anomalous behaviour at low temps. rel. to interstitial mobility 8=22182
 Fe, of Ni, volume and grain-boundary 8=17571
 Fe-Cr alloy components, electrotransfer at 1150–1400°C 8=4952
 Fe-Cr alloys of 25–95% Cr comps., oxidation at 1000–1300°C, interdiffusion, rel. to scaling kinetics 8=18677
 Fe-Ni alloys, C, mag. and mech. anisotropies 8=22814
 Fe-Ni binary solns, interdiffusion coeff. conc. dependence, by X-ray analysis 8=17570
 Fe-Si alloys, mechanism for magnetic Zener relaxation 8=9451
 Ga, self-diffusion 8=22152
 GaAs, of Cu, production of defect centres 8=1954
 GaAs(P) p-n junction, of Zn, conc. gradient near junction 8=8678
 GaAs:Si, site transfer 8=17574
 GaAs, of Zn, coeff. Fermi level dependence 8=1918
 GaAs, of Zn, precipitates formation 8=17617
 GaAs, of Zn, under excess As pressure 8=22153
 GaSb, of Li, and solubility 8=13409
 Ge, Al and B diffusion 8=13406
 Ge, SiO₂ and Si₃N₄ films to mask Al and B diffusion 8=13406
 Ge-O system, sticking coeff., orientation dependence 8=22154
 He³-He⁴ mixtures, phase separation, theory 8=15157
 Hg-Mo system, surface 8=21903
 Hg-W system, surface 8=21903
 InAs(Sb)(P), p-n junction, of Zn, conc. gradient near junction 8=8678
 InSb, heat treatment effect rel. to disloc. density 8=1919
 K, of Na²² impurity 8=8680
 KBr, of inert-gas at energies to 85keV and release behaviour 8=22156
 KBr, self-diffusion, activation entropy and enthalpy from elec. cond. 8=8679
 KCl, of Ar^{39,41} and trapping, n irradiated 8=1920
 KCl, doped and pretreated, of Tl⁺ 8=13410
 KCl, of inert-gas at energies up to 85 keV and release behaviour 8=22156
 KCl-KBr diffusion pairs, pore migration during counter-current diffusion 8=17569
 KCl-KBr, Kirkendall and Frenkel effect 8=8676
 K₂Fe(CN)₆·3H₂O, translational diffusion 8=14145
 KI, of inert-gas at energies up to 85 keV and release behaviour 8=22156

Diffusion in solids—contd

$K_2O-SrO-SiO_2$ system, effective binary coeffs., 8=22155
 KX, (X = Cl, Br, I), of H_2O mols, mechanism 8=4953
 Li, in temp. and elec. potential grads, mass transport and deformation 8=22157
 M hydrides, M = Pd, V, Nb and Ta, of H_2 , solubility isotherm in hydride phase 8=1924
 $MgMn_2O_4$, of cations, migration energy at high temps. 8=4955
 MgO , of Ba rel. to dislocation densities 8=4954
 Mo, of C, and solubility limit 8=17007
 Mo, tracer-diffusion studies 8=17575
 N^{15} , detect. by nuclear activation 8=14504
 NH_4BF_4 , ion rotational diffusion 8=5560
 Na, of alkali metal impurities (K^{42} and Rb^{86}) 8=8680
 Na aluminosilicate glass, Na self-diffusion, rel. to elec. cond. 8=22158
 Na mordenite, synthetic, diffusion of methane, ethane, propane and butane 8=13109
 Na salt, of $Ar^{39,41}$ and trapping n irradiated 8=1920
 Na self-diffusion, isotope effect 8=17576
 Na-Ca aluminosilicate glass, Na self-diffusion, rel. to elec. cond. 8=22158
 NaCl single cryst., diffusion of Cd^{2+} 8=4956
 NaCl crystals, thermal diffusion strontium ions, Soret effect obs. 8=1921
 NaCl-NaBr system, Na isotope diffusion, self-diffusion coefficient 8=13402
 Nb^{95} , diffusion studies 8=17575
 Nb, summary of ORNL work 8=17593
 $\alpha-Nb_2O_5$, near-stoichiometric, diffusion of O_2 8=1922
 Ni, kinetics of H_2 permeation 8=8682
 Ni, mobility of $Sn^{113,123}$ obs. 8=17579
 Ni, sintered, effective, volume self-diffusion 8=1923
 Ni-Co binary solns, interdiffusion coeff. conc. dependence, by X-ray analysis 8=17570
 Ni-Cr solutions, interdiffusion, conc. and temp. dependence 8=17578
 Ni-Pt binary solns, interdiffusion coeff. conc. dependence, by X-ray analysis 8=17570
 PbTe, of Na, coeff. meas. by radio tracer technique 8=17580
 Pd, diffusion of H and D at 0° to $100^\circ C$ 8=17582-3
 Pd, mobility of Fe^{59} obs. 8=17579
 Pd-Ag, diffusion of H and D at 0° to $100^\circ C$ 8=17582-3
 Pd-H, α -phase, of H, by small energy transfer neutron scattering 8=13411
 α -Pd-H, diffusion of H, study by n scatt. 8=17581
 Pt, self-diffusion, vacancies and divacancies from quenching and recovery expts. 8=17612
 Si, of Au, precipitates formation 8=17620
 Si of B, dislocation motion rel. to coefficient 8=1925
 Si, B-doped by ion bombardment, B distrib. profiles 8=18071
 Si of B, lattice contraction, contrast reversal in reflection topography 8=1927-8
 Si:B, Li drift mobility, dislocations effects, obs. 8=20200
 Si, BN source 8=8684
 Si, of B (or P), appl. of dynamical theory of X-ray scattering 8=13412
 Si:Ga, Li drift mobility, dislocations effects, obs. 8=20200
 Si impurities, anomalous obs. 8=13427
 Si, isolation diffusion of P, integrated circuits 8=1929
 Si, Li in surface, electron mirror microscope obs. 8=22159
 Si, of Li, Na and K experimental results cf. Weiser theory 8=8683
 Si of P, dislocation motion rel. to coefficient 8=1925
 Si of P, enhancement by vacancy generation 8=1926
 SiO_2 , of Au 8=13896
 SiO_2 film, of borax 8=4957
 SiO_2 films, tracer diffusion of Na, rel. to Na contamination 8=18069
 SiO_2 :Tb, Eu, fused, H diffusion 8=17585
 Sn, Ag^{110} coeff. meas. 8=22162
 Sn self-diffusion, radioactive tracer absorpt. obs. 8=22161
 $SrCl_2$, pure and Y^{3+} (Na^{+}) doped, of Sr^{90} and Cl^{36} , and ionic conduction mechanism 8=8983
 Ta, summary of ORNL work 8=17593
 β -Ti, behaviour from thermo- and electrotransport meas. rel. to dislocation mechanism 8=17589
 β -Ti, impurity, summary 8=17588
 β -Ti, mechanism 8=17594
 Ti, of metallic impurities 8=17596
 Ti, of Ti-44 and V-48 8=17587
 Ti of Au and of Ag, obs. by radiotracer technique 8=22163
 γ -U, mechanism 8=17594
 γ -U, tracer-diffusion 8=17591
 UC, self-diffusion, appl. to activated processes 8=22164
 UN, of N 8=14504
 UO_2 , surface self-diffusion, from decay of scratches 8=13413
 UO_2 of U ions, lattice and grain boundary, 1900-2150°C 8=13414
 UO_{2+x} , O self-diffusion and lattice defects rel. to chem. props. 8=23113
 V^{48} , self-diffusion 8=17592
 V, summary of ORNL work 8=17593
 α -Zr, of H_2 , rel. to terminal solubility and partitioning in α -Zr, Zircaloy-2 and Zircaloy-4 8=8249

Diffusion in solids—contd

Zn, self-diffusion, isotope effect meas. rel. to vacancies and dislocations 8=4959
 ZnS of S, self 8=1931
 β -Zr, behaviour from thermo- and electrotransport meas. rel. to dislocation mechanism 8=17589
 β -Zr, mechanism 8=17594
 Zr, of metallic impurities 8=17596
 β -Zr, summary of ORNL work 8=17593
 Zr in $ZrH_{1.7}$, $ZrH_{1.65}$, 800-1000°C 8=17595
 Zr-2.5wt%Nb, of H_2 , thermal, rel. to terminal solubility 8=8250
Diffusion columns. See Diffusion in gases/thermal; Isotope separation.
Diffusion pumps. See Vacuum pumps.
Digital computers. See Calculating apparatus/digital computers.
Dilatometers. See Length measurement; Volume measurement.
Dimensions
 See also Units.
 magnetic susceptibility calc. 8=15250
 physical quantities, and orientation, rel. to units system 8=19344
Dimers. See Molecules; Polymers.
Dineutrons. See Neutrons.
Diodes. See Electron tubes; Plasma devices; Rectifiers; Semiconducting devices/diodes and /tunnel diodes.
Dipole moments. See Molecules/moments; Nucleus/electric moment; Nucleus/magnetic moment.
Diquarks. See Quarks
Dirac electron theory. See Electron theory.
Dirac equation. See Quantum theory/wave equations.
Discharge tubes. See Electron tubes; Gas-discharge tubes; Ion sources; Particle accelerators; X-ray tubes.
 electrode field, container wall effect, computer calc. of uniformity 8=16395
Discharges, electric
 See also Arcs, electric; Breakdown, electric; Corona, electric discharge; Plasma; Sparks, electric.
 arc columns with positive V-I characteristics, low-pressure 8=12403
 arc, transient, electrode erosion in dielectric liquid 8=21252
 atmosphere, point, during rapid field changes, rel. to pot. gradient and winds 8=9883
 ball lightning, laboratory, formation mechanism 8=18892
 busbar cavities, location by X-rays 8=21245
 capacitors, power type, effect of self-reson. freq. on magnitude meas. 8=21228
 capacitor, simple switch 8=15188
 cavity with variable density plasma, sustaining of resonance 8=16406
 creep, over solid dielectrics in SF_6 atm. 8=16420
 cross-section determ. from meas. on arc discharges 8=4294
 cyanide laser, HCN mm absorption obs. 8=11055
 cylindrical, time dependent, analysis 8=7650
 dense plasma focus discharge 8=21221
 development, laser photographic study 8=12526
 discharge column, constriction, randomization of plasma-sac 8=1338
 electric discharge machining, dynamic evolution of low-voltage discharges 8=12396
 electrical insulation and dielectric phenomena, conference, Pocono Manor USA (1966) 8=18154
 electrodeless, as detector in gas chromatography 8=23169
 electrode, skin effect analysis using semi-bounded plasma model 8=21219
 exploding-wire discharges, current pause rel. to field strength 8=7695
 exploding wire, precursor ionization rel. to gas, wire distance, press. and capacitor energy 8=16433
 exploding wires, time-resolved spectra 8=15537
 explosion of foils by 6 kV discharge between coaxial electrodes 8=7690
 gas, electromechanical energy conversion 8=7672
 gaseous, between parallel-plate electrodes, field distortion, calc 8=21248
 gaseous occlusions in an insulator, amplitude spectrums 8=18157
 gas-flow system, mass spectra of ions 8=16429
 gas, low-freq. noise 8=21226
 gases, mixture, d. c. axial gas transport 8=1333
 high current, vacuum for triode-sputtering 8=7653
 hollow-cathode, for determ. of trace Li in refractory oxides 8=23189
 hollow cathode effect, medium-pressure theory 8=21230
 inert gases, diffuse continua-emitting 8=4273
 inert gases, stationary ion waves 8=1424
 insulator surface phenomena in vacuum 8=7673
 ion beam extraction from gas discharges 8=342
 ion source, Ti anode, desorbed H_2 8=21227
 Langmuir probe curve second derivative plotting devices, comparison 8=1335
 laser action in selected compounds containing C, N, and H or D 8=12398
 laser induced, optical interferometry of 8=16403
 low-pressure column in axial magnetic field, steady-state theory 8=4283

Discharges, electric—contd

- magnetoplasma dynamics accelerator, phenomena in cathode region 8=7652
 microwave, properties of plasma skin slab 8=12394
 multipacking between coaxial electrodes 8=21225
 oscillographic registration of events in discharge 8=12400
 ozonizer, leakage time constant, external radns. effect, and Joshi effect 8=21222
 partial hazards in elec. equipment 8=16412
 Penning as high brightness ion source 8=15345
 Penning, modes theory and obs. < 10^{-4} torr 8=1332
 Penning, toroidal pulsed 8=21371
 Penning, in vacuum, cathode particle currents 8=7648
 plasma acceleration by self-induced mag. field 8=1327
 plasma, in alternating electric field, changes due to perp. magnetic field 8=16490
 plasma, beam instability, heating 8=4285
 plasma current instability 8=7837
 plasma generation in e. m. shock tubes, optical props. 8=1337
 plasma generator, heat transfer meas. in mag. field 8=7847
 point, current rel. to p. d. and wind speed, lab. expt. 8=9884
 polyethylene, dielectric degradation 8=21214
 positive column, kinetic model of Tonks-Dattner resonances 8=4282
 positive column, l.p., in transverse mag. field 8=7661
 positive column plasmas, l.f. impedance, theory 8=7659
 positive low pressure column in limiting case of low electron density, review 8=7654
 preionized gas gap, spark channel parameters 8=7671
 pulsed, cathode erosion mechanism 8=7649
 pulse, low-pressure, emission from oxide cathode 8=18258
 reflex, rot. vane freq. rel. to anode diameter 8=7662
 resonant-electron, space charge effects 8=16399
 self-crowbar air gap, tests 8=12458
 solid insulation, d.c. detection and meas. 8=21242
 space-charge field, electron temp. gradient effect 8=4278
 spark gaps, overvoltage, without trigger electrode 8=16400
 spiralling impulsive, shape obs. 8=12401
 streamer chambers, pulse mechanisms obs. 8=11326
 surface with ring-type electrodes 8=12397
 theta pinch, He plasma electron densities and temp., spectroscopic meas. 8=21349
 thetatron, rarified-plasma microwave, instability excitation and propag. 8=16523
 through small tree in artificial electric field 8=2599
 Townsend, influence of diffusion 8=12395
 underwater as impulsive high power sound generator 8=6157
 Venus microwave emission, model 8=5959
 wires, explosions initiated at surface and inside the wire 8=4272
 z-pinch, press. -depend. transition behaviour 8=4275
 Al, vacuum pulse, coaxial, charged particle concentration from line broadening 8=16203
 Ar duoplasmatron, relative abundance of ions 8=7780
 Ar laser action in thermionic hollow cathode discharge 8=15457
 Ar, medium press., neutral gas temp. 8=16408
 Ar, Penning modes characts., < 10^{-4} torr 8=1332
 Ar plasma, flowing, minimum specific energy and electric field 8=16402
 Ar, positive column contraction 8=21231
 Ar, positive column, electrons energy distrib. 8=7655
 Ar, spectroscopic study of characts. rel. to Ar⁺ laser 8=12402
 Ar-Cs and Ar-K plasma in pulsed discharge with ionization confined to impurity atoms, props. 8=1346
 Ar⁺ Cs, positive column contraction 8=21231
 for CO₂ lasers, plasma temp. meas. 8=15459
 CO₂, laser, pulse recovery time 8=6443
 CO₂ with N₂ and He, laser gain 8=19963
 Cd 5sP_{0,1,2} levels lifetimes rel. to discharge conditions, obs. 8=1183
 Cs-Ar low-pressure, conditions rel. to absorpt. of Cs atoms 8=7401
 H₂, positive column plasma, cross wave of moving striations 8=4281
 He, electrodeless, cyclotron harmonic resonances 8=4274
 He, in hollow-cathode balance eqns for 2S² and 2P levels 8=20981
 He with hot cathode, behaviour in alternating electric field 8=16489
 He, mag. field stabilised, press. built up 8=7691
 He, positive column, electrons energy distrib. 8=7655
 He-Cs and He-K plasma in pulsed discharge with ionization confined to impurity atoms, props. 8=1346
 He-Kr mixture, excitation 8=4093
 He-Ne, cataphoresis and collision processes 8=1334
 He-Ne laser, stimulation rel. to radiation noise obs. 8=19966
 in He-Ne mixture relation between electron temp. and conc., and discharge parameters 8=7666
 He-Ne mixture tubes, electron temp. and conc. factors 8=7676
 He₂, positive column, correlator for 10-200 kHz signals 8=1405

Discharges, electric—contd

- Hg, e channel multiplier as u.v. detector 8=6506
 Hg, ion acoustic waves phase vel. and ambipolar diffusion coeff., 10^{-3} torr 8=21377
 Hg, ion-acoustic waves, propagation and damping 8=4313
 Hg vapour, electron beam-plasma interaction with transverse modulation 8=4368
 K r.f., spectroscopy reson. lamp for kgauss fields use 8=6536
 LiCl aqueous solns., formation of pulse discharges 8=4608
 Mg vapour, colour change 8=12393
 N plasmas, electron velocity distrib., non-Maxwellian form. 8=16418
 N₂, release of secondary electrons by metastable N₂ and its quenching 8=7663
 N₂, Townsend, prebreakdown, development 8=7677
 Ne-N₂ mixtures, microwave, afterglow decay, e and ion recombination, temp. depend. obs. 8=7719
 Na gas plasma, line excitation rel. to cascade transitions 8=20962
 Ne, positive column, electrons energy distrib. 8=7655
 Ne-Ar, cataphoresis and collision processes 8=1334
 O, Au film sputtering due to negative O ions 8=21877
 Se electrophotographic layers, kinetics 8=2265
 TiO₂ surface, channel development 8=1330
 Y, ohmic heating discharges, in C-stellarator, computer description 8=21407
- glows**
 anomalous, mass-spectrometry of positive ions 8=7658
 cathode sputtering, variation with current 8=2019
 glow probes, effect of work function 8=4284
 hollow cathode effect in neg. glow plasma 8=7660
 hot-cathode, passage of fast neutral H atoms, ionization 8=21274
 light source, cathode noise expt. 8=15521
 microwave detect. effect, theory and obs. 8=10938
 moving striations at medium pressures 8=7657
 photomultiplier residual light emission 8=6327
 positive column, constricted, wall control 8=12406
 positive column diffusion theory, low electron density 8=16404
 positive column, longitudinal non-uniformity 8=7656
 positive column, several gases, modes of screw instability 8=12407
 secondary electrons in neg. glow and Faraday dark space 8=16409
 striations, effect of transverse magnetic field 8=4279
 toluene, polymer films form., comp. and elec. props. 8=21894
 toroidal low-pressure r.f., plasma losses 8=21235
 toroidal tube, expt. investigation in air, He, Ar and Ne 8=4286
 in toroidal tube, positive column at low press. 8=1339
 vacuum, short gap pulsed breakdown, e optical obs. 8=16396
 Al oxidation, controlled, in radio-freq.-excited discharge 8=8310
 Ar mixtures, fast channel ion mass analysis 8=7665
 Ar positive column, direct display of electron temp. var. 8=16407
 Ar-Hg, low-pressure luminous efficiency in positive column 8=4287
 CO, electron removal during d.c. afterglow 8=21233
 Cr films, rel. to resist. 8=17128
 H, movement of ions calc. 8=7705
 H₂ and D₂ flash lamps, comparison 8=15522
 He afterglow, light emission rel. to e density, differential level decay 8=21237
 He, after glow, microwave heating by standing wave 8=1340
 He, fast electron energy decrease in negative glow region 8=4288
 He positive column at above critical field 8=16410
 He-Xe plasma positive column, Xe-level population inversion 8=12405
 Hg vapour, pulsed, afterglow, and population of 6₃P levels 8=21238
 Hg vapour, zeroth order distrib. changes 8=7667
 N₂ afterglow, surface catalytic efficiency and decay of atomic N 8=21239
 N₂, positive column, mass spectrometric analysis 8=1341
 N₂, recomb. rates 8=1313
 NH₃, decomp. in flow system 8=18682
 Ne afterglow, e density determ. 8=12451
 Ne column plasma, radial distribution of parameters in subnormal region 8=7668
 Ne, conc. of metastable atoms at low temp. 8=1368
 Ne, hot cathode, electron energy distribution in moving striations 8=12404
 Ne₂⁺ afterglow decay rel. to recombination rate 8=21282
 O + CO, shock-heated system, radiation 8=1342
 O₂ and O₂-N₂ mixtures, e density decay rates, microwave meas. of temp. depend 8=21240-1
 SiC films deposition in r.f. glow 8=21872
 SiN films deposition in r.f. glow 8=21872
 Ta oxidation, controlled, in radio-freq.-excited discharge 8=8310
- high-frequency**
 coaxial resonator, space-charge effects 8=7647
 coaxial waveguide, space-charge effect rel. to spark voltage 8=7646

charges, electric—contd

high-frequency—contd

current measurements in high-voltage 8=4277

excitation of atoms by orientation of excited states 8=16215

fast electron population, conditions 8=21229

low-pressure, r. f., time-averaged potentials, meas. using ion-beam probe 8=21224

multipacting, similarity principle 8=7675

plasma, energy transfer from e. m. field 8=16397

plasma striations, moving, in strong field, obs. 8=4280

plasma transport in 8=16401

torch, power characteristic, and dependence on electrode geometry 8=4299

tritium, atomic, quartz contained 8=4276

turbulent, at 1 atm, numerical calc. 8=4271

Ar, at atmos press., power developed in jet of plasma torch 8=21236

Ar, electrodeless, props., meas. 8=21234

Ar, electrodeless, temp. dependence of specific power 8=16398

Ar, radio-frequency, temp. determ. using reversal technique 8=21223

Ar, unipolar, spectral diagnostics, 1 to 12 atm. press. 8=4290

Ar-Hg, low-pressure luminous efficiency in positive column 8=4287

H₂, dissociation, rel. to polarized atom source 8=21018

He, electrodeless, temp. dependence of specific power 8=16398

He gas, l. p., luminosity of 5875Å yellow line 8=16416

He gas, low-pressure, p. d. meas. 8=16415

N, microwave, spin-relax. effects 8=12098

N₂, microwave excitation, vibrational deactivation 8=12211

N₂, unipolar, spectral diagnostics, 1 to 12 atm. press. 8=4290

O₂, electrodeless, temp. dependence of specific power 8=16398

O, r. f., dark-sheath form. mechanism 8=12399

integration. See Beta-decay theory; Nuclear decay theory; radioactivity.

integration energies. See Radioactivity.

locations. See Crystal imperfections/dislocations.

erse systems

See also Aerosols; Colloids; Emulsions; Foams; Powders; Sols; Suspensions.

adhesion, spherical particles, effect of capillary liq. 8=8150

Bingham plastic, settling of spherical particles 8=21553

coagulation, by Brownian motion, particle size distrib. 8=8148

condensation nuclei in air free from aerosols, formation in light and dark 8=18864

fluidized bed, dense, gas distribution 8=8141

fluidized bed, dense heat transfer with vibrating cylinder 8=8144

fluidized bed, interphase heat transfer, meas. method 8=8145

fluidized beds, mixing model, dense phase dispersion coeff. and cross flow 8=12945

gas-particle mixture in nonequilibrium, continuum approach to flow props. 8=16655

gas-particle reacting system, source flow model 8=21461

gas-solid, supersonic flow in convergent-divergent nozzle, heat transfer obs. 8=16902

heat and mass transfer, interrelationships and mechanisms, anal. 8=16904

heat transfer 8=8142

latex spheres in H₂O, coherent and incoherent light scatt. rel. to Mie theory 8=20104

mass transfer in solid-liquid system 8=4630

particle, moving, in gas, evaporation 8=12943

permittivity of packed powders in fluids 8=22648

polydisperse particles optical scatt., non-spherical randomly aligned 8=12942

polymers in aqueous solutions, reduction in turbulent skin friction 8=12946

polymer latexes, size distrib. from light scatt. 8=16900

spherical particles in oscillating liquid, terminal velocity 8=7988

surfactants, interaction with hydrocarbon liqs. 8=8147

thermal conductivity, theory and expt. compared 8=16901

CaCO₃ in H₂O, surface charge form. and zero point, obs. 8=16903

Cu crystals with dispersed Co/SiO₂ phases deformation and dislocation distrib. 8=4974

Fe powder in perspex, magnetization process and Mössbauer effect 8=5470

He-CF₄, nonresonant, and absorpt. in compressed mixtures 8=1486

ersion, acoustic

ion-acoustic waves, rel. to increase in frequency 8=185

in rods, thin and cylindrical, piezoelectric transducer 8=4913

solids, non-isotropic, second sound 8=4910

KMgF₃:Ni²⁺, near acoustic paramag. reson. 8=22912

trasonic

rotatory, in spin-phonon interaction in paramagnetic crystals 8=5516

CdS, by acoustoelec. effect 8=1849

Dispersion, optical

See also Optical constants; Refractive index/light.

hexafluoroacetone sesquihydrate, fuchsin red prod.

anomalous, for phase-matched third harmonic

generation 8=8072

Kerr effect 8=4578

methyl iodide, i. r. 8=8079

of modulated or time-varying light, anal. 8=6486

organic solvents, i. r. 8=8074

polymers, amorphous, oriented, birefringence

dispersion 8=9578

polystyrene, oriented, birefringence dispersion 8=9578

quartz, anomalous dispersion spectrum due to Si-K

absorption 8=18560

CaF₂ crystal, doped with Nd³⁺, mag. rotatory curves 8=5592

K₂S₂O₆, rotatory, interpretation 8=18539

NaNO₂, infrared dielectric, and apparent ionic

charges 8=22670

SnTe, visible and i. r. obs. 8=18562

Tl₂O₃ layers, in IR, rel. to electronic carrier props. 8=23017

Dispersion relations

 hydrazyls form. by hydrazines electrochem. oxidation, e.p.r. obs. 8=5722
 interhalogens in molten I_2 solns. 8=21719
 thermal equilb. in liq. phase 8=4603
 xanthilium salt reagents, dissoc. consts. 8=18713
 H_2 bubbles from aq. soln., rel. to added solutes 8=23149

Dissolution. See Solubility; Solutions.

Distillation

- See also Isotope separation.
 liquid phase adsorpt. fractionation in fixed beds, anal. 8=17151
 macromolecular solns., method of determ. props. 8=8018
 Y, vacuum, for low gas content 8=4652

Domains. See Ferroelectric phenomena; Magnetization state; Superconductivity.

Domains, antiphase. See Alloys; Crystal structure/micro-structure; Solids/structure.

Doping. See Semiconducting materials; Semiconductors.

Doppler effect

- acoustic spectrum of moving source, correction 8=19577-
 acoustic wave reflection from rough surface 8=19566
 attenuation calcs. for low recoil vels., nuclear-lifetime meas. 8=7156
 collision processes, nuclear and atomic, energies of emitted particles 8=20763
 defocusing spectrometer, for MeV range 8=15856
 electrodynamics in travelling e.m. wave 8=15272
 e.m. wave propag. off great-circle path 8=2672
 ideal electron plasma, theory 8=12499
 in ionospherically propagated sea scatter 8=18976
 light wave undergoing multiple reflections between two mirrors in rel. motion 8=15543
 magnetic spectrograph, split-pole, ion-optics 8=3228
 Maxwell's eqns. for moving source, soln. and progressive wave formalism for homogeneous medium 8=3252
 μ capture reactions, rel. to meas ν - γ ang. correl. 8=16065
 in neutron reflection, by rotating crystal, condition for time focusing 8=15845
 in nuclear reactors, broadened functions calc. 8=11616
 in nuclear reactors, maximum 8=11615
 quasars, brightness correlation, explanation of absence 8=23625
 radar sea return dependence on waves 8=23240
 rocket propulsion particle velocity meas. 8=23457
 rotation of e.m. wave radiator-reflector system 8=3270
 satellite signals, data accuracy rel. to ionospheric refraction 8=23371
 Schwarzschild space, and Einstein freq. shift 8=10590
 spectral line broadening, effect of collisions 8=1153
 ultrasonic diagnostic scan within body, localisation 8=1507
 Ca ionized spectrum in calutron, due to charge exchange 8=6334
 B^{10} , lifetime of states obs. 8=11719
 Na^{22} energy level lifetime meas. in C_2F_6 8=11729
 on $U^{238}(n, \gamma)$ reaction at different n energies and high temp. 8=20815

Dosimetry

- See also Radiation monitoring; Radioactivity measurement; X-ray measurement.
 α , cyclohexane appls. 8=20592
 activation meas. for high energy p 8=11603
 alkali halide crystal applications 8=13487
 diamond, by current glow 8=20205
 electron irradiation, sample size restrictions 8=10892
 e-photon cascades induced in water by bombard with e and photons 8=21722
 fast neutron radiometers, power sensitivity 8=20562
 ferrous sulphate in heavy water 8=9733
 Fricke, secondary e effects 8=20206
 γ calibration sources Co^{60} , Cs^{137} and Ra by lead absorber method 8=11436
 γ dose rate in p bombarded spherical shell shield 8=3568
 γ -radiation from gas cloud, calc. 8=10448
 γ radiation, scattered dose rate 8=15718
 γ -rays, energy depend. correction for scintillation detector 8=15720
 γ -ray flux density from reflector-mounted sources 8=1007
 γ -ray, in phantom exposed to fallout and simulated fallout 8=23301
 health and safety in U.K.A.E.A., 1966, research and development work 8=19329
 human body influence on n 8=855
 ionization chamber, human tissue equivalent response 8=606
 ionization chamber, n-hexane, recombination after irradiation with γ -rays 8=6628
 ionizing radiations, dose equivalent 8=20741
 n counter, semi-conductor using crystal damage 8=4030
 neutron depth dose meas. in tissue-equiv. phantom 8=15847
 neutron dose in air depend. on distance from neutron source 8=10444
 neutron dose equivalent rate meas. techniques 8=14894
 neutron equivalent monitor, portable 8=20557
 neutron exposure meas., use of hair 8=11315
 n, fast, thermoluminescent detector 8=20564
 n- γ mixed, dose equiv. and quality factor, organic scintillator meas. 8=20561
 neutrons and gamma rays in paraffin block (human body imitation) 8=615
 neutron monitoring for radiological protection, conference Vienna, Austria (1966) 8=15852
 neutron sensitive foils for thermal neutrons, pocket size ionization chambers 8=851
 n, by ultrasonic cavitation in water 8=3721
 nuclear and space radiation effects, conference 8=22578
 personnel radiation dosimeter with preset alarm 8=7346
 with polyvinyl fluoride plastic film, for γ -rays 8=6779
 proton and neutron secondary doses, equivalent model 8=841
 proton recoil dose from DD and DT neutrons, LET distrib. 8=15837
 radiation research, space radiation biology, conference, Berkley USA (1965) 8=23456
 radiation, ionizing, units 8=613
 reactor γ , n field, using PMMA 8=11313

Imetry—contd

- scintillation camera, autofluoroscope, data processing for 8=5982
- of small β rad. doses, use of nuclear emulsions 8=1001
- spheroidal source, calc. of γ -dose on axis 8=3855
- surface and finger-tip, plastic sachet dosimeter containing LiF 8=20204
- X-rays, high-energy, using ionization chambers 8=15595
- Al 8=13474
- CaF₂:Mn, temperature stability and thermoluminescence during γ -irrad. 8=11314
- CaSO₄(Mn) thin film phosphors as thermoluminesc. dosimeters 8=11800
- CdS cell, integrating appl. 8=5404
- Co⁶⁰, photon emission, exposure meas. 8=11427
- Co⁶⁰ underwater source, γ -ray meas. 8=1008
- Cu 8=13474
- H₂ production, ethylene radiolysis 8=614
- K⁴² in urine, det. meas. 8=3867
- KI aqueous solution, possible applications as dosimeter 8=6664
- LiF, response to thermal neutrons 8=20899
- LiF thermoluminesc. dosimeter, for radiobiological work 8=14890
- LiF thermoluminescence fading characteristics and proper utilization 8=14295
- LiF (TLD 100), temperature stability and thermoluminescence during γ -irrad. 8=11314
- Si(Li) detection for π beams in H₂O 8=7347

Refractive index

- See also Electromagnetic wave propagation; Optical constants; Optical rotation; Polarized light.
- alkali halide crystals. 8=18501
- birefringent beam splitter for holography 8=3379
- chain birefringent filters, anal. of Solc and Lyot type 8=3352
- in crystals, analyt. solns. 8=14183
- crystals, internal and external refl. and refr. 8=14184
- filters, optimum-response synthesis 8=15520
- gases, Cotton-Mouton magneto-optical effects 8=7934
- PDMS solns., birefringence 8=12895
- photoelastic stress analysis, automatic meas. 8=11205
- plagioclase feldspars, birefringence varying rel. to age 8=14182
- polymers, amorphous, oriented, birefringence dispersion 8=9578
- polymers, orientation birefringence temp. dependence rel. to structure 8=9577
- polymethylmethacrylate, rotational isomerism in ester group, prediction 8=4220
- polystyrene, oriented, birefringence dispersion 8=9578
- Portland cement clinker, birefringence meas. of tricalcium silicate and dicalcium silicate phases 8=21841
- Rayleigh scatt. meas. in anisotropic medium, birefringence meas. 8=11197
- solns, birefringence, electric and magnetic field effects 8=12878
- CdS_{1-x}Se_x, birefringence rel. to concs. of components 8=5763
- He⁴, hexagonal crystals meas. 8=15155
- KH₂PO₄, birefringence change by elec. field, rel. to 90° phase-matching 8=14234
- LiTaO₃, ferroelectric, birefringence variation and Curie temp. rel. to melt stoichiometry 8=22669
- Sb₂Se₃ films, birefringence 8=14259
- ZnS polytypes 8=8563

Optical effects. See Electro-optical effects.

Low

- polymer solns., relax. times 8=16849
- polymer solns., streaming birefringence, influence of inter-molecular hydrodynamic interaction 8=4505
- polystyrene solns., mol. wt. depend. 8=8030

Magnetic. See Magneto-optical effects.

Mechanical

- See also Photoelasticity
- polyethylene, dynamic, time-temp. 8=18582
- polyethylene, time-dependent 8=18583
- Relaxance. See Nuclear magnetic resonance and relaxation;**
- Paramagnetic resonance and relaxation.**

Sp

- aerosol, diffusive phoresis in binary gas mixt. of soln. drops 8=21741
- aniline or toluene, charged evaporating, supported by elect. field, instability obs. 8=7992
- cloud droplet coalescence, analytic studies 8=23277
- combustion of single drops of liq. fuel, influence of initial diameter 8=19657
- ejected from air bubbles bursting at water surface, elec. charges carried 8=8117
- liquid, coalescence at interface 8=12765
- liquid, disintegration and electrification subject to electrical forces 8=16782
- liquid, growth in subcooled vapour mixture 8=12983
- liquid interface, drop shape 8=12771
- liquid interface, film rupture 8=12773
- liquid interface, film thickness 8=12772
- in liquid-liquid, immiscible systems, agitated, size distrib. 8=12955

Drops—contd

- liquid, shear deform., second-order theory 8=7993
- liquid, wall migration, in Couette and Poiseuille flows 8=7995
- metal falling in viscous dielectric medium with magnetic field 8=7994
- methyl isobutyl ketone, rising in H₂O and H₂O-sugar soln., vols. of continuous phase translated in water 8=21592
- in methyl isobutylketone-salt water emulsion, size distrib. rel. to mixing and coalesc. 8=12956
- sea spray as function of wind speed and height (<1.2 m) 8=23243
- single drop, mass transfer with continuous phase, convective-diffusion eqns. 8=21594
- size, in liquid spraying, determ. 8=4635
- splashing, distortion obs., computer analysis 8=21587
- spray droplets produced by impact of water drop on water 8=4517
- sprayed electrohydrodynamically, charge-to-mass rel. 8=4519
- toluene-CCl₄ mixtures, rising in H₂O and H₂O-sugar soln., vols. of continuous phase translated in water 8=21592
- toluene, rising in H₂O and H₂O-sugar soln., vols. of continuous phase translated in water 8=21592
- transport in a 2-component gas 8=1482
- water, bouncing off rot. ice ball, effect of NO₃' conc. on charge 8=23290
- water, charged evaporating, supported by elect. field, instability obs. 8=7992
- water, discharge between, microwave superheterodyne receiver epoch sensitivity to pulses 8=14624
- water, distortion and disintegration in elect. fields 8=21595
- water, erosion of Cu surface 8=22333
- water, freely falling in elect. field, mass loss and distortion 8=21586
- water, steam-borne, collision behaviour 8=21593
- water, in vertical wind tunnel, collision, coalescence and breakup obs. 8=1519
- Fe alloy, liquid, voids formation 8=8257
- NaCl soln. drops, growth by condensation on nuclei 8=9853

Drying

- air, use of molecular sieves 8=18644
- porous sphere in air stream, mass conductivity calc. 8=12992

Ductility. See Plastic flow; Plasticity.

Dusts. See Aerosols; Powders.

Dynamics

- electrical measurement**
Entries describing measurement methods for specific electrical quantities and effects may also be found listed under the various headings for the subjects concerned.
- a.c., comparison using thermistors 8=267
- cathode-ray oscilloscopes, use in schools 8=10818
- capacitance, absolute meas. by cross capacitor 8=15169
- capacitive transducer, effect of air compression between plates 8=7892
- capacitors, reference, temperature characteristics 8=10820
- cavities, bimodal, wide-band balancing for microwave props. meas. 8=15387
- conductivity of anisotropic mats. with small specimens 8=5156
- critical currents of superconds., with self-balancing current regulator 8=9039
- currents, automatic comparison circuit 8=10826
- current in exploding-wire circuits 8=15171
- current in high-voltage r.f. plasma discharges 8=4277
- digital trace reading potentiometer 8=10816
- direct current on floating pot. 8=10827
- d.c. voltage, by superconducting parametric amplifier 8=15166
- discharge magnitude, power capacitors, effect of self-reson. 8=21228
- double field meter, guarded, for atm. space charge meas. 8=15163
- e/m, modification of experiment 8=10471
- electric drive in cyclotron meas. dev., use of working mag. field 8=11347
- electric-field-strength meter, for components of near-zone e.m. fields 8=269
- electrometer, insulated gate field effect transistor 8=5336
- electrometer, theory and practice 8=3132
- electrometers, use of FET operational amplifiers 8=3131
- electron conc. in plasma, homodyne phase meter 8=7785
- electronic digital integrator 8=10817
- exponentially decaying signals, digital method 8=17922
- gases, electron drift velocity 8=12694
- guarded sphere as gauging electrode in length metrology 8=10823
- h.f. electronic voltmeters, testing and calibrating 8=15164
- impedance, polarographic cell 8=5735
- LCR circuit, ferro-reson. at low freq. 50 Hz, potential difference across inductance 8=6242
- low temp. resistivity meas., eddy current method, contactless, 1-10 000 nΩ cm range 8=5162
- magnetic pickups effects on input transformers of measuring devices 8=10864
- magnetic potentiometer, high precision, description and appl. 8=10819
- oscilloscope, intensity modulation effect on multi-parameter display 8=6238
- piezoresistance of semiconductors 8=268
- potentiometer applications based on Poggendorf's 2nd method 8=3134
- potentiometer, 10⁻⁹ to 10 volts, account 8=19705
- potentiometers, non wire-wound, effective resolution 8=19706
- radiometer signal compensation 8=3271
- random signal quantization effect 8=6260

Electrical measurement—contd

- resistance in series circuit, errors 8=17917
- resistance, very high, electrometric apparatus 8=19707
- resistance, standard ohm 8=19708
- resonators, filled with TiO_2 dielec. discs, h.f. props. 8=19829
- sampling oscilloscope, appl. to meas. of time differences in milli- to picosec. range 8=3138
- semiconductor devices, scattering and transmission parameters 8=9139
- semiconductor, four probe resistivity meas. wander error 8=22577
- single channel recorder, device for conversion to multi-channel sequential recorder 8=6239
- small d.c. voltages, with supercond. parametric amplifier 8=3135
- standard resistors, effect of power dissipation on performance 8=10825
- superconducting bolometer current modulator 8=22573
- voltage meas. using quantum interference device, 10⁻¹⁵ volt sensitivity 8=15165
- voltage ratio, semiconductor magnetoresistance method 8=10821
- voltage, standard cells, electrostatic method 8=10824
- voltage, transient waveform, by Kerr cell system 8=6240
- voltmeter, use of Josephson radiation from superconducting point contact 8=2181
- Ar shock layer, e density 8=21265
- N_2 , electron drift velocity obs. 8=12695
- Electrical properties of substances**
See also Individual properties, e.g. Conductivity, electrical; Dielectric properties of substances, etc.
- benzene, liq., electron-injection from tunnel junction, effective barrier 8=257
- carbon blacks, sample prep. 8=2135
- chalcogenide glasses 8=18028
- conducting mats., rel. to detect. of macroscopic defects 8=8706
- conductors, e. m. wave propag. and light-electric fields cyclotron res. 8=5155
- conference, Dalas 1967 8=12480
- corundum plates, domains, and effects rel. to plate-like whisker formation 8=21972
- current-field non-linear relations in Shubnikov-de Haas conditions 8=17923
- cyclohexane, liq., electron-injection from tunnel junction, effective barrier 8=257
- electrical conduction properties, conference, Pasadena USA (1966) 8=13701
- glasses, chalcogenide, Hall effect meas. 8=13789
- glasses in $\text{PbO-Al}_2\text{O}_3\text{-B}_2\text{O}_3\text{-SiO}_2$ system temp. and comp. dependence 8=18170
- isotropic media, anisotropy induced by intense laser beam 8=8106
- liquid alloys, Hall coeff. meas. 8=16880
- liquid conductors, flow in annular gap, circumferential accn. due to Lorentz force 8=16755
- liquid crystals, review of data 8=1527
- liquid membranes, from ion pair form. and transport 8=4560
- liquid metals, polyvalent, absolute thermoelec. power 8=16881
- liquids, chalcogenide, Hall effect meas. 8=13789
- liquids, electronic wave functions, coherent-wave approx. 8=7998
- macroscopic body, determ. of elect. neutrality 8=11455
- metals, liquids, electronic structure 8=12899
- metals, liq., electron theory and liq. state theory, correl. and meeting points 8=16786
- non-metallic crystals, space-charge-limited transient currents 8=5161
- nylon 66, static, electrification rel. to metals 8=5356
- oxy-acetylene flame, e. m. f. between nozzle and metal target 8=12696
- photo-semiconductors, microwave impedance, dynamic behaviour 8=5288
- polar liquids, collective oscillations, theory 8=21721
- polyethylene film, I-doped, current oscillations at high field strengths 8=8985
- rocks, saturated, resistivity changes in fracture and frictional sliding, obs. 8=23222
- simple cell and mass spectrometer apparatus 8=8668
- solids, current carrier mobility, effect of sonic wave 8=22415
- suspensions, relaxation of transient electric birefringence 8=16899
- thin films, colloquium, Orsay, France (1967) 8=22499
- trace characterization basis 8=18756
- trace characterization basis 8=18757
- transition-metal molybdates, and structure 8=13296
- Ag and Ag alloy contacts, effect of H_2S contamination on contact resistance 8=22512
- Ar, solid and liq. free-carrier drift-velocity meas. by oscilloscope 8=8119
- B, polycryst., thermopower and resist., temp. and press. effects 8=18210
- Bi, liq., electromigration of small amounts of Ag, Cd, In and Sb 8=12815
- Bi-MnBi eutectic single crystal growth dependence 8=8402

Electrical properties of substances—contd

- CdSb, transport properties, temp. range, liquid He to 500°C 8=13698
 CdS, Cu-diffused insulating layers, behaviour 8=13792
 n-CdSe, 4.2 to 300°K 8=13796
 CdSe, stoichiometric, in thin film, and structural and optical props. 8=17127
 CdSnAs₂ and CdGeAs₂, semiconducting, rel. to high-temp. modifications 8=21842
 GaAs injection lasers with compensated p-type region and optical props. 8=15482
 GaP, large crystals, grown from soln. 8=17234
 GaP:S 8=13804
 GaP:S 8=13805
 GaP:Zn 8=13806
 He, liq., electron-injection from tunnel junction, effective barrier 8=257
 Hg-In alloys, liq., electronic struct. and optical consts. 8=16846
 Hg-In, electron transport props. 8=8005
 Hg, liq., electronic struct. and optical consts. 8=16846
 InOF, temp. independent conductor 8=8414
 n-InP, effect of As doping 8=9113
 In-Sb liq. alloys, cell for electrotransport meas. 8=12816
 InSb, thin films, rel. to temp. 8=8323
 KCl-KBr solid solutions 8=22504
 KNbO₃-AgNbO₃ system, and X-ray and thermal expansion studies 8=21823
 Kr, solid and liq. free-carrier drift-velocity meas. by oscilloscope 8=8119
 LiCl aqueous solns., formation of pulse discharges 8=4608
 MnSb, existence region and mag. props. 8=22820
 Ne, solid and liq. free-carrier drift-velocity meas. by oscilloscope 8=8119
 NH₄Cl, solutions, occurrence during freezing 8=1587
 NH₄OH, solutions, occurrence during freezing 8=1587
 Ni and GaAs surface barrier diodes 8=22629
 Pb-Sn liq. alloys, cell for electrotransport meas. 8=12816
 Pb(Zr, Sn, Ti)O₃ ferroelectric ceramics, Nb-doped 8=2246
⁵¹Si, atomic systems, magnetoelec. susceptibility 8=4053
 Si epitaxial films on α -alumina 8=9121
 n-Si:Au 8=13830
 SiC, cond. and Hall coeff. 8=9122
 SiC, vapour-deposited films 8=17137
 Ti₂O₃ single crystal, and growth from melt 8=4817
 Xe, solid and liq. free-carrier drift-velocity meas. by oscilloscope 8=8119
 Yb-Sb phases 8=22754
 ZnS:Cu, irradi., rel. to electroluminesc. quenching and stimulation 8=9640
 ZnSb and ZnSb-CdSb mixed crystals, transport properties, temp. range, liquid He to 500°C 8=13698
 ZnSe interface with electrolyte 8=13837

Electrical units. See Units.**Electricity**

- 50 kV ceramic feed-through plug and socket connector 8=15170
 power transmission network, d.c. 3-wire, relaxation method solution 8=281
 Ni-Mo-Fe core power line de-icing transformer core, obs. 8=22828
 project laboratory, advantages and disadvantages 8=15159

direct conversion

- advanced solar converter, performance rel. to design and mats. 8=15248
 chemical energy engines 8=19723
 collectors in Cs and Cs-Ba vapours, study of low work function region of Re, Mo, Ru and Nb 8=15213
 conference on power source, cells, fuel cells and thermoelectric generators Brighton, England 1966 8=286
 electric pulse, large, prod. by explosive mag. field compression 8=6261
 fuel cells, high temp. 8=9711
 fuel cells, isoporous electrodes 8=9717
 fuel cells, solid electrolyte, 700-1100°C 8=15198
 Gabor-type auxiliary discharge converter, cost of space-charge neutralization 8=15239
 heat radiation into electricity, efficiency 8=15249
 hydromagnetic, thermodynamics of 8=345
 ignited thermionic, ion generation mech. and electron energy distrib. functions 8=15221
 liquid vein m. h. d. generators 8=15207
 MGD generators, graphical display of local characts. 8=15382
 MHD, collision and gyration modes 8=288
 MHD converter, isothermic with electrodes in series 8=6270
 MHD devices using liquid metals 8=6263
 MHD electrical power generation, conference, Salzburg, Austria (1966) 8=15355
 MHD flow distortion by strong Hall effect and effect on power generation 8=15381
 MHD generation, status report 8=15201
 MHD generator 8=10839
 MHD generator, anal. of elec. cond. of high-void-fraction two-phase flow 8=15203
 MHD generator, effect of electrode ends on flow 8=3155
 MHD generator, elec. conductivity of high-void-fraction two-phase flow, expt. 8=15202
 direct conversion
 MHD generator, extreme value of voltage 8=6269
 MHD generator, induction type, fundamentals 8=6268
 MHD generator, liquid vein, sliding field 8=6264
 MHD generator, non-equilib. flow of conducting fluid in channel on sudden short-circuiting 8=6267
 MHD generator, rectangular channel, 2-dimensional flow analysis 8=15209
 MHD generator with peg walls, effect of internal short-circuiting 8=3157
 MHD generators and engines, boundary flow calc. 8=19725
 MHD generators, combustion fired 8=291
 MHD generators from superconducting magnets 8=3166
 MHD generators, liquid vein 8=6262
 MHD generators, review 8=19724
 MHD generators, stability of plasma, voltage oscills. 8=15208
 MHD generators, survey 8=290
 MHD induction generator, flat channel, linear, comparison of three analyses 8=15204
 MHD induction machine, general equations of sliding magnetic field 8=15383
 MHD liquid vein generators, power transfer study 8=6265
 MHD liquid vein generators, pump and flowmeter applications 8=6266
 MHD machines with flat channels, liquid metal efficiency 8=19727
 MHD, molten metal mixing, thermodynamics of cycles 8=294
 MHD power plant 8=19728
 MHD stations, open cycle, thermal efficiency and economics 8=293
 MPD generator, analysis in uniform state 8=10840
 MPD power generation, closed cycle, prospects 8=292
 noble gas mixture thermionic converters, with plasma generation fission-fragment ionization 8=15215
 nuclear reactor heat source, magnetogas dynamic and thermionic systems 8=295
 photoelectromagnetic receivers with optically polished thin elements, sensitivity and inertness 8=6275
 plasma diode, stationary regimes 8=296
 plasma, mag. press. generation of shock wave 8=15054
 plasma, r.f. power into thermal energy, diamagnetic press. obs. 8=12484
 plasma, weakly ionized, transport equations 8=3158
 prototype thermionic, with Re emitters, performance rel. to variable-spaced test diodes 8=15219
 reactor, Ar-filled, thermionic converter 8=298
 reactor for space flight, thermionic, parameters 8=1123
 semiconductor solar cells multistage, selection of optimum combination of materials 8=6277
 sliding-field liquid-vein m. h. d. generator 8=15205
 solar cells, calc. of optimum grid 8=3160
 solar cells, Conference, Florida USA 1967 8=9242-4
 solar cells, distributed model 8=9265
 solar cells for UK 3 satellite 8=19734
 solar cell props. integral covers effects, obs. 8=10854
 solar cell, surface radiative props., effect of scatter, rel. to collector design 8=1686
 solar energy, system of acquisition on space flights 8=10858
 superconducting electromagnets, appl. 8=6281
 supersonic nozzles, gas flow conversion to electrical energy 8=1456
 thermionic, appl. Monte Carlo method to transport processes 8=15246
 thermionic, arc mode operation, anal. 8=6274
 thermionic conversion specialist conference 8=19731
 thermionic conversion Specialists Conference San Diego USA October 1967 8=6273
 thermionic converter 8=19730
 thermionic converter, auxiliary discharge, with extra-electrode, design 8=15232
 thermionic converter, collector work function meas. rel. to Cs press. and interelectrode spacing 8=15243
 thermionic converter, classification of operating regimes 8=3159
 thermionic converter, cylindrical, appl. to nuclear reactors, performance and life test 8=15247
 thermionic converters, electron emission cooling, and optimum collector temp. 8=15236
 thermionic converters, performance, development of parametric eqn. for description 8=15237
 thermionic converters, planar, life-test results and failure mechanisms 8=15233
 thermionic converter plasmas, electron transport phenom., theory 8=15235
 thermionic converter, plasma measurements 8=7782
 thermionic converters, plasma physics, and nine regions of operation 8=15240
 thermionic converter with vapour deposited W emitter, and Mo collector 8=15230
 thermionic converter, vapour-filled, effect of multiple electrodes on efficiency 8=15231
 thermionic converters, V-A characts. in arc regime 8=6271
 thermionic converter, with W emitter, comparison of Nb and Ni as collectors 8=15228
 thermionic, determ. of time-depend. emitter temps. output power and efficiencies rel. to initial values 8=15218

Electricity—contd

direct conversion—contd

- thermionic diode effects of Ar on performance, expt. results 8=15216
- thermionic diode, influence of anode emission on efficiency 8=10841
- thermionic diode, optimization of emitter length 8=15323
- thermionic diode, V-I characts. with grooved-collector 8=15217
- thermionic diodes, structure of adsorbed layer of electropos. and neg. additives 8=17154
- thermionic, dynamic characts, analytical model and expt. 8=15229
- thermionic, effective collector work function variations, interpret. 8=15223
- thermionic emission, Cs-Ne, operation 8=300
- thermionic, (Mo emitter, Nb collector), in-pile tests with nuclear heating 8=15227
- thermionic, Mo emitters, UO_2 fueled, irradiation studies rel. to in-core converters 8=15226
- thermionic nuclear power plant for space flight 8=1122
- thermionic, nuclear reactor, heat transfer simulation apparatus 8=1134
- thermionic, reactor parameters 8=299
- thermionic, sheath-plasma-sheath type anal., boundary conditions 8=15222
- thermionic, space-charge distrib. in neutral plasma 8=16467
- thermionic, theoretical output and efficiency characts, using fundamental princs. 8=15220
- thermionic, transfer of electrons by negative ions 8=287
- thermionic, transport eqns. of 3-component plasma, using irreversible thermodynamics 8=15234
- thermoelectric, review 8=19733
- thermoelectric systems, thermodynamics 8=10844
- thermopile, semiconductor, stationary temp. field calc. 8=22685
- Ar-filled generator, I-V characts. rel. to contact PD between emitter and collector 8=6272
- CdS film solar cell, mechanism obs. 8=10847
- CdS solar cell deployable rigid-frame array, performance obs. 8=10845
- CdS solar cells environmental thermal cycling test obs. 8=10848
- CdS solar cells, thin film on Cu and plastic, characts. and stability 8=10855
- CdS thin film solar cell 8=19735
- CdS-Cu₂S solar cell, mobile impurity ions model 8=10846
- CdTe solar cells, spectral response and integrated array fabrication 8=10856
- CdTe solar cells, 28 V module and roll-up array 8=10857
- CdTe thin film solar cell 8=19735
- Cs, additive emitters, correl. to emission processes 8=15214
- Cs arc diode, effect of additive gases Kr, Xe and I, and Ar 8=15225
- Cs diodes, vapour pressure effect on electrode work function 8=18246
- Cs plasma converter, diffusion theory of Cs ions and electron migration 8=15212
- Cs plasma diode, meas. of pot. and particle energies 8=15210
- Cs plasma diodes, identification of dominant ion species 8=15322
- Cs thermionic converter, anal. of dominant ionic species 8=15211
- Cs thermionic converter, departure from Saha-Langmuir ionization reln. 8=15238
- Cs in thermionic converter, impurity states 8=10842
- Cs thermionic converters, electrode inhomogeneity influence 8=297
- Cs thermionic converter, use of O as steady-state electroneg. additive 8=15224
- Cs thermionic diode, electron temp. and ion density rel. to spacing and press. 8=15242
- Cu₂-Te-CdTe heterojunction, efficiency in solar energy conversion 8=6276
- GaAs solar cells, thin film on Mo and Al, fabrication and props. 8=10853
- GaAs thin film solar cell 8=19735
- Mo emitters with UO_2 , filling, radiation tests 8=15241
- Na vein m. h. d. generator, power transfer to armature 8=15206
- Pt-CdTe solar cell prep. by sputtering 8=10856
- Re cesiated thermionic emitter, evaluation 8=22717
- Re electroetched emitter in variable-parameter diode, output characts. 8=19793
- Re, thermionic emitter, cesiated, evaluation of surface 8=18269
- Si-Ge alloy thermoelectric generator modules 8=19732
- Si p or n solar cell characts. rel. to distributed model 8=9265
- Si solar cell characts. thickness and temp. depend. rel. to power-weight param., obs. 8=10850
- Si solar cell deployable rigid-frame array, performance obs. 8=10845
- Si solar cell, integrated high-voltage 8=10852

Electricity—contd

direct conversion—contd

- Si solar cells, dendritic and refr. back, prod. by implantation 8=10849
- Si solar cells for 0.4 and 0.2 AU from sm use 8=10851
- SrCO_3 -W, conversion/activation, and low work function collector 8=18266
- UC-ZrC, W clad emitter, stability rel. to operating temp. 8=18267
- UO_2 , W clad emitter, stability rel. to operating temp. 8=18267
- W, cesiated, saturated emission and max. output rel. to Cs reservoir temp. 8=18268
- W cesiated thermionic emitter, evaluation 8=22717
- W emitter converter, performance with CsF additive 8=15244
- W emitter, Ni collector thermionic device, effect of emitter mat. evaporated on collector 8=15245
- W, thermionic emitter, cesiated, evaluation of surface 8=18269
- W work function, effect of Cs additives 8=18251
- ZrC powder in vacuum and Cs vapors under thermoelectron transformation conditions 8=10843
- Electroacoustic transducers.** See Acoustic transducers.
- Electrocataphoresis.** See Electrophoresis.
- Electrochemistry**

- manganate-VI-permanganate redox electrode, mechanism 8=18724
- metal in electron, theory 8=5740
- oxygen-peroxide, exchange current density 8=9695
- perforated plates, mass transfer coeffs. 8=23145
- potentials, definition, rel. to work function 8=9715
- scaling, in polarity-reversal water purification 8=18734
- Al, anodic oxidation in presence of hydrated oxide 8=18729

Electrochemistry—contd
electrodes—contd

- Al, behaviour at d.c. and a.c. polarization 8=18725
 Cl₂, high current density, impurity effects 8=18730
 Cu, anodic behaviour in NaCl aqueous solution 8=2532
 Cu, anodic oxidation in LiCl-KCl 8=5738
 Cu, potential in Brussels water influence of light and conds. of circulation 8=18728
 Cu-Zn brasses in NaOH, anodic dissoln. 8=18732
 Cs⁺ on Hg electrode, partial charge transfer react. 8=18722
 GaAs single cryst., H evolution 8=14421
 Hg/methanol interphase, adsorption 8=18721
 I⁻ on Hg electrode, partial charge transfer react. 8=18722
 K⁺ on Hg electrode, partial charge transfer react. 8=18722
 Ni, in In-H₂SO₄, influence of alternating current 8=5739
 NiO, hydration state and electrochem. activity rel. to struct., obs. 8=23146
 Pt, adsorpt. and oxidation of hydrocarbons 8=9714
 Pt, anodic oxidation in LiCl-KCl 8=5738
 Pt, oxidative adsorpt. of n-hexane 8=5737
 Pt, oxidative adsorpt. of propane 8=2534
 Rb⁺ on Hg electrode, partial charge transfer react. 8=18722
 Rh, adsorpt. of CO + H, multipulse potentiodynamics 8=18727
 Rh, adsorpt. of CO, multipulse potentiodynamics 8=18726
 Rh, photoinjection into liq. hydrocarbons 8=8113
 Si, anodic oxide growth behaviour 8=14422
 n-Si anodic passivity in NaOH rel. to cryst. orientation 8=2533
 Sn, passivation in alkaline solns. 8=18733
 Ta, anodic oxidation in LiCl-KCl 8=5738
 Ta, gas-phase anodization 8=14420
 W, anodic oxidation in LiCl-KCl 8=5738

 accelerating charge, $v < c$, elec. field calc. 8=319
 Aharonov-Bohm effect, gravitational analogue 8=6060
 anisotropic medium, problems 8=6294
 betatron acceleration of trapped radiation by geomag. storm, adiabatic 8=2645
 calculus, theory and application 8=10491
 charge in anisotropic medium, radiation of 8=6360
 charged fine particle, radial focusing with transaxial electrostatic fields 8=15276
 charged particles in mag. field, exponentially time dependent, directionally constant 8=15273
 charged particle in modulated magnetic field, stability 8=3178
 charged-particle paraxial motion in varying, azimuthally symmetric elec. and mag. fields 8=3184
 charge motion in e. m. field, Lorentz transformation 8=15269
 in circularly polarized waves of time-varying amplitude 8=19765
 classical, amplitude and phase of e. m. field 8=10887
 classical motion of electron in electric-dipole field, finite dipole case 8=19771
 classical motion of electron in elect. -dipole field, point dipole case 8=19772
 collisionless capture of electrons into region of finite motion, distrib. of particles 8=7740
 current through plane diode, solns. obtained by invariant transforms for description of passage 8=15270
 Dessler-Parker-Sckopke relation, simple derivation 8=23429
 dielectric crystal, interaction of charged particles 8=8625
 diffusion, scattering and acceleration of particles by stochastic e. m. field 8=10880
 discharge plasma, eqns. of motion 8=1329
 discrete charges in crossed elec. and mag. fields, rotating ring stability 8=6291
 drift of particle, effect of h.f. field not close to cyclotron freq. 8=3182
 e-e. m. wave scatt., classical theory 8=15408
 e. m. field of charged particle in the presence of interfaces 8=317
 in electric-dipole field, bound states quantization 8=320
 electromagnetic field equations for moving quadrupolar medium 8=6293
 electron interaction with intense e. m. wave 8=19761
 electron trapping in laser beam rel. to scatt. light freq. shift meas. 8=19821
 energization of charged particles by arbitrarily moving spherical magnet 8=19769
 equations of motion of classical radiating charge, derivation 8=11453
 e radius and var. in gravity 8=6085
 Fermat's principle, appl. to trajectories in mag. spectrometers 8=6629
 fields of accelerated dipole, Heaviside-Feynman expression 8=19825
 hollow conducting cylinder, reflecting oscillator 8=3179
 hollow conducting cylinder, transmitting oscillator 8=3180

Electrodynamics—contd

- kinematic parameters of particles from photos of tracks in track chambers 8=11323
 light packet, adiabatic compression 8=10884
 Lorentz and Coulomb gauges, causal relations, comparison 8=10882
 microparticles, acceleration by laser-induced vapour emission 8=19768
 monocurrent similarly charged particles, theory 8=19767
 moving media, elec. and mag. polarization 8=10886
 non-local effects, comparison with quantum theory 8=10883
 opposed beams, stability of motion 8=19762
 paraxial motion in const. spatially modulated mag. field 8=19759
 particle acceleration in uniform delay structure 8=3493
 particle and plasma motion with e. m. field confinement 8=19764
 particle in dipole field, mag. moment adiabatic invariant 8=2649
 particle in travelling e. m. wave near cyclotron resonance 8=15272
 point charge moving over conducting $\frac{1}{2}$ planes, radiation 8=3183
 potentials in anisotropic dispersive medium 8=3173
 radiation from moving dipoles 8=19770
 relativistic electrons in mag. and weak electrostatic field, effect of radiation 8=6292
 relativistic particle, conical trajectories 8=19760
 self-resonant acceleration of particle in inhomogeneous medium 8=10879
 space and time dependent fields, guiding centre approximation in lowest order 8=3191
 stochastic acceleration in mag. mirror 8=15271
 surface wave excitation by moving charge at interface between vacuum and medium 8=3181
 transition probability for multi-photon process with resonance 8=20011
 uncoupling of parallel and perpendicular particle motion in neutral sheet 8=19766
 in weakly modulated axially-symmetric mag. field 8=19763
 Cs ions, linear acceleration in crossed e. m. fields 8=318
- Electroendosmosis.** See Electrophoresis.

 acoustic domains, generation of light 8=18587
 gases, light sources 8=484
 Gudden-Pohl effect, optical image recording, storage and reproduction applns. 8=6496
 memory circuits, optico-elec., static params. theory and obs. 8=6039
 metal sample prep. for electron microscopy 8=17271
 p-n junction, impurity, kinetics 8=18588
 panel as modulatable light source 8=6517
 specimens for electron microscopy, electrolytic polishing 8=17270
 spectroradiometer-luminometer for quantum-yield studies 8=18589
 sulphide phosphors, freq. depend. of shape of light pulse 8=5676
 transport equations, description using two-stage model 8=5651
 Al-Al₂O₃-Ag sandwich, rel. to electron emission 8=9277
 Al-Al₂O₃-Au tunnel structures, interface trapping 8=5381
 Al-Al₂O₃-M film diodes 8=9598
 Al-CaWO₄-Au tunnel structures, interface trapping 8=5381
 AlN:Cr and S and Z impurity effects, obs. 8=9595
 AlN:Eu and S and Z impurity effects, obs. 8=9595
 AlN:Mn and S and Z impurity effects, obs. 8=9595
 AlN:Sm and S and Z impurity effects, obs. 8=9595
 BaS:Bi rel. to activator and BaSO₄ phase concs., obs. 8=9601
 BaS-Cu(Mn), freq. depend. of shape of light pulse 8=5676
 BaS:Cu rel. to activator and BaSO₄ phase concs., obs. 8=9601
 BaS:Mn rel. to activator and BaSO₄ phase concs., obs. 8=9601
 Be-BeO-Au sandwich, rel. to electron emission 8=9277
 CdF₂ crystal, activated by rare earth ions 8=5658
 CdS acoustoelec. light scanner 8=5309
 CdS film in Au-CdS-In diode, d.c. excit. mechanism obs. 8=9608
 pCu-S-nZnS: Mn, Cu, Cl films, d.c. mechanism 8=23051
 GaAs diffused p-n junctions, longwave bands in luminescence spectra 8=5663
 GaAs, diodes, fabrication 8=5323
 GaAs, diode, with thermoelec. cooling, efficiency 8=22684
 GaP diodes, green bands obs. at room temp. 8=9161
 GaP, and elec. props, effects of two zone melting prep. techniques 8=9611

Electroluminescence—contd

- GaP:Ge p-n functions 8=23073
 KI, intrinsic, and excit., 77°K and 5×10^4 V/cm 8=14320
 KI:TI roentgenoluminesc. stimulation mechanism, obs. 8=9618
 M—O—M sandwich rel. to electron emission 8=2977
 NaCl:Ag, by u.v. excitation studies 8=2486
 SiC diodes, properties 8=9627
 ZnO—ZnSe systems as function of band gap 8=9644
 ZnS, and conductivity changes, alternating voltage effect 8=9259
 ZnS brightness wave 8=9634
 ZnS electrolumino-phors, radiation-controlled enhancement 8=14344
 ZnS, hexagonal, intensity distrib. rel. to dislocation structure 8=18621
 ZnS lamp, calibrated for use as standard light source 8=20067
 ZnS phosphors, photoimpedance, a.c. field freq. and excitation intensity dependence 8=14335
 ZnS phosphors, spectra, time constants of build-up and decay 8=5677
 ZnS, photoconductivity changes 8=22701
 ZnS:Cu brightness build-up and electrolysis prod. ageing, obs. 8=9637
 ZnS:Cu, brightness wave variation 8=18620
 ZnS:Cu, effects of grinding, obs. 8=9647
 ZnS:Cu electroroentgenoluminescence brightness non-additivity obs. 8=9636
 ZnS:Cu, irradi., quenching and stimulation rel. to elec. props. 8=9640
 ZnS:Cu phosphor condenser, characts. depend. on props. of crystal barrier layer 8=9657
 ZnS:Cu rel. to elec. cond., obs. 8=9133
 ZnS—Cu phosphor, filling of traps during electric field excitation 8=14314
 ZnS—CuAl(Mn), freq. depend. of shape of light pulse 8=5676
 ZnS:Cu, Al phosphors, luminescent centre interactions 8=18622
 ZnS:Mn films, polarization effects obs. 8=9638
 ZnS:Mn films, pulse excitation characts. obs. 8=9639
 ZnS:Mn, Cl, i.r. enhancement 8=5678
 ZnS(Mn, Cu), high-efficiency d.c. 8=18625

Electrolysis

Electrolytic conductivity. See Conductivity, electrical/liquids, electrolytic.

Electrolytic deposition

- anodic behaviour of Fe and its oxides in H_2SO_4 and alkaline solutions 8=14432
 anodic oxide films on Al in boric acid-formamide solns., struct. obs. 8=13089
 Institute of Metal Finishing, conference, Brighton, England (1967) 8=14419
 surface interferometry 8=9722
 water, electrode scaling in polarity-reversal purification 8=18734
 Ag cementation on Cu in perchloric acid and alkaline cyanide solns., kinetics 8=14427
 Al alloys plating, surface pretreatments 8=14429
 Al alloys, surface preconditioning, electron microscopy 8=8291
 Al, plating, alkaline Zn pretreatment soln. 8=14431
 Al plating using stannate activation and bronze strike deposit 8=14430
 Au, inside metal containers, regulation 8=14428
 Au, porosity rel. to Cu substrate surface, prep. and undercoats, obs. 8=21981

Electrolytic deposition—contd

- Cd on steel, effect on fatigue 8=22361
 Cd on steel, H₂ absorption 8=17163
 Ce deposits internal stress development, obs. 8=22325
 Co films, growth rate rel. to structure and props. 8=13999
 Fe films, growth rate rel. to structure and props. 8=13999
 Fe—Ni films, conditions effect on internal stresses 8=17653
 Ni, dull plating salt, formulation 8=23152
 Ni film, electroless, and e microscope study 8=17136
 Ni films, growth rate rel. to structure and props. 8=13999
 Ni layers, lattice deformations and crystal orientation rel. to deposition inhibitor effect 8=1805
 Ni from NiCl₂ soln. by a.c., microstruct. obs. 8=22035
 Ni, specified process for electroformation rel. to mech. props. 8=17823
 PbO_2 , cryst. struct. rel. to electrolyte impurities 8=21919
 Pt—Ir alloys from aqueous electrolyte, deposits hardness and stress obs. 8=23153
 Sn, aftergrowth of whiskers 8=17251

Electrolytic tanks. See Calculating apparatus/analogue apparatus.

Electromagnetic fields

- accelerated point charge, exterior vector product 8=3169
 alternating, in continuous casting of steel 8=4847
 of arbitrarily moving particle with mag. and electric moment 8=19770
 averaged equations in nonstationary resonance medium 8=3246
 axial, symmetric, solution 8=10877
 coherent state time development 8=2975
 constant, Lorentz transformation and motion of charges 8=15269
 correlation theory, relativistic formulation 8=19823
 electric-field components, near-zone strength meter 8=269
 electromagnetic induction in conductor bounded by inclined surface 8=18802
 electron gun, computer soln. of eqns. 8=15284
 energy distrib., Maxwell tensor 8=3171
 energy transfer to h.f. discharge plasma 8=16397
 far field scatt. at low freqs. 8=19871
 fluids, relativistic, charged in gravitational field, Larmor and Helmholtz theorems 8=16633
 forces in conductors, relax.-averaging formulae 8=6284
 formal model, based on four-space hyperfluid flow 8=6283
 geometry, energy-impulse tensor treatment 8=3172
 guide field for plasma betatron 8=16563
 impulse-energy tensor from Lagrange function 8=3170
 interaction with warm slightly ionized magneto-plasmas 8=16517
 microwave, redistribution of density in plasma 8=7729
 near to far field, l.f. continuation 8=19870
 null field in Einstein—Maxwell theory propag. vectors and metric tensor 8=316
 null, source-free, energy tensor, differential conds. 8=315
 plane wave, relativistic charge radiation in 8=10881
 plane wave spectrum representation, book 8=15392
 Poyntings theorem, uniqueness theorem concerning energy tensor 8=6288
 produced by rot. bodies, superconductor test proposed 8=3174
 quantization, canonical in Landau gauge 8=3434
 quantized, characteristic states 8=19818
 quantized, fluctuations and correlations 8=20016
 quantum operators, coherent states diagonal representation 8=19820
 radiation from Fermi particles 8=6739
 radiation, Gaussian or laser, statistical props. by photon counting distrib. 8=10998
 radio waveguides, modelling apparatus 8=10962
 relativistic electron motion, effect of radiation 8=6292
 rel. to photon counting statistics, coherence props., dynamical calc. 8=20352
 secondary, due to elementary dipoles, approximation 8=15266
 structural analysis, optimal conditions 8=10878
 for switching thin mag. film near finite permeability keeper and semi-infinite conductor 8=3168
 two-dimensional, integral formula 8=3176

Electromagnetic oscillations

See also Magnetohydrodynamics; Masers; Plasma/oscillations.

- accelerators, coherent, stability 8=638
 avalanche oscillators, freq. locked, relative phase shift 8=10944
 cylindrical resonators with losses, criteria rel. to length 8=6367
 dielectric prism between plane mirrors 8=6361
 exposed cylindrical cavity, excitation coefficient 8=3267
 Gunn effect, freq. modulation by mag. tuning, 9, 300 and 10, 900 MHz 8=361
 laser optical coupled modes, Green functions 8=6430
 laser quantum noise, classical models 8=398
 limiting oscs. in generator during parametric excitation 8=6368
 magnetron electron cloud, calc. of natural freq. 8=15328
 molecular oscillator, investigation with "molecular-ringing" amplifier 8=10940
 multimesh self-excited oscillator, subjected to ext. sinusoidal voltages 8=6371

Electromagnetic oscillations—contd

- optical resonator filled with anisotropic medium, Gaussian beam propag. 8=6373
- oscillators, self-sustained, near threshold, noise exam. 8=6259
- piezoelectric resonator, heat transfer coeff. 8=1884
- quasi-harmonic, self-excited oscillators, fluctuations in case of low noise 8=6370
- radiation, experimental introduction 8=10936
- resonances, free dielect. spheres in infinite medium 8=10979
- resonator formed by concave mirrors, conds. for focusing 8=11025
- resonators, cavity, dependence of e.p.r. sensitivity on geometry 8=387
- resonators, h.f. props. when filled with artificial dielectric 8=19829
- ruby laser, single longitudinal mode production 8=6459
- self-resonance in power capacitors, effect on discharge magnitude meas. 8=21228
- superconducting oscillator-detector 8=15172
- superconducting resonators for oscillators 8=13767
- vibrator on wedge edge, spatial directivity characteristics 8=3249
- whistler resonance temp. dependence rel. to plasma diagnostics 8=3272
- in Fe, purified, rel. to amplitude-dependent internal friction and modulus defect 8=13557
- GaAs, n-type, Gunn oscillators, inhomogeneity effects 8=362

- plasma oscillations generated by relativistic beam 8=7818
- plasma prod., temp. distrib. and oscillations 8=21287
- plasma, u. h. f. e. m. waves radiated rel. to instability mechanism 8=16520
- polyethylene terephthalate, rel. to space-charge effects 8=9185
- polymer, etch-resisting, cross-linking, rel. to integrated cct. prod. 8=15279
- probe microanalyzers, X-ray counting systems, non-linearity corrections 8=4837
- quasi-stationary plasma oscillations, amplification 8=7816
- semiconductors, design of β -spectrograph for meas. 8=11466
- semiconductors, e.m. wave excitation, quasilinear theory 8=5151
- Smith-Purcell effect, theory 8=10941
- spot distortion by mag. deflection of beam 8=6306
- steel, stainless, -induced desorption of gas from surfaces 8=17164
- Teflon friction on steel, adhesion component modification, obs. 8=17842
- water, e-photon cascade calc. 8=21722
- X-ray production from crystals, emission yield dependence on diff. conditions of electrons 8=13237
- Ag, rad. prod. at grazing angles, interpret. via surface-waves 8=3181
- Al, on deformation at 20°K rel. to dislocation model with defect barriers 8=13523
- Al, 50 kV electron mean free path for plasmon excitation; diff. condition effect 8=13696
- Al foils, plasmon excitation cross-sections 8=8966
- Al, irradiated, stage III annealing study 8=13475
- Al, low temp. irradi., electrical resistivity recovery 8=2134
- Al, resistivity recovery, kinetics study 8=5171
- Al, stage I recovery atomic recoil energy dependence from e-irrad. data 8=4961
- Al, 20 keV, excitation of L-shell electrons 8=22495
- Al_2O_3 , 20 keV, excitation of L-shell electrons 8=22495
- Al-1 at. %Zn, irradiation hardening 8=8822
- Ar ionization near threshold 8=7711
- As_2S_3 , amorphous, carrier mobilities from conductivity studies on e-irradiation 8=18162
- Ba atoms, polarization of light emitted and lifetimes of excited levels 8=21019
- Be, e-irradiated, recovery meas. 27-77°K 8=22249
- Be, low temp. irradi., electrical resistivity recovery 8=2134
- Be target, secondary emission, calibration monitor 8=6808
- CO_2 , ionization curves 8=12434
- CdSe, acoustoelectric effect in continuous intense super-sonic stream 8=8628
- Cu, e.m. shower study with computer-controlled system 8=8753

Electron beams—contd
effects—contd

- Cu, electron irradiated, yield stress increase 8=17773
 Cu, electron slowing-down, total electron flux, energy spectrum 8=13474
 Cu films, thickness depend. on heat generated, 9 to 100 keV 8=17699
 Cu, shock waves 8=13484
 Fe, irradi., anisotropy of defect production 8=8770
 p-Ge, angular dependence of radiation-induced conductivity and secondary emission 8=18041
 Ge atom displacement in collision cascade calcs. 8=8754
 p-Ge, bombardment-produced defects at low temps. 8=22170
 Ge, e-irradiated, annealing of Hall mobility changes 8=2196
 Ge, fast electrons, optical absorption edge 8=9534
 Ge, interstitial Cu impurity, irradi. induced, obs. 8=2027
 p-Ge, on microhardness 8=17810
 n-Ge, subthreshold damage 8=22252
 Ge, zone melting and recryst. 8=17235
 H₂ and D₂, excitation by trapped-electron method 8=16281
 H₂, Lyman- α prod. 8=12050
 InS crystals, on twinning and phase transformations 8=17209
 KBr, colour centre studies by pulsed irradiation 8=13460
 MgF₂ films, thin, surface charging 8=22505
 Mo/absorbed CO system, physico-chemisorption processes from study of low energy electron interactions 8=18702
 NH₃ gas, radiolysis 8=18743-4
 N₂O, ionization curves 8=12434
 Ni-20%Cu, penetration at moderate energies, meas. 8=17694
 Ni and W ribbons exposed to water, low-energy bombardment 8=21907
 O₂ dissociation and extreme u.v. radiation excitation 8=7722
 Pt, damage on irradiation at 90°K rel. to built-in annealing damage 8=1947
 Si Brillouin zone symm. props. obs. by e⁻ annihilation 8=13690
 n-Si, elec. props. rel. to impurity and irradiation-temp. dependence 8=5282
 Si, heated, stress investigation, X-ray and i.r. studies 8=1862
 Si: Li, irradi. prod. defects and annealing at 20°C, 1 MeV 8=22604
 Si photocells, rectifying props., effect of accelerated electron irradiation 8=22699
 SiO₂ films on Si, damage rel. to etching rate 8=22609
 Si:P, defect production rel. to spin-lattice relax 8=18434
 Ti-Mg oxide, getterizing effect in vacuo 8=10458
 V₂O₅ (010) surface structure transitions in LEED expt. 8=4733
 W, desorption of CO, NO and O 8=21912
 W, of CO, desorption by electron impact 8=21911
 W/N₂ system, rel. to phase changes of adsorbed N₂ 8=21913
 ZnS, u.v. luminesc. excitation 8=18619

 KCl and KCl:Ti, F-centres, mechanisms rel. to surface contamination, obs. 8=9278
 KI monocrystals, between 3 and 5.5 eV 8=18280
 Mg cpds, energy spectra for prod. by soft X-rays 8=18274
 MgF_2 , F-treated, photocathodes, spectral characts. 8=18281
 NaCl F-centres, mechanisms rel. to surface contamination, obs. 8=9278

Electron emission—contd

photoelectric—contd

- Ni, density of states, rel. to X-ray and ion neutralization studies 8=8940
 Ni, ferromagnetic, energy distrib. and rigid-band model 8=13940
 Ni, laser-induced non-linear photoelectric effect 8=22721
 Ni-Al alloys, ferromagnetic, energy distrib. and rigid-band model 8=13940
 Pd, plasmon excitation, discrete energy loss 8=2279
 Rh, photoelectron into liq. hydrocarbons 8=8113
 Se, amorphous layers and single crystals, studies 8=22725
 Si, autophotoemission energy rel. to e distrib. 8=22726
 Sn, cross-section for K-Mv subshells for X-rays 412-1332 keV 8=7438
 SnO, S-11, S-20, modified S-I and high temp. bi-alkali photocathodes, spectral shift and degradation 8=18282
 SrO, and photoluminescence and enhanced thermionic emission 8=23063
 U, cross-section for K-Mv subshells for X-rays 412-1332 keV 8=7438
 U films, photoelectron attenuation lengths 8=22727
 U monolayer film on polycrystalline W, work function 8=5408

secondary

- Auger electrons for surface segregation obs. 8=22730
 coefficient dependence on energy of primary electrons 8=22728
 crossed-field distributed-emission amplifier, effects in computer simulation 8=19712
 e beam monitoring device 8=3198
 electron-excited Auger electrons for material analysis 8=22729
 gas-covered surfaces, by Ar atoms and ions 8=22731
 glass, degassing by 100-1000 eV bombardment 8=13945
 ion extraction effect in plasma sheath 8=4389
 on laser light interaction with conductors, semiconductors and dielectrics 8=18272
 magnetron diode, space-charge interactions 8=15332
 metallic target, by Auger de-excitation of atoms by sputtering 8=5422
 in microanalysis probe, meas. 8=13941
 negative glow and Faraday dark space 8=16409
 oils, diffusion pump, study by pulsed-beam method 8=13942
 photomultiplier afterpulses, 3:1 ion ratio 8=5418
 Steel, bombarded with H⁺ ions 8=5423
 storage devices, resolution and frequency response 8=10906
 200-2000 eV energy curves, rapid method of determ. 8=5419
 yield, use of Polya statistics in anal. 8=5420
 Ag self-supporting films, and primary electron scatt. 8=2284
 Ag(III) face, rel. to exam. by LEED 8=17212
 Au cathode, rel. to temporal growth of ionization in D 8=12439
 Au films, coeff. on exit side, rel. to energy of primary electrons 8=2285
 Be, Faraday cup for calibration 8=6808
 Be, rel. to large incident angles of primary beam 8=5421
 CdS, e microprobe obs. 8=14317
 CsI, excitation density of slow secondary electrons, distrib. determin. 8=18283
 Cu, bombarded with H⁺ ions 8=5423
 Cu-Be alloys 8=13943
 p-Ge, e-irradiated, angular dependence of emission current 8=18041
 KCl transmission dynode, single electron response, Polya statistics 8=5420
 MgF₂ films, solid, rel. to Molter emission 8=22732
 MgF₂ films, thin, surface charging 8=22505
 Mo, bombarded with H⁺ ions 8=5423
 N₂ discharge, release by metastable N₂ 8=7663
 Ni, bombarded with H⁺ ions 8=5423
 Ni, ionization mechanism in Ne discharge 8=16419
 Ni, polycrystalline, temp. depend, 100 to 600°C 8=13944
 Pb, rel. to large incident angles of primary beam 8=5421
 PbO₂ layers, exptl. results discussed 8=18284
 SnO₂ layers, exptl. results discussed 8=18284
 Ta, bombarded with H⁺ ions 8=5423

thermionic

- See also Cathodes,
 converters, plasma physics 8=2277
 converters with surface ionization, diffusion mechanism for inter-electrode particles 8=2278
 metal crystal with oxide film, and ionic diffusion rel. to oxidation kinetics 8=5710
 metals, effect of surface micropatches on const. 8=18260
 oxide layers, thin unsaturated, phenomenological model 8=8979
 point-cathode electron source, simplified analysis 8=9273
 point cathodes, energy distrib. 8=9274
 from refractory compound surfaces, cesiated, rel. to stable, at 1500°, low work function surface 8=18262
 solid fine powder ionized in cold gas 8=2274
 space charge effect in oxide cathodes 8=18259
 thermionic conversion Specialists Conference San Diego USA October 1967 8=6273

Electron emission—contd

thermionic—contd

- transfer by negative ions 8=287
 transition-metals in Cs and F vapours, model 8=18261
 Au-GaAs Schottky barriers, dominant electron transport mechanism 8=13931
 Cs film in Ir, and adsorption, and field-emission microscopy 8=9268
 Hf, in Cs vapour, emission vs reciprocal temp. curves 8=18264
 Ir filament, periodic Schottky deviations at 1500-2000°K 8=5415
 Pt-group metals, in Cs vapour at T_c=414°K 8=18265
 Re, cesiated, evaluation of emitter surface 8=18269
 Re cesiated surface, evaluation 8=22717
 SrO, enhanced, and photoluminesc. and photoelectric emission 8=23063
 SrWO₄ (mixed normal and basic), and repeatable conversion and activation 8=18266
 Th₃ in Cs vapour, emission vs reciprocal temp. curves 8=18264
 Ti, in Cs vapour, emission vs reciprocal temp. curves 8=18264
 UC-ZrC, W clad, vacuum stability, effect of temp. to 2473°K 8=18267
 UO₂, W clad, vacuum stability, effect of temp. to 2473°K 8=18267
 W, cesiated, evaluation of emitter surface 8=18269
 W, cesiated, saturated emission rel. to energy conversion 8=18268
 W cesiated surface, evaluation 8=22717
 W, in Cs-additive system, work function, rel. to adsorbed mols. 8=15214
 W surface, influence of CsF adsorpt. on work function 8=18270
 W-La₂O₃ system alloys obs. 8=22716
- Electron energy states.** See Crvstal electron states.
Electron gas
 See also Metals/theory; Plasma; Solids/theory; Superconductivity.
 bremsstrahlung, photon spectrum 8=12503
 collective description in generalized r.p.a. 8=5143
 correlation energies at metallic densities 8=5137
 correl. energy calc., in slowly varying high density 8=10659
 coupled plasmon-particle excitation, behaviour of spectral weight function 8=17900
 crystallization and mag. ordering 8=22484
 degenerate, thermal resist. due to interaction between electrons 8=8960
 dielectric constant of dense electron gas with fixed point charge 8=8962
 electrodeless discharge, fast e population conditions 8=21229
 electron-impurity interactions, h.f. elec. cond., calc. 8=2999
 electron-impurity interactions, master eqns. 8=2998
 electron-impurity interactions, one-particle evolution eqns. 8=2997
 embedded atoms, statistical model calcs. 8=22486
 free electrons, ultrasonic absorption in quantizing mag. field 8=6165
 hot-, galvanomagnetic and thermomagnetic size effects 8=19466
 hot ionized, statistical mechanics, and collision theory, book 8=16455
 hydrodynamic equations 8=131
 interacting at high and metallic densities, pair distrib. function 8=17902
 interaction with nuclear or ionic spins via ferromagnetic s-f interaction 8=17898
 kinetic equations, for non-uniform relativistic 8=132
 magnetron cloud, natural freq. calc. 8=15328
 metal, e correlations 8=22483
 metallic interfaces, model, exchange-correlation and lattice potentials effects 8=2112
 plasma, resonant, iemp. and density var. 8=1419
 polarization, static, influence of exchange 8=13681
 polarized free, spin density oscillations 8=22482
 randomization, fast, by trapped electroacoustic waves 8=16580
 scattering of e m. waves in stellar atmosphere 8=15028
 screening around ion cores 8=22485
 semiconductors, dense electron-hole gas 8=8959
 semiconductors, Green function method for density 8=8889
 spectrum, single-particle, electron coupled to plasmons approx. 8=5145
 spectrum, single-particle, spectral weight-function structure 8=5144
 spin-density-wave, 3D case, with magnetic field, existence theorem 8=15022
 superfluid Fermi system, dynamics 8=130
 in thermionic converter plasmas, theory of electron transport phenomena 8=15235
 thermodynamic state with broken geometrical symmetry, existence 8=19465
 virial theorem, alternative proof 8=19464
 rel. to work function calc. 8=18243

Electron gas—contd

- Ar shock layer, density meas. 8=21265
- Fe-based alloys, representation of electron bands 8=13661
- Ga crystal thermal cond., size effects 8=17545
- InAs, light scattering by plasmons and Landau levels 8=22990

Electron guns. See Electron beams.**Electron lenses**

- See also Electron microscopes; Electron optics.
- aberration correction, spherical and chromatic, for fast electrons 8=15308
- objective, spherical aberration coeff., dependence on object position and magnification 8=19788
- quadrupole, aberrations, necessary coeffs. 8=3189
- quadrupole, in scanning microscope 8=334
- quadrupole, third-order aberrations calc. in rectangular model 8=6310
- quadrupole triplets, distortion free image formation 8=332
- refractive systems in spectrometers 8=16175

electrostatic

- "condenser-objective" for microscope up to 700 kV, spherical aberration and resolving power 8=19790
- cylindrical telescopic three-electrode systems 8=3205
- deflection defocussing 8=3206
- intermediate decelerators in electron microscopy 8=6309
- mirror analyser, spherical, comparison with spherical deflectors 8=15209
- quadrupole, linear accelerator beam shaping 8=15655

magnetic

- aberrations, spherical and chromatic, of non-circular lens 8=3207
- coma aberration 8=333
- condenser for e spectrometer 8=20389
- electron microscope objective, soln. for magnetic field 8=336
- iron-less quadripolar 8=15307
- magnetic field meas. at grid of spectrometer, ADI method 8=6337
- magnetron, space charge electrons, lifetimes meas. 8=6319
- quadrupole quadruplet, mech. aberrations 8=15312
- quadrupole quadruplet projector, electron-optical props. 8=15311
- spectrometer analysers, spherical aberration calculation 8=10898
- superconducting, optical characteristics 8=6311
- superconducting, optical constants calc. 8=19791
- three-dimensional with restricted propag. 8=15310
- transmission through aperture, application to retending p.d. 8=3204
- Yoke design rel. to electron beam aberration in magnetic deflection fields 8=10897

Electron microscope examination of materials

- biological systems, complemented by X-ray diffr. 8=14897
- cathodes, submicroscopic projections, in elec. breakdown 8=1343
- clay minerals—Al oxide, hydrous, mutual adsorption 8=8341
- colloidal aggregates, shape analysis 8=16906
- crystal imperfections 8=17269
- crystal imperfections, techniques and limitations 8=17597
- cube recrystallization texture formation 8=13129
- ethylene-butene-1 copolymers, crystalline structure 8=8598
- feldspar, plagioclase, etching and replicating technique 8=21930
- of field-ion specimen tips, interpret. of images 8=18285
- gibbsite in bauxites of Mas Rouge region 8=17275
- glass, thin, transmission 8=21995-6
- lamellar mixtures of 2 c. p. phases, stacking features 8=21974
- magnetic domains, direct obs. by scanning e micros. 8=18315
- of magnetic fields and domain structure 8=13991
- magnetic stripe domains, study 8=22778
- materials, conference, Boston, June 1967 8=8445
- mesomorphic phase 8=16796
- metal disc specimens, electrolytic polishing 8=17270
- metal films, epitaxial growth on NaCl and KCl in vacuum 8=13147
- metal foils, images calc. rel. to strong simultaneous reflections 8=13234
- metal smoke particles prep. by evap. 8=4839
- plastics, elevated temperature, thermal mass thickness variation 8=17186
- polyethylene below 20°K 8=13159
- polyethylene, thin specimens, obtained by xylene-stream method 8=4852
- polymers, microstruct. in ultrathin sections 8=17297
- polymers, sample preparation technique for scanning microscope 8=17180
- PVC single crystals 8=17300
- precip. phase microanalysis with combined energy analysis 8=17276
- precipitates in thin foils, images 8=13152
- silicon iron, notched, fracture topology rel. to crack nucleation and growth 8=17793
- steel, austenite grain size, high temp. obs. 8=13157
- steels, notched, fracture topology rel. to crack nucleation and growth 8=17793

Electron microscope examination of materials—contd

- surface topography charact. with scanning microscope 8=17114
- surface steps, resolution and contrast, meas. 8=13079
- trace analysis 8=17269
- Ag—Cu alloys, age hardenable, precip. 8=21837
- Al, 50 kV electron mean free path for plasmon excitation, diffr. condition effect 8=13696
- Al thin films, distribution of sputtered atoms 8=21876
- Al thin film, obs. of electro-transport 8=17927
- Al-4wt%Cu alloy, precip. phase microanalysis with combined energy analysis 8=17276
- Al—Li alloys, neutron irradiation 8=8456
- Al—Si alloy, interaction between dislocations and precipitates 8=13431
- Au, fine lattice fringes, resolution by dark and light field axial illum. 8=1783
- B₂O₃—PbO—Al₂O₃ glass system, spinodal decomposition structures 8=17268
- BaTiO₃, surface potentials, analysis 8=13880
- BeO, radiation damage 8=22250
- Bi—Sb films, 2-layer, struct. defects by Moiré method 8=22186
- C, evap. films on heated metal substrates 8=4745
- Cu cubic texture formation during recrystallisation 8=480
- Cu films, epitaxial, changes on exposure to H₂—O₂ combination at 325°C 8=8318
- Cu films, obliquely deposited 8=8296
- Cu single crystals in stressed condition, dislocation arrangement 8=22201
- Cu-2 wt.%Be, ageing studies 8=17056
- Cu—Be—Al alloys, ageing characts. obs. 8=22335
- Fe, thermal etching in vacuum 8=17652
- FeC₂—graphite cpd. 8=1972
- H₂ solid 8=8465
- Hg layers adsorbed onto W field emitter tips 8=1702
- Mo, surface structure 8=21992
- MoZr, surface structure 8=21992
- N₂ solid 8=8465
- Nb surfaces, microscope study 8=13950
- Nb₂O₅, high temp. and related phases 8=22033
- Nb—Zr alloy, structure, by photomicrographs and diffr. patterns 8=8245
- Ni films, electrolessly deposited 8=17136
- Ni-2 wt.%Be, ageing studies 8=17056
- O₂ solid 8=8465
- PbTiO₃—PbZrO₃, surface potentials, analysis 8=13880
- Pd films, obliquely deposited 8=8296
- Pt films, obliquely deposited 8=8296
- Pu α -phase foils 8=21887
- Si chemical-vapour-deposition on sapphire, obs. 8=4826
- Si, dislocation motion under e-bombardment 8=17660
- Si, surface diffusion of Li 8=22159
- Sn films, obliquely deposited 8=8296
- UO₂, irradiated 8=8469
- W wire, recrystallized, sample prep. 8=17267
- W, stacking faults obs. 8=1984
- W/N₂ system, phase changes of adsorbed N₂ from field microscope exam. 8=21913

Electron microscopes

- alignment, standard specimen 8=15317
- band pass filter, 8=15303
- calibration, high magnification, using single crystals with known etch steps height as standards 8=8450
- combined with X-ray microanalyzer, illuminating system 8=8442
- condenser-objective for 700 kV accel. 8=6313
- condenser-objective, spherical aberration and resolving power 8=19790
- development, review 8=15516
- diffractometer attachment 8=19792
- electron accelerator, 1MeV, for 8=15319
- energy analyzing, for precip. phase microanalysis of alloys 8=17276
- field emission, desorption of K from emitter 8=3211
- field-emission, ultra-high vacuum metallic dismountable apparatus 8=15320
- filter projection system with image intensification through storage 8=15318
- filters for thick polycrystalline metal foils 8=8455
- 5000 kV, improved fundamental characts. and features 8=8500
- image contrast, theory, elementary account 8=10901
- image intensification, television camera system 8=15527
- lens, quadrupole quadruplet projector, electron-optical props. 8=15311
- objective lens, soln. for magnetic field 8=336
- microprobe resolving power meas. 8=15314
- microprobe spatial resolution 8=15313
- mirror type, spatial frequency response 8=15315
- probe microanalyzers, X-ray counting systems, non-linearity corrections 8=4837
- probes, cathodoluminescent detector 8=5689
- resolution limit of emission type 9=10902
- scanning, experiments with quadrupole lenses 8=334
- scanning, specimen cooling stage 8=6227
- scanning, secondary-electron channel multiplier use 8=3209

Electron microscopes—contd

- scanning microscope with three e.m.lenses 8=17281
thermoelectronic emission type, observation of
recrystallization of steel 8=337
use as diffraction camera, high resolution 8=6316

Electron microscopy

secondary multipliers, explanation of spurious pulses 8=6322

storage-CRO display units for small lab. computers 8=6320

strophoton, e interact. with travelling-wave field 8=10911

strophoton, exisymmetric 8=3213

thermionic diode, energy convertor, influence of anode emission on efficiency 8=10841

thermionic diode, optimization of emitter length 8=15323

travelling-wave, evacuation by Ti getter pump 8=16731

travelling-wave, parametric amplification with pre-modulation 8=6369

travelling wave tubes, space-harmonic fields, interaction with electron beams 8=10910

vacuum diode detector for high γ flux 8=15721

vacuum switching, use of permanent magnets 8=3154

vidicon for automatic recording of spark chamber events 8=3483

Vidicon camera for simultaneous meas. of density and coordinates on bubble chamber photographs 8=20223

vidicon, with CdSe target 8=3215

Cs diodes, electrode inhomogeneity influence 7=297

Cs plasma diode, anal. of ionic species 8=15211

Cs plasma diodes, identification of dominant ion species 8=15322

Cs vapour thermionic diodes, ion current and Schottky effect 8=339

Re electroetched emitter in variable-parameter diode, output charact. 8=19793

Electrons

This heading includes both negative and positive electrons when the differences between them are of no special significance. See also Beta-rays; Cosmic rays/ electrons; Crystal electron states; Fluctuations/ electrical; Nuclear reactions due to/ electrons; Photoelectricity; Plasma; Positronium; Positrons; Space charge.

accelerators, Tomsk Polytechnic design and performance 8=15667

atomic, Cs-inert gas collisions, spin polarization from D_2 pumping 8=1194

bremsstrahlung, total spectrum of ultrarelativistic electrons 8=20367

capture by μ^+ from H and He atoms 8=7481

classical motion in elect. -dipole field, point dipole case 8=19772

cloud in magnetron, stabilizing instabilities in oscillatory conds. 8=15327

coincidence expts., magnetic steering device 8=3596

collision cross section data, low energy, bibliography 1925-1966 8=20990

collisionless capture into region of finite motion, and particle distrib. 8=7740

Compton line shapes for Hartree-Fock wave functions 8=20940

Compton wavelength determ. 8=15739

concentration profiles during sunspot maximum and minimum 8=23357

conduction, quasioptical mag. moments and electrode dipole 8=323

cylindrical capacitor as analyser, dynamic and optical props 8=3280

depolarization in Al, longitudinal with up to 70% energy loss obs. 8=11460

diffusion coeff., Einstein generalized ratio 8=15025

diffusion in gases, time-of-flight meas. 8=7702

in earth's magnetotail, obs. by Vela satellites 8=23431

in elec. -dipole field, classical motion, finite dipole case 8=19771

e^+e^- binding energy, rel. to three body theory 8=667

e/m measurement, modification of experiment 8=10471

$e-\mu$ e. m. difference from $\mu-p$ scatt. obs. 8=20395

$e^+ + p \rightarrow e^+ + \pi^+ + n$ obs. 8=11505

electroproduction of N^* cross-section calc. 8=20514

electroprod. of N^* , model for form factors 8=20579

electroproduction of π on N as function of momentum transfer 8=6840

electroprod. on spin-1/2 target, superconvergence relation and current-algebra identities 8=20376

electroprod. of strange particles, PCAC and current algebra study 8=20344

e-photon cascades in Pb plates, meas. in scintillator 8=6804

energy decrease in neg. glow region of He discharge 8=4288

F-region, approx. 10 ev, geographic distribution 8=23417

in field of intense e. m. wave, photon emission 8=717

freely falling, gravitational force compared with metallic 8=704

Green function and mobility in random potential, calc. 8=11461

heating in beam plasma system rel. to resonant resistive instability 8=1426

- electrons—contd**
 helicity studied in scatt. off polarized d 8=20375
 high-speed reflection, calcs. 8=3595
 hot, in plasma, due to e beam bombard. 8=21306
 hydrated, absorpt. spectrum 8=5705
 hydrated, bimolecular rate constants in aqueous solns. 8=2510
 hydrated, formation in $H + F^-$ reaction 8=18679
 hydrogen-proton collision, electron capture probability 8=1199
 ice, γ -irradiated, solvated e spectrum obs. at 77°K 8=22989
 inner zone, temporal behaviour, 1965/66, Pegasus 1 obs. 8=23344
 ionosphere, local conc., determ. from Doppler dispersion meas. of satellite radio beacons 8=23358
 ionospheric density detm. by coherent frequency method 8=14670
 isobar $T = J = \frac{1}{2}$, electroproduction, soln. of dispersion relations 8=3732
 low-energy, precipitation at high-latitudes, satellite meas. 8=9954
 magnetic moment anomaly in muonium as test for Q. E. 8=11285
 magnetic moment rel. to self-interaction corrections in q. e. d. 8=20174
 magnetospheric tail, electrons within neutral sheet 8=23320
 mass of Dirac particle as function of spin 8=3592
 mass values maximization of ratio decay rate/Q-value 8=3601
 minimum size in nonrelativistic theory, from hyperfine structure 8=826
 p-e charge inequality determ. 8=11455
 p-e interaction quasi pot., using two-time Green functions, p structure effect 8=11590
 photoelectrons, distrib., quantum optics 8=20013
 photoelectron heating efficiency in ionosphere 8=23359
 photoelectrons, single, detection 8=11463
 photon scatt., in field of intense laser ray 8=20354
 π electroproduction, $e + p \rightarrow e + n + \pi^+$, π form factor meas. 8=6834
 plasma, interaction of proton and electron plasma waves 8=4364
 in polar gases, collision freqs. and drift vels. 8=4471
 polarization, radiative, in mag. field, quasiclassical approx. 8=715
 propagator, analytic behaviour for complex $e^2/\hbar c$ 8=15726
 pulses, ≥ 30 -keV, in magnetosheath and beyond, correlation with mag. fields 8=23433
 quantum electrodynamics, third-order vertex part of single electron line 8=20385
 quantum-relativistic concepts 8=6800
 radio sources, energy and lifetime of relativistic electrons 8=19224
 reflection from target, intensity prop. to Z number 8=20381
 resonant radial oscill. in betatron at 5 and 15 MeV 8=20239
 scintillation response and efficiency of crystal 8=716
 self-energy graph, asymptotic behaviour 8=20170
 solvated, yield in γ -radiolysis of water+10% ethanol 8=23167
 temp. and density in theta pinch plasma, laser scatt. expt. 8=16553
 thermal, capture by O_2 8=7723
 trapped in γ -irrad. organic glasses 8=9729
 trapped, low-altitude, boundary collapse in mag. storms 8=14656
 upper atm. >40 keV flux rel. to ionosphere D-layer form., ≤ 100 km 8=14680
 vel. distrib. function in partially ionized gas 8=12423
 Al L-shell. excitation by 20-keV electrons 8=22495
 Al_2O_3 , L-shell, excitation by 20-keV electrons 8=22495
 in D, mag. drift vel. and deflection coeff. 8=7712
 in H, mag. drift vel. and deflection coeff. 8=7712
 K, conduction, u.s. attenuation 8=22104
 NH_3 gas radiolysis, effect of scavengers 8=23162
 Si-Li drifted detector response, 200 keV-1.7 MeV monoenergetic 8=11464
- absorption**
 See also Beta-rays/absorption.
 polycrystalline foils, temp. effects 8=13467
 Si, anomalous, determ. of coeffs. 8=13289
- ionization**
 impact cross sections, semi-empirical 8=1350
 CO, removal during d.c. discharge afterglow 8=21233
 H ionization, asymptotic form of wave function 8=16443
 NO_2 , rate of attachment of gaseous electrons 8=12449
- radiation**

 positrons, by various targets 8=1044
 positrons, slow, by mols. 8=12168
 probability, Kapitza-Dirac effect, experimental test 8=19785
 pseudo-nuclei isotope for configuration mixing extended to s-d shell and non-degenerate case 8=20774
 pseudo-nuclei model, test of purity of configurations in shell-model analysis 8=20774
 quasi-free and nuclear shell structure 8=1043
 radiation correction including hard photon emission 8=711
 reflection coeff. for zero-energy electrons from Ag surface 8=6301-2
 Saskatchewan laboratory, facility 8=7171
 2s-1d shell nuclei, form factor calc. from HF wave functions 8=11802
 solids, for muffin-tin ionic potentials 8=8895
 solid targets backscatt. spectra and coeffs., obs. 8=15298
 by specimen-supporting films in electron microscopy, effect on Fresnel fringe formation 8=19787
 in superconductor by impurities 8=2146
 by thin films, incoherent component 8=3202
 in thin films, inelastic, at oblique incidence 8=17911
 Thomson, frequency shift 8=15729
 Ag foil target, 0.52 MeV to 2.0 MeV, 0° to 20° angle, plural 8=16064
 Al, backscatt. and X-ray prod., obs. and e transport calc. rel. to microanalysis 8=18794
 Al foil target, 0.52 MeV to 2.0 MeV, 0° to 20° angle, plural 8=16064
 Au, backscatt. and X-ray prod., obs. and e transport calc. rel. to microanalysis 8=18794
 Au, rel. to X-ray microanalysis, backscatt. correction, obs. 8=14469
 Be foil, multiple, of high-energy electrons 8=20384
 Be⁹, elastic and inelastic, rel. to nucleon clusters 8=11865
 Be-Au 2-layer target, back-scatt., rel. to thickness 8=3203
 Bi²⁰⁸, 28-73 MeV radiative transition probability 8=11785
 C, cross section meas. and sum rules 8=3911
 C¹² and C¹³, inelastic, excitation of 15.11 MeV levels 8=3791
 C¹², inelastic, at 180°, levels excited 8=16063
 C¹² (e, ep)B¹¹, Born approx. and DWIA calc. compared 8=7175
 C¹², first excited state 8=952
 C¹², inelastic, with excitation of levels at 19.5 MeV 8=1045
 C¹², 15.1 MeV level excited 8=3773
 C¹², 19.4 MeV, $J^\pi = 2^-$ 8=20682
 C¹³, in methane, 250 MeV, nuclear charge radius 8=3912
 in Cs thermionic diode, effect on collector work function meas. 8=15243
 Cu, backscatt. and X-ray prod., obs. and e transport calc. rel. to microanalysis 8=18794
 Cu, rel. to X-ray microanalysis, backscatt. correction, obs. 8=14469
 Cu-Au alloy, from disorder, rel. to anomalous absorpt. 8=17362
 GaP, hot-electron-phonon interactions 8=5245
 H₂, Born inelastic differential cross-sections 8=12191
 H₂, dissociative attachment of e, vibrational resonances obs. 8=21182
 H₂, low-energy elastic 8=7516
 He atom, rearrangement collision, spin flip effect 8=7445
 He, large-angle electron-impact spectra 8=16224
 He⁴, high energy scatt. and N-N correlation 8=891
 He⁴ nuclei, elastic scatt. cross section, 30-59 MeV 8=15732
 InSb, hot polar scattering 8=13638
 K, elastic differential spin-exchange cross sections 0.5 eV 8=12097
 La¹³⁹, at 225 ± 0.7 MeV 8=11866
 Li⁶, 60-130 MeV, off 3.56 MeV level 8=11716
 Li^{6,7} elastic and inelastic, rel. to nucleon clusters 8=11865
 Li^{6,7}, elastic at 100-600 MeV nuclear charge form factors 8=1047
 Li⁷, form factor, h.f. calc. 8=3789
 MgO, Kikuchi patterns rel. to anomalous absorpt. 8=17362
 N¹⁴, inelastic, 50, 53 and 57 MeV electrons, determ. of ground state e.m. widths 8=20684
 N₂, large-angle electron-impact spectra 8=16224

Electrons—contd

- scattering—contd
 N₂, struct. of 2 eV resonance 8=12214
 Ni^{58,60,62} form factors 8=3913
 O¹⁶, 19.08 MeV level form factor 8=3794
 Pb foil target, 0.52 MeV to 2.0 MeV, 0° to 20° angle, plural 8=16064
 Pb²⁰⁸, 207, 208, 28-73 MeV radiative transition probability 8=11785
 Pb²⁰⁸, inelastic form factor calc. 8=16003
 Si²⁸, inelastic, transition matrix elements at 100-260 MeV 8=7174
 Sn^{116,120,124}, collective levels obs. 8=11757
 Sn^{116,120,124}, elastic at 150 MeV, charge density changes 8=1046
 SnO₂, polar optical-modes 8=22611
 scattering, electron—proton
 backward, ratio $R = \sigma(e^+ + p)/\sigma(e^- + p)$ meas. 8=15733
 cross-section data up to 1.1 GeV 8=11459
 cross-section ratio to positron-proton scatt. 8=20383
 elastic, differential cross section comparison with e⁻p scattering 8=3600
 high-energy, polarization quantities and cross-sections 8=20380
 high-momentum-transfer obs. 8=15731
 in equality derived from ν -p backward scatt. sum rule 8=6923
 μ -p, e-p comparison as test for quantum electrodynamics 8=11285
 N₁₅^{*} (1688), missing mass determ. of excitation function 8=11638
 proton aurora, spectra and ang. distrib., rocket meas. 8=5798
 resonances, isobaric electrical excitation 8=713

 reflectance, modulated, at oblique incidence for analyzing band structure 8=14168
 semiconductor surface parameters from electroreflectance studies 8=5230
 suspensions, transient birefringence relax. 8=16899
 triglycine sulphate, deuterated, rel. to deuteration effects 8=5647
 AgBr, migration of photoexcited holes in electric field, obs. 8=1908
 AgBr, piezo-optical transmission, detection of internal polaron states 8=13679
 Ar, crystalline, rel. to growth parameters 8=2238
 Bi₁₂GeO₂₀, elec.-field biased, photo-induced changes in optical polarization 8=2404
 Ca₂Nb₂O₇, eight linear coeffs. 8=18513
 CdS, electroabsorption, exciton effects 8=22965
 CdS, in field distrib. and current saturation meas. 8=9250
 CdS, meas. at 10.6 μ 8=18515
 CdS, photo Hall mobility at high electric field 8=2187
 CuCl, cryst. growth for modulators 8=8407
 Cu₂TaSe₄, and other optical props. 8=8408
 n-GaAs coeff. from Raman scatt. by mixed plasmon-phonon modes, obs. 8=5599
 GaAs crystals, light amplitude modulation, $\lambda=10.6 \mu$ 8=95
 GaAs diode, reverse-biased, light emission position and waveform 8=9160

Electro-optical effects—contd

- GaAs at 80°K, electric field obs. 8=2193
 GaAs, meas. at 10.6 μ 8=18515
 Ga_{1-x}In_xAs alloys, electroreflectance rel. to band structure 8=2419
 Ge, electroreflectance spectra and band structure, 1.5–6.5 eV 8=13663
 Ge films, piezoabsorption, above fundamental energy gap 8=22986
 Ge, interband props., electroabsorption 8=22595
 Ge, interband props., electroreflectance 8=22596
 He-Ne laser modulation by inactive cavity 8=19965
 HgS, linear, at 0.63 and 3.39 microns 8=14225
 K_{0.4}Li_{0.4}NbO₃, ferroelec., single cryst. growth 8=21952
 K_{0.4}Li_{0.4}NbO₃, stable nonlinear optical material 8=5618
 K(Ta-Nb), crystals, obs. 8=9199
 KH₂PO₄, elec. field alteration of phase matching freqs. 8=14234
 KSR₂Nb₂O₁₅, and ferroelec. props. 8=5365
 KTa_{0.66}Nb_{0.34}O₃, crystal obs. 8=14232
 Li, atomic, theory 8=12068
 LiNbO₃, d. c. constant, temp. and optical freq. dependence 8=9547
 LiNbO₃, spontaneous rel. to induced, temp. depend. of birefringence, polarization and linear coeffs. 8=18543
 LiNbO₃, temp. depend. and model 8=5619
 NH₄H₂PO₄ group, 45°X-cut, use in laser emission control devices 8=6424
 Na, atomic, theory 8=12068
 Si p-i-n, Co-doped, optical excitation of current oscillations 8=2227
 Sr_{1-x}Ba_xNb₂O₆, ferroelec. crystals. 8=21966
 ZnO, electroreflectance rel. to gas adsorption 8=9564
 ZnS crystals in X band travelling-wave light-intensity modulator 8=23025
 ZnTe films, rel. to determ. of reduced effective mass 8=18566
 ZnTe, meas. at 10.6 μ 8=18515

Electrophoresis

- clay suspensions forced-flow filtration, elec. field effects 8=16898
 gases, cataphoretic purification 8=2536
 gas mixtures, diffusion coeff. meas. by cataphoresis 8=12704
 He-Hg vapour mixture, cataphoresis 8=7656
 Na, K radioactive ion separation, spacers 8=5742

Electrophotography. See Photography.**Electrophotoluminescence.** See Electroluminescence.**Electropolishing.** See Surface texture.**Electroproduction.** See Beta-rays/effects; Electrons; Nuclear reactions/due to electrons.**Electrostatic generators.** See High voltage production; Particle accelerators/linear.**Electrostatic lenses.** See Electron lenses/electrostatic; Ion optics.**Electrostatics**

 capacitor plates, induced charge convergent solution 8=10834
 charged ellipsoid, potentials 8=3186
 charge measuring instruments 8=279
 charging of solid surfaces 8=18156
 condenser, spherical, field calc. 8=276
 e emission, metal-gas interface, Thomas-Fermi-Dirac theory 8=5414
 electrification by rubbing, essential conds. 8=6254
 field, elec., complex 2-dimens., approx. calc. 8=19716
 field, homogeneous, in cylindrical set of electrodes, elimination of harmonics 8=15191
 guarded sphere as gauging electrode in length metrology 8=10823
 latent image transfer to dielec. surface 8=6580
 liquid drops disintegration and electrification subject to electrical forces 8=16782
 liquids, static electricity 8=12907
 medium including ellipsoidal particles, equiv. cct. 8=6252
 nylon 66, electrification rel. to metals 8=5356
 particle beam focusing, soln. of Cauchy problem 8=15275
 permittivity of randomly inhomogeneous anisotropic media 8=19715
 point charge screening potential by thin films 8=278
 potential fields, two dimensional, for given sources, simulation by induction method 8=6253
 potential problems for half space with cylindrical cavity, solutions 8=6053
 precipitation, particle charge magnitudes 8=19719
 precipitators, particle behaviour, photographic study 8=10836
 space anisotropy, soln. by linear sources 8=14936
 spherical segments, soln. by paired eqns. 8=6251
 static charge, dissipation and generation on dielectrics in vacuum 8=18159
 static electrification Conference, London May 1967 8=6255
 superconductivity, effect on BCS theory for tiny samples 8=5194
 Van der Waals forces, macroscopic theory 8=19718
 voltmeter, feedback, with transparent probe 8=3133

Electrostriction

See also Piezoelectricity.

Electrostriction—contd

- diamond-like crystals, rel. to photoelasticity and first-order Raman effect 8=9486
 ferroelectrics, acoustic and polarization waves interaction, elastic consts. 8=18182
 ferroelectric ceramics, perovskite-type 8=5362
 fluids, rel. to laser beam filament formation 8=8067
 Kerr effect and striction in self-focusing of light 8=3377

Elementary particles

- See also Baryons; Field theory, quantum; Hadrons; Leptons; Nucleons and antinucleons; Nucleus; Particle detectors; Particle range; Quantum theory; Quarks; Scattering particles; Strange particles; and individual particles, e.g. Electrons; Mesons.
 accelerators, classification 8=6689
 Adler-Weisberger relation, π dominance implication 8=11424
 algebra of vector densities, inverse mass approx. to saturation 8=6738
 annihilation processes, statistical unitary-symmetry theory 8=3527
 annual review of nuclear science, book XV 8=15628
 axial coupling constant, renormalized, current algebra predictions 8=3520
 baryon mass formula in terms of decay products 8=6915
 behaviour in plane e.m. wave 8=20279
 β decay coupling constant, sum rule derived 8=11482
 Bethe-Salpeter amplitudes, normalization methods 8=3540
 Bethe-Salpeter eqn. compared to N/D values of required coupling constants smaller 8=20313
 Bethe-Salpeter eqn. for fermion-antifermion system in 0⁺, 1⁻ states, soln. 8=15687
 binary and nonbinary processes, amplitudes, asymptotic relns. bet. asymptotic expansions 8=665
 Bondi-Metzner generalized, reduction 8=14933
 book, general discussion 8=11353
 bootstrap incompatibility with closure and locality 8=15710
 bootstrap model, unified Fermi-Yang and Chew-low 8=3566
 bootstrap theorems and Lagrangian field theory of self-generating interactions 8=20161
 bootstrap theory in Lagrangian field theory, particle wave-function renormalization 8=20334
 bootstrap theory tested by Ω as bound state of ΞK 8=6978
 bound states, equivalent field theories 8=11273
 bound state, intrinsic size as a function of mass 8=20270
 broken symmetries and sum rules 8=11368
 C-conservation in $\eta \rightarrow \pi^+ K^- e^+$, vector meson model 8=3674
 C independ. in $\pi^- p \rightarrow \Sigma^- K^+$, 1170 MeV/c 8=20449
 C violation in e.m. processes 8=584
 Cabibbos' angle and $\Gamma(K \rightarrow \mu + \nu)/\Gamma(\pi \rightarrow \mu + \nu)$ 8=15798
 charge commutation relations in calc. $\pi-\pi$ S-wave scatt. length 8=20466
 charge independence triangular diagrams 8=645
 charge invariance rel. to model for soft-particle production in scatt. 8=3534
 charge renormalization as spontaneous symm. breakdown 8=3425
 charge superselection rule test 8=666
 chiral dynamics, nonlinear theories significance 8=11358
 chiral symm., nonlinear realizations 8=20262
 chiral symm. rel. to superconvergent sum rules for scatt. amplitudes 8=20310
 classification, Clebsch-Gordan coeffs. for SU₆ groups 8=15683
 classification in three categories 8=15706
 Clebsch-Gordan coefficients for SL(n, C) 8=651
 commutators, equal time, appl. of JLD representation 8=3524
 complex angular momentum method, test of basic assumptions 8=6735
 complex double pole and decay law 8=11379
 composite, infinitely as bootstrap criterion 8=11484
 composite model, the optimum Lagrange problem 8=11390
 composite system with mass a linear function of angular momentum 8=11378
 composite system, nonrelativistic, high-energy collision 8=15012
 composite, in weak interaction, absence of poles 8=20249
 compositeness conditions 8=3501
 compositeness criteria in quantum field theory and S-matrix theory 8=6764
 compound, conditions Z = O and bootstrap 8=6772
 conservation laws, review 8=3430
 conserved vector current theory rel. to μ^- stars in emulsion 8=11872
 conspiracy, test in π photoproduction on N 8=6775
 and cosmology 8=20247
 covariant spin operators 8=20338
 CP symmetry, review 8=11282
 CP violating decay, relation between ordinary, strange β and K $\rightarrow 2\pi$ 8=20467
 CP violation in strong interactions, $\beta-\gamma-\gamma$ angular correlation 8=669
 CP violation and weak interactions 8=11393
 current algebra and group theoretical derivations of sum rules compared 8=3522

Elementary particles—contd

- current algebra and locations and residues of fixed poles 8=3535
 current algebra, standard identity proved in perturbative model 8=6725
 current density algebra and form factors 8=6736
 current \times current hypothesis and $\Delta S = \Delta Q$ 8=15684
 Dashen-Frautschi approach to mass perturbation, modified technique 8=20267
 data on properties, updating 8=15671
 decay, nonleptonic, surface terms connected with reduction formulae 8=3511
 decay processes, soluble model 8=3413
 decaying system, theory 8=659
 deformable sphere model, excitons identified as quarks 8=15673
 density matrix elements in resonance production 8=11381
 de Sitter group, inhomogeneous, structure of generators 8=654
 digital computers in high-energy physics experiments 8=11350
 e. m. current operator, hadronic as linear combination of field operators 8=6831
 e. m. current operator, uniqueness proved in strong-coupling theories 8=6746
 e. m. current, possibility of part with $I=2$, $C=-1$ 8=20252
 e. m. effect on bootstrap model of $NN^*\pi$ dynamics 8=11486
 e. m. form factors of particle with spin 1 8=11376
 e. m. formfactor from inverse mass approx. to the saturation of the algebra of vector densities 8=6738
 e. m. interactions involving photons, dressed amplitudes in S-matrix theory 8=20343
 e. m. mass difference, sum rule calc. from current algebras 8=655
 e. m. mass shifts by dispersion theory 8=3509
 e. m. polarisability, correlation symmetry 8=3514
 experimental programme at Desy 8=11349
 F/D ratios for B + pseudoscalar-meson decaying particles 8=6766
 fermion-vector particles interaction 8=15692
 field theory propagators, variational formalism 8=6608
 Feynman diagram, Cayley eqns. equiv. to Landau 8=3448
 field equations, nonlinear, particle like solutions 8=3505
 fixed poles, existence by asymptotic behaviour of weak amplitudes 8=20249
 forces, short range, N/D representation, Regge trajectory calc. 8=3554
 form factors, canonical, and current commutation relations 8=3512
 form factors, consequences of Wu-Yang theorem for asymptotic behaviour 8=20269
 form factors, exponentially falling, crossing bootstrap model 8=20333
 form factor idealities from current density representations in one particle spaces 8=6737
 form factors weak and modification of GT relation with generalization of PCAC 8=11377
 free, field eqns., heuristic determ. 8=6720
 free spin particle, kinematics 8=11382
 Fubini sum rules relating K-decay form factors, meson-meson, and photon-meson couplings 8=20474
 fundamental charge, time-invariance 8=15690
 Galilei group, physical and nonphysical representations 8=6728
 Gell-Mann current commutators, off mass-shell matrix elements, condition for use of partial integration 8=20291
 Goldberger-Treiman relation, correction 8=20496
 Goldberger-Treiman relation, Nambu and Gell-Mann-Levy versions compared 8=6723
 Goldstone's theorem, rigorous treatment 8=6613
 graviton-graviton scatt. and annihilation 8=3452
 groups, noninvariant 8=3502
 high-energy physics, conference Oiso Japan (1965) 8=11348
 high symmetries, useful tools and SU 8=11366
 Hilbert space of 5D pseudosphere, non-diagonalism of mass-squared operator 8=3417
 impulse model for $K^- + He^4 \rightarrow \Lambda^0 + \pi^- + p + d$, obs. 8=20417
 inelastic interactions, energy and angular distribution of secondary particles 8=3518
 infinite component fields model 8=20248
 interacting, finite theory of 8=20136
 interaction constants, equations 8=6741
 interactions, diffraction and structure, conference Israel 1967 8=15672
 interactions, S-matrix theory 8=683
 interactions, strong, self-induced, simplification in infinite-momentum limit 8=20277
 interactions with spin rel. to representation of Poincaré group 8=15614
 interaction 2 spin-zero particles, relativistic 8=15609
 internal symmetries, significance 8=11365
 inverse scatt. problem, finite-range solns. 8=11394
 isospin symmetry, TCP and local field theory 8=11364
 Klein-Gordon equation for spinors 8=15621
 Klein-Gordon wave equation, transformations by conformable group 8=15681
 Lee model, algebraic solns. of V-O sector 8=20250

Elementary particles—contd

- Lee model, equal-time commutator and zero-energy theorem 8=3529
 Lee model, strong coupling soln. 8=11389
 leptonic decay, book 8=3858
 leptonic decays and unitary symmetry breaking 8=671
 Lie algebra of infinite-dimension, tensor product of one-particle representations 8=6724
 Lie algebra R_n group representation 8=11360
 Liperi Summer School in Theoretical Physics Helsinki, 1966 8=6715
 long-range force due to ν -pair exchange, as r^{-5} 8=20273
 Lorentz group complex, in homogeneous rel. to relativistic S-matrix scatt. 8=20289
 Lorentz group, rel. to lepton field 8=11450
 Lorentz group, unitary representations, rel. to dynamics 8=3507
 Lorentz invariance violation in field theory with unreasonable mass spectrum 8=3426
 magnetic moment determ. in $O(3,2)$, $O(4,2)$ 8=20265
 mass differences, e. m. of baryon octet and decuplet 8=11389
 mass, empirical relation, multiples of e mass 8=6734
 mass formula, associative algebra 8=15688
 mass formula describing mass-spin states using unified wave equations 8=11373-4
 mass formula for Nambu eqns., using Lie-group theory 8=20266
 mass formula, quadratic in SU_3 , evidence against use from $X^0 \rightarrow 2\gamma$ 8=20499
 mass formula rel. to superconvergence sum rules algebraic struct. 8=656
 mass ratios from $SU(3) \times SU(3)$ spectral function sum rules 8=20493
 mass spectrum determ. in $O(3,2)$, $O(4,2)$ theories 8=20265
 mass spectrum in $O(3,3)$ group for relativistic deformable model 8=3503
 mass-splitting models 8=3510
 mass-splitting in scatt., symmetries 8=676
 mass-splitting theorem for nonintegrable Lie algebras 8=11375
 massive, search in cosmic rays 8=11661
 massless, condition for existence 8=11363
 massless fields, $U(2,2)$ algebra unitary representations 8=15689
 massless transforming according to infinite-spin representations of 2D Euclidean group 8=20325
 micro-causality principle, math. formulation 8=6716
 monopole, magnetic Schwinger quantization relation derived by group-theoretic methods 8=20271
 μ^2 operator, diagonalization, extended models 8=6733
 multiparticle prod. processes, high energy bounds deduced from scatt. props. through unitarity 8=20275
 multiple-pole resonance, mean life 8=11380
 multiple-production theory via Toller variables 8=686
 N function integral eqn. reduced to Tamarkin form, removal of singularity 8=20314
 N/D eqns. compared to Bethe-Salpeter, values of required coupling constants larger 8=20313
 N/D eqns., Padé pole approx. 8=20315
 N/D formalism rel. to Y-N scatt. 8=20573
 n interacting, Schrödinger eqn. 8=668
 non-compact groups in particle physics, conference Milwaukee, USA (1966) 8=11352
 nonleptonic decay unified treatment rel. to CP-conservation 8=6750
 nonrelativistic quark model, rel. to classification and decay 8=729
 nuclear interactions, book 8=11386
 nuclear model, test with $n + He^3 \rightarrow p + H^3$ 8=15873
 $O(3,1)$ representation and Regge daughter-poles 8=11413
 $O_{3,1}$ unitary representation from IO_3 8=3506
 $O(3,1)$ rel. to high energy behaviour in Compton scatt. 8=20353
 $O(3,2)$, $O(4,2)$ derivation of mass spectrum and magnetic moments 8=20265
 $O(3,3)$ group for relativistic deformable model, mass and spin spectrum 8=3503
 $O(4,2)$ dynamics and N isoscalar form factor 8=6919
 OPE model for K^+ prod. in $p-p$, 2.5-3.0 GeV 8=20479
 off-shell dynamics relativistic, new covariant integral eqns. 8=20293
 pairs, photon-produced and photon-annihilated 8=11445
 parastatistics and unified theory of identical particles 8=6110
 parities, imaginary rel. to Bhabha's equation 8=648
 parity-violating nuclear forces 8=15915
 partial wave analysis of $\pi^+ p \rightarrow \eta n$ 8=6856
 particle state transformations under $\Theta=CPT$, rel. to internal symms. 8=11370
 particles and antiparticles, scatt., high-energy relations for oscillating scatt. amplitudes 8=11400
 PCAC, generalization to strangeness-changing and axial-vector current rel. to weak form factors 8=11377
 PCAC, implications from presence or absence of poles in weak interactions 8=20249
 PCAC, pionic in calc. $\pi-\pi$ S-wave scatt. length 8=20466
 PCAC in strong interaction Lagrangian 8=15749
 PDDAC hypothesis, tested in K^+ scatt. 8=3668
 peripheral inelastic interacts., theory and consequences 8=15693

Elementary particles—cont'd

- phase-shift analysis of $K^0\pi$ scatt. <1500 MeV/c 8=20484
 phase shift analysis for πN scatt. below 1.6 GeV/c 8=20458
 phase shifts, WKB high energy, produced by repulsive singular potential, expansion 8=20272
 photon processes, $2J + 1$ multipoles, associated low-energy theorem 8=20341
 Poincaré group extension to internal symmetry group, non-physical 8=649
 Poincaré and Lorentz invariant expansions of relative amplitudes 8=11396
 poles complex double in propagator and spectral condition 8=11408
 potential scatt., non-relativistic, effect of CDD poles on long range, behaviour 8=6751
 production processes, multi-Regge-pole hypothesis, group theory Toller analysis 8=6769

 propagation functions and field theory 8=6753
 quantum theory of scalar field with nonstatic source 8=11362
 quasiparticles, kinetic eqn. for free fermions 8=15674
 quasi-particles as many-sakaton system 8=20401
 quasi-particles rel. to transformation properties of the kinetic equations 8=14996
 reduced density matrices, permutational symmetry 8=13
 Regge cuts, condensation 8=6768
 Regge pole couplings to N in field theoretic model 8=20327
 Regge-pole model for associated prod. reactions 8=15777
 Regge-pole model with L-S coupling for $PN \rightarrow P^*N$, $PN \rightarrow VN$ 8=20318
 Regge-pole model for partial-wave amplitudes in $\pi-N$ scatt. 8=15784
 Regge-pole model for πN scatt. 1-5 BeV/c, modifications 8=20456
 Regge pole model for $\pi^- + p \rightarrow \eta + n$ 8=11519
 Regge-pole model with L-S coupling applied to $\pi^- p \rightarrow \pi^0 n$, $\pi^- p \rightarrow \eta n$, $\pi^+ n \rightarrow \omega p$ 8=20444
 Regge pole prediction for Compton scatt. and $O(3, 1)$ symm. compared 8=20353
 Regge poles, suppression at $t=0$ 8=11410
 Regge-pole theory in relativistic problems, constrain eqns., general scheme for Reggeization 8=20321
 Regge-pole theory used in model for saturating super-convergent sum rule 8=6756
 Regge residue function, $\beta(s)$, decrease with $\alpha(s)$ as $s \rightarrow \infty$ 8=11420
 Regge theory rel. to real-to-imaginary amplitude ratio for $\pi^+ p$ scatt. 8=20459
 Regge trajectory formulation of dynamics, with unitarity, and narrow-resonance approx. 8=20324
 Regge trajectories, integral eqn. for ρ derived and solved 8=20412
 Regge trajectory for ρ 8=20504
 Regge trajectories for Schrödinger eqn. with Yukawa pot. 8=11421
 Reggeons interaction with vector and scalar currents 8=664
 relativistic quantum mechanical position operator 8=20339
 relativity theory, negative self-energy contribs. by fields rel. to mass discrepancy 8=647
 representation in quantum field theory 8=3446
 resonances, decay rate, implications of infinitely rising Regge trajectories 8=11422
 rigid rotor, relativistic motion 8=11383
 S-matrix theory, uniqueness and symmetry breaking 8=11405
 saturation a good approx. to sum rules? 8=3513
 seniority scheme, quasi-spin methods and pairs of one particle CFP 8=918
 separation by a progressive e. m. wave 8=15649
 $Sh_{2,c}$, Feynman diagrams for unitary representations 8=20180
 SL(6), Casimir operators of Lie algebra determined 8=3508
 SL(6, C) invariant interact., non-linear spinor eqn. 8=646
 $SL_{6,c}$, Weinberg formalism for spin-s particles 8=20259
 $SO_0(4, 2)$ conformal group, physical aspects 8=15682
 sources, anisotropic, path-length formalism 8=7284
 space-time and degrees of freedom 8=11351
 space-time fluctuations as propagator 8=15677-8
 special relativity and high energy physics experiments 8=69
 in spherical potential, classical symmetry group 8=6732
 spin current algebra and relativistic formulation of SU(6) 8=11272
 spin-1/2, in gravitational field 8=2959
 spin, general case in Reggeization of 2-body interactions 8=11412
 spin and isospin, spinor field classification rel. to interacts. 8=706
 spin, Lagrangian formulation of $(2J + 1)$ -component theory 8=6616
 spin, mass-spin depend., unified wave eqn. 8=11373-4
 spin, nonphysical representations the limit of Poincaré group with spacelike momentum 8=6728

Elementary particles—cont'd

- spin-one, polarization effects in scattering 8=6752
 spin particle in outer Maxwell field, kinematics 8=11384
 spin quantization, dynamic reference system 8=3515
 spin- $\frac{3}{2}$ Rarita-Schwinger field, spectral representation 8=6719
 spin, $S_{3/2}$ interacting with gravitational field, covariant wave eqns. 8=11359
 spin and statistics rel. to hyperquantization in quantum field theory 8=20163
 spin theory, non-linear, applic. of Feynman technique 8=20288
 spin-W-spin mixing for B + pseudoscalar-meson decaying particles 8=6766
 spinless, symm. of wave functions, necessity of connected space 8=6602
 spinors and 3-D rotations, relation extended to n dimensions 8=660
 spontaneous creation in de-Sitter space 8=10070
 square of fundamental charge, time-invariance 8=15691
 strong coupling consts., symm. breaking corrections, dispersive calc. 8=15685
 strong coupling group representations 8=6731
 strong interactions as mediator for weak interactions 8=6749
 strong interactions, universal vector and axial-vector theory 8=15771
 strong and weak interactions, present problems, conference Erice Italy (1966) 8=15695
 structure and quantum theory of gravitation 8=6081
 SU(2) and internal symmetry group b, embedding in larger group b 8=652
 SU(2) \otimes SU(2) symmetry of Kepler motion 8=653
 SU(2) and SU(3), rel. between "outer" and "inner" multiplicity 8=3504
 SU(3) generators expressed as differential operators 8=15686
 SU_3 harmonics as basis states for meson resonances 8=11555
 SU(3) and O(4), connection rel. to symms. 8=11371
 SU(3) multiplet, suppression of dibaryon states from PCAC and CA 8=20512
 SU_3 , projection operators and Clebsch-Gordan coeffs. calc. 8=15680
 SU(3) and Regge poles: classification and high-energy scatt. 8=15708
 SU(3) symm. rel. to $\pi^- + p \rightarrow n + \eta$, $\gamma + p \rightarrow p + \eta$ 8=20490
 SU_3 , Wigner coeffs. 8=2885
 SU(3, 1) wave eqn. for dynamical description of h and l 8=20258
 SU(6)_v approach to e.m. form factor of N 8=20514
 subtractions in dispersive approach to SU(3) and SU(2) breaking in medium strong interaction 8=15694
 sum rules and currents, restrictions 8=6730
 sum rules and high energy theorems of current algebra in free field model 8=3550
 sum rule identities from equal-time commutator 8=3526
 sum rule for spectral functions, relation to between $A_1(1080)$ and $K_1(1320)$ 8=20261
 sum rules, Weinberg type, necessary and sufficient condition for validity 8=6727
 superconvergence and e.m. mass differences calc. 8=11372
 symmetries, International School of Physics "Ettore Majorana", ERICE 1965 8=6721
 symm. breakdown, classical model, invariance of solns., mass spectrum and occurrence of zero masses 8=20257
 symmetry breaking and const. gauge transforms. 8=650
 symmetry groups, appl. 8=11361
 symmetry, spherical, breaking into Euclidean rel. to impact-parameter representation 8=15698
 three-body final-state interactions, appl. of unitary symmetry 8=3519
 three-body reaction threshold, scatt. cross-section near 8=3547
 three-particle states, Green's function expansion using spherical harmonics 8=20263
 $3\pi^{1+}$ in three octets, decay 8=733
 3-nucleon system, application of perturbation theory 8=11579
 time-of-flight obs., large-area isochronous scintillation counters 8=15631
 time reversal invariance in $\nu_l + N \rightarrow N^* + l$ and $\bar{\nu}_l + N \rightarrow N^* + \bar{l}$ 8=3585
 two-body charge-exchange processes, in quark model 8=6742
 2-body reactions, simultaneous s-t analyticity from axiomatic field theory 8=6740
 2-particle inelastic interactions asymptotic amplitudes, Mandelstam branch points contrib. 8=663
 2-particle \rightarrow 2 particle transformation relativistic, current algebra 8=662
 U(3) \times U(3) chiral symm. in strong interaction Lagrangian 8=15749
 U(6), relativistic, difficulties 8=11369
 U(6, 6) algebra in harmonic function space 8=14934
 unitary symmetry 8=11367
 unitary symm., change in internal symm. group on going from time-like to space like momentum 8=20337
 unitary symmetries, SU(3) and SU(6), book 8=20256

Elementary particles—contd

- unitary symmetry theory 8=6722
- unstable, and resonances, application of general wave function 8=20268
- vector meson sum rules from current commutators 8=3525
- vertex functions obeying $SU(2) \otimes SU(2)$, calc. 8=744
- Vrkljan linearization eqns., verification 8=6717
- weak interactions of non-strange particles 8=11392
- Weinberg sum rules for spectral functions of vector and axial-vector current propagators, 8=20260
- Weinberg sum rules, finite meson corrections 8=3521
- Yang-Mills field, rel. to conformal group on space-time curve 8=15679
- Yang-Mills theory, equivalent results from current algebra with meson pole dominances 8=11357
- Yukawa potential, bound on double spectra function 8=661
- zero mass in σ model of PCAC eliminated 8=11489
- zero rest-mass particles, wave equation 8=11354

interactions. See Field theory, quantum/interactions; Nuclear reactions. Entries on interactions involving named particles are listed under the particles concerned, e.g. Mesons/interactions; Cosmic rays/effects and interactions.

Elements

- equilibrium properties of matter at very high temp. and densities 8=19167
- f.c.c., stacking fault energies, extrinsic to intrinsic relative magnitudes 8=17666
- new, prod. of, accelerator problems 8=15913
- 126^{210} production possibility calc. 8=3972

origin

- See also Cosmology; Thermonuclear reactions.
- chondritic meteorites, origin from moon or Mars 8=14856
- nucleosynthesis in supernovae shock waves 8=5842
- planets, by accretion of planetesimals, statistical problems 8=19248
- primeval thermonuclear fusion 8=23471
- B, in expanding hot universe, abundancies 8=5840
- Be, in expanding hot universe, abundancies 8=5840
- D, in solar system 8=19236
- Li, Be, B spallation formation in solar system 8=3922
- Li, in expanding hot universe, abundancies 8=5840
- p- O^8 reactions, Li, Be, B isotope ratio obs. 8=20792

relative abundances

- anomalies, explanation by cosmic annihilation 8=7116
- in BL Telescopii primary body 8=10204
- evolution in galactic cosmic rays 8=23490
- HD 122563, iron-peak, from u. v. spectra 8=5862
- HD 30353, H-poor, light elements 8=5882
- meteorites, Fe, inert gas compositions 8=10366
- radioactive Th, U and K, in crystalline shield rocks 8=9794
- solar chromosphere, O, Mg, Cr, Mn, Fe and Ni 8=23742
- solar corona, from u. v. spectrum 8=5976-7
- stellar interiors, heavy ion reactions 8=10151
- stellar surfaces, anomalies produced by nuclear reactions 8=5870-1
- Sun, rel. to diffusion of Li to Bi 8=19285
- supergiants, HD 96248 and HD 14443, N-deficiency 8=5889
- C^{12}/C^{13} solar abundance ratio from spectral meas. 8=10429
- from Ca II forbidden line in solar spectrum 8=19293
- D, $He^{3,4}$, implications of Brans-Dicke theory 8=23478
- Fe 8=2769
- Fe, in sun and meteorites 8=23682
- Fe XIII solar emission lines, photoelectric meas. during eclipse 8=5965
- Fe, in volcanic pigeonite, by Mössbauer meas. 8=9790
- He in Star Groombridge 1830 8=23505
- P^{229} and Pu^{244} in early solar system, obs. from achondrites 8=23468
- Li in the Pleiades and Ursa Major clusters 8=5863
- O/Fe in solar corona 8=23748
- Pb in sun, spectrometry 8=23696
- Pu^{244} and P^{229} in early solar system, obs. from achondrites 8=23468

Emission spectra. See Luminescence; Spectra; X-ray spectra emission.

Emissivity

- cathode, oxide, in low-pressure pulse discharge 8=18258
- cavities, cylindrical, nr. black body 8=220
- coaxial system, reduced emissivities meas. method 8=223
- incandescent light source, angular dependence 8=15524
- infrared, impurity-induced in interstellar dust 8=23571
- nichrome ribbon, natural convection rel. to heat flux 8=17548
- solid bodies, study 8=225
- solids, thermal, integral, 100 to 1100°C, modified calorimetric method 8=13400
- spatial distrib. of emission coeff., in limit of small self-absorption 8=3354
- surfaces, role of scatter, rel. to polar-collector design 8=1686
- synchrotron, for cosmic radio waves, correction 8=23604
- tubular radiator, computer soln. 8=10767
- CO_2-N_2 plasma, i.r. meas. 8=12510
- CdS, exciton lines, intensity variation rel. to excitation intensity, 4.2°K 8=22964
- Eu chelates, u. v. irradi., three-ligand β -diketonates, absence of stimulated emission, causes 8=18571

Emissivity—contd

- LiF film on Mo substrate, at 420°K and 605°K, at 20° and 0° 8=14236
- W, spectral, in visible and i.r. range 8=1897

Emulsions

- See also Colloids.
- alkylbenzenesulphonate-octanol-water systems, phase behaviour 8=8159
- benzene-in-water, particle size and distrib. 8=12953
- immiscible liq.-liq. system, agitated, drop size distrib. 8=12955
- methyl isobutylketone-salt water system, drop size distrib. rel. to coalescence 8=12956
- stabilized, barrier to coalescence, model 8=12957
- thickness and absorption, rel. to hologram reconstruction 8=15556
- tritium counter, water/toluene/triton system 8=3856
- ultracentrifugation, simultaneous automatic sequence and photo control system 8=4631

Emulsions, nuclear. See Nuclear track emulsions.

Emulsions, photographic. See Nuclear track emulsions; Photographic materials.

Energy bands. See Crystal electron states; Metals/theory; Semiconducting materials; Semiconductors.

Energy gaps. See Crystal electron states; Semiconducting materials; Semiconductors; Superconducting materials and devices; Superconductivity.

Energy levels. See Atoms/structure; Molecules; Nucleus/energy levels; Spectra.

Enthalpy. See Thermodynamic properties.

Li plasma, calc. 8=12462

Enthalpy measurement. See Calorimetry.

Entropy

- See also Thermodynamics.
- alkali halides, entropy of vacancy pair formation, calc. 8=1943
- Boltzmann's H theorem, standardization of terms 8=1066
- change rel. to vacancy diffusion in f. c. c. lattices 8=2217
- expansion, adiabatic, of mixture of two phases 8=10662
- fluid, charged, relativistic in e. m. and gravit. fields, adiabatic flow, rel. to pot. 8=16634
- functions existence of as result of relations of inaccessibility between states 8=93
- gas, discontinuities flowing past area change as cause of acoustic wave generation 8=177
- generation equation, derivatives of symmetry relations 8=96
- Hamiltonian system, indefinability 8=2971
- increase principle 8=108
- Landau damping 8=12505
- low temp. behaviour near transition line 8=8260
- magnetic alloys, dilute, low temp. props. 8=18289
- minimum prod. rate conditions in heat-cond. body 8=10663
- neutron diffusion in non-absorbing moderator 8=15850
- plasma, Gibbs entropy calc. outside equilb. 8=4334
- radiative transfer, size of production 8=6118
- solid phase, computer calc. 8=16923
- supersonic layers, linearized perturb. and vorticity due to curved shock waves 8=16652
- rel. to systems analysis by thermodynamics, combined pot. function 8=26
- superconductor, type I, mechanical transport 8=22545
- thermodynamic and information theoretical relationship 8=6104
- weak turbulence in plasma 8=7839
- of KBr self-diffusion from elec. cond. 8=8679
- K_2MoCl_6 , mag ordered and disordered states difference obs. 8=1872
- properties of substances**
- adsorbed large atoms, configurational 8=13104-5
- cyclohexane, gases in solution, rel. to solubility 8=4536
- cyclooctaselenium, changes in formation 8=21207
- cyclooctasulphur, changes in formation 8=21207
- elastic material, no. of parameters 8=50
- hydrogen ion solvation by H_2O mols. in gas phase 8=18661
- ice, square, residual entropy at low temp. 8=4945
- steam, dissociating 8=7917
- transition metals with adsorbed CO, changes on desorption 8=17174
- CO adsorbed on transition metals, changes on desorption 8=17174
- Cu formate tetrahydrate, at antiferroelectric transition pt. 8=8638
- $KCoF_3$, 80°-300°K 8=17519
- Na_2HPO_4 hydrates, low temp. 8=17521
- Th cpds., refractory, and charact. temp 8=13379
- YH_2 , from resistivity meas. 1000-1200°K 8=17942
- $ZrH_{1.69-1.96}$, from resistivity meas. 1000-1200°K 8=1794
- Epitaxy.** See Crystals/faces; Crystals/growth; Films/solid.
- Equations**
- See also Differential equations; Integral equations.
- Bethe-Salpeter, normalization of amplitudes 8=3540
- boundary layer flow, numerical solution 8=7871
- evaporation transient, through a finite region, generalized Galerkin-Kantorovich treatment 8=16946
- exploding loop, second integrals of simplified eqn. 8=613
- gases, diffusion and flow in porous media, approx. 8=214

Equations—contd

- Hartree-Fock-Roothaan eqns., numerical solns. 8=7349
 hierarchy, in fluctuation theory of gases 8=21501
 integral for partial distribution functions 8=10619
 K-G, covariant generalization of soln. 8=11256
 Korteweg-de Vries asymptotic soln. 8=2901
 Korteweg-de Vries, solution 8=2900
 Lagrangian eigenvalue problem $[\omega^2 I - \omega i A - H] \xi = 0$,
 soln. 8=20159
 Laplace, Cauchy problem soln. for particle optics 8=15275
 Laplace, soln. with transport through cylindrical
 constrictions 8=10670
 Liouville for simple fluids, soln. for thermal
 excitations 8=21419
 magnetic induction, use of SI units 8=3177
 Monge-Ampère, and one-dimensional m. h. d. flow 8=19812
 Navier-Stokes, non-stationary, new finite-difference
 scheme 8=21558
 nonlinear diffusion 8=10771
 with partial derivatives extending to impurity, solution
 by partition method 8=15267
 Percus-Yevick eqn. for fluids, soln. method 8=21415
 thermoelasticity, linear 8=10579
 Vlasov, integration in a reduced phase space 8=10499
 wave soln. with transport through cylindrical
 constrictions 8=10670
 Wiener-Hopf with kernel, application to e.m. boundary
 problems 8=2884

Equations of state

- See also Thermodynamics.
 Boltzmann, monoenergetic, spectrum in plane geometry
 with linear-anisotropic scatt. funct. 8=135
 Bose gas at critical point, correl. function 8=19459
 correlation function near critical point, thermodynamic
 behaviour 8=16914
 critical point thermodynamics, fundamental
 problems 8=12962
 fluid of linear mols., 2nd virial coeffs. 8=4252
 fluids, perturbation theory, square-well potential 8=4425
 formulation from thermodynamic data using digital
 computers 8=10666
 nuclear matter at zero temp. and high density rel. to
 neutron stars 8=19166
 plasma free energy, second virial coeff. contribution at
 high temp. 8=12468
 relativistic, condition satisfying principles 8=6065-6
 square-well fluid 8=12581
 stars with phase transition, equilibrium 8=5861
 virial coeffs. of low density fluid, square-well
 model 8=16613
 virial theorem for electron gas, alternative proof 8=19464
 Yvon-Born-Green eqn. for rigid spheres and disks,
 asymptotic modification 8=16616
 Ar, shock compression, Thomas-Fermi-Dirac
 theory 8=16994
 CH₂Cl₂, thermodynamic props., to 750°K and
 200 atm. 8=16819
 Fe-Ta system, liquid and solid δ -phases 8=8161

gases

- air-water vapour mixtures, third virial coeff. 8=4468
 Boltzmann rel. to specific heat of thin film 8=10656
 comparison using spinodal as envelope of isocurve
 family vs. p, T 8=1620
 diatomic, thermodynamic functions with molecules in
 Σ^3 state 8=1467
 ethyl ketone, vapour, second virial coeff. 8=1471
 ethyl propyl ketone, vapour, second virial coeff. 8=1471
 Fermi, hard-sphere at zero temp., thermodynamic
 props. 8=10658
 linear relation of temp. and density at unit compressibility
 factor 8=16690
 methane-tetrafluoromethane system, PVT relations 8=7912
 methyl isopropyl ketone, vapour, second virial
 coeff. 8=1471
 methyl phenyl ether, vapour, second virial coeff. 8=1471
 multi-atomic, temp. dependence of thermodynamic
 props., formulae derived 8=12674
 nitrogen-ethane mixture, Joule-Thomson coeffs. 8=12679
 nonpolar, and mixtures, third virial coeffs. 8=12677
 pentane, enthalpy calc. from Redlich-Kwong eqn. 8=16689
 Rice-Allnatt assumption in low-density limit 8=1464
 second virial coeffs. of unpolar mols. 8=12676
 Van der Waals, fallacies 8=21503
 van der Waals, sound attenuation near critical
 point 8=16706
 virial eqn., based on hard-sphere model 8=21504
 Ar, interact. potentials rel. to parameters of solid
 at 0°K 8=1468
 Ar₂, virial coeff., 2nd., obs. 8=7913
 Ar-N₂ mixtures, virial coeffs. from Burnett meas. 8=16691
 CO₂ for region 0-1000°C and 0-1000 bars 8=10666
 CO₂, second virial coefficient, -10 to 200°C 8=12675
 F-F, Cl-Cl, Br-Br and I-I systems, 2nd virial coefficient
 for different electron states at 2000-6000°K 8=1469
 H-H and O-O, 2nd virial coefficient for different electron
 states at 2000-6000 K 8=1469
 H₂, and nonpolar mixtures, third virial coeffs. 8=12677
 H₂, normal, Is diagram, 16°-100°K, up to 500 kg/cm² 8=7915
 H₂O₂, decomposition thermodynamics and kinetics 8=1466

Equations of state—contd

gases—contd

- He, enthalpy calc. from Redlich-Kwong eqn. 8=16689
 He, and nonpolar mixtures, third virial coeffs. 8=12677
 He-n-butane mixtures, second virial coeffs.
 determ. 8=12980
 He⁺, second virial coeff., for exponential repulsion
 potential 8=12678
 Kr, interact. potentials rel. to parameters of solid
 at 0°K 8=1468
 Kr₂, virial coeff., 2nd., obs. 8=7913
 N₂, enthalpy calc. from Redlich-Kwong eqn. 8=16689
 N₂-hydrocarbon mixtures, enthalpy calc. from Redlich-
 Kwong eqn. 8=16689
 NH₃, enthalpy calc. from Redlich-Kwong eqn. 8=16689
 Ne, interact. potentials rel. to parameters of solid
 at 0°K 8=1468
 Ne, and nonpolar mixtures, third virial coeffs. 8=12677
 Xe, interact. potentials rel. to parameters of solid
 at 0°K 8=1468

liquids

- n-alkanes, correl. with chain length 8=16790
 binary mixtures, hard-sphere model 8=4539
 inert gases, law of corresponding states 8=1552
 parahydrogen, to 350 atm 8=4525
 perturbation theory 8=12783
 polyelectrolytes, 2nd virial coeff. 8=4540
 polymer solutions, rel. to critical opalescence 8=21669
 simple liquids, theory 8=21604
 solutions, 2nd virial coeff., cryometric determ. 8=8017
 transition metals, density of states of non-degenerate
 (s) band 8=12901
 volume change on mixing simple liqs., corresponding
 states calc. 8=4537
 Ar, thermodynamic props. calc. 8=8041
 Hg, density rel. to temp. and press. 8=12900
 N, 63.15° to 140°K and reduced densities from
 1.8 to 3.1 8=4543

solids

- polar crystals, thermal eqn., linear model 8=13013
 solid solns., thermal 8=8634
 Be, mechanical, from stress/strain curves 8=8825
 Ni near Curie temp., approx. eqn. 8=2330

Erbium

- deformation planes after dehydrogenation and hydride
 habit planes 8=8728
 energy/wave vector spin-wave dispersion
 relation 8=22800
 magnetic structure using Mössbauer effect 8=2291
 microwave absorption phenomena at 9.44 and 35.3 Gc/s,
 10-290°K 8=14269
 thin films, oxidation, electron microscope study 8=5701
 Er³⁺ in CaMoO₄ and SrMoO₄, e. p. r. spectra at 4.2 and
 10°K 8=18412
 Er³⁺ centers in CeO₂, spin lattice relaxation times 8=5530
 Er³⁺, energy transfer in Na rare-earth tungstates 8=9610
 Er³⁺ in LiNbO₃, e. p. r. 8=18428
 Er³⁺ in YGA garnet, optical obs. intensities and quantum
 counter action 8=22979
 Er(III), in YPO₄ and YVO₄, angular overlap
 treatment 8=4075
 in Mg crystal, e. s. r. 8=5531
 Sc₂O₃:Er³⁺, absorpt. and emission spectra 8=14260

Erbium compounds

- Er ferrite-garnet, dichroism and mag. anisotropy 8=18423
 α -ErAl₃, nuclear magnetic resonance 8=22920
 ErCl₃·6H₂O, hyperfine splitting of lowest 2⁺ state of
 Er 8=9301
 Er-H₂ system, phase analysis by X-ray exam. 8=17058
 Er₂O₃ foils, grain boundary energetics by transmission
 e-microscopy 8=21986
 Er₂O₃, sintering, kinetics, data correlation 8=8258
 Er₂O₃, sintering kinetics, resonant freq. meas. 8=17027

Ergodic theorem. See Statistical mechanics.

Errors. See Measurement/errors; Random processes.

Esaki diodes. See Semiconducting devices/tunnel diodes.

Esaki effect. See Semiconducting devices/p-n junctions.

Etalons. See Interferometers.

Etching. See Crystals/etching.

Ether drift. See Relativity/special; Velocity/light.

Etingshausen effect. See Magnetothermal effects.

Europium

- elastic moduli and u. s. attenuation from 4.2 to
 300°K 8=17781
 Fermi surface and antiferromagnetism 8=22459
 heat capacity, 5°-300°K 8=17518
 hyperfine field from conduction-electrons 8=1633
 Mössbauer effect measurements, 16°K anomaly 8=8212
 optical properties and band structure 8=5598
 Eu²⁺ activation, alkaline-earth pyrophosphates,
 luminesc. 8=9628
 Eu²⁺ in BaTiO₃, e. s. r. in cubic and tetragonal
 phases 8=14094
 Eu²⁺ in CaF₂, stress induced nuclear quadrupole
 splitting 8=22928
 Eu²⁺, e. p. r. in KCl cryst. 8=5529
 Eu³⁺ in CaF₂, radiochemical reduction giving Eu²⁺ 8=18740
 Eu³⁺ in garnet struct., hypersensitivity of ¹⁵²D₀-⁷F₂
 transition 8=18602

Europium — contd

- Eu³⁺ in MnF₂, antiferromagnetic, radiationless processes and afterglow kinetics 8-23058
 Eu³⁺ in SrTiO₃, vibronic structure in luminescence spectra 8-14333
 Eu³⁺ in tungstates and molybdates, u. v. excitation of fluoresc. 8-2473
 Eu¹⁵² decay, longitudinal polarization of β -rays 8-20754
 Eu WO₃, determ. of Eu by γ -activation 8-9766
 in MF₂ (M=Ca, Sr, Ba), e. p. r. spectra at 77-964°K 8-9424
 in Na₂B₂O₇ glass, luminescence 8-23061
 in ThO₂, spectrometric determ. 8-18787

Europium compounds

- chemical shifts of inner levels, determ. by photoemission 8-16971
 β -diketon complexes, spectron, rel. to laser use 8-22978
 ligand exchange kinetics 8-23085
 salts, hydrated, fluoresc. lifetimes and multi-phonon deactivation, 4, 2°, 77° and 300°K 8-14315
 Eu chelates, mag. props. 8-9306
 EuAl borate, nonstoichiometry 8-8410
 EuF₃, absorpt. and fluoresc. spectra 8-14214
 EuO films, prep., Faraday rot. and mag. props. 8-13090
 EuO, magnetic susceptibility and mag. sp. ht., Padé approximant estimates 8-22861
 EuO, u. v. reflect. spectra 8-18524
 Eu₂O₃, u. v. reflect. spectra 8-18524
 Eu₂O₄, metamagnetism 8-22746
 EuPc₂, EuPd₂, EuPt₂ and EuRh₂, mag. props. by Mössbauer e. p. r. and n. m. r. studies 8-18334
 EuS, magnetic susceptibility and mag. sp. ht., Padé approximant estimates 8-22861
 EuS, magnetically ordered, magnetointernal field emission obs. and model 8-5428
 EuS, magnetocrystalline anisotropy 8-9341
 EuSe, magnetically ordered, magnetointernal field emission obs. and model 8-5428
 EuSe, magnetic moment 8-22802
 EuSe, magnetic structure 8-22803
 EuZn₂, mag. props. by Mossbauer e. p. r. and n. m. r. studies 8-18334

Evaporation

- See also Vaporization.
 capillary transpiration, liquid-vapour mass transfer 8-21776
 clouds and sprays in air 8-8184
 diffusion limited, enhancement by condensation within thermal boundary layer 8-4658
 directed, in high vacuum, for obtaining targets 8-23775
 drops, large, formation of, equation 8-4556
 ethanol, into O₂ and CO₂, effect of interface motion on mass transfer 8-16711
 ethylether, into He and CO₂, effect of interface motion on mass transfer 8-16711
 films, thin, piezoelectric crystal-type instrument for thickness obs. 8-21871
 liquids, coeffs. determ. by jet tensimeter 8-12990
 metals, by powerful heat flux, pulse effect 8-8187
 mass transfer by evaporation-diffusion between solids 8-8673
 metals, "flash" evaporation, high vacuum device for rate metering 8-8186
 nonadiabatic, from porous system, convective heat and mass transfer 8-8183
 particle, moving, in gas, free mol. regime 8-12943
 polymer solvent kinetics at film formation 8-12972
 solids, due to laser irr. heating effect 8-15130
 of solid surface, surface defect structure theories and quasi-equilib model 8-21782
 surface, unsaturated, using energy balance and Dalton-type transport eqn. 8-21777
 thin films, vacuum deposition, substrate heater 8-17122
 transient, through a finite region, generalized Galerkin-Kantorovich treatment 8-16946
 vacuum metallurgy conference New York USA (1966) 8-16746
 water baths, const. temp., minimizing evaporation 8-16947
 water surface, small, at ground level, convectionless turbulent diffusion 8-14638
 Ag films on mica, W substrate nucleation 8-13087
 Be₃N₂ vaporization, coeff., vapour pressure, enthalpy and enthalpy of activation 8-1624
 CdTe-HgTe, mass transfer by evaporation-diffusion 8-8673
 Cu from Fe-Cu alloys at 1600°C under vacuum 8-12993
 of Mg from Ni, rel. to CO evolution 8-16745
 Mn from Fe-Mn and Fe-C-Mn alloys at 1600°C under vacuum 8-12993
 of NaCl and NaCl solns., charge release 8-4307
 Ni and Pb simultaneously for formation of NiPb phase 8-21852
 Pb-glass melts, volatilization of volatile constituent from surface 8-21775
 Se films, viscoelastic properties, obs. 8-21888
 Si films on W substrate 8-4758
 Sn from Fe-Sn alloys at 1600°C under vacuum 8-12993
 ZnS, cubic, epitaxial growth by evaporation in ultra-high vac. 8-21893
 ZnSe, ZnSe_{1-x}Te_x and ZnTe, thin films, prep. by flash evaporation 8-13100

 antiferroelectric, permittivity and losses investigated at 37Gc/s 8=18196
 ceramic condenser and its use in thermodielectric generators 8=9231
 ceramics, perovskite-type, electrostriction 8=5362
 copper formate tetrahydrate, antiferroelectric phase transition, cell doubling 8=9222
 crystals, switching transients, contour and symmetry, theoretical interpretation 8=9207
 dicalcium strontium propionate, Ca₂Sr(C₂H₃CO₂)₆, dielectric critical slowing down 8=2248
 dicalcium strontium propionate, Ca₂Sr(C₂H₃CO₂)₆, crystal structure 8=4892
 dicalcium strontium propionate, Ca₂Sr(C₂H₃CO₂)₆, structure in paraelectric phase 8=4891
 electro-optical effects 8=5647
 guanidinium Al₂(SO₄)₃·6H₂O, cryst. struct. 8=17449
 guanidinium Al₂(SO₄)₃·6H₂O, ferroelec. moment 8=18195
 guanidinium Cr₂(SO₄)₃·6H₂O, cryst. struct. 8=17449
 guanidinium Cr₂(SO₄)₃·6H₂O, ferroelec. moment 8=18195
 ice, impure, dielec. dispersion obs., above -190°C 8=18188
 multiple Curie point films prep. 8=18185
 niobates, single crystals., growth 8=21958
 order-disorder, statistical perturbation theory, Zeroth approximation 8=9191
 perovskite crystals, phonon lifetime, at low temps. 8=4908
 perovskite-type crystals, distorted, phase transitions rel. to lattice dynamics of atomic displacements 8=17332
 polarization vectors, spontaneous, irreversible but divertible 8=2242
 Rochelle salt: Cu²⁺ e.p.r. Stark effect obs. 8=14101
 Rochelle salt, u.s. relaxation near ferroelec. transition 8=1858
 Rochelle salt, X-ray extinction rules and radiation damage effects 8=13266
 thiourea, l.f. modes from neutron scatt. 8=13340
 triglycine fluoroberyllate, e.p.r. study of Cu²⁺ ion 8=14105
 triglycine sulphate crystals, pyroelectric effect, by dynamic method 8=18198
 triglycine sulphate, u.s. relaxation near ferroelec. transition 8=1858
 ultrasound damping and velocity near phase transition rel. to long range dipole-dipole effects 8=18181
- Ferroelectric materials**—contd
 BeSeI, dielec. const. and elec. conductivity meas., -200 to +50°C 8=18193
 BiSI, dielec. const. and elec. conductivity meas., -200 to +50°C 8=18193
 Bi_{1-x}GeO₂₀, cryst. struct. 8=13254
 HBr, solid, lowest temp. phase ferroelec., obs. 8=13889
 HCl, solid, lowest temp. phase ferroelec., obs. 8=13889
 K₃Fe(CN)₆·3H₂O, proton relax. and translational diffusion 8=14145
 KD₂PO₄, Curie temp. and Curie-Weiss constant pressure dependence 8=5366
 KD₂PO₄, dynamical effects of deuteron intrabond jumping 8=9212
 KD₂PO₄, near Curie point (-70°C) 8=1873
 KD₂PO₄, order-disorder, phase transition studies, calorimetric investigations 8=22668
 KH₂PO₄, dielectric const. just above transition temp., freq. and temp. depend. 8=22666
 KH₂PO₄, domain switching by irradiation damage 8=18184
 KH₂PO₄, n.m.r. of K³⁹ at 77°K 8=22924
 KH₂PO₄, transition temp. shift by hydrostatic press 8=18189
 KH₃(SeO₃)₂, fundamental absorpt. edge near phase transition pt. 8=9548
 K_{0.4}Li_{0.4}NbO₃, single crystals., growth 8=21952
 KNbO₃ crystals, absorpt. edge temp. dependence 8=2430
 KNO₃, resistivity rel. to temp. and other props 8=18191
 KSr₂Nb₂O₁₅, charact. and electro-optic coeff. 8=5365
 LiH₃(SeO₃)₂, dielectric const. and spontaneous polarization 8=18190
 LiH₃(SeO₃)₂, fundamental absorpt. edge near phase transition pt. 8=9548
 LiNbO₃ crystal for converting near i.r. to visible light by optical mixing 8=11118
 LiNbO₃ domain structure, single crystal 8=13886
 LiNbO₃, refractive index 20°-900°C 8=5620
 LiNbO₃, single crystal, dielectric properties up to 9 GHz 8=9216
 LiN₂H₃SO₄, mol. reorientation of NH₃ 8=8235
 LiTaO₃, Curie temp. and birefringence variation rel. to melt stoichiometry 8=22669
 LiTaO₃, pyroelec. coeff. temp-dependence, 200-800°C and spontaneous polarization 8=18200
 NaH₃(SeO₃)₂ and NaD₂(SeO₃)₂, crystal growth 8=8420
 NaH₃(SeO₃)₂, fundamental absorpt. edge near phase transition pt. 8=9548
 NaH₃(SeO₃)₂ and NaD₃(SeO₃)₂, crystal symm. and nature of phase transitions 8=21849
 NaH₃(SeO₃)₂, phase transition, second, meas. 8=2245
 NaNbO₃, resistivity rel. to temp. and other props 8=18191
 (NH₄)₂SO₄, deuteron spin-lattice relax. time 8=2386
 (NH₄)₂SO₄, H-bonding below ferroelec. transition 8=23005
 Pb zirconate-titanate ceramics, depolarization at high strain rates 8=2243
 Pb zirconate-titanate, surface potentials, electron-mirror microscope anal. 8=13880
 PbTiO₃-PbZrO₃-PbMg_{0.5}W_{0.5}O₃ system, domain orientation processes 8=5367
 PbZrO₃, current hysteresis loops near Curie point, obs. 8=13887
 PbZrO₃ near-antiferroelec.-ferroelec. transition, cond. rel. to ageing and relax. polarization 8=2249
 PbZrO₃ polycrystals, temp. changes of polarization at phase transition 8=13888
 Pb(Zr, SnTi)O₃ ceramics, Nb-doped, elec. props. 8=2246
 Sb₂S₃ and SbSI, anomalous dispersion of permittivity and reson. absorpt. of microwaves 8=9218
 SbSeI, dielec. const. and elec. conductivity meas., -200 to +50°C 8=18193
 SbSI, light polarization near ferroelec. phase transition 8=18559
 SbSI(Br), dielec. const. and elec. conductivity meas., -200 to +50°C 8=18193
 SbSI, photosensitive phase transition 8=2159
 SbSI, polarization discontinuities caused by illumination 8=18192
 SbSI, temp. autostabilizing props. at <20°C 8=5369
 Sr_{1-x}Ba_xNb₂O₆, hysteresis loops 8=21966
 SrTiO₃, optical-phonon freq., electric field dependence 8=5370
 SrTiO₃, phonon lifetime, at low temps. 8=4908
 SrTiO₃, second-order renormalization and phase stability 8=9219
 YMnO₃, domain struct. made visible by etching 8=2247
- barium titanate**
 absorption edge anomalous shift under electric field 8=13882
 absorption edge shift in elec. field, temp. dependence 8=13883
 acoustic and soft optic modes, mixing 8=22665
 breakdown, electric, rel. to movement of colour centres 8=13884
 ceramics, depolarization at high strain rates 8=2243
 cold-conductor ceramic, working mechanism, electron microscopic investigation 8=21982
 conductivity, elec., anomalies 8=9208
 current rise due to injection during elec. ageing, hypothesis 8=18194

Ferroelectric materials—contd**barium titanate—contd**

- dislocation-90° domain boundary interactions 8=8724
- electrical conductivity between 600 and 900°C 8=5363

 polyethylene terephthalate, as solar furnace 8=19675
 polyhexamethyldisiloxane on Al, form. and dielec. props. 8=5731
 polymers on base, i. r. spectra 8=4738
 polymer, trapping of electrostatic changes in surfaces 8=13891
 polymethylmethoxysiloxane on Al, form. and dielec. props. 8=5731
 polypropylene, melting and recryst. or evap. due to laser pulse irradi. 8=17710
 polysulfone, BaTiO₃ and organic cpds. loaded, dielec. props. 8=22661
 polythene, laser-produced plasma, formation mechanics 8=23034
 polyurethane coats, effect of Al bed on density of network in surface layer 8=17145
 polyvinyl alcohol crystallization, i. r. study 8=13101
 polyvinyl alcohol films dyed in solutions of iodine in iodides and bromides, absorption spectra 8=5650
 poly-p-xylene, molecular orientation, cell dimensions 8=1828
 precipitates in thin foils, electron microscope images 8=13152
 production and ion bombardment apparatus 8=17121
 propane, far u. v. spectra 8=14283
 reflexion scanning electron-diffraction crystallography 8=17265
 semiconducting, charge-carrier mobility 8=9107
 semiconductor, effective density of electron states per unit volume 8=22448
 semiconductor, electron-phonon interactions at low temp. 8=22428
 semiconducting thin layers, nature of high voltage photo-e. m. f. 8=9247
 semiconductor, quantum longit. galvanomag. oscs. 8=9074
 sensor for heat transfer to turbulent fluid 8=16822
 single-crystal, ferromag. resonance 8=2353
 sputtering in crossed e. m. field 8=7651
 sputtering, r. f. dielectric system with non-grounded electrodes 8=17138
 sputtering resistive, effect of temp., pressure 8=8303
 standard for electron microprobe analysis by automatic stepping shutter system 8=4737
 stearic acid multi-monolayers dielectric thin film, electrical properties 8=13878
 steel, austenitic, stress corrosion cracking 8=8844
 structural defects, nucleation mechanisms 8=1735
 structure during growth, electron diffraction method 8=8306
 submetallic, quantum longit. galvanomag. oscs. 8=9074
 substrate, glass, low power self heated 8=4736
 superconducting, critical currents rel. to thickness 8=13729
 superconducting, energy gap dependence on mag. field 8=22529
 superconducting, far i. r. absorption, mag. field depend. 8=22938
- Films—contd**
solid—contd
 superconducting, far i. r. spectra 8=22939
 superconducting, Green's function calc. in mag. field 8=5188
 superconducting with current flowing, energy gap and critical current 8=22528
 superconductor, on plane surface of massive supercond., third crit. field 8=5192
 superconducting, as transformer secondary, modulated flux flow 8=17992
 superconducting superimposed, proximity effects 8=9044
 superconducting, surface parallel critical field, calc. 8=13727
 surface reactions exam. by simultaneous X-ray emission and electron diffr. 8=8290
 thickness measurement, dielectric 8=1690
 thickness meas. instrument, vacuum evaporated, piezo-electric crystal-type 8=21871
 thickness meas. by interferometry 8=1692
 thickness meas. using X-ray interferometry 8=8301
 thickness and microanalysis, X-ray meas. 8=14482
 thickness and refractive index meas., method 8=8300
 thin, calc. of Debye-Waller factors from Mössbauer effect 8=8207
 thin, electron scattering within, inelastic, at oblique incidence 8=17911
 thin, electronic properties, colloquium, Orsay, France (1967) 8=22499
 thin film solar cells 8=19735
 thin film techniques, development and application 8=13841
 thin, filtered and unfiltered electron diffraction intensities 8=1777
 thin foil electron microscope specimen preparation by rotating P. T. F. E. holder 8=8451
 thin, grain size distribution, conservative systems 8=13084
 thin, grain size distrib., non-conservative systems 8=13085
 from toluene, polymer, comp., spectra and elec. props. obs. 8=21894
 transistors 8=18135
 transistors, thin-film field-effect, fabrication process, props. 8=13861
 transparent thin (10-600 nm), thickness meas., simple non-destructive interferometric method 8=8302
 triacetate, proportioning electron beam 8=10890
 triacetylcellulose, plastified, thermomech. curves of elongation at const. strength 8=22407
 triode sputtering, new discharge arrangement, high current in 10⁻⁴ torr range 8=7653
 vacuum deposition on heated substrate, and structure X-ray study 8=8307
 vacuum deposition, substrate heater 8=17122
 vapour deposition, obs. by mass spectra 8=17155
 wax polished painted surface, reflectance determ. of thickness and roughness 8=2470
 white tin, optical data analysis over 0.1 to 27.5 eV energy region 8=2456
 zinc evaporated, oxidation 8=1691
 Ag, growth effected by ultrasonic vibrations, of substrate 8=4827
 Ag on mica, W substrate nucleation 8=13087
 Ag, optical constants, ellipsometric meas. 8=11201
 Ag, secondary electron emission from self-supporting films 8=2284
 Ag, structure and surface characts. rel. to optical absorpt. 8=18502
 Ag, thin, Hall effect 8=2133
 Ag, vapour deposited, resistivity annealing temp. and thickness dependence 8=17925
 AgBr plates, ion-sensitive, for mass spectrograph 8=16178
 Al alloys, dislocations multiplication, transmission electron microscope study 8=13435
 Al alloy, effects of thin anodic oxide films, on fatigue behaviour 8=2049
 Al, chemisorption of O₂, stability and work function changes 8=5726
 on Al, deposited from Zn electroplating pretreatment soln, props. 8=14431
 Al, dislocations, dynamic behaviour on deformation, continuous obs. 8=13433
 Al, distribution of sputtered atoms by electron microprobe 8=21876
 Al on glass, vacuum deposition technique 8=17123
 Al on Ta (110) surface, growth studied by LEED 8=8311
 Al, oxidation effect on photocurrent 8=18221
 Al, oxidation in low-pressure O₂ atmosphere 8=18669
 Al oxidised in radio-freq. discharge 8=8310
 Al, plasma oscillatory modes at surface, energy rel. to intensity 8=8946
 Al, thickness monitor of osc. quartz cryst. type 8=17118
 Al, thin strips, electron microscope obs. of electro-transport 8=17927
 Al vacuum condensates, influence of annealing on block structure charact. 8=4741
 Al-Ag (20%), dynamical multiple reflections in electron diffraction patterns 8=13256
 Al-Al₂O₃-Al, current instability 8=18201

Films—cont'd

solid—cont'd

- Al-Al₂O₃-Al diodes, noise meas. 8=13851
 Al-Al₂O₃-M diodes, electroluminescence 8=9598
 Al₂O₃, rel. to anodic oxidation of Al in presence of hydrated oxide 8=18729
 Al₂O₃, breakdown electric strength rel. to thickness 8=5351
 Al₂O₃, Cs activated, semicond. low work function, props. 8=17999
 Al₂O₃, chem. deposition and props. 8=4740
 Al₂O₃ dielectric, pyrolytically grown, voltage-current charac. 8=13873
 Al₂O₃, e beam evaporation and dielec. props. 8=22652
 Al₂O₃, large-area planar and non-planar films 8=13088
 Al₂O₃, photoluminescence, spectral distrib. curves 8=9596
 Al₂O₃ thickness obs. by tunnel emission and capacitance 8=8312
 Ar, thin, microstructure, electron diffraction study 8=8313
 Au, D⁺ transmission 8=22242
 Au, electrical conductivity, island structure, on quartz glass and BaTiO₃ substrates 8=13709
 Au, electron diffr. intensities, temp. dependence 8=8509
 Au, growth effected by ultrasonic vibrations, of substrate 8=4827
 Au, growth on NaCl, high vacuum 8=21878
 Au, growth on NaCl, high vacuum, model 8=21879
 Au, light scattering, thickness and wavelength dependence between 2000–7000 Å 8=14199
 Au, meas. of secondary electron emission from exit side 8=2285
 Au, morphological changes following deposition 8=4743
 Au nuclei on MoS₂ substrate, strain nucleus size and misalignment dependence 8=8823
 Au, nucleation density on NaCl cleavage surface 8=4742
 Au, ohmic and thermoelectric props., –100 to –100°C in ultrahigh vacuum 8=22513
 Au on MoS₂, epitaxial growth under u. h. vacuum and defect structure 8=17125
 Au on NaCl, deposition rate and residual gas effects 8=1693
 Au, optical absorpt. band edge 8=5585
 Au, recrystallization obs. in electron microscope 8=8314
 Au, reflectance and transmittance, anomalous skin and size effects 8=9498
 Au single crystal, effect of ion bombardment on texture and structure 8=17124
 Au single crystals, deuteron blocking 8=22241
 Au, sputtered, due to negative O ions in O discharges 8=21877
 Au, structure and surface characts. rel. to optical absorpt. 8=18502
 Au, thin, Hall effect 8=2133
 Au, X-ray total reflection 8=5604
 Au-Cu alloy single crystal, effect of ion bombardment on texture and structure 8=17124
 B, ultra-pure, technique for preparation 8=8315
 Ba, sorption capacity for O₂ in colour picture c. r. t. 8=15324
 Be, self-supporting, 5–10 µg/cm² 8=4744
 BeF₂ on Be, as corrosion retardant 8=23098
 Bi, condensed, crystal structure defects 8=8705
 Bi, elec. resist. and Hall coeff., temp. dependence 8=8995
 Bi, field effect at 4.2°K 8=17928
 Bi quantum and classical dimension effects 8=22516
 Bi, thin, thermoelectric power and elec. resist. 8=5383
 Bi, transmittance and reflectance meas. rel. to band structure 8=13859
 Bi₂O₃, electrical properties and defect structure in range 175–250°C 8=8996
 Bi₂S₃ evaporated, electron diffr. exam. 8=17126
 Bi-Sb, 2-layer, struct. defects by Moiré method 8=22186
 Bi-Se, vitreous, near i. r. photodetection 8=22704
 C, evap., reaction with heated metal substrates 8=4745
 C, for target backings in reaction studies 8=8316
 Ca, absorpt. of light between 0.5 and 5.5 eV 8=14204
 CaF₂, MgF₂, Na₃AlF₆, i. r. antireflectant suitability 8=2435
 Cd vapour impinging on W, film nucleation in two phases 8=8305
 CdCl₂:Cu²⁺, e. s. r., exchange coupling pairs spectrum 8=18416
 CdI, vac.-deposited, structure 8=8317
 CdS, elec. props. changes on O₂ adsorpt. and ion bombardment 8=13791
 CdS, electroluminesc. d. c. excit. mechanism obs. 8=9608
 CdS in diode, d. c. and a. c. behaviour 8=13852
 CdS polycrystalline, orientation inversions, and in bulk crystals 8=8374
 CdS solar cell mechanism obs. 8=10847
 CdS, thin, structure and phase composition by electron diffr. investigations 8=4746
 CdS-CdSe, thermal quenching of photoconductivity 8=5399
 CdSe_{1-x}, prep. by vacuum deposition from molec. beam 8=4748
 CdS-SiO₂ film devices, "frozen" cond. and thermo-stimulated currents 8=5388
 CdS-SiO₂ system, heat-stimulated currents and 'quenched' cond. 8=9096
 CdSe, non-stoichiometric, elec. and photoelec. props. 8=13795

Films—cont'd

solid—cont'd

- CdSe, stoichiometric, preparation, structural, optical, electrical and photoelec. props. 8=17127
 CdTe, ion bombardment effect on resistance 8=5244
 CdTe, polymorphism by multiple refl. studies 8=1694
 CdTe, thin, structure, obtained by coevaporation 8=4747
 CdTe, wedge-shaped, photo-voltages rel. to incident angle of illum. 8=5398
 Co for mag. recording, deposition and props., obs. 8=22790
 Co, galvomagnetic effect obs. 8=5475
 Co, galvanomagnetic effect, in rotating mag. field 8=17931
 Co, hexagonal, dynamical multiple reflections in electron diffraction patterns 8=13256
 Co, on Cu, pseudomorphic deposits 8=21881
 Co, phase changes, thickness depend. 8=17050
 Co-Ni for mag. recording, deposition and props., obs. 8=22790
 Co-P for mag. recording, deposition and props., obs. 8=22790
 Cr, deposition from low-energy ion source 8=19796
 Cr, glow discharge rel. to resist. 8=17128
 Cr on Ni, pseudomorphic deposits 8=21886
 Cr₂O₃, epitaxial growth due to Cr surface oxidation 8=4828
 Cr₂O₃, reactively evaporated, optical props. 8=9517
 Cr-SiO cermet, elec. props. 8=8981
 Cr-SiO cermet, resistivity and struct. 8=1695
 Cs on Ir, adsorption and electron emission 8=9268
 Cs on Re substrate, mode of growth 8=1696
 Cs₃Sb, time depend. of absorpt. and photoemission 8=13937
 Cu, absorpt. spectra 8=5596
 Cu-constantan thermocouples 8=22686
 Cu, creep, elastic lattice strains 8=13548
 Cu, epitaxial growth, and activity and topographical changes on exposure to H₂-O₂ combination at 325°C 8=8318
 Cu, film on Si, transmission and absorpt. in spectral region from 1.5–7 µ 8=14212
 Cu, K_α emission fluoresc. and direct components 8=14179
 Cu, obliquely deposited, struct., effect of atom mobility 8=8296
 Cu, optical transmission and absorpt. in spectral region between 0.6 and 4 µ 8=22972
 Cu phthalocyanine, trap distribution 8=22586
 Cu, plasma oscillations, interband transitions 8=5117
 Cu, reflectance and transmittance, anomalous skin and size effects 8=9498
 Cu single crystal, effect of ion bombardment on texture and structure 8=17124
 Cu thermopower size-effect for determination of electronic structure 8=13903
 Cu, thickness depend. on heat generated by 9 to 100 keV electron beam 8=17699
 Cu, thin, Hall effect 8=2133
 Cu, vacuum deposited, oxidation rel. to temp. 8=18674
 CuAu II containing Zn, dynamical multiple reflections in electron diffraction patterns 8=13256
 CuI layers, low temp. spectra rel. to nature of substrate 8=9528
 Cu-Pt alloy, n. m. r., quadrupole effects 8=2383
 Cu-Te system, phases investigated by e-diffr. 8=17057
 Cu-Te system in thin films, phase transformations and structure 8=17054
 Er, thin, oxidation, electron microscope study 8=5701
 Er₂O₃, grain boundary energetics by transmission e-microscopy 8=21986
 EuO, preparation, Faraday rot., and mag. props. 8=13090
 Fe on hot Cu, pseudomorphic growth 8=21880
 Fe-2°Cr alloy, early growth of oxide, structure and stability 8=21882
 Fe-28°Cr alloy, early growth of oxide, structure and stability 8=21882
 Fe-Cr alloy, Cr₂O₃ protective scales, mechanism of breakthrough 8=23099
 Fe-Gd, hysteresis loops, by static method 8=9345
 Fe and Mg multilayered structure, X-ray diffraction 8=1758
 Fe-Ni alloys, evaporation characteristics 8=12719
 Fe-Ni alloy, thin evaporated with oblique incidence, structure 8=14017
 Fe-Ni electro-deposited, internal stresses rel. to deposition conditions 8=17653
 FeNi, electrodeposited, mag. props. rel. to struct. 8=9347
 FeNi-FeNiMn, with ferro-antiferromagnetic coupling, study 8=9346
 GaAs, epitaxial, propag. of growth striae 8=17129
 GaAs, high-mobility, grown by liquid-phase epitaxy 8=22588
 GaAs, wedge-shaped, photo-voltages rel. to incident angle of illum. 8=5398
 GaAs:Zn polycrystalline, electrical resistance and Hall effect obs. 8=5255
 GaP epitaxial layers with high mobility 8=9101
 GaP, vacuum deposited, polymorphism 8=21883
 GdFe garnet on YAl garnet, chem. vapour deposition 8=13099
 Ge, degenerate epitaxial, production by iodide method rel. to tunnel diodes 8=8321

- Films—contd**
solid—contd
 Ge, epitaxial growth in open iodide process 8=17131
 Ge, epitaxial, prep. by pyrolysis of hydrides 8=17130
 Ge, polycrystalline, acceptor and scattering centre natures 8=18046
 Ge, recryst. by electron beam zone melting 8=17235
 Ge semiconducting, growth by zone melting 8=8320
 Ge, thin, Seebeck coefficient, Hall mobility 8=2255
 Ge, transition to metallic conduction at high exciton concs. 8=18048
 Ge on Al_2O_3 by vacuum deposition, and elec. mobilities 8=4749
 Ge, X-ray stress topography, rel. to film-crystal interface stresses 8=22371
 Ge, X-ray total reflection 8=5604
 HfO_2 , dielec. and resist. props., and resistors and capacitors characts. 8=22654
 HfO_2 , e beam evaporation and dielec. props. 8=22652
 In-doped Ar, Kr and Xe, absorption spectra 8=9541
 In, longitudinal magnetomorph effect 8=5430
 In, superconducting, Nernst effect 8=2174
 In, superconducting transition temp. thickness dependence 8=9045
 In with superconductive and ferromag. overlays, tunnelling 8=22549
 In surface, oxide layer, kinetics of growth 8=8322
 In, transverse phonon generation by microwave excitation 8=4903
 InAs epitaxial film on GaAs, orientated growth 8=17132
 InAs, growth and electrical props. 8=1749
 InAs, optical props. 8=18535
 InAs, thin, obtained by discrete evaporation, structure 8=8324
 InAs thin film transistor, fabrication and charact. 8=22635
 In_2O_3 dielectric, pyrolytically grown, voltage-current charac. 8=13873
 InSb, epitaxial growth, electron diffraction study 8=21884
 InSb, epitaxy on single crystal substrate 8=17133
 InSb, slow photoconduction 8=9254
 InSb, thin by electron beam re-crystallization, electrical props. 8=8323
 InSb, vacuum deposited, crystallization by electron beam zone-melting process 8=13091
 Ir, ultra-thin, vacuum-deposited, structure from e-diffr. and microscopy 8=17292
 K, optical absorption 8=5612
 KCl(Br) foils, P-polarized light absorption at plasma resonance freq. 8=2123
 KH_2PO_4 , i. r. absorption spectrum, internal vibrations 8=9545
 La, superconducting, electron-tunneling meas. 8=9047
 La-Ce alloy, gapless superconductivity 8=5205
 La-Lu alloy, superconducting, electron-tunneling meas. 8=9047
 Li, on W and Re faces, effect of thickness and substrate orientation on work function 8=18256
 Li_2Bi , prep. and props. 8=8325
 LiF, on Mo substrate, emissivity at 420°K and 605°K 8=14236
 MgF_2 , thin, charging with electrons of average energy 8=22505
 MgF_2 , thin, Molter electron emission 8=22732
 MnO_2 , prep. and props. 8=4750
 Mo, heteroepitaxial growth on insulating substrates 8=17134
 Mo, on W crystal, adsorption and electron emission 8=9269
 Mo-Al intermetallic resistors, sheet resistivity and temp. coefficients of resistance 8=22520
 Nb, for cryotron ground planes 8=2171
 Nb, vacuum deposited on MgO , rel. to substrate-condensate chem. interaction 8=8326
 Ni, condensed polycrystalline, structure and substructure elements 8=17286
 Ni, elec. conductivity and Hall effect dependence on O_2 adsorption 8=17936
 Ni, electrolessly deposited, e microscope study 8=17136
 Ni-Cr sputtering role of H_2 rel. to thickness control 8=8777
 Ni-Fe, lattice contractions by electron diffraction 8=1806
 Ni-Fe, thickness and composition determ. by X-ray fluorescence 8=9750
 Ni-Fe, vacuum-deposited, thickness meas. by elec. resistivity method 8=17135
 NiO, semicond. and insulating, prep. 8=22602
 NIS on Ni in S solns., growth kinetics and mechanisms, obs. 8=2525
 Pb, Josephson tunnel junction characts. 8=9063
 Pb, self-supporting, 250-500Å thick, prep. 8=4751
 Pb, superconducting, far i. r. absorption 8=13759
 Pb, superconducting, frequency conversion in 3 cm band 8=22558
 Pb superconducting, thermal forces on vortices 8=13761
 PbS, photo-e. m. f., effect of const. current 8=18234
 PbTe, elec. characts. and vacuum evaporation 8=8327
 PbTe, resistivity, Hall mobility and cond. 8=22603
 Pd, obliquely deposited, struct., effect of atom mobility 8=8296
 Pd, preadsorbed CO oxidation, induction period 8=5700
 Pt, electrical conductivity, island structure, on quartz glass and BaTiO_3 substrates 8=13709
- Films—contd**
solid—contd
 Pt, epitaxial growth on NaCl(100) face and CaF_2 (111) face 8=4752
 Pt, obliquely deposited, struct., effect of atom mobility 8=8296
 Pu α -phase foils, electron microscope study 8=21887
 Sb, conductivity quantum oscill. obs. 8=17940
 Sb, transmittance and reflectance meas. rel. to band structure 8=13859
 Sb_2S_3 , amorphous, photo-e. m. f. meas. 8=9255
 Sb_2S_3 evaporated, electron diffr. exam. 8=17126
 Sb_2Se_3 , optical anisotropy 8=14259
 Se, evaporated, viscoelastic properties, obs. 8=21888
 Se, photoconductivity, anomalous, activated by Hg 8=9256
 Se, polycrystalline and single crystal, extra reflections in electron diffr. pattern 8=4753
 Se, vitreous, space-charge-limited currents and high elec. field effect 8=13828
 Si, amorphous, structure 8=13092
 Si epitaxial on α -alumina, electrical props. 8=9121
 Si, epitaxial, on Ge(111) surfaces, LEED struct. obs., 870°K 8=17140
 Si, epitaxial growth, Si substrate, SiO_2 and SiN_4 elimination 8=13128
 Si epitaxial layers, "hillock" formation 8=17619
 Si, epitaxial, on Si(311) surfaces, LEED struct. obs., 870°K 8=17140
 Si, epitaxial, prep. by pyrolysis of hydrides 8=17130
 Si, epitaxial, stacking faults, cause and cure 8=8736
 Si, etch rates in H_3PO_4 , influence of H_2O content 8=17218
 Si, evaporated, quantitative determ. by radioisotope analysis following n-activation 8=4756
 Si growth on W substrate by vacuum evaporation 8=4758
 Si grown epitaxially on sapphire, diffused diode charact. 8=18130
 Si, heteroepitaxial on sapphire, space-charge limited currents 8=2213
 Si, homoepitaxial, vacuum deposition, low temp. 8=1697
 Si on insulators, epitaxial growth 8=8328
 Si, on Ni substrate, total reflection of X-rays of different wavelengths 8=22038
 Si, isolation diffusion of P, integrated circuits 8=1929
 Si, large area p-n junctions, by epitaxial growth technique 8=5316
 Si, prep. by rheotaxial method 8=4739
 Si and SiO_2 films, r. f. and d. c., sputtered rel. to re-emission coeffs. 8=2032
 Si, X-ray stress topography, rel. to film-crystal interface stresses 8=22371
 SiC deposition in r. f. glow discharge 8=21872
 SiC, vapour deposited, phys. props. 8=17137
 SiN deposition in r. f. glow discharge 8=21872
 SiN deposition on metal coated substrates 8=13870
 Si_3N_4 , amorphous, structure dependence on deposition parameters 8=17179
 Si_3N_4 , deposited on GaAs, i. r. absorpt. 8=14262
 Si_3N_4 , etch rates in H_3PO_4 , influence of H_2O content, and use of SiO_2 mask 8=17218
 Si_3N_4 , fabrication and characts. 8=21891
 Si_3N_4 , prod. by reactive sputtering 8=17139
 Si_3N_4 , pyrolytically deposited, thermal expansion coefficient 8=4939
 Si_3N_4 , reactively sputtered, evidence of excess Si 8=21890
 Si_3N_4 , vapour deposition on GaAs, by $\text{SiCl}_4\text{-NH}_3\text{-N}_2$ system 8=13094
 SiO_2 , etch rates in H_3PO_4 , influence of H_2O content, and use as mask for etching Si_3N_4 8=17218
 SiO_2 , capacitor appl. 8=22676
 SiO_2 capacitors, heating effects 8=9233
 SiO_2 elect. cond., Pool-Frenkel eqn. 8=13705
 SiO_2 evaporated, forming process variables 8=4754
 SiO_2 , thin 8=2253
 SiO_2 deposited on n-type Si by reaction SiH_4 with water vapour 8=4757
 SiO_2 , deposition from silane 8=13095
 SiO_2 deposition from SiCl_4 -water vapour reaction 8=21889
 SiO_2 dielectric, pyrolytically grown, voltage-current charac. 8=13873
 SiO_2 , diffusion of borax 8=4957
 SiO_2 , growth in microwave discharge 8=4755
 SiO_2 , MOS capacitors, noncrystalline structure, electronic conduction 8=9234
 SiO_2 , in m. o. s. structure, Fowler-Nordheim tunnelling and energy band structure 8=2229
 SiO_2 , Na contamination, and diffusion and drift of tracer Na 8=18069
 SiO_2 on Si, pinhole locating by electrograph method 8=1698
 SiO_2 on Si, thickness (< 900 Å) meas. with reflection tech. 8=13093
 SiO_2 , proton and Na transport 8=9172
 SiO_2 , thermally grown, electronic conduction mechanism 8=18076
 SiO_2 , vitreous, i. r. absorpt. 8=5637
 $\text{SiO}_2\text{-Si}_3\text{N}_4$ on Si, optical thickness obs. 8=1699
 Si- WSi_2 -Si, epitaxial struct. 8=17257
 Sn, Ge coating effect on transition temp. 8=5214

Films—cont'd**solid—cont'd**

- Sn, Josephson tunnel junction characts. 8=9063
 Sn, obliquely deposited, struct., effect of atom mobility 8=8296
 Sn oxide, electron emission from high resist. regions 8=22713
 Sn superconducting and bulk Nb, microwave-photon assisted tunneling 8=17975
 Sn, superconducting, Nernst effect 8=2174
 Sn, superconducting, nonlinear effect at about 10 GHz 8=22562
 Sn, in u.v., reflecting power, optical const. and dielectric const. deduced 8=5638
 Sn vacuum condensates, influence of annealing on block structure charact. 8=4741
 SnO₂, thin, u.v. absorption edge spectrum 8=2458
 SnTe, prep., resist. meas., Hall effect and cryst. props. 8=13096
 Sr, thin, optical absorpt. between 0.5 and 5.5 eV 8=23014
 SrTiO₃, superconducting semiconductor films and whiskers, transition temps. 8=9056
 Ta oxidized in radio-freq. discharge 8=8310
 Ta, ultra-thin, vacuum-deposited, structure from e-diff. and microscopy 8=17292
 Ta₂O₅, e beam evaporation and dielec. props. 8=22652
 Ta₂O₅, prep. by anodizing and sputtering 8=13097
 Ta₂O₅, prep. by gas-phase anodization 8=14420
 Ta₂O₅-SiO₂ thin film capacitor, prep. and props. 8=9232
 Tb chelate phosphors, radiative quantum efficiencies, enhancement 8=18617
 Te, vac.-evaporated, forbidden reflexes in e-diff. 8=17141
 Tl, resistivity in thickness range 75-350 Å 8=9019
 Ti-Al alloys, thin foils, hydride formation 8=17016
 TiO₂, with large ionic space charge, conduction process 8=2233
 TiO₂, spark discharge along surface 8=7682
 Tl, Ge coating effect on transition temp. 8=5214
 U monolayer on polycrystalline W, photoelectric work function 8=5408
 U on W, vac.-deposited, props. in u. h. vac. and H₂ 8=17142
 U, photoelectron attenuation lengths 8=22727
 UAl₃ coatings formed by electrophoretic depos. of Al on U, structure and props. 8=21892
 W, absorpt. and interact. of H₂O vapour, rel. to catalytic activity 8=14405
 W, adsorpt. of N₂, sticking probability temp. dependence 8=14396
 W, L_α emission fluoresc. and direct components 8=14179
 W, sputtered and condensed on cleaved NaCl, structure rel. to temp. 8=4759
 WO₃, Pt-activated, sensitivity as gas detector 8=13098
 YFe garnet on YAl garnet, chem. vapour deposition 8=13099
 ZnS, cubic, epitaxial growth by evaporation in ultra-high vac. 8=21893
 β-ZnS, growth and elect. props. 8=17143
 ZnS:Ag, use of radiation deterioration for meas. ion energy losses 8=8758
 ZnSe, preparation by flash evaporation 8=13100
 ZnSe-Te_{1-x}, preparation by flash evaporation 8=13100
 ZnTe, electroabsorpt. rel. to determ. of reduced effective mass 8=18566
 ZnTe, preparation by flash evaporation 8=13100
 Zr-O coated W, field-emitted electron distrib. and work function 8=5413
 ZrO₂, e beam evaporation and dielec. props. 8=22652

Filters

- axially symmetric. eqn., boundary problems, relaxation method 8=16761
 liquids, insulating, Cottrell electrostatic purification 8=1543
 microwave, with two-pole maximally flat response functions 8=11377
 molecular, appl. to air drying 8=18644
 molecular, Rumanian ion exchangers 8=18652

Filters, electrical. See Circuits.**Filters, optical**

- See also Absorption/light; Optical films.
 in astronomical photometry, temp. effects 8=10103
 in Barnes ES-100 Educational spectrometer absorpt. 8=491
 birefringent, optimum-response synthesis 8=15520
 chain birefringent filters, anal. of Solc and Lyot type 8=3352
 device for spacial filtering of astronomical photographs 8=14744
 distorted images, linear least-squares filtering 8=483
 far i. r. LWP, low temp. transmittance 8=20066
 for far i. r., metal mesh interference type 8=6516
 far i. r. transmission filters, containing alkali halides, preparation and use 8=20063
 frustrated total reflection 8=11143-4
 holograms for filtering spatial frequencies in incoherent light 8=20111
 image restoration after random-media degradation 8=15507
 i. r., effects of variation of angle of incidence and temp. 8=6515
 infrared, water-cell for pyrometer 8=15099
 interference, for i. r. region of spectrum 8=20064
 interference, narrow-band, u. v. region 8=6513

Filters, optical—cont'd

- interference-polarization, with transmission-band shift 8=11203
 Irtran 2, 4 and 6, total hemispherical emittance at low temps. 8=18467
 multilayer, consisting of homogeneous layers or inhomogeneous films, Fourier synthesis 8=11142
 Ross difference filter for Mo K α rad., preparation 8=2437
 ruby laser, smoothing of spikes 8=11141
 spatial filter for character recognition, storage capacity 8=6514
 spatial frequencies, for pattern recognition 8=3353
 Al-MgF₂-Al bandpass, far vac. u. v. 8=20065
 Finlay-Freundlich red-shift hypothesis. See Astronomical spectra; Cosmology; Gravitation; Relativity.
 Fireball model. See Cosmic rays; Elementary particles; Field theory, quantum/interactions; Nuclear reactions.
 Fission. See Nuclear fission.
 Flames
 absorption line profiles, Zeeman scanning 8=12044
 air-N₂O-acetylene, for atomic absorpt. spectroscopy 8=14458
 audible noise, ultrasonic abatement 8=10779
 configuration in guided flow 8=19655
 impinging on plate, e. m. f. 8=12696
 ionization, aerosol particle size analyser 8=16908
 diffusion, turbulent, thermal equil. meas. 8=7946
 electric field effect, Schlieren survey 8=6217
 fuel droplet, free and forced convection, diffusion-flame shape in wake 8=15113
 hydrocarbon, electronically excited CH and C₂ 8=7509
 laminar diffusion, in core of vortex, swirling motion and flow field 8=15111
 laminar diffusion flame behind parabolic cylinder, const. press. Oseen-flow model 8=19656
 metals detect. by atomic fluoresc. 8=14460
 modulated by acoustic waves 8=10750
 oxyacetylene, in air or N₂, temp. determ. from rot.-vib. spectrum of OH 8=18692
 oxyacetylene, low press., absorption and emission spectroscopy of C₂, CH and OH 8=21189
 oxygen-acetylene, temp. meas. by molecular spectroscopy 8=3109
 photometry, atomic absorpt. chemical analysis 8=18777
 plasma, induction-coupled, in air and Ar, spectroscopic obs. 8=21411
 premixed, with diffusion, asymptotic treatment of structure 8=242
 spectral source, evaluation for atomic absorpt. 8=23183
 spectrophotometry, absorpt.-emission intensity ratio 8=18778
 spectroscopy analytical appl., bibliography 1800-1966 8=23182
 spectroscopy, atomic absorpt., atomization of solid samples, use of solid fuel 8=11150
 temp. field in cylindrical chamber, recirculation effect 8=15114
 CO-air, effect of H₂O on burning velocities 8=15109
 H₂, chemiluminesc., effects of SO₂ 8=18693
 H₂+O₂+N₂ pre-mixed, Cr₂O₃ particles obs. 8=23118
 N₂O-acetylene, in emission anal. 8=18782
 O, CO, low temp., kinetic calc. 8=9699
 O, H, low temp., kinetic calc. 8=9699

 Flocculation. See Sedimentation.
 Flow
 See also Diffusion; Jets; Plastic flow; Turbulence; Viscosity.
 aerosols, near obstacles, non-symmetrical theory 8=21737
 axisymmetrical free flow with rotation, turbulent, decay of vel. 8=21463
 baroclinic, stability in zonal magnetic field 8=2582
 b.c.c. metals, axisymmetric, lattice rotations, computer solution 8=8373
 between disks, rotating and stationary 8=21571
 Boltzmann eqn., linear, soln. for flow over point source 8=7875
 boundary layer effect on shock wave reflection at rigid boundary 8=6138
 boundary layer growth in non-conducting fluid on a magnetized circular cylinder 8=7872
 boundary layer, simultaneous ht. and mass transfer in convection 8=240
 boundary layer turbulence promoters, improved heat transfer rel. to power reactor systems 8=21510
 boundary layer, turbulent, inactive motion and press. fluctuations 8=4436
 boundary values for uniform wall temp. in non-circular conduits 8=4429
 channel, two-dimensional, reverse transition from turbulent to laminar 8=21430
 circular Couette flow, problem of Taylor instability suppression of effect of geometry 8=21425
 compressible fluid, in wake of symmetrically positioned body 8=7862

Flow—contd

- confined rotating vortex, forced and periodic breakdown 8=21469
- distribution properties behind spherical detonation wave 8=15061
- drag of two-dimensional bluff-plates immersed in turbulent boundary layers 8=21446
- elastic tube, satisfying Windkessel condition, asymptotic uniqueness 8=21428
- elastico-viscous fluid, slow steady motion with heat transfer in wavy channel 8=16624
- eqn. for geomag. flux tubes, and appl. to polar substorms 8=10029
- exact Navier-Stokes solutions including swirl and cross-flow 8=4433
- expanding, behind incident shock waves, probe studies 8=15049
- fluid, along plate with transverse cavity, mass transfer coeff. 8=12600
- fluid boundary layer build-up between concentric rot. cylinders, turbulence development 8=12633
- fluid, boundary layer eqns., dual solns. at point of detachment 8=7873
- fluid boundary layer, laminar, nonlinear instability development 8=12613
- fluid boundary near wall, turbulence, press. rel. to velocity components 8=12632
- fluid boundary, 2D, rot. tank with small inflow, instability 8=12592
- fluid, charged in e. m. and gravit. fields, Hamilton-Jacobi eqn. 8=16634
- fluid, charged, relativistic in e.m. and gravit. fields, Helmholtz and Larmor eqns. 8=16633
- fluid, Coutte, inner cylinder stationary, stability with centrifugal forces 8=16627
- fluid, Couette, plane, nonlinear instability 8=12591
- fluid, Couette and Poiseuille, between parallel plates, appl. couple stress and micropolar theories 8=7874
- fluid, curved, rate of change of vorticity components 8=12609
- fluid, elastico-viscous, acoustic streaming near cylindrical obstacle 8=6169
- fluid, electrically conducting, incompressible near accelerated plate under transverse magnetic field 8=3241
- fluid with finite conductivity, in mag. field 8=10921
- fluid, forced oscillations behind vibrating cylinder 8=12609
- fluid, free boundary layer, statistical behaviour of turbulence 8=12617
- fluid, incompressible, shear, between parallel walls, statistical theory 8=12748
- fluid, induced by thermal oscillation of infinite horizontal cylinder 8=7881
- fluid, laminar boundary layer interaction with free stream turbulence 8=12614
- fluid, laminar-turbulent, stationary mixed, digital obs. 8=12640
- fluid motion induced by surface-tension variation 8=21422
- fluid, periodic pressure gradient 8=7861
- fluid, Poiseuille in pipe, stability when subject to azimuthally periodic disturbances 8=16631
- fluid, re-attaching high-speed, transverse variations obs. 8=12604
- fluid, rot. stratified, second circulation generation 8=12637
- fluid, shear isotropic, turbulent energy spectrum eqn. 8=12599
- fluid, shear, space-time correlation obs. interpretation 8=12605
- fluid, supersonic, forced vibr. of plate in plane of flow 8=10686
- fluid, turbulent boundary layer structure, review 8=12607
- fluid, turbulent boundary layer, 3D, with wall heat transfer 8=12611
- fluid, turbulent, longitudinal dispersion by combination of convection and lateral spreading 8=12622
- fluid, turbulent radial wall jet, mass transfer from axial source 8=1451
- fluid, turbulent separated in rectangular cavity, transport processes 8=12610
- fluid, turbulent shear, waveguide model 8=12598
- fluid, turbulent swirling jet, axial velocity and shear stress profiles 8=12626
- fluid of 2nd order, plane Poiseuille, effect of slight viscoelasticity on hydrodynamic stability 8=16632
- fluid, velocity defect law, surface roughness effect 8=12612
- fluidized bed, mean and variance of local particle conc., rel. to non-uniformity 8=21462
- fluidized beds, solid-to-fluid heat transfer 8=21470
- fluids, boundary layer, velocity space-time correlations, structure with and without freq. filtering 8=12606
- fluids, elec. cond., Hall effect for variable mag. field and high Reynolds numbers 8=16614
- fluids, freezing in forced flow, analysis 8=16926
- fluids, micropolar, between concentric cylinders 8=12590
- fluids, non-Newtonian, natural convection, laminar boundary layer equation solution 8=7857
- fluids, Reiner-Rivlin, in entrance region of channel 8=12601
- fluids, rotating and stratified 8=21427
- fluids, thermodynamically nonequilib., restraints on energy and spectrum of turbulence 8=16641

Flow—contd

- fluids, velocity spikes in limiting layer 8=1448
- fluids, viscoelastic through porous media 8=1446
- fluid, wall turbulence, secondary currents 8=12639
- four-space hyperfluid, as model of electro-magnetism 8=6283
- free-surface waves, interaction with viscous wakes 8=21449
- free turbulent, effects of intermittency on turbulent transport processes 8=16766
- free turbulent shear layer, approx. theory for development 8=21474
- fully developed, in tube with exp. varying heat flux, Nusselt numbers 8=19642
- gas-liquid mixtures in pipes, friction press. grad., Lockhard-Martinelli correl. 8=21564
- gas/liquid, through packing of absorpt. column 8=12737
- gas-particle reacting system, source flow model 8=21461
- gas-solid mixt., supersonic, in convergent-divergent nozzle and heat transfer, obs. 8=16902
- granular material in fluidized bed, heat transfer 8=4628
- gravity currents and related phenomena 8=16626
- heat transfer from a sphere at rest in a fluctuating stream 8=6207
- heterogeneous systems, 2nd law of thermodynamics 8=12595
- homogeneous fluid, inviscid layer, stability under action of uniform adverse temp. gradient 8=12602
- hydrodynamic boundary layer, heat transfer 8=12587
- hydrodynamic mixing in porous media 8=12596
- incompressible, density-current surges at density ratios of 1.05 and 3.0, numerical study 8=16630
- induced by body oscillating in unbounded viscous fluid otherwise at rest, review and extension 8=21556
- interpenetrating electron and ion streams, warm, nonlinear interaction 8=7752
- inviscid source flow field, loading calc. anal. of thin-ring airfoil 8=21473
- laminar boundary layers, free convection, incipient instability 8=4430
- laminar boundary layer on a sphere rotating about a diameter 8=7871
- laminar boundary layers, stability at separation 8=12589
- laminar, conduction-convection critical transition time 8=16692
- laminar, development in rectangular ducts 8=4451
- laminar incompressible viscous, nonlinear stability theory 8=12586
- laminar in parallel plate channel, development stability 8=4428
- laminar, through pipe with small suction 8=7868
- laminar Poiseuille, slightly supercritical, disturbance evolution 8=1450
- laminar source flow between 2 parallel co-axial discs rotating at different velocities 8=21426
- laminar and turbulent, heat transfer, analysis 8=7870
- laminar to turbulent, transition, incompressible fluid obs. review 8=12608
- laminar, of wall-jet over curved surface 8=21443
- linear Maxwell type viscoelastic fluids, near osc. or accelerating plate 8=21559
- MHD in cylindrical pipes with non-uniform mag. field 8=19810
- MHD, in expanding pipe, transverse magnetic field effect 8=6354
- MHD at flat duct entrance, heat transfer 8=19809
- MHD nozzles with end effects 8=6348
- MHD, one-dimensional, and Monge-Ampère eqn. 8=19812
- MHD, solution for small magnetic interaction 8=3236
- MHD stabilization, in plane channel, heat exchange 8=3240
- mass oscillating, in modified Moore variometer configuration 8=4445
- miscible in porous column, one dimens. hydrodynamic dispersion eqn. soln. 8=1441
- non-equilibrium, shock wave formation 8=6141
- non-Newtonian fluid, rotational motion through annulus with porous walls 8=21433
- non-Newtonian fluids, in straight pipes 8=7867
- non-Newtonian fluids, turbulent, through round tubes 8=16638
- ordered aggregates of rigid spheres, disks and rods in plane Couette flow 8=12944
- orifice, circular, numerical soln. of integral eqn. 8=16625
- over yawed cylinder, eqns. for boundary layer and out pot. flow, for cross-wire and spanwise vel. comps. 8=16657
- perfect fluid, over obstacles of finite amplitude 8=21431
- pipe, forced, free convection effect on heat transfer 8=16623
- plane reversible, compressible fluid, singularity of hodograph 8=16662
- plane supersonic, plate vibrations, nonstationary parametric and self excited 8=15033
- Poiseuille flow in parallel channel, with variable fluid props. 8=21472
- Poiseuille over porous surface, boundary conditions 8=1447
- Poiseuille, stability and incipient turbulence, study by difference method 8=12722
- polymer melts, molec. mechanisms 8=16749

Flow—contd

- in porous media, saturated, numerical simulation 8=12594
- potential, numerical solution for flux components 8=19365
- power-law fluids, down inclined plane between parallel plates 8=21435
- pressure drop across sharp-end capillary tubes 8=12588
- progress in heat transfer, book 8=15104
- rate of mass flow of a fluid 8=16629
- Reynolds number, large, Navier-Stokes solutions 8=7863
- shear, past cylinder with inverse ellipse cross section 8=21436
- shear, rapidly rotating, instability rel. to non-axisymmetric disturbances 8=21429
- shearing, influencing motion of sphere 8=7866
- slow viscous, extremum principles and application to suspensions 8=1449
- soap stems, complex, meas. 8=12959
- for sphere transversely moving in rot. fluid 8=4435
- spiral, conformal representation 8=10495
- standard flow nozzles, effect of cavitation on discharge coeff. 8=21579
- steady of visco-elastic fluid in annulus of two cylinders 8=21432
- Stokes, cellular, spatially periodic, induced by time invariant elect. field 8=7883
- Stokes conditions, particle aggregation, in sound field 8=6156
- Stokes, past a circular cylinder in MHD 8=15372
- suction, optimal, of boundary layer, rel. to initial turbulence and surface roughness 8=12597
- supersonic with heat sources through deformable cylindrical shell 8=16649
- of suspension, particle migrations in 8=8146
- suspensions and drilling muds, in tubes, laminar and transitional 8=8151
- Taylor-vortex, perturbation instability 8=12643
- transducers, principles and basic eqns. 8=16635
- transient Couette, kinetic theory 8=21423
- turbulent boundary layer, effect of sudden compressions 8=15055
- turbulent, conduction-convection critical transition time 8=16692
- turbulent boundary layer, structure 8=7876
- turbulent, heat transfer in tube with circumferentially varying thermal boundary conditions 8=19638
- turbulent wakes, two dimensional, self preserving 8=7880
- 2 incompressible immiscible viscous fluids, due to pulses of tangential force on upper surface 8=21434
- two-phase in heated pipe, stability calc. 8=4431
- vapour-liquid mixtures in pipes, friction press. grad., Lockhard-Martinelli correl. 8=21564
- variational principle for hydromagnetic flows 8=15374
- viscoelastic, linear instability of a plane-parallel Couette flow 8=7869
- viscoelastic Maxwell fluid, contained between concentric spheres, motion 8=21421
- viscoelastic, restrictions on velocity probes 8=12603
- viscous, around semi-infinite obstacle 8=7864
- viscous incompressible between parallel plates, appl. of variational principle 8=4432
- viscous under transverse magnetic field 8=6353
- viscous, unsteady temp. distrib. 8=7977
- vorticity, free-stream, effects in region of separated zones 8=12644
- water, small bore, effect of vibrations rel. to laminar and turbulent transition regimes 8=1501
- $\text{Fe}(\text{OH})_3$ suspension, Br^{82} meas. 8=21727

gases

- See also Acoustic streaming; Aerodynamics; Anemometers; Supersonic flow.
- absorbing-emitting, free convection at stagnation point 8=4454
- air/air free jet, nozzle-fluid concentration field 8=4453
- air, arc heated, temp. fluctuations and autocorrelation function 8=12653
- air between parallel plates, parabolic profile meas. 8=7902
- air, free convection from vertical flat plate with step discontinuities in surface temp. 8=21458
- air, hydrodynamic boundary layer at a disc 8=4449
- air, laminar forced convection in entrance region between parallel flat plates 8=21459
- air, low-speed, study of skewed turbulent boundary layers 8=21475
- air, turbulent, through concentric annuli, experimental study 8=12650
- air, in tubes, acoustic reflection coeff. of discontinuous changes of cross-section 8=19565
- air, turbulent, in vertical square duct, temp. inner-law and heat transfer 8=4456
- air over boundary between smooth surface and small water waves 8=1460
- air, turbulent, rel. to effect of waves at gas-liq. interface 8=21464
- air-water interface with progressive water waves, aerodynamic press. distribution 8=5791
- "almost-Lagrangian" formulation 8=21476
- annular duct, boundary elements, flutter, gas flow induced 8=15038

Flow—contd**gases**—contd

- atmospheric shear, thermally stratified, rel. to laboratory models 8=14599
- behind detonation, friction and heat-transfer effects on transition to steady flow 8=15058
- boundary layer, with large injection and heat transfer 8=21485
- boundary layer, low-drag, disturbances induced by suction through slots 8=12667
- boundary layers, turbulent with air injection, transformation 8=12665
- boundary layer transition at Mach 5.5, shock tunnel investigation on 8° half-angle cone 8=12670

- compound-compressible theory for streams through nozzle 8=21455
- conducting, at high vel., influence of Hall currents 8=16653
- conical, holographic interferogram, refined analysis 8=6565
- in conical nozzle, with velocity slip and temp. jump 8=16651
- counter-flow suspension, particle residence time tracing 8=21454
- critical points, determination using wire heater and differential thermocouple 8=12668
- critical, valve sizing 8=7898
- crossed E and H fields, longitudinal stability 8=10923
- cylinder near-wake and separation point, velocity fluctuation obs. 8=12654
- adiabatic internal source 8=1458
- droplet suspension, momentum and heat transfer 8=12663
- dusty, steady, past sphere 8=12669
- effusion apparatus, angular deflection recording, automated 8=4637
- effusion current through cylindrical orifice 8=7899
- Ekman boundary layer, transition and instability 8=12657
- ethane, transpiration through membrane 8=12662
- exponentially sheared in vert. dirn., effect on induced drag of elliptically loaded lifting line 8=16677
- flame, laminar diffusion, in vortex core, field 8=15111
- fluidized bed, dense, gas distribution 8=8141
- free convection, heat transfer and binary diffusion 8=4491
- gas-particle system, turbulent flow, two-phase eqns. with fluctuations of particle cloud 8=16660
- Graham's law, range of validity 8=12708
- Graham's laws reviewed 8=12707
- guided, flame configuration 8=19655
- heat transfer with packing in packed bed of spheres 8=13363
- high-enthalpy, stagnation point heat transfer of a solid 8=22140
- high speed over liquid layer, effect on stability 8=4523
- hypersonic low-density, past thin wedges 8=21487
- hypersonic past blunted bodies, soln. valid for whole field 8=16654
- ideal, magnetohydrodynamic 8=3234
- ideal, with a normal shock 8=15375
- integral characts. method for press. and vel. calc. 8=21460
- inviscid, past delta wing, field near centre of rolled-up vortex sheet 8=1459
- ionized laminar boundary layer, two temp. 8=7900
- ionized, quasi-unidimensional flow in mag. field, stability of transverse oscills. 8=349
- laminar, development in rectangular ducts 8=4451
- laminar diffusion flame behind parabolic cylinder, const. press. Oseen-flow model 8=19656
- laminar hypersonic near wake, theoretical soln. 8=16670
- laminar-turbulent transition, small parameter method 8=12655
- linearized inviscid relaxing, approx. analysis 8=4457
- MGD, elect. conductivity dependence on temp. 8=16491
- MHD, distortion by strong Hall effect and effect on power generation 8=15381
- measurement and recording by capillary method 8=7896
- miniature turbine flowmeter, low flowrates, operation and calibration 8=16665
- molecular, in cylindrical tubes, approximation 8=1453
- molecular flow in long cylindrical tubes, soln. of Clausius's integral eqn. 8=21529
- molecular, interaction with tube walls 8=7893
- in narrow channels, rel. to flow-induced vibs. in rigid plate 8=19497
- nozzle into still air, plume geometry calc. 8=21453
- over yawed cylinder, boundary layer and out pot. flow equations 8=16657
- partially dissociated stream, effect of mass injection on heat transfer 8=21457
- partially ionized, supersonic source flow expansion into vacuum 8=16658
- particle-gas mixture in nonequilibrium, continuum approach 8=16655
- plane Poiseuille, of rarefied gas 8=21456
- plane reversible, singularity of hodograph 8=16662
- plasma, collisionless, over mag. obstacle, wind tunnel obs. 8=16513

- light, phase and instantaneous freq. 8=20029

Fluctuations—contd

- noise, harmonic oscillator and atomic sources, quantum theory 8=19438
 - optical parametric devices, quantum noise 8=15445
 - particles, heavy charged, in thin absorbers, energy loss distrib. 8=13471
 - pulse effect in a medium, instabilities, convective and absolute 8=19476
 - quantum noise, rate equation and amplitude noise in lasers 8=11022
 - in quasi-harmonic self-excited oscillators, for low noise 8=6370
 - radiation, detector, meas. theory 8=3010
 - radiation and matter interacting system 8=19819
 - random trend removal in parity violation expts. 8=6630
 - reduced-width amplitude, exact distrib. 8=2908
 - spectrum, statistical props. of analyser 8=10981
- electrical**
- accelerator tubes, suppression of e loading 8=15653
 - amplifier, pulse, noise calc. employing gated active integration 8=619
 - atmospheric, affecting cm.-wave radioastronomy 8=18894
 - capacitor charging time, voltage effect 8=280
 - crystal-mixer noise, rel. to temp., 1400 MHz 8=6258
 - diodes, space-charge-limited, thermal noise 8=18132
 - e.m. perturbations in explosions 8=3040
 - frequency, bridge oscillator, stabilization 8=3145
 - in frequency modulation due to damped waves 8=2902
 - gas discharges, low-freq. noise 8=21226
 - gas laser, multimode, excess photon noise in detected photocurrent 8=11039
 - integrators, in pulse amplitude systems 8=20213
 - interference in sonar detection 8=23241
 - JFET, noise calcs. of meas. values 8=5334
 - laser noise in phase locking region, quantum mech. theory 8=3291
 - laser noise, quantum Fokker-Planck soln. 8=19937
 - magnetron, e.m. field fluctuations effect on space charge and anode current 8=338
 - in Markoffian continuous-parameter system, Lax calc. modified for computer evaluation 8=3152
 - MOS transistors, generation-recombination, theory 8=9174
 - MOS transistors, l.f. noise, surface states 8=9176
 - MOS transistors, thermal noise, theory accounting for substrate doping 8=9170
 - noise source, 10 GHz, Ar discharge tubes 8=7664
 - noise in waveforms, programme for reduction 8=3153
 - oscillators, self-sustained, near threshold, noise exam. 8=6259
 - oscilloscope, intensity modulation effect on multi-parameter display 8=6238
 - photoconductive i. r. detectors, generation-recomb. noise 8=22709
 - photoconductive i. r. detectors, noise limited detectivities 8=22708
 - photodetector signal: noise ratio rel. to electro-optic filter modulation voltage vars. 8=2270
 - photomultipliers, noise factor and photocathode quantum efficiency 8=10905
 - photomultipliers noise pulse, effect of high energy radiation 8=3216
 - plasma, turbulent, intensity of emitted e.m. rad. and noise 8=4370
 - polyethylene film, I-doped, current oscillations at high field strengths 8=8985
 - random signal quantization effect 8=6260
 - reactor interference on n counting system 8=4028
 - reduction method 8=15161
 - semiconductor lasers, population and current noise 8=429
 - semiconductors, piezoelectric, acoustoelec. domain formation during thermal noise amplification 8=18001
 - semiconductor surfaces, l/f noise, theory 8=13787
 - shot noise in crossed-field electron guns, space charge effect 8=19781
 - signal-to-noise ratio in pulse amplitude meas. 8=3478
 - in solids, space charge noise suppression 8=5380
 - spectroscopy, nuclear, improvement of peak to background ratio 8=3453
 - superconductors, type II, rel. to flux-transport 8=17949
 - superconducting foils, flicker noise 8=5220
 - thermal noise across tuned circuits used to meas n.m.r., e.p.r. 8=19906
 - transformer laminations, transversal motion as cause of hum 8=285
 - X-ray tube supply, high voltage waveform, radiographic effects 8=11243
 - Al-Al₂O₃-Al thin film diodes, meas. 8=13851
 - Cs vapour thermionic diodes, ion current and Schottky effect 8=339
 - GaAs at 80°K, electro-optic obs. 8=2193
 - Ge diodes, high freq. noise and double injection, obs. 8=13854
 - Ge, generation-recombination, 100°-350°K 8=22593
 - Ge photodiodes, shot-noise meas. at high freqs. 8=22706
 - He-Ne laser, discharge modulation noise 8=6449
 - InSb, quantum oscillations in photoelec. coeffs. in n-type 8=13913
 - n-InSb, relaxation oscillations rel. to bias current and magnetic field intensity 8=13824

Fluctuations—contd**electrical—contd**

- Se rectifiers, prebreakdown region, I-V fluctuations 8=2225
 Si:In, measurement, and photocond. and Hall effect rel. to
 electron and hole-capture coeff. 8=13915

 Gd I, Zeeman effect rel. to g-values of levels 8=4077
 Gd II, Zeeman effect rel. to g values of levels 8=4076
 Gd³⁺ in BaF_2 and SrF_2 , optical spectra 8=23015
 Gd³⁺, energy levels and cryst. field in LaCl_3 8=16975
 Gd³⁺ impurity centres in SrF_2 , temp. effects 8=8703
 Gd³⁺ ion, energy structure 8=2421
 Gd³⁺, e. s. r. in $\text{SmCl}_3 \cdot 6\text{H}_2\text{O}$ single crystals 8=9427
 Gd³⁺: $\text{Sm}(\text{NO}_3)_3 \cdot 6\text{H}_2\text{O}$, e. s. r. 8=18435
 Gd³⁺ in YVO_4 e. p. r. 8=9428
 in ThO_2 , spectrometric determ. 8=18787

Gadolinium compounds

- heat capacity singularities below 1°K 8=22115
 Gd phosphate-vanadates, struct. and luminesc. 8=14330
 GdAlO₃, antiferromag. order, from optical absorption studies 8=22880
 GdB₃, (x=4, 6), prep. and props. 8=17384
 GdCl₃, crystal structure 8=8523
 GdCl₃, with dipolar interactions, magnon spectrum analysis 8=9353
 GdCl₃, ferromagnetic high-temp. expansion coeffs. calc. 8=9352
 Gd-Dy alloys, magnetocrystalline anisotropy 8=9350
 GdFe garnet, epitaxial film on YAl garnet, chem. vapour deposition 8=13099
 GdFe garnet wafer for magneto-optic memory element 8=19755
 Gd₂O₃, u.v. reflect. spectra 8=18524
 Gd₂O₃, vapour pressure from 2350° to 2590°K 8=21789
 Gd-Tb alloys, magnetocrystalline anisotropy 8=9350
 GdWO₄, determ. of Gd by γ -activation 8=9766
 Gd-Y alloys, mag. props. 8=5472
 Gd-Yt alloy, spin-disorder resistivity meas. 8=9007

Galaxies

- See also Nebulae.
 analogue of H-R stellar diagram 8=23590
 background linear polarization at $l^{II} = 140^\circ\text{C}$, $b^{II} = 6^\circ$ 8=23595
 blue compact, Leo A and B clusters, suitability for verification of redshift for light from ultradense galaxies 8=19221
 bright, identification with radio sources in 4 C catalogue 8=10288
 bright, south of +20° declination, optical positions 8=10259
 Centaurus, stellar assoc., statistical obs. 8=10264
 close encounters, possibilities and frequencies 8=19215
 clusters, analysis of clustering distribution 8=2798
 clusters and assoc., nearby, β Cephei stars, photoelectric search 8=2786
 clusters and assoc., nearby, new variable stars, data 8=2787
 clusters formed by compact galaxies, discovery of two new ones 8=19220
 clusters, previously identified radio sources 8=19212
 clusters, radio emission obs. 8=19211
 compact, condensation to neutron-star-studded 8=14808
 cosmic mag. field, generation 8=23583
 cosmic rays, intergalactic, solar modulation and p and He source spectra 8=2771
 counter-jet in M87 8=23591
 cylindrical, in gravitational experiments 8=10086
 disks, time-independent, axisymmetric, self-consistent models 8=10271
 disc, types of vel. distrib. and stability 8=10262
 elliptical, collisionless relax. rel. to light distrib. statistical mechanics 8=10273
 escape vel. effect on dist. of residual velocities 8=14800
 evolution and structure, conference, Brussels Belgium (1964) 8=19210
 formation in early stages of universe due to baryon inhomogeneity 8=23474
 formation from an initial spectrum of primordial fluctuations 8=14809
 formation rel. to fluctuations in the primordial fireball 8=10075
 formation, thermal instability in expanding universe 8=14733
 forms and activity, unifying theory 8=14803
 Fornax dwarf, integrated magnitudes and colour indices from photoelectric scans 8=10276
 4 near groups, conc. of irregular dwarf galaxies 8=19218
 galactic cosmic rays, anisotropy in intensity distribution 8=23488
 halo, selected area 54, stellar density by 2-colour photometry 8=19214
 hydrogen neutral, detection, and model profiles investigated 8=5934
 instability, absolute and convective rel. to evolution 8=10261
 intergalactic arms lifetime and star form. 8=10260
 intergalactic mag. field and density, radar obs. 8=10236

Galaxies—contd

- "integral sign" redshift, vel. field and evolutionary stage 8=10270
 irregular galaxies of M82 type 8=19222
 Jacobi's ellipsoidal figures under influence of halo, gravitational stability 8=14725
 Magellanic Cloud Large, X-rays in 8-80 keV, search with sounding rocket 8=5916
 Magellanic Clouds, obs. rel. to massive stars evolution 8=10274
 mag. fields and cosmic rays, role 8=23585
 mass distribution from radial velocities data 8=14801
 mass distribution from radial velocities and photometry 8=5939
 mass-luminosity ratio, variations 8=19216
 metagalactic radiophone intensity in evolutionary models of Universe 8=10076
 metagalactic turbulence and fragmentation of matter, rel. to microwave relict. rad. 8=19079
 metagalaxy anisotropic expansion, rel. to weakly interact. particles 8=5844
 M31, extent of radio emission 8=23596
 M33, H II, kinematical and physical data from interferometric obs. 8=23568
 M87 jet, radiation and props. 8=23592
 NGC383 (radio source 3C31), beamwidth obs. 8=10267
 NGC 1808, velocity field, rotation and mass 8=10277
 NGC 2403 in the M81 group, stellar content and distance 8=23593
 NGC 3516, nucleus spectral variations 8=23589
 NGC4151, O III fluorescence in u.v. spectrum 8=5937
 NGC 4151, optical and near i. r. spectrum of nucleus 8=23588
 NGC 4449, rotation obs. 8=19217
 NGC 4486 ejection, spectrum 3730-6300 Å 8=10279
 NGC 4631/4656 binary system, neutral H observations 8=10275
 NGC 5548, nucleus electron temp. var. obs. 8=14805
 NGC6166 (radio source 3C338), beamwidth obs. 8=10267
 NGC 6611, 6523 and 7000, electron densities from 4 cm obs. 8=23570
 nonexistence of cluster of clusters of galaxies 8=10269
 normal spiral, radio radiation at 430 and 611 MHz 8=5933
 nuclei and activity 8=23587
 nucleus, i. r. obs. for structure determination 8=10250
 origin, models of concentration of matter in expanding universe 8=14724
 with peculiar nuclei, properties 8=10265
 plasma, synchrotron and gyromag. relativistic, amplification dependence on polarization 8=21345
 proton relativistic anisotropic plasma, transverse e. m. wave effect 8=5850
 radio, as cosmological probes 8=23597
 radio emission of 47 bright galaxies 8=5931
 radio, inverse, Compton effect due to interaction with cosmic black body radiation 8=19213
 radio, 9.55mm, flux density obs. 8=23599
 radio, O III emission rel. to fine struct. const. time var., obs. 8=14727
 radio observations, r. f. spectra of normal spiral, flux densities of radio sources 8=5935
 radio radiation of normal galaxies at 8 cm flux densities and angular dimensions obs. 8=10266
 radio, sky temp. calc. 8=5936
 radio sources 3C79 and 3C192, structure obs. 8=23603
 radio sources in declination range + 18° to +20°, freq. 750 and 1410 MHz, pencil beam survey 8=23605
 radio, 1418 MHz radiation, upper limits to degree of circular polarization 8=23600
 radiogalaxies and quasars, space distribution 8=23630
 radioluminescence function 8=10272
 reddening of light, gravitational contribution 8=14804
 Seyfert, envelopes, structure and masses 8=19176
 Seyfert, new, intrinsically bright 8=14802
 Seyfert NGC 1068, as extragalactic nebula 8=10227
 Seyfert NGC 5548 nucleus props., spectral obs. 8=10263
 Seyfert, nuclei struct., spectrophotometry obs. 8=10278
 spiral arm, magnetic field and gas outflow association 8=10280
 spiral, orbits and velocity distribution of population I stars 8=5932
 stars and gas evolution in 8=19132
 Stephan's Quintet, 3 colour photometer obs. 8=5938
 structure and evolution 8=23586
 containing supernovae, class and absolute value distrib. 8=19223
 systematic red shift, explanation 8=19219
 3C191, Si/C ratios 8=14810
 3C revised catalogue, re-examination 8=23602
 Triangulum spiral, M33, spectrophotometric studies of diffuse nebula NGC 604 8=19193
 triple, dynamics, trajectories and decay, computer calc. 8=19101
 HI regions, i. r. emission and m. h. d. shock waves 8=23566
 H II regions, higher-order high-quantum H recombination lines 8=23569
 H_{II} regions, radial velocities and kinematics 8=19208
 H II regions, temperature obs. 8=10251
 H II, stimulated emission of r. f. lines, enhancement by small departures from thermal equil. 8=23567

Galaxies—contd

- OH galactic, radio emission, brightness and temporal variation 8=10253
- the Galaxy**
- anticentre, stellar distrib. obs. 8=19207
- central globular cluster 8=5929
- central region, photographic obs. 8=2796
- Circinus (SA195), photographic UB_V photometry of 634 stars, catalogue 8=19202
- cosmic ray e prod., model from secondary spectrum 8=19198
- cosmic ray trapping 8=23491
- Crux regions, photometric standard sequences 8=19205
- Gould's belt, kinematics from simple model as projection from Orion spiral arm 8=10255
- inertial frame of reference in stars near the earth 8=14739
- interstellar hydrogen, radial motion 8=10243
- magnetic field strengths 8=14798
- mass model, velocity dispersions 8=2797
- Milky Way, southern, distrib. of OB star groups 8=10111
- neutral hydrogen in Gould's belt, influence on modelling 8=10256
- north galactic spur, structure of mag. fields 8=10254
- precessional corrections, in systems GC, FK3, N3O and FK4 8=23584
- proto-, He and metal abundance vars. from globular cluster to cluster 8=14799
- I Puppis and Norma, OB stars radial vels. rel. to struct., obs. 8=23594
- Puppis, three regions, magnitudes and colours for 78 stars 8=19204
- radio noise, ionospheric attenuation, 25 and 21.3 MHz, Ahmedabad, 1957-64 8=14673
- radio sources at 4170 MHz, high resolution obs. 8=5928
- rotation, in systems GC, FK3, N3O and FK4 8=23584
- Scorpius, interstellar K line and λ 4430 absorption band 8=19201
- South Pole, new C star 8=14755
- spiral arm population distrib. 8=10248
- spiral arms, shape, stellar positions, movement of gases etc. 8=19203
- survey of southern sky at 85 MHz 8=10257
- two new variables found 8=23548
- u. v. emission in drapason 1225-1340 Å and in L α line in dira of Milky Way 8=19206
- X-ray sources, 1964-65 survey 8=10252
- HI region, OH, excitation temp. of 18 cm line 8=10299
- HII regions, electron temperature 8=2795
- H γ regions, H recombination line 158 α , obs. 8=5930
- H β regions, OH emission mechanism 8=10258
- HII regions, W49 radio source 8=10249

Gallium

- crystal structure 8=22024
- cyclotron effective mass obs. 8=13717
- cyclotron resonance, mass determinations 8=13687
- Fermi surface study, by u.s. geometric reson. 8=8935
- glasses, e. s. r. study 8=18420
- line-broadening collisions, cross-sections 8=12083
- liquid, structural sensitivity of thermoelectric props. 8=16878
- open-orbit electrons in crystal, velocity 8=13640
- periodic size effect in high magnetic field meas. 8=3161
- self-diffusion 8=22152
- r.f. size effect, temp. and freq. dependence 8=9099
- single crystals, therm. cond., size effects 8=17545
- specific heat near 1.7°K, no anomaly, rel. to absence of mag. transition 8=1871
- superconducting boundary scattering rel. to critical temp. shifting 8=13747
- superconducting energy gap and anisotropy meas. by tunneling effect, 0.36-1.1°K 8=22546
- ultrasonic wave absorption 8=4922
- velocity of sound, quantum oscs. 8=13351
- Ga in GaAs and GaP X-ray K-absorption spectra 8=2420
- GaBr phthalocyanine, luminesc. singlet-singlet transitions 8=18591
- in Si, implanted atoms location and lattice disorder, obs. 8=17414
- in Si, photoexcitation lines, anomalous broadening rel. to optical phonons, obs. 8=5601

Gallium compounds

- gallate i. r. glasses, props. 8=22954
- junction laser, e. m. cavity properties 8=19996
- suboxide, structure in gaseous phase by e-diff. 8=16290
- Ga $_x$ Al $_x$ As diodes, stimulated emission at 77°K 8=19997
- n-GaAs, in mag. field, circularly polarized waves, doping rel. to optical absorpt. 8=22981
- GaCl phthalocyanine, luminesc. singlet-singlet transitions 8=18591
- Ga-Fe system, mag. props. 8=22817
- Ga-Fe system phase transform temps., comp. and struct., obs. 8=21749
- Ga $_{0.85}$ Fe $_{0.15}$ O $_3$ magnetically ordered crystal, electron resonance spectrum 8=14087
- Ga $_2$ -Fe $_2$ O $_3$, Mössbauer investigations 8=13028
- GaH, mol., $a^3P_1 \rightarrow X^1\Sigma^+$ transition 8=7515
- Ga $_x$ In $_{1-x}$ As alloys, electroreflectance rel. to band structure 8=2419

Gallium compounds—contd

- Ga $_x$ In $_{1-x}$ As alloys, optical energy gap variation 8=18040
- 5Ga $_2$ O $_3 \cdot 3M_2$ O $_3$, (M = rare earth), mag. props. 8=2340
- GaP crystals, anomalous photoconductivity response 8=18241
- GaP, dielectric dispersion and phonon line shape 8=14215
- GaP diffused single crystal layers p-n junctions photoelectric properties 8=5406
- GaP, electron energy loss probability, retardation effects 8=22497
- GaP epitaxial layers with high mobility 8=9101
- GaP films, vacuum deposited, polymorphism 8=21883
- GaP, Ga X-ray K-absorption spectra 8=2420
- GaP, Hall coefficient and conductivity, 4.2-300°K 8=9100
- GaP, hot-electron-phonon interactions 8=5245
- GaP, inter-band piezoelectr. 8=18529
- GaP, intrinsic optical absorption 8=2417
- GaP, large crysts. soln. grown, prep. and props. 8=17234
- GaP miniature photodiode 8=15525
- GaP: Ni, absorption spectrum 8=22983
- GaP p-n junctions, microplasma obs. 8=5310
- GaP, photoelastic props. rel. to use as acoustic light modulators and scanners 8=9496
- GaP, thermal expansion coeffs. from -62° to 200°C 8=1880
- GaP, vapour-grown crystals, effect of substrate orientation 8=13136
- GaP-Cl $_2$ -H $_2$ system, vapour transport in open tube, thermodynamics 8=12699
- Ga-P-Te system, phase equilibrium 8=17082
- GaSb, vapour press. as function of temp., and thermal stability 8=21786
- GaSb, diffusion and solubility of Li 8=13409
- n-GaSb, electron mobility carrier conc. dependence at 77°K 8=2195
- GaSb, Faraday rotation, spectral emittance and Hall effect 8=22587
- GaSb injection laser, emission in pulsed conditions 8=6462
- GaSb, laser diode, spectrum fine structure 8=444
- GaSb, photoelectromagnetic receivers with optically polished thin elements, sensitivity and inertness 8=6275
- n-GaSb, Shubnikov-de Haas oscs., beating effects 8=9102
- GaSb, surface stress in polished and clean (111) surfaces 8=8849
- GaSb, thermal expansion from 2-40°K 8=4937
- GaSb-InSb alloys, thermal and elec. props. at high temps. rel. to comp. 8=4944
- GaSb-GaAs alloy, pressure-sintered, densification and thermoelectric props. 8=4697
- GaSe crystal, dislocations and optimal visualization etchant 8=1973
- GaSe, generation of second optical harmonic 8=5600
- GaTiBO $_5$ (B=Nb, Ta, Sb), crystal structure and fluorescence 8=4879
- gallium arsenide**
- See also Semiconducting materials/gallium arsenide.
- coated with Si $_3$ N $_4$ film, i. r. absorpt. 8=14262
- diffusion of Zn under excess As pressure 8=22153
- elastic constants rel. to charge carrier concentration 8=13575
- electrodes, single cryst., H evolution 8=14421
- e. m. diffraction when subject to u. s. waves 8=22942
- electrooptical effect, meas. at 10.6 μ 8=18515
- electroreflection meas. 8=2422
- epitaxial deposition in Ar 8=17253
- epitaxial films, propag. of growth striae 8=17129
- epitaxial growth from Ga soln. 8=4829
- epitaxial p-n junctions, spontaneous and coherent light emission 8=6466
- Fermi level, influence of volume dope 8=8934
- growth of InAs films on 8=17132
- Gunn oscillators, inhomogeneity effects 8=362
- injection laser, catastrophic degradation 8=6461
- junction laser, operation on diamond heat sinks at 200°K 8=6465
- junction laser, threshold current calc. 8=6467-8
- laser diode, c.w.-operated, junction temp., current depend. 8=442
- laser diodes, influence of junction structure on parameters 8=6464
- laser diodes, low threshold 8=19995
- laser diode operating at room temp. 8=441
- laser, dual type, quenching resonance 8=443
- laser, excited by electron beam, pulsed operation 8=6469
- laser threshold current density temp. dependence 8=6463
- luminescence, stepwise excitation 8=23055
- magneto-optical absorpt., interband, meas. at 2°K, 77°K and room temp. 8=22985
- n-type, Raman scatt. by mixed plasmon-phonon modes, polarization and intensity obs. 8=5599
- photoelastic props. rel. to use as acoustic light modulators and scanners 8=9496
- photo-Hall effect, high field 8=9105
- piezoelectric, ultrasound generation under Gunn effect 8=22100
- p-n junctions, diffused, luminescence spectra 8=5663
- p-n junction laser, direct investigation method 8=445

Gallium compounds—contd

gallium arsenide—contd

- p-n junction, max photo-e.m.f. on laser excitation 8=9252
 Raman scattering by coupled optical-phonon-plasmon modes 8=22984
 semi-insulating, light amplitude modulation, $\lambda=10.6\mu$, using electro-optical effect 8=9530
 solar cell, thin film 8=19735
 solar cells, thin film on Mo and Al, fabrication and props. 8=10853
 thermal expansion coeffs. from -62° to 200°C 8=1880
 tunnel-diode p-n junctions, alloying temp. rel. to characts. 8=22631
 twins and stacking faults obs. for vapour grown crystal 8=1982
 vapour pressures and phase equilibria, 900-1200°K 8=4664
 wedge-shaped, photo-voltages rel. to incident angle of illum. 8=5398
 X-ray K-absorption spectra of Ga 8=2420
 Ga-As-M (M = Au, Ag or Cu), equil. ternary liquidus-solidus phase diagrams 8=4639
 GaAs-Cs-O photoemission 8=22718
 GaAs-Ga(AsP) heterojunctions, photocurrent, forward current injection modulation 8=13844
 Ga(As, P), thermal expansion coeffs. from -62° to 200°C 8=1880
 GaAs:Zn, photoluminescence, effect of As pressure 8=23053
 Ga-As-Zn system, gas phase equilibria 8=21764
 (GaIn)As-GaAs heterojunctions, photocurrent, forward current injection modulation 8=13844
 Si diffusion, site transfer 8=17574
 SiCl₄, use in epitaxial growth 8=13146
 Si₃N₄ deposition, by SiCl₄-NH₃-N₂ system 8=13094
 Zn-diffused, precipitates formation 8=17617
 Galvanomagnetic effects. See Magnetoelectric effects.
 Galvanothermomagnetic effects. See Magnetoelectric effects;
 Magnetothermal effects.
 Gamma-ray sources. See Gamma-rays.
 Gamma-ray spectra

- See also Nuclear decay theory.
 computer decomposition 8=15943
 cosmic, effects of decaying nucleon isobars and hyperons 8=23489
 differential energy and angle spectra in water and air, for Cs¹³⁷ point source 8=11819
 of fission gases released from n-irrad. UO₂ graphite pellets 8=4016
 fission-product contamination of earth, aircraft meas. 8=9895
 μ capture reactions, Doppler broadening rel. to meas. ν - γ ang. correl. 8=16065
 from n reactions on 14 elements, prompt γ rays and prod. processes, 14.7 MeV 8=7211
 photopeak analysis by computer programme 8=6792
 of products from U fast-n fission, at selected times after fission 8=3984
 radioactive nuclei 8=16019
 stabilizer correcting gain drifts of detector heads, transition probabilities E_0 , M_1 and E_2 , lifetimes of excited states 8=936
 Ag^{108m} \rightarrow Pd¹⁰⁸ 8=7092
 from Ag^{110m} 8=982
 Al²⁷(p, γ)Si²⁸, Q-value meas. of γ -ray energy 8=3574
 Au¹⁹⁸, beta-gamma correlations 8=3887
 Ba¹³⁴ following Cs¹³⁴ \rightarrow Ba¹³⁴ decay 8=7139
 Be⁹(He⁹, α)Be¹¹ 8=3964
 Bi²⁰⁵ \rightarrow Pb²⁰⁵, to determ. which transitions feed 13/2⁺ isomeric level 8=997
 Bi²⁰⁷, 569.6, 1063.6, 1771 keV obs. 8=11440
 Bi²¹⁴, energies and rel. intensities above 1 MeV 8=11788
 Br⁸⁷ decay, in atmosphere 8=2611
 Ce¹³⁶ decay 8=20721
 Ce¹³⁶ and K-conversion coeffs. and transitions multiplicity, 119-1469 keV 8=11763
 Co^{58m} \rightarrow Co^{58g}, obtained by radiating nickel-foil with deuterons 8=1011
 Co⁶⁰, by Ge p-i-n detector 8=16010
 Co⁶⁰, n.m.r., orientation destruction by resonant absorption 8=18331
 Cs¹³⁶ and decay scheme, obs. 8=11761
 Cs¹³⁷, by Ge p-i-n detector 8=16010
 Eu¹⁵⁵ levels from Sm¹⁵⁵ decay 8=7105
 Er¹⁶⁷ from thermal n capture by Er¹⁶⁶ 8=1083
 Er¹⁷³, new radioactive isotopes 8=20756
 Fe⁵⁷(n, γ)Fe⁵⁸, thermal n-capture 8=1080
 Fm²⁵³ \rightarrow Cf²⁴⁹ 8=11836
 Fr²²¹, γ transitions studied by α - γ coincidences 8=3845
 Gd¹⁴⁹ \rightarrow Eu¹⁴⁹ \rightarrow Sm¹⁴⁹ decay chain 8=7143
 Gd¹⁵³, by Ge p-i-n detector 8=16010
 Ge, from thermal neutron capture 8=3810
 Hg²⁰⁸, by Ge p-i-n detector 8=16010
 Ir, from thermal neutron capture 8=3810
 Ir¹⁹⁵, ^{195m} decay 8=11827
 K⁴¹, resonances in proton bombardment 8=16082
 Lu¹⁷⁶ decay 8=1023
 Mn, from thermal neutron capture 8=3810

Gamma-ray spectra—contd

- Mn⁵⁴ n.m.r., orientation destruction by resonant absorption 8=18331
 Na²², from F¹⁹(α , n γ)Na²², and Ne²⁰(He³, p γ)Na²², reactions, Doppler broadening 8=3801
 Nd¹⁴³, ¹⁴⁵, following neutron capture 8=16032
 Nd¹⁴⁷, decay using Ge(Li) spectrometer 8=1018
 Ne²⁰ 4.97 MeV 2⁻ and 7.02 MeV 4⁻, states weak decay, obs. 8=15959
 of Np²³⁷, obtained with Ge-Li detector 8=20732
 Os^{162m}, neutron emission 8=16001
 Os¹⁹¹ β decay 8=3886
 Os¹⁹³ \rightarrow Ir¹⁹³, levels assigned 8=11826
 Pd¹⁰⁶, linear polarization correl., solid angle correction 8=11433
 Po²¹⁴, 10 new γ -rays 8=3844
 Pr¹³⁹, bremsstrahlung-induced activity 8=986
 Pr¹³⁹ \rightarrow Ce¹³⁹ decay 8=7141
 Pt^{194m}, neutron emission 8=16001
 Pt¹⁸⁸, from Au spallation 8=1024
 Pt^{197m} and Pt¹⁹⁷ decays 8=7110
 Pu²³⁹ decay, 300-450 keV 8=16049
 Ra²²⁶, and derivatives, low-energy obs. 8=16046
 Re¹⁸⁰, 2.5 min. decay 8=3885
 Rh⁹⁹ \rightarrow Ru⁹⁹ 8=978
 Rh¹⁰², 2 year, singles and coincidence spectra 8=20751
 S³⁴(p, γ)Cl³⁵, at 2079 keV, p γ -correlation 8=1063
 Sc⁴²(f, γ)³ 3 and 5 spin states obs., 1500 keV 8=15973
 Sm¹⁴⁵, bremsstrahlung-induced activity 8=986
 Sn¹²⁵ \rightarrow Sb¹²⁵ 8=3874
 Sn(Ar⁴⁰, xn), cpd. nuclei rel. to ground-band collective levels population, obs. 8=11953
 Ta¹⁸⁰ decay 8=1023
 Ta¹⁸², decay, sum coincidence studies 8=3884
 Te¹¹¹, recoil nuclei with 290 \pm 27 and 660 \pm 28 keV 8=11818
 Te^{119m} decay 8=3877
 Te(Ar⁴⁰, xn) cpd. nuclei rel. to ground-band collective levels population, obs. 8=11953
 Tm¹⁷² decay, spins and parities of Yb¹⁷² 8=11823
 of U fission products, short lived 8=7263
 U²³³, identification of 7 new lines 8=20760
 U²³⁵ thermal neutron fission, total γ energy release 8=7247
 V⁴⁸, β - γ circular polarization correl. meas. 8=7131
 Xe¹²³ decay, and energy level scheme 8=7138
 Y⁸⁹, isospin analogue resonance decay 8=11754
 Y⁸⁹(n, γ)Y⁹⁰, separation energy 8=7215
 Gamma-ray spectrometers
 See also Beta-ray spectrometers; X-ray spectrometers.
 Compton-effect, compensation 8=11448
 Compton, improved sensitivity by replacing NaI(Tl) scintillator by an organic one 8=6788
 Compton scatt., excitation of nuclear resonance fluoresc. 8=20666
 Compton, with 2 summing Ge(Li) detectors, 150-350 kV, reduction of tail 8=6789
 double crystal diffraction for high energy (n, γ) reactions 8=11442
 double-focusing magnetic pair spectrometer 8=6793
 gain and baseline discrepancy adjustment 8=11441
 high-resolution production by cooling 8=6811
 Hoogenboom method, apparatus with semicond. detector 8=16011
 low-level, NaI(Tl) crystal with quartz window, in 20 cm thick Fe room underground 8=6790
 Mössbauer, attenuation coeffs. of plastic and metal mounting materials 8=3579
 Mössbauer, constant velocity, automation technique 8=8210
 Mössbauer, MS10 8=693
 Mössbauer spectrometer 8=15722
 Mössbauer, time analyser for vel. precision meas. 8=20361
 neutron capture, excitation of nuclear resonance fluoresc. 8=20660
 n-capture, thermal, Ge(Li) 8=3576
 n radiative capture, anti-Compton 8=6785
 n radiative capture, high sensitivity 8=6783
 plastic scintillation, ASG-48, aerial, calibration 8=20364
 positron annihilation radiation meas. efficiency 8=17905
 semiconductor detectors and cooled pre-amplifier, X-ray range 8=698
 semiconductor, gain stabilization with digital system 8=11439
 semiconductor, noise, trapping and energy resolution 8=6791
 Ge(Li) annular detectors 8=6787
 Ge(Li), calibration, non-linearity of amplifier-analyzer system 8=11440
 Ge(Li) detector applications 8=15630
 Ge(Li) detectors, high resolution, fabrication and use 8=6782
 Ge(Li) detectors in parallel 8=6781
 Ge(Li), Compton, reduction of background by use of single crystal 8=697
 Ge(Li), determ. of full peak and 2-escape peak efficiencies 8=6784
 Ge(Li) photopeak analysis by computer programme 8=6792
 Ge, p-i-n, for nuclear decay 8=16010
 Ge(Li), 30 c.c., coaxial 8=6786

Gamma-ray spectrometers—contd

- Ge(Li), and NaI, 3-crystal high resolution 8=3844
 Ge(Li)-Na(Tl), high efficiency 8=20365
 H_2O , in the vicinity of nuclear power stations 8=4032
 Mn^{54} reference source, calibration 8=20750
 NaI scintillator, for geological logging 8=14528
 NaI(Tl) photopeak analysis by computer programme 8=6792
 NaI(Tl) 64-channel probe for 0.05-9.6 MeV 8=20363
 Zn^{65} reference source, calibration 8=20750

Gamma-rays

- See also Cosmic rays/photons.
 background, linear accelerator, reduction by beam shaping 8=15655
 beams, equipment for production 8=7118
 diffraction in crystal structure deter.ms. 8=17326
 field, near-surface atm., effect of rock and soil moisture 8=9795
 $\gamma + p \rightarrow \pi^+ + n$, in hydrogen 8=3626
 heating calculations, use of infinite medium spectra 8=7345
 image, conversion to visible image by solid scintillators 8=9587
 isotropic obs., rel. to cosmic blackbody theory 8=23485
 from n reactions on 14 elements, prompt γ rays and prod. processes, 14.7 MeV 8=7211
 in p bombarded spherical shell shield, dose rate 8=3568
 source, spent fuel elements, in irradi. plants 8=16163
 source up to 3.5 MeV for calibrating detectors 8=11428
 spectrum stabilizer, using 2 single channel analysers 8=20357
 from $\text{C}(n, n', \gamma)$ reaction, Monte Carlo calc. of unscatt. flux distrib. 8=7206
 Cs^{137} source in level control 8=1010
 Co^{60} cylindrical source, dose rates in radial direction at half-height of source, meas. 8=11434
 Co^{60} , source in level control 8=1010
 Co^{60} , specific constant 8=16029
 Cs^{137} , specific constant 8=16029
 Gd^{158} , Mössbauer effect meas. rel. to 79.5 keV transitions 8=3786
 I^{121} decay obs. 8=20752
 Pb^{211} radiation obs. 8=7149
 Po^{215} radiation obs. 8=7149
 Rn^{219} radiation obs. 8=7149
 Ru^{99} , M_1 - E_2 transition time-reversal invariance, Mössbauer obs. 8=7091

absorption

- See also Mössbauer effect.
 Mössbauer spectrometer mounting material criteria 8=3579
 Mössbauer spectroscopy, use of NGR in chemistry and solid state 8=692
 p photon-absorption sum rule applied to N, d, H^3 , He^3 8=3577
 steel, effect of tensile stresses 8=13483
 total mass absorpt. coeffs., by cryst. diffraction spectrometer 8=696
 Cu, effect of tensile stresses 8=13483
 Nd^{145} , recoilless nuclear resonance absorpt. rel. to energy level scheme 8=20724
 Zn-Al, spectrum distrib. compression effects 8=4999

angular distribution

- β - γ - γ correlation, CP violation in strong interactions 8=669
 e capture coeff. determ. 8=11798
 γ - γ correlation, effect of magnetic resonance 8=20761
 KX- γ directional correlations 8=20739
 nuclear structure studies with heavy ion bombard. 8=932
 particle range calc. for heavy ions 8=8756
 π -p charge exchange scattering at 96.6 MeV 8=6876
 rare-earth nuclei, $4^+ \rightarrow 2^+$ rotation 8=15938
 $\text{Cr}^{53}(\text{p}, \text{n})\text{Mn}^{53}$, 2, 3, 2, 4, 2.5 MeV 8=3926
 $\text{Cr}^{53}(\text{p}, \text{p}')\text{Cr}^{53}$ and $\text{Cr}^{53}(\text{p}, \text{n})\text{Mn}^{53}$, yields 8=7185
 Cs^{137} point source scattered by Al shields, determ. 8=16028
 $\text{Cu}^{93}(\text{p}, \text{n})\text{Zn}^{93}$, rel. to compound nucleus statistical model 8=1948
 $\text{Cu}^{65}(\alpha, \text{n})\text{Ga}^{68}$, rel. to compound nucleus statistical model 8=11948
 Eu^{154} , 1855-123 keV β - γ directional correl., energy depend. obs. 8=7142
 $\text{F}^{19}(\text{d}, \text{p}, \gamma)\text{F}^{20}$, 1.6 MeV rel. to reaction mechanism 8=16116
 Fe^{54} , after n scatt. branching ratios 8=3934
 Gd^{154} , rel. to M_1 - E_2 mixing, 693-123 keV transition obs. 8=15993
 Hg^{198} , $\gamma\gamma$ ang. correl. 8=11782
 Kr^{82} , $\gamma\gamma$ ang. correl. 8=11782
 $\text{Ni}^{60}(\alpha, \text{n})\text{Zn}^{63}$, rel. to compound nucleus statistical model 8=11948
 $\text{O}^{16}(\text{He}^3, \text{p})\text{F}^{18}$ for spin and parity of 1.131 MeV level of F^{18} 8=3800
 Pt^{192} , $\gamma\gamma$ ang. correl. 8=11782
 $\text{S}^{34}(\text{p}, \gamma)\text{CP}^5$, at 2079 keV, p, γ -correlation 8=1063
 Sm^{153} , β - γ ang. correl. obs. 8=16035
 Te^{122} , $\gamma\gamma$ ang. correl. 8=11782
 W^{182} , γ - γ angular correlation obs. 8=20728
 $\text{Zn}^{68}(\text{p}, \text{n})\text{Ga}^{68}$, rel. to compound nucleus statistical model 8=11948

Gamma-rays—contd**detection, measurement**

- See also Dosimetry; Gamma-ray spectrometers;
 Particle detectors; Radioactivity measurement.
 atmosphere, vertical intensity meas. 8=20639
 balloon-borne telescope, orientation system 8=19328
 calibration factors for low-energy γ -ray emitters 8=114
 calibration using Co^{60} source 8=11428
 camera, image intensifier system 8=15719
 contamination with natural radioactive materials 8=2035
 cosmic, high-energy meas. 8=19096
 crystal counter, correction for radial depend. in fast fission ratio meas. 8=20358
 Doppler-shift attenuation method for nuclear-lifetime meas. for low recoil vels. 8=7156
 dose from radioactive gas cloud, calc. 8=10448
 dose-rate, scattered 8=15718
 dosimeters calibration 8=11436
 dosimeter, personnel, with alarm 8=7346
 dosimetry with polyvinyl fluoride 8=6779
 energy determ. using digital computer programme 8=679
 energy determ. utilizing Q-value and transition consistency 8=3574
 film recording monitor using CsI(Tl) crystal 8=11444
 fission-product contamination of earth, spectra, aircraft meas. 8=9895
 4 π plastic scintillator detector with clinical applications 8=11304
 4 π gas counter, γ counting efficiency 8=605
 Geiger-Müller tube, efficiency rel. to incidence angle 8=6639
 geometric imaging props. of detectors 8=11437
 high energy, new Al spark chamber spectrometer 8=6685
 n- γ discriminating detector for n spectrometer 8=11627
 n- γ mixed, dose equiv. and quality factor, organic scintillator meas. 8=20561
 n- γ pulse-shape-discrimination in B loaded liq. scintillation detectors 8=20563
 nuclear lifetimes, coincidence technique for meas. 8=385
 photometer, single pulse reception, operational props. 8=3575
 polarization, linear, correls. of cascades 8=11433
 repetitive correction for finite resolving power of collimator in scintiscanning 8=20366
 scintillation dosimeter detector, energy depend. correction 8=15720
 shield for detectors 8=11438
 source activity by scintill. counter, corrections 8=3851
 spark chamber, magnetic core, suitable for satellites 8=6688
 spheroidal source, calc. of γ -dose on axis 8=3855
 thermonuclear explosion γ -glow 9 July 1962, riometer obs. validity 8=14636
 vacuum diode detector for high flux 8=15721
 C analysis in bulk materials, from n scatt. 8=18801
 CdTe, photopeak resolution 8=3578
 Co^{60} , appl. of Hoogenboom spectrometer 8=16011
 Co^{60} underwater source, flux density in air 8=1008
 CsI crystals, Na-activated, characteristics 8=6641
 Ge detector preamplifier, low noise, charge sensitive, for 8=6780
 Ge detectors for reactor meas. 8=1127
 Ge(Li) detectors, fabrication and appl. 8=15630
 Ge semiconductor detector, full registration efficiency 8=11429
 Ge(Li) coaxial detectors, current pulse generation 8=114
 Ge(Li) detectors and Compton effect 8=11435
 Ge(Li) detectors, cryostat systems 8=11443
 Ge(Li) detectors, high resolution, fabrication and use 8=6782
 Ge(Li), pulse height defects due to dead layer, correction 8=6777
 Kr-85 branching ratio 8=7133
 LiF, response to n- γ reactor fluxes 8=20899
 NaI-Tl, single cryst., with oxygen-containing impurities, response 8=18610
 Si(Li), cooled, linearity of charge conversion 8=6778
 $\text{Ta}^{181}(5/2^+ \rightarrow 7/2^+)$, circular polarization 8=991
 from $\text{Te}^{119\text{m}}$ decay, level structure of Sb^{119} obs. 8=7136

effects

- See also Nuclear reactions due to/photons.
 alkyl iodides, γ -irrad. at -196°C , ionic processes 8=1427
 N-allylmonomides of maleic and succinic acids, polymerization 8=23131
 anthracene, colour centres 8=17689
 dielectric liqs., energy to create ion pair 8=21723
 ethylene in solution, reactions in presence of O 8=14446
 frozen aq. solns., e.p.r. of trapped H atoms 8=18423
 fluorescent X-rays from γ -irradiated target, absolute yield meas. 8=23039
 glasses, aluminosilicate, thermoluminesc. spectrum 8=18
 glasses of $\text{Na}_2\text{O}-\text{TeO}_2$ system on e.p.r. spectrum at 77 and 295°K 8=9434
 graphite, energy spectra of electron calc. 8=20769
 n-hexane, elec. cond. obs. 8=21714
 n-hexane, theory of electrical conductivity 8=6628
 ice, solvated e spectrum obs. at 77°K 8=22989
 liquids, radiolysis at high press. 8=14444
 MOS diode on Si, Co^{60} γ -rays effect on surface state density and oxide charge density 8=22641

gamma-rays—contd
effects—contd

- noise pulses from photomultiplier tubes 8=3216
paraffin block (human body imitation) 8=615
phosphates, glassy and cryst., e. s. r. 8=22913
polymethylmethacrylate, trapped free radicals, e. s. r.
spectra obs. 8=4682
polypropylene, free radicals prod., e. s. r. obs. 8=7628
polytetrafluoroethylene, carbon-black filled 8=17700
scintillation in plastics 8=9656
water, e-photon cascade calc. 8=21722
TFE-HFP copolymers, dielectric props. 8=9202
Al, energy spectra of electron calc. 8=20769
Al₂O₃, with Cr/Mn impurity, thermal cond. meas. 8=1886
Au¹⁹⁸ impurity nucleus in metallic solid solutions,
isomeric shifts 8=1653
Ba silicate glasses, defects and absorpt. 8=13479
CaF₂:Mn dosimeters, temperature stability and
thermoluminescence during γ -irrad. 8=11314
GaAs, p-type, on elect. props. 8=18039
p-Ge, on microhardness 8=17810
HCl, gaseous, ion lifetimes 8=23164
K₂B₂O₄ glass, γ -irrad., induced absorption bands assoc.
with Tl⁺, Pb²⁺ or Bi³⁺ 8=5639
KCl, irradiated at room temp., defect production and
annihilation 8=8696
KNO₃, irrad. cryst., e. p. r. of NO₂ at 4°K 8=5537
LiF (TLD 100) dosimeters, temperature stability and
thermoluminescence during γ -irrad. 8=11314
Mo, polycrystalline, X-ray scattering 8=22253
Na acetate, trapping of CH₃CO₂[•] free radical 8=4242
NaBrO₃, prod. of paramag. centres 8=2372
NaCl, electron centres form. by Co⁶⁰- γ -irrad. 8=22235
NaPO₃, colour centres and thermoluminesc. 8=22234
P₂O₅, glassy and cryst., e. s. r. 8=22913
Se, hexagonal, effect on conductance, rel. to temp. and rad.
damage 8=18067
SeO₂(NH₄)₂, form. of paramag. centres 8=9305
Sn¹¹³ impurity nucleus in metallic solid solutions, isomeric
shifts 8=1653
SrCl₂, electron centres form. by Co⁶⁰- γ -irrad. 8=22235
TiCl₄, heptane solns., γ -radiolysis obs. 8=18747
TeO₂K₂, on e. s. r. spectrum 8=9444
TeO₂Na₂, on e. s. r. spectrum 8=9444
Zn, polycrystalline, X-ray scattering 8=22253
Zn-Al, spectrum distrib. compression effects 8=4999

internal conversion

- air-CO₂ interfaces, plane shock refraction and expansion wave generation 8=4482
- air-CH₄ interfaces, plane shock refraction and expansion wave generation 8=4482
- air in tube, forced vibrations of finite amplitude 8=16705
- analyser, magneto-mechanical 8=5758
- analysis, optical-acoustic, selectivity and sensitivity on gas pressure 8=23192
- analyzer, quadrupole mass filter, rod mounting, simplified 8=7357
- 9, 10-anthraquinone, sensitized emission spectrum in visible region 8=4177
- arc-heated, enthalpy meas. 8=19672
- atmosphere constituents, number density determ. using laser beams 8=14585
- axisymmetric non-uniformities, multi-beam interferometry 8=21498
- bubble, aut propulsion by rocket effect, applications 8=7894
- bubble, imploding, rel. to trailing liquid microjet 8=12658
- compressed, Kerr effect for h.v. meas. 8=6564
- critical, sound attenuation 8=12688
- cyclohexane, in soln., rel. to solubility and entropy 8=4536
- detonation wave, collapsed cylindrical 8=7907
- diatomic, e interference study of molecular parameters 8=4115
- diatomic, macroscopic distribution of binuclear distance, rotating Morse oscillators 8=7499
- dielectric permeability calc. for resonance atoms 8=1481
- dilute, molec. interactions, statistical calc. 8=4466
- discharges, low-freq. noise 8=21226
- diverging detonation wave, motion 8=4461
- dust laden, electronic component of transfer props., calc. 8=1472
- dynamics problems, integral characts. method 8=21460
- expansion of cloud into a vacuum 8=4447
- flow rate-measurement by modified continuous-ionization method 8=12659
- fuels, combustion in fluidized beds 8=23119
- fugacity of nonpolar and quantum gas mixtures 8=16939
- gas-liquid mass transfer, effect of moving interface, theory 8=16710
- gas-particle mixtures, sound propag. and acoustic combustion instability 8=16704
- gravitating mass, homogeneous, Jeans' instability criterion, effect of grains 8=2793
- grey gas, absorbing, between heated plates, source functions for heat transfer 8=21507
- heating, by lasers, dynamic processes 8=7928
- heat transfer, absorption related to temperature distribution 8=230
- heat transfer, effect of sound 8=12680
- high press systems at low temp., compact elec. lead 8=3147
- highly rarefied, effect of gas-surface interaction on sound propagation 8=21519
- ideal, multiply ionized, Raizer's method of calc. degree of ionization, applicability 8=21257
- inert, interact. potential rel. to parameters of solid at 0°K 8=1468
- intermolecular interactions, thermodynamics 8=3002
- intermolecular potential, bound double molecules formation 8=12357
- interstellar, C¹²/C¹³ ratio, a lower limit 8=5919
- ionic movement under influence of electric fields 8=7705
- ionized mixture, composition and thermodynamic props. 8=12422
- ionized, partially, l.f. oscillations described by operation of plasma continuity eqns. 8=12541
- macroparameters near leading edge of plate in hypersonic flow, asymptotic values 8=16672
- mass, inhomogeneous, convective instability, model 8=2794
- mass of large volumes, determ. by direct weighing 8=7890
- methane, molec. dynamics, study by slow n. scatt. 8=16374
- mixture, axial transport in d. c. discharge 8=1333
- mixtures, intensity of rotation lines, modification theory by density effect 8=16244

Gases—contd

- molecular, resonance phenomena in kinetics 8=21493
 - monatomic, sound propagation 8=1474
 - multicomponent mixtures, viscosity, additional matrix elements for third approx. 8=12700
 - non-equilibrium boundary layer problems, finite-difference soln. 8=18662
 - nongray, diatomic, i. r. radiative heat transfer, theory 8=16693
 - nonisothermal nongray, radiation heat transfer 8=21506
 - non-polar, aqueous solutions, freezing 8=1618
 - nonpolar, Clausius-Mossotti function, effect of molec. interaction 8=12693
 - organic mixtures in air, optical-acoustic effect using cm e.m. waves 8=21520
 - photodissociation, orientation of transition moment, photolysis mapping 8=1307
 - photoelectric control for rotary power meas. 8=15549
 - polar, collision freqs. of thermal electrons 8=4471
 - polar, rotational relax. 8=7909
 - polar, second virial coefficient contribution of bound double mols. 8=7914
 - polyatomic, gyro-thermal effect in mag. field 8=12672
 - polytropic changes for gas-solid system 8=4472
 - pressure gauge, sensitive differential, for corrosive gas 8=4448
 - pressure temp. coeff. meas. apparatus 8=7922
 - purification by cataphoresis 8=2536
 - quantum gas, slow neutron scatt. 8=16685
 - quantum ideal gases, effective potential 8=19456
 - radiating, nonisothermal, general band model 8=7520
 - radiative transfer, differential approximation, modfn. 8=222
 - radiative transfer, non-grey, plane-parallel geom., approx. methods 8=6117
 - reaction kinetics, use of e.s.r. to study 8=14351
 - reactions, transition state and Arrhenius parameters 8=4465
 - relativistic, in magnetic field, energy-momentum tensor evaluation 8=15362
 - relativistic, non-relativistic bulk motion, e. m. effects and suprathermal waves 8=5925
 - relativistic, perfect, distrib. function in external force field 8=4338
 - residual, in e tube manufacture, mass spectrometry 8=18
 - resistance to relative motion 8=16686
 - Rice-Allnatt assumption in low-density limit 8=1464
 - second harmonic generation in homogeneous mag. field 8=12123
 - slightly ionized, continuum theory of electrostatic probes 8=16545
 - slightly rarefied, with shock wave, corrections to Crook's soln. for density, temp. and vel. of gas 8=16667
 - sound absorption, rel. to free energy associated with critical density fluctuations 8=16703
 - sound amplification, radiation induced, possibility 8=21516
 - spin-lattice relax. 8=12697
 - spin-lattice relaxation 8=21176
 - specific heat meas., capillary flow calorimeter 8=7921
 - spectra, continuous 8=4060
 - spectral line broadening theory, phase effects 8=1154
 - surface energies and equilb. forms of anisotropic phases 8=4464
 - temperature, high nozzle thermocouple meas. 8=7927
 - temperature meas. by spectral line reversal, effect of continuous absorber 8=16695
 - thermodynamics, calc., correl. of corresponding states law 8=16697
 - transport coeffs. in critical region 8=4490
 - transport coeffs. from inelastic collisions 8=7939
 - turbulent, energy dissipation by suspended particles 8=7
 - uniform gas, frequency-integrated radiation due to weak lines 8=12690
 - vapour-cavity form. in pipes, column separation, for liquid transients 8=16757
 - vel. distrib. near solid wall in non-uniformly heated gas 8=21494
 - vibration in reactor, meas. with acoustic transducer 8=20885
 - vibrational relax. of diatomic mols. 8=1218
 - water vapour attenuation of millimeter wavelength radiation 8=12689
 - weakly ionized, propag. of longit. ion waves 8=4398
 - SF₆, self. induced transparency using 10.6 μ laser radiation 8=1478
- Gegenschein.** See Zodiacal light.
- Geiger counters.** See Counters/Geiger.
- Gelatin**
- No entries
- Gels**
- crystal growth, large, method 8=21934
 - diffusion 8=1540
 - isotropic, low-angle light scatt. 8=16911
 - rubber + benzene mixtures, tracer diffusion 8=21641
 - silica, adsorbed H₂O, proton relax. 8=12932
 - silica, PbS crystal growth near ambient temperatures 8=1743
 - silica, surface meas., adsorption method 8=21742
 - silicates, microprobe analysis standards prep. 8=14496

Cells—contd

- surface, energy states and dynamics of Sn atoms 8=16912
 thoria, crystallite size obs. 8=12960
 viscometer-gelation timer 8=16810
 Cu₂Cl₂ crystals, growth from Cl⁻ ions from HCl
 soln. 8=8406
 CuCl-HCl, growth of clear CuCl crystals 8=8405
 Si, factors influencing growth of CuCl 8=21944

Geochemistry. See Earth/composition.

Geochronology. See Earth/age; Radioactive dating.

Geodesy

See also Gravity.

- day length, annual and semi-annual vars. rel. to geophysical
 obs. 8=14510
 earth's pole movements, free and forced amplitude, long
 period var. 8=9770
 equatorial curve from equilibrium position of synchronous
 satellite 8=2756
 gravitational pulsation, geological evidence for 8=2554
 gravity gradiometer computer model for simulated
 gradient contour mapping 8=5771
 oscills., spheroidal and torsional, Q values from decay of
 seismogram spectral amplitude 8=23205
 tidal forces of sun and moon, long period vars. 8=19241
 U.S. Navy Doppler system and accuracy 8=5766

Geoelectricity. See Earth/electricity.

Geomagnetism. See Earth/magnetic field.

Geometrical optics. See Optics/geometrical.

Geometry

- electromagnetic field, energy-impulse tensor
 treatment 8=3172
 Gauss hypergeometric function, unit circle, univalent
 conformal mapping 8=14926
 irrational surfaces of zero orders 8=14927
 of magnetrons, calculation of e. m. f. 8=15333
 perimetric coordinates 8=4045
 superficial discrete set of points in Euclidean
 space 8=6012

Geons. See Gravitation.

Geophysical prospecting

- aerial radiometry, directional detectors 8=18829
 California north coast ranges, upper mesozoic
 graywackes 8=2565
 e. m. prospecting for ore deposits, rel. to e. m. diffraction
 by conducting strip 8=23214
 e. m. wave diffraction by conducting half-plane, in
 layered medium 8=6385
 gravimetry in correctly posed problems, soln. by
 convolution-type integral eqns. 8=23199
 groundwater flow, radioactive tracer obs. 8=2568
 magnetometry, in correctly posed problems, soln. by
 convolution-type integral eqns. 8=23199
 metalliferous deposits, induced polarization field
 expts. 8=2561
 ores, variable density, selective γ -ray logging 8=18819
 rotatable field em prospecting system, anal. and model
 studies 8=14540
 by u. s. wave absorpt. in rocks, lab study by
 bending vib. method 8=22095
 NaI crystal scintillation gamma spectrometer in search
 for U deposits 8=14528

Geophysics

See also Atmosphere; Earth; Oceanography;
 Seismology.

- acoustical phenomena resulting from artificial sources,
 instrumental role in obs. 8=9804
 alluvium nuclear detonation, cavity press. and temp.,
 time history afterwards 8=14527
 Brazilian glauconites, K-Ar age meas. 8=18830
 colour indices of some earth surfaces 8=2816
 conference, Dallas 1967 8=14280
 continental drift and polar wandering, deductions from
 paleomag. Sierra Nevada obs. 8=14701
 core and mantle motions and variations of main geo-
 magnetic field 8=14554
 core, surface fluid motions from mag. obs. of 1885, 1912,
 1933 and 1960 8=5813
 cosmic ice residuum and astrobleme 8=2562
 earth's core, surface fluid motion rel. to secular mag.
 field changes 8=2724
 elastic half-space in mag. field, disturbances 8=10703
 elastic wave propagation rel. to identification of one-
 dimensional mechanics 8=10702
 electromagnetic induction in conductor bounded by inclined
 surface 8=18802
 fault propag. model, rel. to prod. of seismic shock 8=14536
 γ methods, classification system 8=23224
 geomagnetic dipole axis, vib. round geographic N pole
 in historic time 8=5812
 gravimetry, in correctly posed problems, soln. by
 convolution-type integral eqns. 8=23199
 Greenland ice cap, dielectric constant rel. to ice
 density 8=14565
 high pressure gas, sphere, expansion in porous
 medium 8=1439
 Hugoniot eqns. of state for 12 rocks from shock wave data,
 rel. to those derived from geophys. obs. 8=14558
 interior density, pressure and rigidity distrib. 8=18826

Geophysics—contd

- isostatic equilb. of crust, and viscosity of
 asthenosphere 8=14556
 isostatic equilb. disturbances, rel. to tectonics and
 internal processes 8=14555
 large-scale mantle convection rel. to thermal requirements
 for crustal processes 8=14521
 liquid flow, through porous media and packed
 beds 8=12739
 magnetometry, in correctly posed problems, soln. by
 convolution-type integral eqns. 8=23199
 magnetometry and gravimetry, soln. of convolution
 integral eqns. 8=23200
 magneto telluric two- and three-layer master
 curves 8=18827
 mantle convection and continental drift hypotheses,
 criticism 8=14518
 mantle, flow inferred from continental drift and low
 harmonics of geopot. 8=14551
 mantle, upper, low velocity zone temp. and density
 distributions, thermodynamic approach 8=14553
 mantle, upper, preferred mineral orientation by recrystal-
 under stress 8=14552
 mantle, viscosity and finite strength of transient water and
 ice loads 8=14548
 mantle, viscosity variation with depth 8=14549
 microtektites in deep-sea sediments, obs. 8=14568
 pyroclastic rocks, New Hampshire obs. 8=23228
 ridge, mid-Atlantic 22-23°N, and tectonic rises 8=23219
 rigidity of Earth, estimation from tidal studies 8=14546
 rocks, displacement field in horiz. layer of elastic and
 granular material 8=2567
 rotation period radio interferometric meas.,
 implications 8=18804
 Sahara basins, evolution of water isotopic comp. during
 evaporation 8=18832
 sand, "singing" phenomenon 8=23232
 scattering of telluric currents and signal extraction 8=14564
 soil pressure cell, effect of diaphragm flexibility on
 calibration 8=9803
 soil stratification, allowance for in compiling elect.
 cond. maps U.S.S.R. 8=23229
 statistical reduction of acoustic and mag. data 8=6092
 stress state in crust rel. to energy of tectonic processes
 ass. with upper mantle 8=14516
 tectonic processes, effect of gravity, model expts. 8=14512
 tektites, association with geomagnetic reversal 8=14567
 terrestrial heat flow distrib., consistent with mantle
 convection 8=14522
 thermal convection theory for mantle, problem of non-
 linearity of eqns. 8=14520
 tidal flow and mass transport in Humber estuary 8=5785
 tide damping, isostasy and mantle convection, rel. to
 creep 8=14559
 turbulence and boundary layers with geophysical appl.,
 conference, Kyoto, Japan 1966 8=7850
 viscosity of upper and lower mantle, from creep and solid
 state theory 8=14550
 viscosity of upper mantle, and postglacial uplift of
 Scandinavia 8=14547
 volcanic ashes, nonhomogeneous, from turbulent
 diffusion, distribution 8=23216
 Zuni Lineament, evidence from Pb isotope meas.,
 depth sounding and seismic data 8=5781
 Au, exogenous, different categories from Ag distrib.
 mode 8=14562
 NaAlSi₃O₈, isomorph of high pressure NaAlGeO₄, rel. to
 formation in earth's mantle 8=1678
 Pb isotopes, abundance ratios, interpretation, generalized
 model 8=16236
- Germanium**
- See also Semiconducting devices; Semiconducting
 materials/germanium.
 absorption edge, imperfections effect 8=5603
 absorption K-edge, proximity of X-ray interference 8=14218
 addition to 50 Ni Permalloy, isotropic and anisotropic,
 effect on mag. props. 8=22815
 atom displacement in collision cascade calcs. 8=8754
 atoms, electron-impact ionization cross-sections 8=12428
 atomic scattering factor, Pendellösung meas. 8=22025
 Auger recombination, indirect band-to-band 8=14221
 band structure calc. using LCAO approximation 8=8906
 coating effect on Sn and Ti films superconducting
 transition temp. 8=5214
 crystal window in double spectrometer, X-ray diffr.
 profile exam. with monochromatic radiation 8=22004
 cubic crystals, thermal expansion coeff., temp.
 depend. 8=8646
 diodes, high freq. noise and double injection, obs. 8=13854
 dislocation arrangements in foils after crystal-
 lization 8=1975
 dislocation investigation by Borrmann's method: appl. of
 asymmetric exposures 8=17655
 etching in HNO₃-HF-CH₃COOH 8=4791
 etching, vac. thermal 8=17217
 film, complex index and optical thickness from meas. of
 reflecting powers at oblique incidence 8=18530
 films, epitaxial growth in open iodide process 8=17131
 films, epitaxial, prep. by pyrolysis of hydrides 8=17130

Germanium—contd

- films, growth, from liq. films, structure obs. 8=1741
 films, recryst. by electron beam zone melting 8=17235
 films, thin, piezoelectricity, above fundamental energy gap 8=22986
 generation-recombination noise, 100°–350°K 8=22593
 group V diffusion, hot implantation behaviour, comp. with group III diffusion 8=22160
 group V diffusion, hot implantation behaviour, comp. with group III diffusion in Si 8=22160
 internal friction phenomena, screw and edge dislocation damping 8=22370
 irradiation, low-energy, by He⁺ and Xe⁺ 8=8772
 lattice energy rel. to elastic deform., electron distrib., internal strain 8=13576
 lattice theory of third order elastic consts. 8=13261
 liquid, interaction between O₂ and B in Ge 8=23104
 optical energy gap, pressure coeff. meas. 8=14220
 Pendellösung meas. 8=13262
 phonons stimulated emission by supersonic electrons, n-type, 4.2°K 8=5257
 photodiodes, shot-noise meas. at high freqs. 8=22706
 photoelastic constants, bond stretching and bending model 8=8830
 photoelectromagnetic receivers with optically polished thin elements, sensitivity and inertness 8=6275
 plasticity at room temp., obs. 8=22372
 positron annihilation meas. cf Se 8=5150
 p-type, bombardment-produced defects at low temps. 8=22170
 refining effect in vacuum melting of Fe-Ni alloy, rel. to mag. props. 8=22815
 reflection coeff. of I vapour from crystal surface etching vel. 8=8382
 reflectivity, low freq., in mag. field 8=22988
 refractive index in far i.r. 8=14219
 resistance thermometers, below 1°K 8=19665
 semiconductor detector, full registration efficiency for γ -rays 8=11429
 substrate with layer CdS elastic surface wave behaviour 8=8850
 surface contamination, detection and identification 8=1688
 surface stress in polished and clean (111) surfaces 8=8849
 thermal conductivity, lattice component, effect of impurities 8=1888
 thermal expansion from 2–40°K 8=4937
 thermoreflectance spectra in region of a critical point, calc. and obs. 8=14217
 undercooling 8=4649
 X-ray K-absorption spectrum 8=2423
 X-ray transmission, multiple Bormann effect 8=14222
 As in Ge, solid solution, supersaturated, decomposition mechanism 8=17005
 As and Sb impurities, excitation spectra, under uniaxial compression 8=13424
 Ge⁷³, Larmor freq. rel. to H² and K⁴¹ 8=5558
 Ge + MoO₃ in powder form., reaction mechanism 8=14365
¹H⁺, ²D⁺, ³He⁺ ions, channelling props., diffr. calc. 8=13485
 Li-doped, impurity vibrational modes rel. to i.r. absorpt. 8=9532
 P-doped, impurity vibrational modes rel. to i.r. absorpt. 8=9532

Germanium compounds

- fluoro- and hydroxyfluoro-compounds and thermal polymerization products, i.r. vibr. freqs. of Ge-O-Ge bond 8=4170
 GeD₄, vibr.-rot. spectrum 8=12187
 GeH₄ radical, struct. and Ge⁷³ coupling 8=12346
 GeH₃NCO, i.r. spectra and struct. 8=21074
 Ge:In, detector for pulsed far infrared laser radiation 8=9262
 Ge-O system, sticking coeff., orientation dependence 8=22154
 GeS_{1-x}, effect of defects on lattice thermal conductivity 8=1892
 GeS, gaseous, dissociation energies 8=7616
 GeSe_{0.75}Te_{0.25}, prep. and props. 8=2197
 Ge-Si alloys, heterojunctions, electron microprobe analysis 8=2216
 Ge-Si alloyed heterojunctions, elec. props. at interface region 8=2217
 GeSi alloy, meas. of reflectivity 8=2422
 Ge-Si alloys, ultrasonic attenuation 8=1853
 GeTe-SnTe alloys, $\alpha \rightarrow \beta$ transition, at high press. 8=17084

Getters. See Adsorption; Electron tubes; Vacuum technique.

Giant pulsations. See Earth/magnetic field; Magnetic storms.

Gibbs functions. See Thermodynamic properties.

Ginzburg-Landau theory. See Superconductivity.

Glaciers

- Kesselwandferner, Pb²¹⁰ and Sr⁹⁰ meas. on firn and ice samples 8=18831

Glass

- See also Optical materials; Vitreous state.
 advanced optical techniques, book 8=15489
 alkali aluminosilicate, ion-exchanged, effect of stress on durability 8=13525
 alkali borate, binary, u.v. absorpt. of Cr(VI) 8=18519
 alkali borate glasses, co-ord. equilibria of Ni(II) 8=21836

Glass—contd

- alkali silicate glasses, X-irrad., trapped hole centres 8=1998
 alkali silicate, validity of Nernst-Einstein eqn. 8=8354
 aluminate i.r., optical, mech. and thermal props. 8=22954
 aluminophosphate glasses, radiocolouration and luminescence kinetics 8=1996
 aluminosilicate, gamma-irradiated, thermoluminescence spectrum 8=18614
 blocks, fracture produced by impact 8=2055
 borate glasses, e.p.r. of Mn²⁺, 293–4°K 8=18408
 boric acid, dissolved aromatics direct and sensitized photo-oxidation 8=23160
 borosilicate, neutron transmission determ. of B content 8=23196
 BSC, annealing, effects of relax. times 8=4770
 breakdown and fracture, laser-induced 8=8851
 ceramic, from SiO₂-Li₂O-ZnO system, plastic deformation 8=17829
 chalcogenide, electrical properties 8=18028
 chalcogenide elements based, elec. cond. 8=22522
 chalcogenide, Hall mobilities 8=18027
 chalcogenide, Hall effect meas. method 8=13789
 chemical bonds, nature, det. by spectral char. of Mn 8=811
 contact with metal electrodes in vacuum, generation and dissipation of static charge 8=18159
 containing In, superconductor, flux jumping during magnetization 8=2163
 crack-branching, vel. meas. and stress effects 8=8815
 crack propagation and bifurcation vel. 8=22296
 crystal growth, contamination-nucleated, at bubble surfaces 8=21937
 CW laser at room temperature 8=19998
 damage and spectral emission during illum. by ruby laser light 8=14246
 degassing by 100–1000 eV bombardment 8=13945
 dielectric props. and losses, meas. at 40 Gc/s 8=22649
 diffusion processes in surface layer, rel. to distrib. of alkali ions 8=22146
 disks for X-ray fluoresc. anal., casting technique 8=2551
 electrification by friction with metals in a 3 × 10⁻⁷ torr vacuum 8=13872
 electron bombardment luminescence, viewing by optical microscopy 8=14296
 ethanol, naphthalene-d₈ biphotonic T→T transitions, obs. 8=23161
 fibres, drawing apparatus and tensile strength 8=5073
 fibres, length rel. to strength 8=1666
 fibre, passive core, Nd-doped cladding, laser action by total internal refl. 8=11073
 flint, refraction, mean reference indices calc. 8=20044
 fracture, conference, Boston, USA (1966) 8=13518
 gallate i.r., props. 8=22954
 Hertzian stress cracks 8=13540
 ion-bombardment-induced emission of gas 8=17173
 irrad. effect suppressed by high pressure synthesis 8=499
 irradiation resistance, h.p. H₂ synthesis 8=8353
 mass spectrometer, miniature, charact. spectra 8=16176
 metaphosphate, trapped Ag radicals 8=4990
 methyl-pentane, naphthalene-d₈ biphotonic T→T transitions, obs. 8=23161
 microporous, shrinkage and deformation under load at high temp. 8=17021
 molten, diffusion of Ne bubbles 8=4554
 oxides, four new, rapid quenching techniques 8=5087
 phosphate glass: Ag, radiophotoluminescent centres 8=14331
 phosphate, layers on SiO₂ films prevent Na contamination 8=18069
 phosphate, luminescence, with Mn as activator 8=2483
 photochromic, information storage capacity meas. by holography 8=6570
 photoluminescence, effect of heat treatment 8=2482
 plates, precise interferometry for thickness and refractive index variation 8=14223
 porous, adsorption of water vapour, increase in surface conductivity 8=4766
 porous, strength rel. to micromechanical stress concentrations 8=13577
 Pyrex, thermal props. 0.4–4°K in 0–90 kG fields 8=1752
 reflection light at large incidence, indicatrices with two maxima 8=5631
 resistance thermometers, self-heating 8=6219
 ring cracking by spherical indenters 8=17747
 selenide i.r., props. 8=22954
 semiconducting oxide and non-oxide, cond. mechanisms and struct. 8=22580
 silica, dielec. loss at low temp., OH⁻ conc. and irradiation effects 8=18172
 silica, thermal conductivity, measurement method 8=13396
 silicate, containing fluorides, nucleation and cryst. growth 8=8357
 silicate glasses, e.p.r. of Mn²⁺, 293–4°K 8=18408
 silicate, rare earth doped, Faraday rotation, freq. depend. 8=18531
 silicate, 6% Nd, multimode generation 8=2487
 silicate, on Si-steel, rel. to mag. props., obs. 8=22843
 soda, laser prod. photocond. rel. to dielec. breakdown 8=18239

Glass—contd

- soda-lime, with adsorped water, spreading of org. liquids 8=1520
solid-lime silicate, quantum efficiency of Nd^{3+} absorpt. and excitation spectra 8=5667
spheres, adhesion in water or mineral oil 7=8150
 β spodumene-silica in $\text{Li}_2\text{O}-\text{Al}_2\text{O}_3-\text{TiO}_2-\text{SiO}_2$ glass ceramic 8=1661
substrate, self-heated, for vacuum deposition of thin films 8=4736
superconductor-glass vacuum seals 8=21551
surface cleaning meas. by evolution of H with Na-ammonial solns. 8=21868
tempered, fracture, rel. to elastic strain energy and rate of crack extension 8=22373
thermal neutrons, effects 8=8771
thermostable org. glasses cont. P 8=13110
thin, transmission electron microscopy 8=21995-6
transition metal oxide, elec. cond. 8=22522
uran, fluorescence, quantum yield in anti-Stokes region 8=18640
vanadate, electronic conduction rel. to crystallinity 8=18091
Verdet constant, spectral dependence 8=2424
viscosity-temp. data in range 10^{12} to 10^{14} poises, approx. by fibre elongation 8=17725
Vycor, porous, film area hysteresis 8=13050
X-ray total reflection of films 8=5604
 Al_2O_3 -glass composite, effects of hot-pressing on chemical reaction 8=18671
As-S, origin of 800 cm^{-1} absorpt. 8=5584
As-S systems, dielectric properties 8=9193
 AsSe_3 , refractive index 8=14198
As-Se, thermal expansion 8=13382
 B_2O_3 glass, permanent densification by hydrostatic press. 8=22314
 B_2O_3 -PbO- Al_2O_3 spinodal decomposition structures, obs. 8=17268
Ba silicates, γ -ray effects 8=13479
Ba silicates, internal friction due to condensation 8=13537
 Ce^{3+} paramagnetic resonance in glassy phase 8=9436
Cs silicate, n.m.r. absorption, ionic conduction 8=9197
Fe dispersions in matrix, superparamagnetism 8=14013
Ga, e.s.r. study 8=18420
 He^4 superleak construction 8=15149
 $\text{K}_2\text{B}_2\text{O}_7$, γ -irrad., induced absorption bands assoc. with Ti^{4+} , Pb^{2+} or Bi^{3+} 8=5639
Li-silicate glass, second phase particle growth, diffusion controlled 8=21847
 $\text{Li}_2\text{O}-\text{B}_2\text{O}_3$ systems, fraction of four-co-ord. B atoms present 8=21915
 $\text{Li}_2\text{O}-\text{SiO}_2$ system, crystallization of Li disilicate 8=21953
 Mn^{2+} e.p.r. 8=5536
 $\text{MoO}_3-\text{P}_2\text{O}_5$, X-ray study of good formation 8=8356
Na aluminosilicate, Na self-diffusion rel. to elec. cond. 8=22158
Na borate, ht. of soln., density and refractive index changes under high pressure 8=1715
 $\text{Na}_2\text{B}_4\text{O}_7$, Eu activated, luminescence 8=23061
Na-Ca aluminosilicate, Na self-diffusion rel. to elec. cond. 8=22158
 $\text{Na}_2\text{O}-\text{B}_2\text{O}_3$ systems, fraction of four-co-ord. B atoms present 8=21915
 $\text{Na}_2\text{O}-\text{BaO}-\text{SiO}_2$ system, internal friction 8=22383
 $\text{Na}_2\text{O}-\text{GeO}_2-\text{B}_2\text{O}_3$ system, and melts, structure 8=21605
in $\text{Na}_2\text{O}-\text{TeO}_2$ system, γ -irradiation effect on e.p.r. spectrum at 77 and 295°K 8=9434
Nd doped laser, travelling-wave, features 8=3333
Nd-doped, stimulated emission cross-section, from free-running laser oscillator output 8=19979
Nd:glass laser, mode-locked, Eastman 9740 bleachable dye transmission obs. 8=11110
Nd glass, measurement cross-section stimulated emission 8=449
with Nd^{3+} ions, influence of composition on luminesc. characts. 8=18592
Nd laser, picosecond pulses, spontaneous appearance 8=439
Nd silicate glass laser, stimulated emission cross section, from fluorescence changes 8=14292
 Nd^{3+} doped, influence on Q-spoiled laser dynamics 8=11017
 Nd^{3+} laser glass, self-Q-switching by saturable absorpt. of colour centres 8=11107
 Nd^{3+} paramagnetic resonance in glassy phase 8=9436
 $\text{Nd}^{3+}-\text{Yb}^{3+}$ glass, laser emission at $1.06\text{ }\mu$ 8=11109
 $\text{Nd}^{3+}-\text{Yb}^{3+}$ laser glass, self-Q-switching by saturable absorpt. of colour centres 8=11107
with Pb oxide, volatilization of volatile constituent from melts 8=21775
 $\text{PbO}-\text{Al}_2\text{O}_3-\text{B}_2\text{O}_3-\text{SiO}_2$ system glasses, elec. props. temp. and comp. dependence 8=18170
 $\text{PbO}-\text{BaO}_3$ systems, fraction of four-co-ord. B atoms present 8=21915
 TiO_2 , enamel, opacification kinetics, X-ray diffr. meas. 8=17221
Ti silicate, n.m.r. absorption, ionic conduction 8=9197
Zn tellurite, formation, refractive index, optical transmission range 8=5644

Glass—metal seals

- alumina ceramics-Mb seals, bonding mechanism obs. 8=16743

Glass—metal seals—contd

- gold wire for ultrahigh vacuum, config. of unpolarized rotatable u.h.v. flanges with Au wire gasket 8=21549
high-vacuum h.v. apparatus 8=1498
quartz-metal sealed window, bakeable 8=16741-2
silicone resin sealant for i.r. vacuum windows 8=16739
Al film, vacuum deposition technique 8=17123
- Glow discharges.** See Discharges, electric/glows.
- Goks.** See Hypernuclei.
- Gold**
- cold-worked, recrystallization during α -irrad. 8=21943
collapsed tetrahedra and stacking fault energy 8=22216
colloidal in water, extinction light curves 8=4579
contacts, to n-Si surface, props. 8=18070
crystals, well-annealed, stress at which dislocations multiply 8=13545
diffused in Si, precipitates formation 8=17620
diffusion in Cu, detect. by deuteron elastic scatt. 8=8675
diffusion in SiO_2 8=13896
diffusion in Ti, obs. by radiotracer technique 8=22163
electrodeposits struct. and porosity rel. to Cu substrate surface prep. and undercoats, obs. 8=21981
electron back-scattering from Be-Au 2-layer target 8=3203
electroplating inside metal containers 8=14428
energy loss of fission fragments, range-energy relation 8=2021
energy loss by low-energy protons 8=13478
exogenous, study of categories from Ag mode of distrib. 8=14562
films, critical angles for channeling of H^+ , D^+ and He^+ ions 8=17704
film, electrical conductivity, island structure, on quartz glass and BaTiO_3 substrates 8=13709
film formation on NaCl, deposition rate and residual gas effects 8=1693
film, growth effected by ultrasonic vibrations, of substrate 8=4827
film growth on NaCl, high vacuum 8=21878
films, growth on NaCl, high vacuum, model 8=21879
films, light scattering, thickness and wavelength dependence between 2000–7000 Å 8=14199
films, meas. of secondary electron emission from exit side 8=2285
films, morphological changes following deposition 8=4743
films on MoS_2 , epitaxial growth under u.h. vacuum and defect structure 8=17125
films, recrystallization obs. in electron microscope 8=8314
film, reflectance and transmittance, anomalous skin and size effects 8=9498
films, thin, ohmic and thermoelectric props., –100 to $+100^\circ\text{C}$ in ultrahigh vacuum 8=22513
fluorescence corrections to X-ray absorption in a sphere 8=23037
foil, electron diffraction intensities, temp. dependence 8=8509
foil, n flux determ. by β , γ activity meas. 8=11620
foils, optical absorpt., and structure and surface characts. 8=18502
grain boundary diffusion in Cu 8=17568
heat capacity, temp. dependence, effect of crystal lattice defects 8=13368
heavy ion penetration along low index channels, effect of atomic thermal motion 8=2024
hemispherical reflectance, rel. to λ and surface roughness 8=2399
laser induced non-linear photoelectric effect in metals 8=22721
lattice fringes, electron microscope resolution 8=1783
in liquid Pb, thermodynamic props. 8=8043
microcrystals, uniform, obtained from hydrosols 8=1745
microdeformation measuring technique 8=22273
nucleation density on cleavage surface of NaCl 8=4742
nuclei on MoS_2 substrate, elastic strain nucleus size and misalignment orientation 8=8823
optical absorption band edge in film 8=5585
penetration distrib. of $^{133}\text{Xe}^+$ ions, effect of Au temp. 8=2023
photoelectric effect, non-linear, laser induced 8=2258
plastic stress relaxation rel. to stacking fault energy 8=13529
quenched and aged, structure 8=22185
quenched, slip channel formation and other defect behaviour on plastic deform. 8=17663
quenched, stacking fault tetrahedra as vacancy sinks 8=13443
quenching experiments 8=8824
radioactive colloids, Ag coated for radiotherapy 8=14893
shear strength in grossly deformed sample at high temps. 8=8833
single crystals, D^+ blocking 8=22241
single crystals, D^+ channeling model 8=22243
single crystals, D^+ transmission 8=22242
single crystal film, effects of ion bombardment on texture and structure 8=17124
small particles, conduction electron spin reson. 8=14093
sols, radioactive conc. determ. from spectrophotometric data 8=16910

Gold—contd

- sputtered films, due to negative O ions in O discharges 8=21877
- target for ion emission, bombard by Ar⁺ 8=6626
- thermal desorption of inert gas ions 8=9280
- thermal desorption of inert gases 8=17701
- thermoelectric power and elec. resist., high press. effects 8=13902
- thick films, optical constants, least squares method 8=2403
- thin films, Hall effect 8=2133
- twins formation during diffusion between films of Au and Pd 8=13127
- ultrasonic attenuation rel. to Fermi surface deformation 8=1851
- vacancy annealing, three different experiments 8=13421
- vacancy diffusion rate calc., Debye model 8=22172
- vacancy and divacancy behaviour from elec. resistance meas. on quenching and annealing 8=1945
- vapour press., from Knudsen effusion 8=12999
- wire seals for ultrahigh vacuum 8=21549
- X-ray microanalysis e backscatt. correction, obs. 8=14469
- X-ray prod. and e backscatt. rel. to microanalysis, obs. and calc. 8=18794
- X-ray total reflection of films 8=5604
- Au III, transition strengths between 5d⁶6s and 5d⁶6p configurations 8=4071
- Au¹⁹⁷, n. m. r., Knight shifts 8=2379
- Au¹⁹⁷, 10–80 MeV He⁺ ions, recoil range 8=13489
- Au¹⁹⁹ ion exchange removal from n irradi. Pt 8=23168
- Au–Ni spinodal, re-calc. 8=13245
- Au/Ni–Cr, contacts and conductive paths 8=8993
- Be–Au two-layer target, electron energy losses 8=22496
- inBiTe, electrotransport, 150 and 250 A/cm², ≤ 400°C 8=17564
- in Fe, magnetization saturation at 20°K 8=2324
- O¹⁶ ion beam energy loss 8=13477
- PbTe–Au pseudobinary section 8=17098
- S³² ion beam energy loss 8=13477
- Si–collodion–Au contacts, photocapacitive effects 8=22673

Gold compounds

- Au–Ag alloys, Ag¹⁰⁹ n. m. r., Knight shifts 8=2379
- AuAg alloy optical const., deform., recryst. and ordering effects, 276–1200 nm 8=22958
- Au–Ag–Cu natural alloys, e probe microanalysis obs. 8=14477
- AuAl₂, Fermi surface topology 8=5116
- Au–Ba alloys, work function 8=18245
- Au–C alloys, growth of spheroidal graphite crystals 8=13156
- Au₃Cd alloy, long-period ordered, X-ray diffraction study 8=13250
- Au–Cd alloys, quenched and aged, structure 8=22185
- Au–Cd binary system, point defect segregation at melting rel. to comp. 8=17624
- Au–Cd phase transformations, thermodyn. investigation 8=8263
- AuCu alloy optical const., deform., recryst. and ordering effects, 276–1200 nm 8=22958
- AuCu₂ alloy optical const., deform., recryst. and ordering effects, 276–1200 nm 8=22958
- Au₃Cu, shear modulus change during ordering 8=17769
- Au–Cu–Zn ternary alloys, phase relation and kinetics of transformations 8=13063
- Au–Fe solid soln., magnetic ordering rel. to electric hyperfine interactions 8=2289
- AuGa mol., emission in Ar atm. at 2100°C 8=16265
- Au–Hg alloys, liq., abs. thermoelec. power 8=12913
- Au₇₇Mg₂₃ phase, crystal structure 8=13251
- Au–Mg system, some phase structures 8=17043
- Au₂(Mn, Al)₂ alloys, coexistence of ferro. and antiferro. structures 8=9389
- β–AuMn, change to f. c. c. structure on cold working 8=17042
- AuMn, magnetic structure 8=22872
- Au₂Mn, magnetisation process up to 50 kOe at 4.2°K and up to 70°K at 80°K 8=9281
- AuMn, spin-disorder resist., anisotropic 8=14064
- Au–Mn–Al alloys, ferromag. order dependence on comp., n-diff. study 8=18387
- Au–Ni alloys, modulated structure formation, conc. and temp. dependence 8=17044
- AuPd alloy, localized states from permittivity obs. 8=13656
- Au–Pt alloys, annealed, defects rel. to X-ray diff. "tails" 8=17341
- Au–Pt system, X-ray meas. of chem. diffusion coeff. 8=1913
- Au–Si alloy, specific heat and enthalpy near eutectic composition 8=1548
- Au–Sn alloy, atom pair distrib., partial interference functions 8=4531
- AuTe₂, liq, Hall coeff. rel. to possible semicond. nature 8=12917
- Au–V alloys, dilute, mag. susceptibilities rel. to mag. moment quenching 8=2288
- Au–V alloys, thermoelectric power, resistivity near Kondo temp. 8=8992
- Au–V alloys, s-d interaction from elec. resistivity and mag. susceptibility meas. 8=13657
- Au₄V, sp. ht. meas. 1.5–60°K 8=4930

Gold compounds—contd

- Au–Zn alloys, long-period ordered, X-ray diffraction study 8=13250
- Au–Zn alloys, quenched and aged, structure 8=22185
- Au–Zn system, β' thermal stability 8=17037
- β'–AuZn, reflectance and other optical props. 8=2402
- Grain boundaries.** See Crystal imperfections; Crystal structure, microstructure.
- Gramophones.** See Sound reproduction.
- Granato–Lücke theory.** See Crystal imperfections/dislocations.
- Granular structure**
 - brass, grain size, dependence of hardness 8=8835
 - films, thin discontinuous, grain size distribution, conservative systems 8=13084
 - films, thin, grain size distrib., non-conservative systems 8=13085
 - grain boundary segregation, autoradiography 8=8738
 - grain boundary sliding, contribution to creep strain of polycrystal 8=8802
 - grain density, measuring methods, resolution limit 8=825
 - grain size distrib. by e microprobe 8=17260
 - heat transfer to contact plates, calc. 8=19629
 - impact cratering in granular materials 8=8253
 - layer of elastic and granular material, horizontal displacement 8=2567
 - moisture effect on tensile strength 8=22285
 - moving boundaries, solute profiles 8=8468
 - orientation depend. of grain size, X-ray meas. 8=4832
 - particle sizes and strains, determ. from three different diffraction parameters 8=22257
 - plasticity theory 8=8798
 - size distrib. in 1 μm range, by X-ray diff. 8=13151
 - statics of granular materials, theory 8=21829
 - steel, austenite grain size, high temp. microscope obs. 8=13157
 - steel, growth of secondary grains during annealing 8=172
 - steels, intergranular fracture 8=22222
 - tensile strength equation 8=22288
- Ag–base, solid solutions, impurity atoms in grain-boundary transition zones 8=17277
- Ag–5.64 wt. %Al alloys, grain boundary precipitation 8=17038
- Al, during extrusion recovery and recrystallization 8=48
- Al, sub-boundaries in single crystals grown from melt, direct observation 8=17678
- AlZn–Mg cast alloys, boundaries rel. to stress corrosion cracking 8=22312
- Be sheet rolled from ingots, grain boundary precipitation 8=17046
- BeO, grain growth during sintering, effects of SiC and MgO 8=22315
- C grains, production in discharge, light scatt. and interstellar matter 8=4296
- Fe, glass-doped, and orientation after annealing, model for doped W 8=17025
- Fe grains, production in discharge, light scatt. and interstellar matter 8=4296
- LiF, single crystals, X-ray studies on sub-grain boundaries by limited projection topography 8=13446
- MgO grain shape change during creep 8=13584
- MgO segregation of impurities to grain boundary 8=1345
- Pb, ball indentation tests 8=13602
- UO₂ swaged compacts, equiaxed grain growth under temp. grad. 8=8255
- W, thermochem. deposited, effect of F impurities on high temp. grain stability 8=17294
- Graphite**
 - adsorption of CO₂, anisotropy of polarizability 8=21900
 - adsorption, localized 8=8339
 - adsorption of various gases and vapours by fresh surface 8=8338
 - crystal impurity growth during diamond crystallization by catalyst-metal system 8=1737
 - deformation mechanism 8=5053
 - deformation props. and anomalous strength in nuclear grade A, 20–2200°C 8=8829
 - diffusion of fission products, Xe and I 8=12015
 - electrodes, bisulphate intercalates form. and elec. props. 8=18731
 - electrodes for spectroscopy, purification by electron beam heating 8=23187
 - escape behaviour of captured fission Xe, isothermal annealing 8=11975
 - Fermi surface pressure dependence 8=8926
 - foamed, shock compression 8=22316
 - gasification by pure CO₂, transient phenom. rel. to impurities 8=9678
 - Graphon, adsorpt. of isopropyl alcohol 8=1700
 - interstellar grains, adsorption 8=23572
 - interstellar matter, computed and observed extinction curves 8=10247
 - interstellar, role of impurities 8=10246
 - irradiated at 77°K, effect on phys. props. 8=8763
 - irradiation induced creep under constant stress 8=8828
 - magnetoresistance, linear, in the quantum limit 8=13711
 - monocrystalline, e. p. r. of free charge carriers, thermal variation of line width anisotropy 8=5524
 - n-irradiated, optical absorpt. 8=14202
 - neutron scattering law S(α, β), values at 1300°K and 1800°K 8=11898

graphite—contd

- neutron prod. dimens. changes rel. to bromination test 200°C 8=8764
- noble gas isotope anomalies, origin 8=9793
- optical absorption of pi-electrons 8=18511
- optical props., transverse and longitudinal 8=2407
- permeability for gaseous fission products 8=4950
- polycrystalline, brittle, form. and growth of cracks 8=22318
- polycrystalline, Youngs modulus, comment on effect of porosity and orientation 8=22319
- pyrolytic, dynamic mech. behaviour, rel. to reactor rad. dose 8=8827
- pyrolytic, electron momentum distrib. by Compton X-ray scattering 8=17907
- pyrolytic, formation and structure 8=13134
- pyrolytic hot-worked, shear compliance 8=5054
- pyrolytic, oxidation pitting comp. with vitreous C 8=8292
- pyrolytic, prep. for transmission electron microscopy 8=4835
- pyrolytic, two-stream instability, dispersion relations 8=8968
- quasi monocrystalline, thermal conductivity, effect of neutron irradiation 8=13389
- quasi monocrystalline, thermal conductivity, quantitative description 8=13390
- reactor, gasification with CO₂ and H₂O 8=2514
- rubbed over ceramics, for optical accentuation of fine pores 8=17019
- slabs, density meas. and isodensity curves 8=22317
- soldering to metals, by first electroplating with Cu 8=5998
- solubility of B, 1800–2500°C 8=17006
- spheroidal crystal growth in Fe-C, Ni-C, Co-C, Au-C and Fe-C-Si alloys 8=13156
- thermal vib. amps. of C atoms in lattice parallel to c-axis 8=22085
- thermoelectric and galvanomagnetic props. rel. to cryostat size and structure 8=5384
- FeCl₃-graphite cpd., electron microscopy 8=1972
- ICl doped, anelasticity, impurity-dope effects 8=13541
- K-graphite lamellar cpds., phase equilb. 8=4712
- Xe captured by nuclear recoil, escape behaviour 8=4017

Graphs

See also Nomograms.

- Chebyshev polynomials, fitting to equidistant points 8=14941
- geometric representation of indeterminacy reln. 8=550
- for perpendicular reflectivity and phase angle at boundary of two mats. 8=500

2, 3, 4-particle systems with harmonic oscillator pot., group theory 8=11258
U(2, 2) algebra unitary representations and massless fields 8=15689
U(3) isoscalar factors, recursion relations 8=3420
U(6, 6) algebra in harmonic function space 8=14934
unitary symmetry, SU(3) 8=6722
Wigner coefficient. See Specific heat; Thermal expansion.
Wigner-Pohl effect. See Electroluminescence.
Wigner-Preston zones. See Crystal structure/microstructure.
Wigner effect. See Crystal electron states/plasma; Semiconducting materials; Semiconductors.
Zeeman effect
sun, thermal r.f. emission from active regions 8=23713
Zeeman ratio
alkali metals, precision determ. by atomic beam resonance technique 8=12089
measurement by differential perturbed angular correlation 8=7066
rigidity, eqn. of motion 8=4047
Dy¹⁶¹, from branching-ratio expt. 8=11772
H₂⁺, by selective photodissociation 8=12195
Hf^{176, 178, 180} precession obs. following Coulomb excitation by O¹⁶ and recoil into liquid Ga 8=15998
In¹¹⁷, g-factor of ³/₂⁺ 660 keV 8=3823
Ir^{191, 193}, g factors, for first excited states 8=3836
Np^{237, 239}, g-factor meas. by α-γ correl. 8=3846
Rb⁸⁵, g₁/g₂ meas. by atomic beam resonance method 8=20709
Rb^{85, 87}, g₁/g₂, optical pumping determ. 8=1173
Yb^{174, 176}, Mössbauer effect meas. for first excited states 8=3832
Zn⁶⁷, 184 keV state 8=7085
Zeeman effect
precession and nutation, simplification by vectors 8=10529
Schiff's, as test for Brans-Dicke scalar-tensor theory 8=14977
quartz sphere with superconducting Nb for satellite instrumentation and expts. 8=17984
vibrating, solid-state, new resonator 8=33

Hadrons

- β-decay Fermi part, radiative corrections 8=20409
hook 8=6830
bootstrap conditions in S-matrix theory, rôle of CDD zeros 8=15712
bootstrap and finite-energy sum rules 8=15711
bootstrap incompatibility with closure and locality 8=15710
bootstrap model of NN*π dynamics, e. m. perturbation effect 8=11486
classification rel. to weak and e. m. currents 8=731
cluster model using sakaton 8=20401
collisions, high energy, secondary particles, charge ratio and transverse momentum 8=11524
composite particle theory, construction of Hamiltonian 8=11487
Compton effect, J^p = 1⁻, 3/2⁺, sum rules 8=6901
current algebra and sum rules 8=15743
current dynamics, self-interacting charged meson model 8=20398
currents formulation of dynamics 8=20397
decay, weak, time-reversal invariance, K⁰ → μ⁺ν_e⁺e⁻ as test 8=789
decay with CP conservation and violation in the same interaction 8=6827
ΔI = 1/2 rule derived using chiral transformation 8=15752
e. m. current as part of neutral vector-meson fields 8=6899

Hadrons—contd

- e. m. interactions need not be CT invariant 8=20475
electromagnetic interactions, vector-dominance model tests 8=15751
electric and mag. polarizabilities, in quark model 8=6823
form factors and structure effects in vacuum polarization 8=588
form factors e. m., as infinitely composite particle rel. to bootstraps 8=11484
hadron-lepton neutral transitions, neutral current and limit of weak interaction theory 8=6829
interactions, 4-fermion, with ΔS=1, SU₃ symm. and RP invariance 8=20400
isomultiplet splittings of e. m. origin, quark model 8=6824
isovector e. m. current and ρ field, as in Yang-Mills theory 8=6831
lepton-hadron weak interactions and lepton octet 8=11449
leptonic decay, two-angle Cabibbo theory rel. to data anal. 8=6819
levels, assignment, evidence for O(4, 2) 8=15747
meson-baryon S-wave scatt. length calc., pseudo-scalar 8=20420
meson-baryon scatt., QQQ model 8=20418
magnetic moment relations using sidewise dispersion relations 8=3605
mass difference, e. m., superconvergence dispersion relation approach 8=11485
mass difference, model 8=20415
mass differences, rel. to weak vector currents 8=732
mass spectrum, asymptotic bootstrap approach 8=15746
meson-baryon systems, systematics of forces 8=6918
pion-hadron, elastic amplitude calc. 8=20451
pion-hadron scatt., strong-interaction sum rules, mass relations 8=20450
production at high energies, statistical characteristics 8=6821
quark model as deformable sphere 8=15673
quark model based on collinear group 8=728
quark model for elastic 90° 8=15754
quark model for interactions, breaking of SU(3) 8=20405
quark scattering model, additivity test from decay distrib. in double reson. prod. 8=11479
Regge branch-point exchange effect 8=20319
Regge poles and interaction total cross sections, universality and degeneration 8=15748
Regge pole hypothesis in amplitude with photons 8=15716
Regge-pole model with L-S coupling for PN → P⁺N, PN → VN 8=20318
Regge-quark scattering model 8=734
relativistic trion model 8=20396
reson. splitting and multiple poles 8=11483
scatt. in additive quark model, shadowing correction 8=6825
scatt. at high energy and arbitrary angle, quark model 8=15755
scattering, peripheral, [SU(6)]_w-symmetry 8=6832
scatt., similarities to multi-π prod. 8=20530
SU(3) chiral dynamics 8=15744
SU(3, 1) representation, mass spectrum 8=20258
SU(12) ⊗ SU(12) symm. and sum rules relating isovector states, mass relationship 8=15745
sub-hadronic system, mass term, in Lagrangian, chiral-type interactions 8=11481
sum rules and equal-time commutation relations for composite fields 8=15750
2-body reactions by Pomeranchukon exchange, spin parity rule 8=20317
2-body scatt., sakaton model 8=15753
Thirring model, 2D based on currents for hadron dynamics 8=20399
Haemoglobins. See Proteins.
Hafnium
deformation planes after dehydrogenation and hydride habit planes 8=8728
isotopic shift in spectrum, rel. to deform. of Hf¹⁷⁴ nucleus 8=20953
ore deposits in Republic of South Africa 8=9792
thermionic emission in Cs vapour, meas. by plasma-anode tech. 8=18264

 semiconductors, voltage, influence of skin effect 8=5232
 semimetals with equal numbers of electrons and holes, quantum theory 8=22416
 weak-field coefficient, new computation method for most band models 8=13645
 Ag, thin films 8=2133
 Ag-In liq. alloys, depend. on temp. and conc. 8=12923
 α -Ag₂S mixed conductor, coeff. meas. rel. to electronic props. 8=22500
 AgTe, liq., rel. to possible semicond. nature 8=12917
 Al, between 2.5° and 300°K 8=5170
 Al, high field coeff. from helicon resonances 8=5169
 Au, thin films 8=2133
 AuTe₂, liq., rel. to possible semicond. nature 8=12917
 Bi, effect of pressure 8=5173
 Bi films, temp. dependence 8=8995
 Bi, positive, explanation 8=8994
 Bi, 300-540°K 8=13710
 Bi_{1-x}Sb_x, (0 < x ≤ 0.15), at 77°K rel. to band structure 8=22518
 CdCr₂Se₄, ferromagnetic 8=2189
 CdS, photo Hall mobility at high electric field 8=2187
 CdS single crystal, elec. field and mobility 8=17860
 p-CdSb, coefficient anisotropy 8=13794
 n-CdSe, meas. and anal., and magnetoresistance effects 8=13796
 CdSe, p-type, meas. 8=5239
 CdSAs₂, rel. to temp., conduction band structure 8=8929
 CoO, paramagnetic, anomalous 8=17914
 Cr, at 4.2, 77 and 273°K, rel. to applied mag. field 8=8855
 Cr, at 4.2°K, 77°K and room temp., magnetic fields up to 147 kOe 8=9002
 Cr-Mo alloys, and sp. ht. meas., between 125-625°K rel. to comp. 8=4931
 Cr-SiO cermet films, coeff. and other elec. props. 8=8981
 Cr_{1-x}Te_x alloys, in paramagnetic state 8=9300
 Cu, thin films 8=2133
 α -Cu-Ag alloy, coeff. and resistivity, interpretation 8=13641
 p-Cu₂S, and thermoelectric power and elec. cond. 8=22585
 Cu-Sn alloy, rel. to bound state form. round Sn atoms 8=12917
 CuTe, liq., rel. to possible semicond. nature 8=12917
 FeCrAl alloys as ferromag. Hall probes 8=14011
 α -Fe₂O₃, paramagnetic, anomalous 8=17914
 GaAs, insulating, high-field photo-Hall effect 8=9105
 GaAs, Cu-diffused crystals, defect centres 8=1954
 GaAs, semiconducting, at high electric fields 8=22417
 GaAs, Sn doped meas. 8=2191
 GaAs:Zn polycrystalline films, obs. and theory 8=5255
 GaP crystals, coefficient, 4.2-300°K 8=9100
 GaP:S, coeff. meas. 4.2 to 400°K 8=13805
 GaP:Zn, coeff. meas., 4 to 300°K 8=13806
 GaSb 8=22587
 p-GaSb at 4.2°K, valence band studies, and by magnetoresistance 8=13803
 p-GaSb, Hall coeff. and conductivity, pressure dependence at diff. temps. 8=13804

Hall effect—contd

- GaSe, charge carrier mobility from elec. resistivity and Hall constants 8=5247
 p-Ge bolometer 8=6205
 n-Ge, effect of dislocations on galvanomag. props. 8=22592
 Ge, holes mobilities at 9.6 GHz between room and liquid He temp. 8=13836
 n-Ge, hot electron mobility, and magnetoresist. for elec. field along <100> direction 8=18052
 Ge, screw dislocations, optical effects 8=1979
 Ge-Si alloyed heterojunctions, coeff. and conductivity at interface region 8=2217
 GeTe liq. 8=16877
 HgTe, coeff. and magnetoresistance at 4.2 and 77°K rel. to carrier model 8=2200
 HgTe-ZnTe, coefficient, at low temperatures 8=13816
 InAs, quantum oscs. 8=13818
 p-InSb bolometer 8=6205
 InSb, coeff. and conductivity, high pressure dependence 8=13819
 n-InSb, Corbino conductivity 8=9114
 InSb, electron drift velocity and mobility calc. 8=9112
 p-InSb, Li-saturated, and resistivity, annealing effects 8=5270
 InSb, n- and p-type, saturation of drift velocity 8=2201
 InSb, microwave emission 8=5267
 InSb, quantum oscs. 8=13818
 p-InSb, 90% compensated, Hall const., 4.2-300°K 8=13822
 MoS(Se)₂, charge carrier mobility from elec. resistivity and Hall constants 8=5247
 Na_{0.33}V₂O₅, single cryst. 8=22601
 NbN, effect of N content variation 8=13702
 Ni films and conductivity dependence on O₂ adsorption 8=17936
 Ni-Cu alloys, rel. to electrical resistivities 8=9014
 NiO at high temps. 8=8977
 NiO, mobility at 1007°K 8=13827
 NiO, paramagnetic, anomalous 8=17914
 PbS films, rel. to space-charge layers on crystallite surfaces 8=5273
 Pb-Sn alloy polycrystalline vs impurity concentration obs. of two maxima 8=8803
 PbTe, anomalously high-mobility rel. to sample prep. 8=2138
 PbTe films, thin, and conductivity and resistivity 8=22603
 PbTe liq. 8=16877
 PbTe, p-type, mobility and thermoelectric power rel. to Na doping 8=5274
 Si, screw dislocations, optical effects 8=1979
 Si₃ ion implanted with Sb, Ga and As rel. to carrier conc. distrib. 8=18072
 Si:In, and photoconductivity and noise meas. rel. to electron and hole-capture coeff. 8=13915
 SiO₂, rel. to electron mobility determ. 8=9124
 SnO₂, rel. to electron scattering polar optical modes 8=22611
 SnTe films, thin, prep., resist. meas., Hall effect and cryst. props. 8=13096
 SnTe liq. 8=16877
 TaN, effect of N content variation 8=13702
 Te-Ge eutectic alloy 8=16877
 ThC₂, nonstoichiometric 8=2140
 Th_xY_y, (x = 1, 3; y = 1, 4), coeff. rel. to electronic props. 8=2139
 UO_{2-x} and U₃O₈, Hall coeff. rel. to carrier mobility investigation 8=18090
 WSe₂, charge carrier mobility from elec. resistivity and Hall constants 8=5247
 Zn-Ag, polycrystalline 8=17941
 Zn-Al, polycrystalline 8=17941
 Zn_xCd_{1-x}Sb, rel. to temp. and conc. of acceptors 8=2131
 Zn-Cu, polycrystalline 8=17941
 ZnO:(Ni, Co) crystals, liquid N₂ to room temp. 8=9132
 ZnS, e and hole mobility obs. 8=8898
 ZnS, photoexcit. assoc., rel. to recomb. mechanisms 8=9258
- Hall generators.** See Electricity/direct conversion; Semiconductor devices.
- Hall mobility.** See Semiconducting materials; Semiconductors.
- Halogens**
 crystals, intensities of i.r. -active lattice vibr. 8=22084
 molecules, dipole strengths as function of internuclear distance 8=21084
 solid, space groups dependence on electron density 8=17328
- Hamidashi effect.** See Ferroelectric materials; Ferroelectric phenomena.
- Hard-sphere gases.** See Quantum theory/many-particle systems; Statistical mechanics.
- Hardness**
 See also Abrasion; Work hardening.
 beam, rigid-plastic, strain-hardening rel. to permanent deformation 8=19402
 binary cpds., inorganic, rel. to point defects 8=8689
 brass, rel. to grain size 8=8835
 brass, 70-30, rel. to deformation texture development, pole figure 8=17777
 Brinell hardness, analytical interpret. rel. to common mech. props. 8=17748

Hardness—contd

- carbon steels, at 2 to 20°K, rel. to C content 8=8639
- diamond, abrasion and surface strains and damage 8=8826
- epoxy polymers, micropenetrator for surface characterisation 8=8876
- hardboard and nonmetallic materials, measurement of 8=13520
- lithium ferrites-chromites, effect on spontaneous magnetization 8=2341
- polycapromide, correl. with melting temp. and nature and cond. of filters 8=21914
- sapphire, single crystals, alloyed with Ti, increased hardness 8=17767
- sormite type alloys, influence of Nb conc. 8=5066
- steels, ausforming effect 8=13561
- steel EI-702, deformation and hardening temp. effect on mechanism of precipitation 8=17078
- steel, EI702, dispersional, investigation by tensile tests 8=8845
- AgCl single crystal, surface, effect of aqueous environment 8=4727
- Ag-Mg solid soln., Ag-rich, microhardness short-range order dependence 8=21819
- Al, annealed, commercially pure, rel. to strain ageing 8=5042
- Al-Cu-Mg alloy with 1%Fe and 1%Ni, age hardening rel. to intermetallic phases comp., obs. 8=14495
- Al-Mg alloys, effect of various ageing conditions and recovery 8=17765
- Al-Zn-Mg alloys, quenching rate rel. to age hardening 8=8817
- Al-Zn, lattice defects and aging phenomena 8=13536
- Al-Zn-Mg, lattice defects and aging phenomena 8=13536
- CaF₂, proton irradiated, change in microhardness, kinetics 8=22320
- CdSnAs₂ and CdGeAs₂, semiconducting, microhardness changes rel. to high-temp. modifications 8=21842
- Cu, rel. to deformation texture development, pole figure 8=17777
- Cu-Be-Al alloys, ageing characts. obs. 8=22335
- Fe alloys, and wear resist. influence of strengthening mode 8=8847
- FeCo, micro-, microstrain under deformation 8=13596
- Fe-Ni-C martensites, ferrous, change due to deform. 8=22352
- GaAs, microhardness temp. dependence, 20-800°C rel. to doping effects 8=17809
- p-Ge, microhardness on e-irradiation and X-ray irradiation 8=17810
- LiF, microhardness at 20, 60 and 115°C 8=17813
- Mg-9 wt.% Al alloy, age hardening mechanism and precip. process 8=13683
- Mn steel, effect of multiple $\gamma \rightleftharpoons (\epsilon, \epsilon')$ transformations 8=17785
- (Mn, Me)(S, Se)-type solid solutions, microhardness 8=4692
- NaCl:Mn, particle hardening 8=22381
- Nb, rel. to dissolved O₂-N₂ mixtures 8=9011
- Nb, rel. to precip. of nitride 8=8274
- Nb-Mo steel, high-strength, combined effect of Nb and Mo 8=22385
- NbN, microhardness, effect of N content variation 8=13702
- Nb-Zr alloy, rel. to precip. of nitride 8=8274
- Ni, polycrystalline, shock-hardening 8=13595
- Ni₂Co, micro-, microstrain under deformation 8=13596
- Ni₃Mn, micro-, microstrain under deformation 8=13596
- Pt-Ir alloy electrodeposits, obs. 8=23153
- β -Pu from α and γ parent phases, anomalies, 120-190°C 8=8860
- Pu-Ga alloys, microhardness 8=8859
- Si, microhardness temp. dependence, 20-800°C rel. to doping effects 8=17809
- Ta-Mo alloys, compared with pure Ta 8=8862
- Ta-Nb alloys, compared with pure Ta 8=8862
- Ta-N, microhardness, effect of N content variation 8=13702
- W, effect of non-metallic trace additions 8=17835
- W, effects of neutron irradiat. and subsequent annealing 8=2141
- Y₂O₃, inference of segregation of ThO₂ at grain boundaries 8=13444
- ZrO₂, Y₂O₃- and MgO- stabilized, microhardness rel. to stress relief mechanism 8=17839

liquid, rotating, in zero-gravity field 8=4562
to liquid in square ducts 8=12854
liquid, viscous, flowing in channel, asymptotic representation of temp. field 8=1546
magnetohydrodynamic flow at flat duct entrance 8=19809
Malkus' transition in thermal turbulence 8=19653
metal corrosion, test apparatus 8=18665
metal, liquid rot. in magnetic field 8=8054
metal, quenching in water at 100°C 8=8635
methane, h. p. boiling apparatus 8=16944
non Newtonian fluid with nonlinear heat conduction law 8=4424
nonlinear diffusion equations 8=10771
nonsteady state, exponential point meas. method 8=10781
nuclear reactors, coolant and fuel temp. calc. 8=7342
Nusselt numbers for fully developed flow in tube with exp. varying heat flux 8=19642
ocean, flow anomalies 8=18838
between packing in packed bed of spheres, and fluid streaming through it 8=13363
between parallel plates in transition regime, and density-distribution obs. 8=21505
from partially dissociated gas stream, effect of mass injection 8=21457
in phase-changes with time-depend. surface temp., approx. soln. appl. to Stefan problem 8=16913
from piezoelectric resonator, into surroundings, meas. of coeff. 8=1884
pipe flow, forced, free convection effect 8=16623
plasma generator, discharge chamber, in mag. field 8=7847
polymer, dilute solutions, in turbulent flow 8=7981
progress in, book 8=15104
propyl alcohol, subcooled boiling in tubes, rate study 8=21657
pulsating gas flow, particle motion 8=16696
radiant, in fibrous insulator 8=1883
radiation, in nonisothermal nongray gases 8=21506
radiation, semi-isotropic model 8=15103
radiation of spectrum lines 8=230
radiative, and emissivities of emitting volumes, relations between 8=3099
radiative, between parallel plates separated by non-isothermal medium with anisotropic scatt. 8=19625
radiative in fluids, optically dense, volumetric absorpt. effects 8=10674
radiative, between two narrow strips 8=221
reactor, thermionic, conversion, simulation apparatus 8=1134
Rosseland approximation appl. 8=19633
shock wave effect around blunt body 8=19538
in simulated boiling, on submerged heating surface rel. to bubble growth 8=16945
solar air heaters, rating parameters 8=228
solid-to-fluid, in fluidized systems 8=21470
solid in high-enthalpy gas flow, in stagnation region 8=22140
solidification of binary eutectic system, analysis 8=21756
solids, variable, transient temp. field 8=22127
source function soln. for radiative transfer through absorbing grey gas between heated plates 8=21507
sphere with air flow, obs. 8=19632
spheres, effect of fluid turbulence 8=17541
sphere heat transfer to air current 8=19635
from sphere, to turbulent streams 8=4434
superconductor, type I, transport by moving magnet 8=22544
steam temp. influence on corrosion 8=18666
system physical props. effects calc. 8=10770
thermal fluxmeter in shear flow, theory 8=19639
thermal-wave generator, cam equation 8=3101
thermoelectric pile to liquid flows past hot and cold junctions 8=4567
thin-film resistance thermal flux gauge 8=10768
three-fluid heat exchanger, NTU-effectiveness relns. 8=19643

Heat transfer—contd

- through dispersed system having irregular pore sizes comparative study 8=8142
- through semitransparent materials, radiation heater 8=19641
- transient natural convection, from vertical plate, leading edge effect 8=19652
- transient, reversed conduction methods appl. 8=19636
- for turbulent air flow in vertical square duct, temp. inner-law parameters 8=4456
- turbulent boundary layer problems, solutions 8=62C8
- turbulent liquid at supercritical pressure 8=8050
- in turbulent motion, in presence of transverse homogeneous mag. field 8=12742
- turbulent in non-Newtonian fluids 8=4565
- in turbulent skin friction, Preston tube meas. 8=12750
- turbulent, in tube with circumferentially varying thermal boundary conditions 8=19638
- turbulent, in viscoelastic liqs. 8=1510
- in verneuil crystal growth process 8=21936
- in vertical cylinder containing heat-generating liq., due to natural convection 8=7916
- vertical plate to power-law fluid 8=8052
- of viscoelastic fluids, in turbulent region 8=4426
- wall to turbulent fluid, hot-film sensor 8=16822
- water, acoustical effects on free convective transfer from horizontal wire 8=21663
- to water in channel formed by bundle of tubes or rods 8=12849
- water, local during viscogravitational flow in horizontal tube 8=12730
- in water, saturated pool boiling, effect of interfacial vibration 8=12985
- water, subcooled boiling in tubes, rate study 8=21657
- in Ar plasma laminar flow in entrance region of circular tube 8=16477
- CO₂, near critical point, forced convection 8=16915
- in H₂-air, free convection and binary diffusion 8=4491
- H₂O turbulent, flow in square duct, temp. distribution in wall, obs. 8=1545
- in He-air, free convection and binary diffusion 8=4491
- He, liquid, impulse 8=10798
- He II, body immersed in flow, exchange torques 8=3127
- He II filling narrow gap, heat exchange with solid body 8=6233
- He, supercritical, circulation systems 8=19690
- Hg turbulent flow in square duct, temp. distribution in wall, obs. 8=1545
- N₂, h.p. boiling apparatus 8=16944
- to NaK flowing through unbaffled rod bundles 8=21649
- Ni alloys, temp. effects on corrosion 8=15102
- UO₂/sheath, in irradiation of reactor 8=7339

Heat treatment

- alkaline beryls, structure dependence on tempering at 600-1200°C 8=17345
- annealing of defects in crystals, observation 8=1933
- anthracite, rel. to reduction of paramag. absorpt. 8=5441
- carbon, soft, structural defects 8=1955
- deformation, metallurgical problems 8=22277
- diamonds, natural, effect on luminescence 8=18596
- failure of materials subjected to thermal shock by cooling, statistical analysis 8=22295
- garnet, elastic constants and derivatives w. r. t. temp. and press., obs. 8=2037
- glass, BSC, annealing, relax. effects 8=4770
- glasses, commercial, rel. to photoluminescence 8=2482
- glass, four new oxides, rapid quenching techniques 8=5087
- glass, tempered, fracture, rel. to elastic strain energy and rate of crack extension 8=22373
- graphite electrodes for spectroscopy, by electron beam, for purification 8=23187
- iron, pure, annealing effect on internal friction temp. dependence 8=17791
- lanthanides, recrystallization and work-hardening characts. 8=5089
- martensite decomposition, effect of thermomechanical treatment during low-temp. tempering 8=21845
- martensite, tempered, precipitation of Fe carbides 8=17080
- metals, rel. to Bauschinger effect 8=5020
- metal sheets, by lasers, pulse frequency effect rel. to sheet thickness 8=2871
- metals, thermomechanical deformation 8=23777
- Nimonic 80A creep props. recovery by annealing, 600-750°C 8=5083
- Old Red Sandstone, effect on mag. props. 8=5821
- piezoelectric ceramics, reduction of stress sensitivity of permittivity 8=19555
- polyethylene, noncryst. regions, changes during annealing 8=17183
- steel, growth of secondary grains during annealing 8=17283
- steel, low-C, quench-ageing at 240°C after rapid annealing 8=17806
- steel, nodular graphite, effect on mechanical properties 8=8843
- steel, quenching in mag. fields, review 8=22343
- steels, strain ageing of martensite rel. to brittle fracture susceptibility 8=13573
- Ag, annealing in hydrogen rel. to water vapour bubble formation 8=22307
- Heat treatment—contd**
- Ag film, vapour-deposited, resistivity annealing temp. and thickness dependence 8=17925
- Al, in air and vacuum, form. of surface tops and pits 8=17117
- Al, degassed, form. of dislocation loops 8=1966
- Al, dislocation densities and configs. during slow heating and cooling 8=22198
- Al, electron-irradiated, stage III annealing study 8=13475
- Al, e-irradiated, stage II and III recovery temp. and impurity conc. dependence 8=1935-6
- Al, formation during slow heating and cooling 8=8723
- Al, quenched, yield stress rel. to aging temp. 8=13530
- Al sections, reinforcing with continuous steel wires 8=10459
- Al vacuum condensates, annealing effect on block structure charact. 8=4741
- Al₂O₃, sintering, activation enthalpy 8=13052
- As₂Se₃, vitreous, effects on electrical conductivity 8=8991
- Au quenching experiments 8=8824
- Au, vacancy and divacancy behaviour on quenching and annealing 8=1945
- AuAg alloy recryst. rel. to optical const., 276-1200 nm 8=22958
- AuCu alloy recryst. rel. to optical const., 276-1200 nm 8=22958
- AuCu₂ alloy recryst. rel. to optical const., 276-1200 nm 8=22958
- C composite sintered materials, firing duration, firing atm., forming process, effect on elec. resist. 8=2129
- C, in quenched steel, behaviour 8=22354
- CdS rel. to luminesc., absorpt. and refl. spectra, obs. 8=9606
- CdS, S₂ annealing pressure effect on resist. homogeneity 8=8980
- CdSe rel. to luminesc., absorpt. and refl. spectra, obs. 8=9606
- Co hexagonal single crystal, Young's modulus dependence on thermal expansion 8=22324
- CsI, isothermal annealing effect on dislocation density 8=17650
- Cu hot working, grain struct. prod., obs. 8=21984
- Cu, plastically deformed, annealing behaviour, effect of dispersed phases 8=17772
- Cu, quench hardening, study 8=22334
- Cu₂-Mg₂Fe₂O₄, quenching in high oxygen pressure furnace 8=2516
- Cu, quenched, vacancy annihilation kinetics 8=1946
- CuFeMnO₄, annealing of cubic and tetragonal crystals 8=17205
- Fe, annealing and plastic deform., rel. to X-ray diffraction line intensity 8=21989
- Fe crystals with 8-20 p.p.m. C, n-irradiated, yield stress and annealing expts. 8=17800
- Fe-Cu, Cu precip. and coagulation rel. to ferromag. props., obs. 8=22809
- Fe-Mn austenite, plastic deform. and annealing rel. to H permeability 8=17573
- p-GaAs, photoluminescence, effect with excess As pressure 8=23054
- GaAs, Zn-doped, effect on photoluminescence 8=2481
- Ge, effect of annealing on (111) surface stress 8=8849
- Ge, e-irradiated, annealing of Hall mobility changes 8=2196
- Ge, n-type, formation of acceptor centres, vacancies 8=4962
- InSb, diffusion effect rel. to disloc. density 8=1919
- p-InSb, Li-saturated, annealing effects on Hall coeff. and resistivity 8=5270
- K, deformation by thermal activation at low temps. 8=1957
- KCl, X-irradiated, α -centre production and thermal annealing 8=17685
- LiF, influence on luminescent properties 8=14322
- MgO aggregates, hot-pressing 8=17816
- Mg(OH)₂, reactive hot-pressing 8=5077
- Mn basic carbonate and magnesite containing ZnO, calc. 8=4698
- MnO, axially cooled or stressed, anisotropy from torque meas. 8=14072
- Mo permalloy, coercive force, neutron bombardment and annealing effect 8=18344
- Mo steel, quenched and tempered, orientation relationship between Mo₃C and matrix 8=17369
- NaCl, quenching rel. to dislocation structure on {100} faces 8=22207
- NaF, F-aggregate centres 8=17686
- NaI, isothermal annealing effect on dislocation density 8=17650
- NaI, in O rel. to capture centres luminesc., obs. 8=23060
- NaI: Tl, in O rel. to capture centres luminesc., obs. 8=23060
- NbN, quenching curves, critical data in magnetic fields 8=2165
- Ni, annealing, weakly deformed, recrystallization nucleation 8=8421
- Ni-base alloy 718, correl. with mech. props. 8=21827
- Ni films, electrolessly deposited e microscope study 8=17136
- Ni, thermo-mechanical, increase in creep strength 8=13601

Heat treatment—contd

- Ni_{0.5}Fe_{2.5}O₄, annealing temp. dependence of magneto-crystalline anisotropy 8=9385
 NiO, axially cooled or stressed, anisotropy from torque meas. 8=14072
 Pt, annealed, anelastic effect at low temps. 8=22211
 Pt, damage on annealing rel. to damage on e-irradiation at 90°K 8=1947
 Pt, refinement by annealing in air 8=4812
 Rh and Ir, hot working, poor ductility 8=22390
 S ion implanted with Sb, Ga and As, anneal characts. obs. 8=18072
 Se, crystal structure, and other props., effect of cooling to 100°K 8=1808
 Si, proton-irrad. damage isothermal annealing 22-158 MeV, 100-300°C 8=22605
 Si:Li, annealing rate, rel. to defect concentration 8=2067
 n-Si, n-irradiated, elec. props. rel. to defect structure and annealing 8=5283
 SiO thin-film capacitors 8=22676
 Si, P-doped, annealing of the Si-E centre 8=2209
 p-Si thermally quenched, effect on electrical properties 8=18084
 Sn vacuum condensates, annealing effect on block structure charact. 8=4741
 SiO₂-UO₂ vitroceraamics, irrad. induced vol. changes and annealing 8=8779
 W, annealing of n-irrad. damage, migration of point defects 8=17601
 W, annealing subsequent to neutron irrad., effects on elec. resist. and hardness 8=2141
 W wires, on secondary recrystallization, from electron optical meas. based on emission 8=1765
 Y, recrystallization and work-hardening characts. 8=5089
 ZrO₂-TiO₂ system, change of mineral composition 8=4721

alloys

- Alnico magnets, at temperatures below 1000°C 8=9361
 β -brass, effect on elec. resistivity 8=13714
 Magnox ZR-55, creep behaviour in 350-450°C range 8=5078
 metallic, crystalline structure changes at early stages of ageing and order-disordering 8=17036
 non-ferrous, thermomechanical deformation 8=23777
 steels, fatigue crack propagation obs. 8=5072
 steel, low-alloyed chrome, effect of tempering on Young's modulus 8=13560
 steel, low-carbon, sheets, rolling and annealing textures 8=17799
 steel, mechanical strength after tempering, effect of lower bainite 8=17805
 steel, mild strip, tensile strength rel. to quench rate 8=22365
 steel, Nb carbon-nitrides on dissolution, precip. and age hardening effects 8=1660
 steel sheet, rapid soaking effect on strength 8=22364
 steels solid soln. and precip. hardening and grain refining rel. to mech strength 8=22344
 steel, straining at elevated temp. and retempering, rel. to increase in yield strength 8=17782
 steel, temper brittleness, effects of alloying with Ni and Cr and adding Sb, P, Sn or As impurities 8=17797
 steel, temper brittleness rel. to structural imperfections 8=17626
 Udimet-500, -520 and -700, effect on stress-rupture props. and structural stability 8=13599
 Zircaloy-2, annealed in α and (α + β) regions, effect on H₂ terminal solubility 8=8250
 Al, cracking during welding 8=5047
 Al, microstruct. changes 8=21979
 Al, natural ageing effect prior to artificial ageing 8=17764
 Al-Cu-Cd alloys, deformation before and during ageing, effects on precip. 8=17039
 Al-Cu-Mg, effect on corrosion 8=8819
 Al-Mg alloy, ageing effect on structure 8=17004
 Al-Mg, various ageing regimes and recovery 8=17765
 Al-Zn-Mg alloys, conc. and dilute, quenching rate rel. to ageing 8=8817
 Al-Zn-Mg, effect on precipitation 8=13062
 AlM, (M = Mg, Ga, Ag), e-irradiated, stage II and III recovery temp. and impurity conc. dependence 8=1935-6
 C steels, austenite formation and tempering 8=13067
 CdS phase structure recovery to room press. at 77°K 8=1671
 Co based, f. c. c., ageing effects after deformation 8=17622
 16/13 CrNi steels, high temp. embrittlement after n irrad. 8=22362
 Cu-Be-Al, ageing characts. obs. 8=22335
 Cu-Be, Guinier-Preston zone formation, conc. and ageing dependence 8=17606
 Cu-Be, quenched and aged, vacancy role in solute clustering 8=17607
 Cu-2%Be, precip. and twins appearing on ageing 8=17625
 Cu-Mg alloys, variation of Cu₂Mg precipitation 8=4705
 Fe-Al, rel. to paracrystal detect. from X-ray powder patterns 8=17368
 Fe-Co-Ni-Cr, new ferromagnetic state during recrystallisation 8=9342

Heat treatment—contd**alloys—contd**

- Fe-Cr-Ni-Nb steel, recrystallization obs. 8=21950
 Fe-N alloys, tempering process 8=8840
 Fe-N, quenching, study of structures 8=8522
 Fe-Ni-Al-Ti, microstruct. and mech. props. 8=21987
 Fe-Ni-Ti alloy, structural changes during martensite ageing 8=17064
 Fe-Si, annealing effect on physical props. 8=23778
 GaSb, effect of annealing on (111) surface stress 8=8849
 InSb, effect of annealing on (111) surface stress 8=8849
 InSb vapor-deposited films, electrical resistivity 8=9008
 n-InSe crystals, thermal and i. r. quenching of photo-conductivity 8=18233
 Nb-Mo steel, strengthening effect of precipitates 8=22386
 Ni-base alloy, refractory-melt reactions in vacuum induction melting 8=9694
 Ni-bearing steels, ageing rel. to martensitic structure 8=1762
 NiAl, ordered b. c. c., supersaturation of vacancies on quenching 8=17611
 Ni-12.7 at.%Al, rolled, effect of coherent γ' (Ni₃Al) particles on annealing 8=13598
 Ni-Al₂O₃ alloys, annealing and creep meas. 8=22388
 Ni-Mo, quenched, deformation effects on transformation during annealing 8=17094
 Ni-SPAN-C alloy 902, vacuum remelt versus air-melt, rel. to elastic and fatigue props. 8=17822
 Pt-Rh, quenching expts. 8=13423
 Pu-0.85at%Ga, metastable δ -phase, effect of thermal cycling on transform. behaviour 8=8278
 Zn-Al, superplastic, effect on strain rate 8=5090
 Zr rich, effect of rolling temp. on texture developed 8=22399
 ZnTe, melt-grown, edge emission, annealing effects 8=5681
 Zr-2.5wt%Nb, annealed in α and (α + β) regions, effect on H₂ terminal solubility 8=8250

Heating

- carbon furnace i. r. source 8=15093
 distortion of semi-infinite solid due to uniform circular heat source on surface 8=22122
 ferrites, by ferromag. resonance 8=14082
 furnace, simple thyristor controller 8=15125
 gases by lasers, dynamic processes 8=7928
 gas flow, by arc, enthalpy meas. 8=19672
 hotplate corrosion, steam temp. influence 8=18666
 magnetron cathodes, surface-wave, ion bombardment 8=15334
 metals, by laser radiation pulse 8=3285
 radiation heater, electrically-powered, operation to 1200°C 8=19641
 relaxation solution of d.c. 3-wire network, effects of steady currents 8=281
 rotary kilns, charge flow rate, enthalpy depend. 8=22108
 solids, focused laser beam 8=15130
 system, for n.m.r. spectrometer 8=19912
 thermal gradient apparatus for Pu glovebox 8=7334
 Fe-Ni alloys, by ferromag. resonance 8=14082
 He, afterglow, microwave by standing wave 8=1340
 Ni powder, by ferromag. resonance 8=14082

Heaviside layer. See Ionosphere.**Heavy water.** See Water.**Height measurement.** See Length measurement.**Heisenberg model.** See Ferromagnetism; Statistical mechanics.**Helicity.** See Elementary particles; Field theory, quantum.**Helicons.** See Crystal electron states.**Helions.** See Alpha particles and helium nuclei; Alpha rays.**Heliotron.** See Plasma/devices.**Helium**

- absorpt. coeff., continuous 8=7387
 abundance in proto-Galaxy 8=14799
 abundance in sun 8=10381
 adsorption on Molecular Sieves 5A, 10X, and 13X, at 77.3°K and press. range 10² to 10⁻⁶ torr, effect of preadsorbed H₂O 8=21897
 adsorption on powders at room temp. 8=21899
 after glow, microwave heating by standing wave 8=1340
 alkali ions scatt. at He atoms 8=7464
 arc, pulsed, spectrographic meas. 8=21253
 atom, aligned, scatt. resonance fluorescence, depolarization 8=20982
 atomic collisions, autoionization 8=7714
 atom, correlation factors, effective range 8=20938
 atoms, determ. of excited state lifetimes by single-photon counting 8=7429
 atom, double ionization by 1-3 MeV p, using product of H-like orbitals 8=21280
 atom, dynamic polarizability of ground state, variational calc. 8=20945
 atom, elastic scatt. of zero-energy positrons 8=20995
 atoms, e capture by μ^+ , cross section calc. 8=7481
 atom, e excitation, rearrangement collision, spin flip effects 8=7445
 atoms, e excitation of 2¹P and 2³P states 8=7446
 atom, e scatt., long-range interaction, nonadiabatic contrib. 8=12092

Helium—contd

- atom, energy level calc. by variational perturbation method based on the principle of moments 8=20919
- atom, excitation, from metastable 2^3S He, cross-section 8=4055
- atom excitation by 100-400 eV electrons, cross sections rel. to Born approx. 8=16218
- atom, excitation by 0.15-1.0 MeV p and d impact 8=7384
- atoms excited states, adiabatic exchange approx. calc. 8=7434
- atoms, form factor and incoherent-scatt. function 8=12053
- atom, ground state from perturb. theory 8=7369
- atom, ground state, variational calc. of expected values 8=7386
- atom, Hartree-Fock energy, saddle-point character 8=7370
- atom, hyperpolarizability calc. 8=20942
- atoms, interaction energies calc. 8=4110
- atoms ionization by e impact, cross-section calc. 8=12084
- atoms, isoelectronic sequence multipole polarizabilities and shielding factors 8=16199
- atoms, large-angle electron-impact spectra 8=16224
- atoms, lower bounds to eigenvalues 8=11253
- atom, 0.15-1.0 MeV p and d impact, quadrupole and dipole transition theory compared to obs. 8=7385
- atom params. from wave functions with pole-eliminating correl. factors 8=16197
- atoms, S limit, energy surface in parameter space 8=16196
- atomic-stopping cross section in Al 8=2022
- atom, He⁺, charge exchange in atmospheric gases, 40-1500 eV 8=21275
- atom, He-p e capture excitation of 3s, 4s states of H 8=7462
- atom, He³⁺ single and double e-capture cross-sections obs. in He³⁺-He, 7.2-181 keV 8=21278
- atoms, He⁺-He collision, excitation and e capture probabilities calc. 8=7463
- atoms, He-He, Van der Waals interaction, self-consistent calc. 8=21002
- Atom He³⁺-N₂, 7.7-166 KeV, cross -sections for single and double e capture 8=21279
- atom, scatt. of charged particles, Bethe cross-section sum rule 8=12107
- autoionizing D states, character 8=12445
- autoionization, kinetic energy 8=12443
- in B star He λ 4771 strength in IC2391, 2602, Southern galactic cluster 8=2783
- beam on H₂ scatterer, total cross section meas. using high intensity nozzle beam source 8=7639
- bubbles, in Al-Li alloys, neutron irradi. 8=8456
- chemical reactions with D₂⁺ and H₂⁺ cross sections 8=14348
- in chromosphere, low temp. emission theory 8=10430
- conductivity, thermal, line-source transient-heat-transfer technique 8=16701
- collisions with inert gases, total scatt. cross-sections 8=7634
- content in subdwarf stars 8=5865
- cosmic rays, isotope production 8=20607
- cryostat, for use with torque magnetometer down to 4.2°K 8=15140
- cylindrical plasma, instability 8=1430
- discharge, electrodeless, cyclotron harmonic resonances 8=4274
- discharge, positive column, correlation functions 8=1405
- discharge, positive column at above critical field 8=16410
- dissolved in water, molec. diffusion coeffs. 8=12828
- effect on lifetime of CO₂ laser levels 8=420
- electric discharge positive column, electrons energy distrib. 8=7655
- e capture by H⁺ + He(1s²) → H(1s, 2s, 2p) + He⁺(1s) 8=7465
- electron impact cross sections 8=1347
- flow, rarified, molecular velocity distribution function Doppler obs. 8=16664
- glow discharge, fast electron energy decrease in neg. region 8=4288
- glow discharge in toroidal tube, expt. investigation 8=4286
- ground and metastable states, dipole props. 8=20980
- ion beam, 910 MeV, in thin absorbers, energy loss distrib. 8=13471
- ion, energy loss in passing through ZnS:Ag film 8=8758
- ion, recombination afterglow, differential level decay 8=21237
- ionization cross-section, electron impact 8=7700
- ionization cross-sections for 100-2000 eV electrons 8=12446
- ionization, electron and proton impact, classical model 8=12444
- ionization processes, double by γ and e impact 8=7715
- isoelectronic sequence, calc. of 1s² 1S-1sn¹P transitions 8=7388
- isoelectronic sequence, 1sn¹P and ³P states, wave functions calc. 8=7390
- isoelectronic sequence, 1S states eigenvalues calc. 8=7391
- isoelectronic sequence, ³S states eigenvalues and wave functions calc. 8=7392
- isoelectronic series, ground-state wavefunctions and energies 8=4067

Helium—contd

- isotope mixtures, thermal diffusion props. 8=1492
- laser, He-Ne mixture, pulse delay 8=3314
- mass spectrometer, applications 8=7359
- metastable atoms, Penning ionization of gases 8=21258
- molecular flow through capillary, interaction with tube wall 8=7893
- para- and ortho-, electron impact ionization, ratios of cross-sections 8=7431
- plasma, axial injection into mag. dipole field, obs. 8=16506
- plasma in coaxial accelerator 8=4337
- plasma, electron density meas. with regenerative laser amplifier dev. 8=11027
- pressure broadening of Hg resonance line 8=7403
- shell-burning stars, pulsational instability 8=5873
- spectra, excitation of 4F states 8=12054
- stars atmospheres 8=5891
- in star Groombridge 1830, abundance 8=23505
- stars, vibrational stability, non-constant opacity effects of 8=2788
- target nucleus, thermonuclear reaction rates 8=11976
- thermal conductivity meas. with hot-wire cell 8=6210
- third virial coeff., and for nonpolar mixtures 8=12677
- ³P-²P transition, polarization 8=7432
- ³P, ⁴S and ⁴D levels, lifetime obs., using positive ion Van de Graaff accelerator 8=16183
- triplet spectrum in expanding nebulae, capture-cascade intensities 8=19194
- triplet spectrum in expanding nebulae, self-absorption 8=19195
- ²S state, in planetary nebulae, depopulation rate 8=5913
- in Universe, abundance 8=10073
- viscosity, effect of organic vapour molecules, for determ. of mol. dims. 8=1485
- Wigner spin rule validity in He-He collision 8=21015
- H atom in 3s state prod. in collisions with H₂⁺, H₃⁺ 8=21191
- to H⁺ ratio, galactic rays of low energy, balloon obs. rel. to solar modulation possibility 8=2770
- H₂-He mixture, composition-depend. of thermal-diffusion factor 8=1493
- He-air system, free convection, heat transfer and diffusion 8=4491
- He-n-butane mixtures, second virial coeffs. determ. 8=12980
- He-n-butane system, phase and volumetric behaviour showing gas-gas equil. for low He conc. 8=12979
- He-methane solid-vapour equil., 55°-91°K, to 140 atm. 8=16953
- He I 4026 Å stellar line rel. to rotation and vel. 8=19121
- He II, 4686 Å line complex excited in atomic-beam light source, analysis 8=12052
- He II, interference of fine-structure levels 8=4066
- He II line, Lamb shift 8=1161
- He II, Stark broadening of 3203 Å line 8=7383
- He₂, ground-state potential 8=12200
- He₂, ground state, wavefunctions and potential curves 8=7526
- He³, atoms, radio-optical resonance, coherence 8=16219
- He³, nuclear (fund.) and electronic (excited) orientations 8=16226
- He³, optically oriented, magnetic resonance 8=20999
- He³, transverse optical pumping and detection of modulation resons. 8=16195
- He³, ⁴ and D, relative abundances, implications of Brans-Dicke theory 8=23478
- He⁴, density measurement near critical point to test $\beta(6+1) + \alpha^1 \geq 2$ 8=259
- He⁴, virial coefficient, 2nd, for exponential repulsion potential 8=12678
- He⁻, negative, lifetime obs. 8=20944
- He⁻, critical angles for channeling in thin Au films 8=17704
- He⁻, electron-impact excitation and auto-ionization 8=4091-2
- He⁻, low-energy irradi. of Ge crystals 8=8772
- He⁺ photoionization reactions with N₂ and O₂ 8=16444
- He₂⁺, potential curves for X² Σ ⁺ and ² Σ ⁺ states 8=12201
- He⁺ + H₂ and He⁺ + HD reactions 8=21277
- He²⁺, ground state calcs. 8=4130
- ³He²⁺ ions, prod. by r.f. ion source 8=10914
- ³He⁺ in Ge, channelling props., diff. calc. 8=13485
- He₂⁺, potential energy curves calc. 8=12149
- ³He²⁺, ⁴He⁺, in solar wind, Vela satellite meas. 8=23715
- He-Ar mixtures in jets, separation 8=21471
- He-CF₄ compressed mixtures, nonresonant absorpt. and dispersion 8=1486
- p + He → H(2p) + He⁺, cross-section 8=21009
- He³-HD mixture, thermal diffusion model 8=12705
- He⁴-HT mixture, thermal diffusion model 8=12705
- He-He interaction, SCF-MO approx. 8=21013
- He-Li⁺ interaction energy at small internuclear distances 8=21014
- He-Ne d.c. discharge, relation between electron temp. and conc., and discharge parameters 8=7666
- He-Ne discharge tube, dia. and pressure effects 8=7676
- He-Ne laser, with axial magnetic field, resonance dips in output 8=11065
- He-Ne laser, axial mode frequency and power, characteristics 8=19967

Helium—contd

- He-Ne laser, axial mode number from moving mirror experiments 8=11026
- He-Ne lasers, cold cathodes for 8=11067
- He-Ne laser for colour television display 8=11068
- He-Ne laser, c.w., 6328Å, modes 8=19971
- He-Ne laser, discharge modulation noise 8=6449
- He-Ne laser, ears on line profile of decay transitions 8=3316
- He-Ne laser, intensity fluctuations, correlation meas. 8=3315
- He-Ne laser, method for meas. of depend. of gain per pass on power inside cavity 8=19969
- He-Ne laser, mode-locked quieting 8=15466
- He-Ne laser and monochromatic incoherent light fog scattering, comparison 8=14615
- He-Ne laser, oscill. mode interactions, with spher. mirror resonator 8=427
- He-Ne laser, power enhancements with double pulse excitation, comments 8=11062
- He-Ne laser probability of $3s_2$ - $2p_4$ transition in Ne 8=3317
- He-Ne laser rough reflector, noise and operation at $\lambda = 3.39 \mu$ obs. 8=11064
- He-Ne laser, single-mode, single freq., stabilization of output 8=11060
- He-Ne laser, spatial coherence, expt. investig. 8=19968
- He-Ne laser, spatial coherence and mode structure 8=6447
- He-Ne laser, Stark effect produced frequency shifts 8=11058
- He-Ne laser 3.39 μ Ne line, modulation by electro-optic gases 8=426
- He-Ne laser wavelength increase due to Ar addition 8=11063
- He-Ne mixture excitation in d.c. discharge 8=4093
- He-Ne mixture, meas. of thermal-diffusion factors 8=1488
- He-Ne mixture optical pumping by He-Ne laser, Hanle and saturation effects obs. 8=20983
- He-Ne 6328Å laser, self-pulsating oscillator 8=11057
- He-42.5% Xe gas mixture scintillation props. 8=11301
- Ne-He laser, stationary regime and oscill. damping 8=15471
- Ne-He mixtures, integral Joule-Thomson effect 8=15139
- TiO₂ surface discharge, channel development 8=1330
- Xe-He couples in binary mixtures, translation spectra 8=7425
- in ZnO:Zn, ions energy losses obs. 8=18624
- accommodation coeff. in impact on Al, Ag, Au and Pt, 500-12 000 eV 8=12685
- gas, annihilation rate of positrons 8=20998
- atoms, superradiance at transitions terminating at metastable levels 8=20943
- gas bubbles in austenitic steel after n-irrad., rel. to B distrib. 8=13040
- discharge, h.f. electrodeless, e density cinematography 8=16398
- discharge, low-pressure, p.d. meas. 8=16415
- electron-impact ionization cross section 8=16446
- enthalpy calc. from Redlich-Kwong eqn. 8=16689
- excitation by fast protons and H atoms 8=7433
- excitation in hollow-cathode discharge balance eqns for 2^3S , and 2^3P levels 8=20981
- excitation by H^+ , D^+ , H_2^+ and H_3^+ 8=16217
- glow discharge, secondary electron energy distrib. 8=16409
- ions, atomic and mol., mobility, 195-665°K 8=16445
- low-pressure h.f. discharge, luminosity of 5875Å line 8=16416
- of normal atoms, diffusion coeff. of metastable He atoms 8=4494
- residual, in colour picture c.r.t., mass spectrometry 8=15324
- scattering ionization, short range forces 8=1364
- solution and diffusion in tridymite and cristobalite 8=8247
- in stellar evolution flash and thermally unstable shell form., calc. 8=19133
- test gas in ballistic compressor, thermodynamic conditions 8=1470
- thermal conductivity, hot-wire cell meas., 30°-100°C, 120-150 torr 8=16700
- viscosity, low-temp., high press. 8=4493
- Cs vapour thermal diffusion in mixture 8=21525
- He³, nucl. spin relax. by surface interactions suppression 8=1160
- gas, and He-Ar, He-Ne mixtures excited by α , scintillation mechanism 8=12202
- He-N₂ mixtures, viscosity, low-temp., high press. 8=4493
- He-Ne, cataphoresis in d.c. discharges 8=1334
- He-Ne laser, frequency standard 8=15467
- He-Ne laser, growth of oscillations 8=19964
- He-Ne laser intensity correl. near threshold, 6328Å and 3.39 μ 8=19970
- He-Ne laser, intra-cavity loss perturb. rel. to Faraday effects in glasses 8=11059
- He-Ne laser modulation by inactive cavity 8=19965
- He-Ne laser, optimum d.c. excitation 8=15470
- He-Ne laser, output intensity variation of, in a magnetic field 8=15468
- He-Ne laser, radiation divergence meas. 8=6448

Helium—contd**gas—contd**

- He-Ne laser, stimulation rel. to radiation noise obs. 8=19966
- He-Ne laser Zeeman resonances 8=15469
- N₂-He mixtures, diffusive separation obs. 8=19537

liquid

- See also Quantum theory/many-particle systems; Superfluidity.
- advances in low temp. physics, book V 8=19680
- boiling point, thermodynamic temp. scale 8=19689
- Brillouin scattering, stimulated 8=19691
- electric current supply by vapour-cooled leads 8=15195
- Feynman-Onsager vortex, classical theory 8=10807
- filling of storage dewar, control device 8=15147
- film, rotating, thickness rel. to superfluid component motion, obs. 8=10796
- heat transfer, impulse 8=10798
- hot-electron injection from tunnel junction, effective barrier 8=257
- Kapitza resistance of Ce ethylsulphate 8=19700
- λ point, elec. field suppression 8=15151
- light absorption and scattering by excess electrons 8=19687
- minimum propag. current of immersed supercond. wire 8=22541
- quantized circulation, evidence from torque on cylinder 8=10808
- Rice model rel. to spin diffusion, thermal cond. and viscosity 8=10800
- specific heat, re-evaluation of spin fluctuation contrib. 8=2995
- specific ht. and susceptibility, from lattice model of planar 'spins' 8=126
- supercritical, heat circulation systems 8=19690
- superfluid circulation in a porous medium 8=19698
- superfluid, closed-cycle refrigeration at 1.85°K 8=6224
- superfluid, flow through orifices, critical vel. and vortices form obs. 8=6234
- superfluid, intrinsic critical vel. near λ point 8=263
- superfluid, vortex lines 8=3124
- superfluid, wave function exam. 8=261
- superfluidity penetration into Zeolite micropores., obs. 8=10805
- superfluidity, phonons origin and rotor excits., collective coordinates theory 8=10799
- superfluid, rotating in annular channel 8=10809
- thin film, fermion model, specific heat, size effects 8=10656
- ultrasonics and superfluidity 8=10806
- viscosity, appl. to theory of nearly ferromag. Fermi liqs. 8=2994
- vortex ring formation by ions, evidence for peeling model 8=10797
- vorticity in flow through orifices 8=19699
- X rays, phonon and muonic 8=1211
- H II vaporization, limiting ht. current density for initiation at Pb surface 8=4660
- He I, temp. distrib. with height, meas. with Pb-Sn wire cryotron relax. oscillator 8=22571
- He II, back flow effect appl. to impurity atom among Bogoliubov quasiparticles 8=3122
- II, counterflow past a flat plate, anisotropy 8=19701
- He II near critical point, superfluid density obs. 8=19702
- He II filling narrow gap, heat exchange with solid body 8=6233
- He II, heat exchange torques on bodies immersed in flow 8=3127
- He II, ion velocity discontinuity at 1.1°K 8=19697
- He II, Kapitza conductance, depend. on Debye temp. of solid 8=10811
- He II, local gauge invariance and broken symmetry 8=3126
- He II in plane-parallel capillary, wave processes 8=3123
- He II quantized circulation around a fine wire obs. 1.2-1.9°K 8=19703
- He II quantized vortex lines threshold in rotating annulus, obs. 8=10810
- He II, rotating, interaction of quantized vortex and lines 8=10804
- II, rotating, superfluid velocity rel. to temp. 8=6231
- He II, rotating, wave propagation 8=262
- He II single, vortex and rotating vortex lattice, quantum theory 8=3125
- He II, specific heat, logarithmic singularity 8=15150
- He II, subcritical flow, press. obs. 8=19695
- He II, surface tension calc. 8=3128
- He³, dilute solution in liquid He⁴ rel. to elementary excitations, model 8=6229
- He³, collective treatment 8=19692
- He³, Fermi liquid theory rel. to specific heat and magnetic susceptibility 8=15020
- He³, Fermi model, flow along narrow channel, spin diffusion, thermal cond. calc. 8=15017
- He³, heat capacity and freezing curve 8=3118
- He³ solubility in He⁴ and dilute mixtures molar density, 1.25-0.025°K 8=6230
- He³ in superfluid He⁴, dilute mixtures 8=15152
- He³, transport coeffs., pressure depend., spin fluctuation theory 8=19693
- He³, vapour press. in mag. field, theory 8=15144

Helium—contd**liquid—contd**

- He^{3,4}, ground state energy calc. using Lennard-Jones pot. and de Boer-Michels parameters 8=10803
 He-3, 4, solid-liquid phase transition prediction 8=10813
 He³, Cr, and Fermi liquid quasiparticle self-energy 8=3117
 He³-He⁴ dilution refrigerator, rapid start-up 8=15145
 He³ in He⁴ dissolution refrigerator 8=19682
 He³-He⁴ mixture, heat capacity and freezing curve 8=3118
 He³-He⁴ mixture, thermal conduction due to phonons for $T \leq 0.6^\circ\text{K}$ 8=10801
 He³ in He⁴, osmotic pressure of dilute solutions 8=10795
 He³-He⁴ solutions, nuclear spin polarization enhancement 8=256
 He³-He⁴ solutions, thermodynamic properties at λ -transition, n. m. r., studies 8=10794
 He⁴, with He³ impurities, model of dilute fermion mixture in dense bose fluid 8=19688
 He⁴-3.9% He³, positive ion mobility, $T, -1.4^\circ\text{K}$ 8=15141
 He⁴, atomic collisions and Ramsauer-Townsend effect 8=1200
 He⁴ cryostat for 0.9°K 8=15146
 He⁴, energy spectrum of elementary excitations 8=3115
 He⁴ glass superleak construction 8=15149
 He⁴, lambda curve, meas. and empirical eqns. 8=3116
 He⁴, λ -transition, Patashinskii-Pokrovskii theory 8=255
 He⁴, molar volume, coeff. of thermal expansion obs., $1.25-4.2^\circ\text{K}$, $0.5-28\text{ atm}$ 8=10802
 He⁴, positive ion mobility, $T, -1.4^\circ\text{K}$ 8=15141
 He⁴, superfluid model, normal-mode anal. 8=15153
 He⁴ superfluid, with soln. of He³, model of fermion soln. in boson gas 8=6232
 He⁴, turbulently flowing, λ -point shift 8=19694

liquid, sound propagation

- absorption of sound below 0.6°K 8=6235
 second sound, laser beam scatt. photocounting method 8=11192
 second sound wave, observation by laser beam diffraction 8=6236
 He II attenuation of second sound during rotation 8=10812
 He II, rotating, first and second 8=262
 He II second sound visual obs. by Toepler method 8=264
 He³ soln. in He⁴, temp. and freq. dependence 8=15143
 He³, zero sound 8=3119
 He³, zero sound in magnetic field 8=3120
 He³-He⁴ mixture, attenuation due to He³ viscosity and phonon-He³ scatt. 8=10801
 He³-He⁴ mixtures, speed of second sound below 1°K 8=3129
 He³-He⁴ mixtures, zero sound existence 8=3121
 He⁴, sound vel. at 1 Mc/s in critical region 8=15142
 He⁴, 3-phonon mechanism incompatibility with obs. 8=258

solid

- b. c. c. crystals, phonon freq. calcs. and thermodynamic props. 8=1836
 EMS (Saunders) theory, anomalies 8=19704
 isotope mixtures, lattice thermal conductivity 8=1889
 lattice dynamics at 2.9°K and 125 atm. by n-scattering 8=1837
 thermal conductivity, h. c. p. single crystals 8=8659
 He³, exchange energy diffusion rate meas. 8=15156
 He³, melting curve calc. below 0.04°K 8=15158
 He³, nuclear magnetic relaxation $0.3-0.04^\circ\text{K}$ 8=3130
 He³, nuclear spin ordering evidence 8=6237
 He-3, 4, at 0°K , ground state energy rel. to density 8=10813
 He³-He⁴ mixtures, phase separation, theory 8=15157
 He⁴ crystals, hexagonal, birefringence 8=15155
 He⁴, and isotopic mixtures, thermal cond. at high densities 8=15154
 He⁴ phonon dispersion measurements on single crystals 8=10815
 He⁴ II-I transition under rot., higher than first order 8=10814

Helium compounds

- HeH²⁺, one-centre perturbation calc. 8=4138
 HeH⁺ $1s\sigma$ and $2p\pi$ states, approx. wave functions calc. 8=4153
 HeH⁺, the $3d\sigma$ state, approx. molec. wave function 8=1245

Hellmann-Feynman theorem. See Quantum theory.**High-pressure phenomena and effects**

- albite, elec. cond. 8=8978
 alkali aluminogermanates, transforms rel. to geochem. 8=8261
 alkali aluminosilicates, transforms rel. to geochem. 8=8261
 alloys, hydrostatic tension on solidification 8=21759
 apparatus for obtaining high static press., rel. to effect on solids 8=2873
 atoms, electron shell filling order 8=7364
 ball bearing, flanged-mounted, Weibull plot of contact fatigue data 8=17741
 basalt, elec. cond. 8=8978
 compressibility of metals, effect of electron structure 8=17724
 compression loads in controlled atmos., apparatus for meas. 8=5019
High-pressure phenomena and effects—contd
 conductance of aqueous solns., meas. cell, $1-3000\text{b}$ and $25-225^\circ\text{C}$ 8=14424
 cryostat for studies at $\sim 100\text{kbar}$ at liq. He temp. 8=3112
 crystal electronic spectra, theory 8=8914
 dead weight piston gauge for press. to 26 kbar 8=5999
 depolymerization, by ultrasound 8=4568
 differential thermal analysis technique 8=9684
 DPPH, absorpt. spectra 8=18579
 ferrocene, effect of press. on Mössbauer resonance 8=1652
 gases, compact elec. lead for use at low temp. 8=3147
 glass molten, viscosity high-temp., high-pressure viscometer obs. 8=8022
 glass, suppression of irradiat. effects 8=4996
 haloquinone complexes in polymer matrices, absorpt. spectra 8=14274
 n-hexane, dielec. const. 8=1582
 high-pressure chambers, to 19 kbar , working at liq. He temp. 8=10464
 hydrostatic to 60 kbar , technique 8=7971
 hydrostatic tension in solidifying materials 8=21758-9
 inductive coil tech. for meas., anal. of error sources outside apparatus 8=19342
 ionic crystals, changes in cryst. and electron struct. 8=4699
 low temp. closure and elect. leadthrough for high-pressure systems 8=23781
 magnetic materials, magnetization and anisotropy meas. 8=13952
 metals, changes in cryst. and electron struct. 8=4699
 metals, strain fields under omnidirectional uniform compression 8=17756
 minerals, hydrothermal synthesis, apparatus 8=23782
 nitrobenzene, dielectric props. 8=21713
 optical cell for absorpt. and luminescence studies up to 40 kbar and at 77°K 8=6502
 parahydrogen, fluid, eqn. of state 8=4525
 parahydrogen, solid, ht. of fusion and density at up to 400 atmos. 8=16928
 n-pentane, solidification at high press. 8=21747
 phenolphthalein and congeneric mol. crystals, plastic deformation effects 8=23033
 phlogopite, stability at high press. rel. to presence in Earth's mantle 8=23221
 piston-cylinder devices, friction pressure loss 8=14909
 pistons of press. booster, sealing with rubber ring 8=10465
 plastics, solid, hydrostatic creep, linear strain and recovery 8=22280
 polymer-diluent mixtures, melting 8=4642
 polymers, glass transition 8=8359
 polymers, influence on crystallinity 8=4774
 powders, preparation of samples for melting point determ. 8=8172
 radiolysis of liquids 8=14444
 reactions in solutions 8=14356
 semiconductors, changes in cryst. and electron struct. 8=4699
 shock-velocity-particle-velocity relationship in study of solids under pressure 8=8787
 silicate-water system, melting, hydrothermal curves 8=21752
 solids, mech. props. 8=8796
 solid-state physics research tool 8=10463
 static, demountable, low temp. seal 8=14910
 on stress/strain relns. of mats in mech. props. 8=13502
 surface press. generated by pistons on spherical and cylindrical baffles 8=6134
 ultrasonic press. gauge to 20 kbar for solid rods 8=19341
 vapour-liquid equilibria 8=16939
 vessel flush nozzles, stress analysis 8=10557
 AgI, ionic diffusion 8=1907
 Al, thermoelectric power and elec. resist. 8=13902
 Ar, heats of fusion and random close packing 8=8181
 Ar, shock compression, Thomas-Fermi-Dirac theory 8=16994
 Au, thermoelectric power and elec. resist. 8=13902
 B, polycryst., on thermopower and resist. at 25 to 300°C 8=18210
 B₂O₃ glass, permanent densification by hydrostatic press. 8=22314
 Ba I-II transition, pressure determ. with single-piston apparatus 8=4702
 C₂ClF₅-He mixtures, microwave absorption 8=7936
 Cr, spin density wave studies by n-diff., high pressure effects 8=22876
 CrO₂ reduction from CrO₃, under high press. and temp. 8=9674
 Fe ionic cpds., Mössbauer effect 8=4674
 FeO, synthesis of stoichiometric cpd. 8=13259
 FeS₂, effect of press. on Mössbauer resonance 8=1652
 p-GaSb, Hall coeff. and conductivity, pressure dependence at diff. temps. 8=13804
 H₂ cell, Raman emission at $8.84\mu\text{m}$ 8=15484
 He gas, viscosity 8=4493
 He-N₂ gas mixtures, viscosity 8=4493
 In, superconducting critical fields, up to 30 k atm 8=5212
 InSb, on Hall coeff. and conductivity 8=13819
 KCl solns., elec. cond. 8=12922
 KH₂PO₄, ferroelec., transition temps. shifts by hydrostatic press 8=18189

High-pressure phenomena and effects—contd

- K₂Fe(CN)₆, Mössbauer effect 8=4673
 K₄Fe(CN)₆, Mössbauer effect 8=4673
 K₄[Fe(CN)₆]₃, Mössbauer effect 8=4673
 LiBO₂, prep. of β and γ forms 8=8269
 LiF, effect of hydrostatic pressure on dislocation mobility 8=1976
 Li₂SO₄·H₂O, incongruent melting and polymorphism 8=12970
 MnP, Curie point and anisotropy energy decrease under hydrostatic pressure 8=2328
 MnT'O₃, (T' = Ho, Er, Tm, Yb, Lu), hexagonal, transform. to perovskite form 8=17089
 N₂ gas, viscosity 8=4493
 Na borate glasses, ht. of soln., density and refractive index changes up to 40 kbar 8=1715
 Nb, superconducting, influence on transition temp. 8=9060
 Ni, thermoelectric power 8=13902
 NiS, on mag. and elec. transition pt. 8=22885
 PbCrO₄, synthesis 8=23110
 Pt, thermoelectric power 8=13902
 Re, superconductivity, transition temp. var. 8=17972
 Re—Os alloys, superconductivity, transition temp. var. 8=17972
 Sn, superconducting critical fields, up to 30 k atm 8=5212
 Sn₂Te₂, about 840°C and 12.0 kb, liquid and two solid polymorphs. 8=1614
 Ta, superconducting, influence on transition temp. 8=9060
 Te, liquid, elec. cond. meas. 8=1588
 TiO₂, II modification at 40–120 kbar and 400–1500°C 8=17104
 V, superconducting, influence on transition temp. 8=9060
 Zn₂GeO₄, phase transformations 8=13075
 Zn₂SiO₄, phase transformations 8=13075

High-speed photography. See Cinematography; Photography/
high-speed.

High-temperature production and effects

- Alnico alloys, magnetization obs. 8=22813
 in cold gas 8=2274
 conductance of aqueous solns., meas. cell., 1–3000b and 25–225°C 8=14424
 laser beam, focused on solids, heating and evaporation effects 8=15130
 plasma, shock wave generation for nuclear fusion 8=7798
 polymeric and refractory heat shield materials, ablation obs. 8=1860
 on quartz spoon gauges 8=5990
 solar concentrators, use of polyurethane foam in construction 8=19677
 solar energy receivers, cylindrical cavity, optimal dimensions 8=19676
 solar furnace of polyethylene terephthalate film 8=19675
 solar stills, aerodynamic coeffs. rel. to leakage of steam-air mixture 8=19678
 solar still, effect of leakage on performance under thermal head 8=19679
 vacuum film solar concentrator, proposed long-focus type 8=19674
 Fe, alloys, levitation apparatus for phase equilibria 8=1669
 Fe—Al alloys, oxidation after storage 8=9666
 In, creep, pressure dependence 8=8852
 UC, oxidation behaviour obs. 8=23115
 UO₂·Dy₂O₃ dispersion, behaviour in steep temp. grad. 8=4694
 UO₂·Eu₂O₃ dispersion, behaviour in steep temp. grad. 8=4694
 UO₂·Sm₂O₃ dispersion, behaviour in steep temp. grad. 8=4694

High voltage production

- accelerators, linear, compressed gas insulation and other improvements 8=15652
 d. c. power supply of shielded design 8=15185
 d. c. power supplies, small, improvements 8=15186
 electrical feedthrough, compact 60 kV UHV, construction 8=3140
 for electron beam machine 8=15290
 1250 kW thyristor converter plant as power source for CERN-MeV synchrocyclotron 8=15663
 particle accelerators, principles 8=6689
 pulse rate generator exponential, associated with reactor 8=3144
 progress in nuclear physics, book IX 8=15627
 pulses, by three-electrode spark gap 8=7680
 ultrastable source to 10 kV, using capacitive feedback 8=3146
 Van de Graaff accelerator, 3 MV, square and sine wave modulation of beam 8=19713
 van de Graaff method, development and application 8=11341
 voltage meas. using Kerr effect 8=6564

History

- acceleration due to gravity, Poland, determ. 8=14515
 auroral exceptional periods 8=23336
 Burrau three-body problem, historical review and soln. 8=19100
 crystallography achievements in USSR, 1917–1967 8=2874
 earth, thermal 8=9772
 Ising–Lenz model solns. and appls., review 8=10612
 Kepler and Tycho on lunar theory 8=14821
 "non-mathematical theoretical physics" 8=10467
 origin of word "plasma" as applied to gaseous electronics 8=12457

History—contd

plasma, survey of concept 8=1375

Hodoscopes. See Cosmic rays/apparatus; Particle detectors.

Hole theory of liquids. See Liquids/theory.

Holes. See Crystal electron states; Semiconducting materials; Semiconductors.

Holmium

- absorption spectrum, 3mm microwave radn., mag. structures effects 8=14226
 deformation planes after dehydrogenation and hydride habit planes 8=8728
 microwave absorption phenomena at 9.44 and 35.3 Gc/s, 10–290°K 8=14269
 neutron diffraction study under high pressure, helical periodicity 8=14040
 vapour pressure 8=16950
 Ho-doped crystals, infrared quantum counter action of Ho³⁺ 8=18606
 Ho²⁺, e.p.r. of CaF₂, stress effects 8=14128

Holmium compounds

- holmium ethyl sulphate, far-infrared high resolution, spectroscopy on e.p.r. lines 8=14110
 HoAl₃, nuclear magnetic resonance 8=22920
 Ho₂C, mag. structure by n-diffr. 8=22865

Holography

- acoustic, with inclined planar reference 8=10744
 acoustic, recording technique 8=6176
 advanced optical techniques, book 8=15489
 aerodynamic flow visualization 8=6572
 antenna polar diagram, Fresnel zone field meas. 8=19900
 antennas and propagation conference, Ann Arbor 1967 8=15401
 birefringent beam splitter 8=3379
 bubble chamber track holograms 8=6567
 coherent optical systems, improvement of two-dimensional image quality 8=11132
 cylindrical, construction and appl. 8=11206
 diffuse object, noise-like structure 8=12127
 by division of amplitude 8=528
 double exposure interferometric, theory and expt. 8=20114
 double exposure, white-light interference-pattern reconstruction 8=15557
 dynamical X-ray diffraction theory application 8=530
 electron, ion and laser beams technology, conference, Berkeley, USA (1967) 8=15283
 film nonlinearities effects, extension 8=20112
 for filtering spatial frequencies in incoherent light 8=20111
 focused-image-hologram copying with white light 8=20121
 gas laser light sources 8=15559
 glass, photochromic, information storage capacity meas. 8=6570
 gratings, six types, response and efficiency 8=20122
 ground tests 8=521
 hologram aberrations, evaluation by ray tracing 8=11216
 holograms, binary Fraunhofer, computer generation and reconstruction 8=6576
 holograms, coded multiple exposure 8=20117
 holograms, construction with direct reference beams 8=3381
 hologram copying by Gabor holography, analysis 8=6575
 holograms with increased range coverage 8=11211
 holograms, inexpensive method 8=6569
 holograms, instant, prep. and characteristics 8=11208
 hologram, laser reconstruction of image 8=524
 hologram-Moire interferometry for transparent objects 8=522
 holograms, point, as optical elements 8=6568
 hologram, pulsed formation of diffusely reflecting systems 8=527
 holograms, quantity reproduction process 8=11209
 hologram reconstruction, influence of emulsion thickness and absorption 8=15556
 hologram, resolving power, calculation by Abbe and Airy methods 8=15561
 hologram rotation for image scanning 8=523
 holograms synthesized on cathode-ray tube 8=11207
 holograms, training bleach bath, variation of method 8=20119
 holographic fringes, stabilization by f. m. feed-back 8=20116
 holographic interferometry appl. to plasma meas. 8=7779
 holographic stereogram from sequential component photographs 8=15555
 holomicrography, image transformation during reconstruction 8=525
 image separation increase by total reflection 8=11210
 image systems, real and virtual 8=520
 interference, isophase surfaces 8=20113
 interferogram for conical flow studies, refined analysis 8=6565
 interferograms as image holograms 8=15554
 interferometer, 3-beam with single emulsion exposure 8=6541
 interferometric, ghost lines 8=3380
 introduction, undergraduate level 8=11213
 laser application, review 8=6479

Holography—contd

- lens, imaging analogy and formulae appls. 8=20105
 light sources, mutually coherent, interference paradox 8=6546
 light yield and signal/noise ratio 8=20108
 measurement of transfer function of an objective 8=15514
 microwave 8=20109
 microwave, and optical reconstruction 8=11214
 moving objects, using front-illum. of pulsed laser 8=11218
 multiple freq. wavefront recording 8=15558
 nonpseudoscopic real image from holograms, technique 8=6577
 phase objects, three-dimensional, scope and limitations 8=15560
 phase structures, interferometric meas. 8=15553
 photographic film non-linearities, effects 8=6574
 photographic material resolution limit 8=15552
 principles and practical requirements 8=20106
 progress in optics, book VI 8=15541
 pulsed laser holograms, resolution 8=20110
 pulsed, and microscopy, interferometry and dynamic recording appls. 8=20107
 recording on 3-dimens. media, theory and reconstruction 8=20120
 review of progress 8=11119
 sampled wavefront scatt. from laser illuminated object 8=20115
 spatial coherence, influence on holographic processes 8=11215
 spatial filters for image restoration and code translation 8=519
 techniques, limitations, theory 8=6566
 with total internally reflected light 8=3378
 two hologram-copying parameters, effect 8=11212
 ultrasonic, by electronic scanning of piezo-electric crystal 8=19580
 ultrasonic, recording technique 8=6176
 velocity meas. of steady fields 8=15562
 wavefront reconstruction by hologram transmitted on closed circuit television system 8=6573
 X-ray, Fresnel-zone lenses appls. 8=15591
 X-ray microscopy with Fourier-transform holograms, high resolution attainment 8=15592
 CaF_2 photochromic crystals, thick hologram storage 8=20118
 SrTiO_3 photochromic crystals, thick hologram storage 8=20118

Hot-atom chemistry. See Chemical analysis/radioactive; Nuclear reactions/chemical effects; Radiochemistry.

Hubble model. See Cosmology.

Hugoniot diagrams. See Equations of state.

Humidity

See also Atmosphere/humidity; Hygrometers; Moisture.

- air, effect on electric breakdown 8=12691
 control system for small chamber 8=16645
 distributed parameter nonadiabatic heat and mass transfer, thermal dynamics 8=12976
 hygrometer, frost point, sensing element with fast response 8=9838
 measurement by slowing down of high-speed neutrons 8=9839
 sound absorpt. in the atmosphere, pressure depend. obs. 8=23268
 Al alloy, rel. to surface bubble formation during fatigue 8=4729
 rel. to Pu oxidation rate in air 8=5717

Hydrodynamics

- See also Flow/liquids; Jets; Liquid oscillations; Liquid waves; Magnetohydrodynamics; Viscosity/liquids.
 aerosol particles in sound field under Oseen flow, interaction calc. 8=21731
 Boltzmann eqn., linear, soln. for flow over point source 8=7875
 boundary layer at a disc in transverse air flow 8=4449
 cavitation, gas diffusion, into void 8=4497
 circular Couette flow, problem of Taylor instability, suppression of effect of geometry 8=21425
 compressible fluid flow in wake of symmetrically positioned body 8=7862
 continuous medium, space and time dependent correlation fluctuations 8=6103
 critical mixtures, equations for nonlinear effects in shear viscosity 8=8163
 Crocco-Vazsonyi relativistic eqn. for ideal fluids 8=1442
 crystals, liquid, nematic type, linear theory 8=8007
 cylindrical shell containing flowing fluid 8=152
 differential equations, nonlinear, solution 8=12584
 elastico-viscous fluid, drag on oscill. sphere 8=21557
 electron gas, equations 8=131
 electron gas, non-uniform, relativistic, kinetic equations 8=132
 equations, microphysical derivation 8=12726
 explosive detonation, theory 8=6146
 flow, discontinuous one dimensional non-dissipative 8=15375
 flow, laminar incompressible viscous, nonlinear stability theory 8=12586
 flow in rotating and stratified fluids 8=21427

Hydrodynamics—contd

- fluidic amplifier, improved sensitivity 8=4427
 fluid flow through porous media, numerical simulation 8=12594
 fluid shear flow, turbulent, waveguide model 8=12598
 gas jet impinging on liq. surface 8=12728
 Hamilton-Jacobi eqn. for charged relativistic fluid in e. m. and gravit. fields 8=16634
 Hamilton's principle, Noether's theorems appl. 8=12583
 high pressure gas, sphere, expansion in porous medium 8=1439
 jet oscillation in the presence of a separator 8=16780
 laminar flow development in rectangular ducts 8=4451
 laminar source flow between 2 parallel co-axial discs rotating at different velocities 8=21426
 liquid-gas media dynamics under zero-gravity, surface effects 8=4506
 liquid sphere, influenced only by gravity, frequency spectrum 8=4504
 local potential of fluctuations, variational properties 8=1440
 MHD pipes, hydraulic resistance 8=15385
 motion of gas behind diverging detonation wave 8=4461
 Navier-Stokes eqns. for dissipation processes 8=7859
 Navier-Stokes equations, non-stationary, new finite-difference scheme 8=21558
 non-linear problems in fluid mechanics, Newton's approximation application 8=12721
 non-Newtonian fluids, natural convection flow, boundary layer equation solution 8=7857
 non-Newtonian fluid, rotational motion through annulus with porous walls 8=21433
 oscillations of viscoelastic fluids 8=7861
 particle aggregation, in sound field 8=6156
 particle movement in a viscous irregularly moving medium 8=7853
 perfect fluid, rotation of heavy smooth object 8=12729
 pipe flow, effect of vibrations rel. to laminar and turbulent transition regimes 8=1501
 pipeline flow of capsules, velocity and press. gradient 8=7972
 plasma, laser-produced in vacuum chamber, coding by expansion, obs. 8=4322
 Poiseuille flow in parallel channel, with variable fluid props. 8=21472
 Poiseuille flow, stability and incipient turbulence, study by difference method 8=12722
 polymer solutions, effects on quasi-elastic scattering 8=4542
 polymer solns., influence of intermol. interaction on viscosity and streaming birefringence 8=4505
 porous column dispersion, for small linear porosity var. of with distance 8=1441
 rotating liquid with free cylindrical surface, stability to small inviscid disturbances 8=1505
 rotating and stratified non-rotating fluids, analogous behaviour 8=1445
 shock waves in fluid with steady uniform flow 8=21447
 silicone oil heated under constant temp. air surface 8=1504
 similarity method using governing eqns., boundary condns. and dimensional analysis 8=16620
 sound wave absorption by forced alternating viscous fluid flow 8=3058
 sphere, charged, moving in polarizable liquid, Stoke's law correction 8=12723
 spherical waves, radiated in fluid, finite amplitude 8=19516
 stability, spectrum of operator 8=1443
 stellar, gaseous, mass, inhomogeneous, convective instability, model 8=2794
 Stokes resistance, translation and rotation, boundary effect 8=1444
 stratified fluid, spin-up 8=7855
 swimming, doubly infinite and flexible sheet 8=16752
 thin films, behaviour in transient state 8=16783
 Tietjens function, numerical evaluation 8=21420
 time-dependent motion due to cylinder moving in unbounded rotating or stratified fluid 8=7856
 trapezoidal models, lift and drag coefficients 8=7858
 two-phase flows in vertical tubes 8=21560
 underwater explosion, phase shift due to total internal reflection 8=19547
 underwater explosions, π/λ phase shift at caustics 8=19546
 variational principle for hydromagnetic flows 8=15374
 viscoelastic Maxwell fluids, contained between concentric spheres, motion 8=21421
 viscous flow in a tube, constant temp. 8=12734
 viscous fluid, initially prescribed surface normal velocity 8=7854
 water, corona discharge characts. 8=21250
 wave pattern, 2D, produced by disturbance moving in density stratified liquid 8=4514
 wedge in viscous fluid, impulsive motion 8=16619
 He II, rotating, interaction of quantized vortex and lines 8=10804
 He II, rotating, superfluid velocity rel. to temp. 8=6231
 He II, superfluid in rotating annular channel 8=10809

Hydrogen

See also Deuterium; Protons and antiprotons; Tritium.
 accommodation coeff. in impact on Al, Ag, Au and Pt, 500-12 000 eV 8=12685

Hydrogen—contd

adhesion coefficients at 4.2° and 20°K 8=7954
 adsorption with CO on Rh electrodes 8=18727
 adsorption on Ni surfaces, electron probe surface mass spectrometer obs. 8=21908
 adsorption on Ta ribbon, work function changes 8=9276
 auroral arc, Balmer α emission rel. to incident H flux obs. 8=2636
 beam-plasma systems, beam generated, interacting components 8=21289
 bond, nature of, and water structure 8=4529
 bonding in solns., n. m. r. obs. 8=16883
 bubble chamber, sealing of glass illuminators using pneumatic packing 8=15645
 bubble tech. for flow visualization and vel. of H₂O in clear tubes 8=16756
 chemisorption on Re 8=23126
 combination with D₂, gas torque effect on heated cylinder 8=1320
 crystal-structure changes during transitions in ortho- and para-states, X-ray exam. 8=13263
 desorbed from Ti anode, discharge 8=21227
 desorption from Ni polycrystals 8=17170
 diffusion in fused SiO₂; Tb, Eu 8=17585
 diffusion in α -Pd-H, study by n-scatt. 8=17581
 diffusion in Pd and Pd alloys, at 0° to 100°C 8=17582-3
 discharge lamp, constant-current power supply 8=19714
 discharge in spark channel, voltage drop, expansion rates etc. 8=12410
 dissolved in α -Zr, equilib. press. 8=8251
 dissolved in water, molec. diffusion coeffs. 8=12828
 electromigration in Fe 8=8677
 electron microscope investigation of condensed H₂ 8=8465
 electron transport coeff. 8=21521
 estimation, in solid and liquid samples, by neutron thermalisation 8=23197
 flames, chemiluminesc., effects of SO₂ 8=18693
 flame, O, H kinetic calc. 8=9699
 flash lamp pressure and voltage gradient effects 8=15522
 galaxy M33, H II, kinematical and physical data from interferometric obs. 8=23568
 gas, high pressure synthesis of glass rel. to suppression of irradiation effects 8=4996
 gas, Is diagram, 16°-100°K, up to 500 kg/cm² 8=7915
 gas, rotational relaxation, high temp. u. s. obs. 8=1251
 ground-state dissoc. energy, theory and expt. 8=16364
 heat transfer props. in reduced gravity 8=16692
 high-pressure cell, Raman emission at 8.84 μ m 8=15484
 high-pressure glass synthesis, irradiation desensitization 8=8353
 ignition, slot-injected in supersonic air stream 8=15112
 interstellar distribution, 21 cm obs. with 300 foot telescope 8=23565
 interstellar H II, r. f. line, emission enhancement by departures from thermal equil. 8=23567
 interstellar neutral regions, i. r. emission and m. h. d. shock waves 8=23566
 interstellar, formed by chemical-exchange reaction, upper limit on abundance 8=5926
 interstellar, radial motion within the Galaxy 8=10243
 intramolecular bridging bond, pot. 8=7497
 ionized partly, viscosity obs. 8=12701
 isotope mixtures, thermal diffusion props 8=1492
 jet, supersonic and dense, as charge exchange target 8=21451
 lamp, spectrum, 2500-1100 Å, intensity distrib. 8=4065
 laser action in electrical discharge containing H 8=12398
 lines, broadening by Stark effect 8=1159
 liquid-solid mixtures, quality determ. 8=15138
 liquid-solid rocket fuel mixture obs. 8=19067
 liquid, thin walled nuclear bombard. target, description 8=15838
 magnetic drift vel. and deflection coeff. for slow electrons 8=7712
 mixtures in He and Ne, striations in glow discharge 8=7657
 multiphoton ionization of atom 8=12440
 nebulae vels. $n_{105} \rightarrow n_{104}$ line intensity and width obs. 8=10233
 neutral, galactic, detection, and model profiles investigated 8=5934
 neutron activation analysis determ. 8=2553
 ohmic heating discharges, in C-stellarator, computer description 8=21407
 ortho, solid, self-consistent model, Pca2, ordering 8=17375
 orthohydrogen, solid, orientational ordering, h. c. p. molecular lattice 8=22026
 para, fluid, eqn. of state 8=4525
 para-H₂, solid, deformation curves at 4.2°K, mech. constants 8=5074
 parahydrogen, ht. of fusion and density at up to 400 atmos. 8=16928
 permeation rate in W, pressure, thickness and temp. dependence 8=4958
 permeation through Ni, kinetics 8=8682
 planetary nebulae model, ionization balance rel. to Lyman continuum problem 8=19190
 plasma of d. c. discharge positive column, cross wave of moving striations 8=4281

Hydrogen—contd

plasma, laser-produced, temp. and density meas. rel. to absorpt. at laser freq. 8=12514
 plasma, pulsed relaxation 8=4410
 plasma, in shock tube, elec. props. and Cu cold electrodes V-I characts. 8=21359
 profiles of H lines of peculiar stars α^2 CVn and γ Lyr, anal. 8=19146
 pumping speed-press. data, getter-ion pump 8=1495
 quark-atom lines in solar spectrum 8=6718
 quasi-molecular absorpt. in metal-deficient subdwarfs, calc., 0.2-0.45 μ 8=23528
 radiation belts, interaction with charged particles and subsequent Lyman α emission 8=18963
 reaction with O(D) 8=5744
 recombination lines 158 α in galactic H II regions 8=5930
 recombination system of H₂-O₂-gases in BER reactor 8=4014
 residual, effect on BaO cathode emission 8=18663
 residual, pressure obs. in picture c. r. t. 8=15325
 shock wave thickness 8=16646
 slush, liquid-level sensor, superconducting 8=16929
 solar Ly- α and - β line intensities rel. to emitting layers e temp. and density 8=10390
 solid and liquid, Raman spectra, intensity anomaly 8=9536
 solid H₂, n. m. r. data, correl. time for mol. rot. 8=14141
 solid, ortho, quadrupole-quadrupole interaction and λ transition 8=8267
 solid, pressure changes on phase transitions 8=4711
 solid, Raman effect intensity anomalies 8=6523
 solid, Raman spectra anomalies rel. to mol. vibrations 8=9535
 solid, statistical model applied to n. m. r. 8=22923
 solubility in hydride phase of Pd, V, Nb and Ta, isotherm 8=1924
 solubility in liq. Ag 8=21617
 solution in liq. Ar, translational absorpt. spectrum in far i. r. 8=12889
 solubility in solid Ni-Cu alloys 8=21826
 spectral-isotopic definition in high-sorption metals 8=9743
 stellar atmosphere, theoretical study 8=2773
 stellar clusters H₂ index rel. to distance moduli and distances, photo-elec. obs. 8=10207
 stellar, mixing by He-shell flashes, calc. 8=10145
 stimulated emission in beam laser, line shape and width obs. 8=421
 target nucleus, thermonuclear reaction rates 8=11976
 terminal solubility and partitioning in α -Zr, Zircaloy-2 and Zircaloy-4 8=8249
 terminal solubility in Zircaloy-2 and Zr-2.5wt%Nb, thermal diffusion obs. 8=8250
 third virial coeff., and for nonpolar mixtures 8=12677
 in variable star α Lupi, spectroscopic obs. 8=10182
 viscosity, effect of organic vapour molecules, for determ. of mol. dimens. 8=1485
 rel. to Ag surface struct., catalytic oxidation effects, obs. 8=18706
 D content, neutron spectrometry 8=9765
 in Fe, anomalous behaviour at low temps. 8=22182
 H-bond stretching freq., effect of bond strength 8=21141
 H α line in aurora, variation in width over 1 hour 8=14650
 H α emission in galaxy with 1967 supernova in NGC 3389 8=14781
 H γ , Stark broadening in plasma column 8=4063
 HD, liquid, n. m. r. proton transitions 8=8133
 H-e exchange scattering amplitudes 8=12090
 H-line Stark broadening functions 8=12051
 H-H system, 2nd virial coefficient for different electron states at 2000-6000°K 8=1469
 H I clouds, high velocity, search for interstellar Ca II and Na I lines near 8=5880
 o-H₂ prep. by preferential adsorption 8=17158
 H₂ sorption, Bayard-Alpert gauge modification 8=16732
 H β , Larmor freq. rel. to Ge¹³, and K⁴¹ 8=5558
 Mo tip, absorption, field emission study 8=21905
 in Na-K reactor coolants, effect on efficiency of coolant, corrosion act. and residual radioact. 8=7328
 Ne-H bubble chamber, cryogenic 8=20224
 Ni-Cr film sputtering control 8=8777
 Ni-Cu, effect of cathodic hydrogen loading on ferromag. resist. anomaly 8=14023
 in Pd-H, α -phase, diffusion, by small energy transfer neutron scattering 8=13411
 U, surface potential of H₂ 8=21909
 in ZnO:Zn, ions energy losses obs. 8=18624

ions

collision cross-sections determ. by ion cyclotron reson. 8=12442
 e partition function from screened Coulomb interactions 8=1157
 e-H compound states, 5 parameter wave function for lowest two 8=20997
 ions, 0.2-40 keV, deceleration in Ag foil 8=2020
 plasma, heating by large amp. ion cyclotron wave, efficiency 8=4332
 plasma, internal energy of free p and e, calc. 8=12469
 plasma in mirror machine cyclotron resonance and nonadiabatic trapping 8=21370

Hydrogen—contd
ions—contd

- solvation by H_2O mols. in gas phase, kinetics and thermodynamics 8=18661
- H II regions in anticentre region, electron temp. determ. by radio obs. 8=19199
- p-H collision, charge transfer, 1D model 8=20152
- H^+ , absorption coeff., from numerical soln. of Schrödinger eqn. 8=7382
- H^+ , hyperpolarizability calc. 8=20942
- H_1^+ , D_1^+ and T_1^+ ion injector, for charge-exchange generator 8=7713
- H^+ ion source, polarization increase 8=10915
- H^+ , photoabsorption coeff. in u.v., study of resonance near $n = 2$ level 8=7444
- H_2^+ source, duoplasmatron 8=15339
- H^+ -H collision, 2-60 keV ionization and e capture obs. 8=21007
- H^+ -H interaction pot. rel. to H_2 mol. 8=21075
- H_2^+ , Hartree-Fock and correl. energies 8=12197
- H^+ cation, in Antarctic atmosphere 8=23264
- H^+ , H_2^+ charge exchange in atmospheric gases, 40-1500 eV 8=21275
- H^+ , critical angles for channeling in thin Au films 8=17704
- $^1H^+$ in Ge, channelling props., diff. calc. 8=13485
- H^+ to H^+ charge exchange in K and Cs vapour 8=12441
- H^+ on Kr scattering, charge transfer 8=1203
- H^+ -rare gas collision, polarization of Lyman- α radiation 8=21004
- H^+ -H(1s) elastic and resonant exchange collisions, nuclear symmetry 8=12106
- $H^+ + N(O) \rightarrow H + N^+(O^+)$, classical calc. Bates-Mapleton theory 8=7461
- H_2^+ , accurate wavefunction, James function as approx. to Guillemin and Zener 8=1249
- H_2^+ chemical reactions with He, cross sections 8=14348
- H_2^+ , collision-induced excitation, angular dependence 8=1362
- H_2^+ , cross-sections for photo-dissociation 8=21188
- H_2^+ , electron collisions, proton production cross section meas. 8=7519
- H_2^+ , e-energy, linear eqn. computation method 8=1248
- H_2^+ , ground state, variational function 8=7518
- H_2^+ , improved Gaussian wavefunctions 8=21080
- H_2^+ , interaction energy 8=12370
- H_2^+ , one-centre perturbation calc. 8=4138
- H_2^+ , passage through $N_2 + He$ mixture, N_2^+ vibration and rotation 8=4156
- H_2^+ polarizability, longit. and transverse, variational calc. 8=1254
- H_2^+ , by proton collision, electron capture probability 8=1199
- H_2^+ , 2p σ state, variational function 8=21078
- H_2^+ , 3d δ_5 and 4f δ_5 states, approx. MO's 8=1244
- H_2^+ wave function and electronic terms for large H-H distances 8=1255
- H_2^+ , vibrational excitation effect on dissociation under e and p impact 8=21076
- H_2^+ , Zeeman sublevels, g-factor ratios, h.f.s. spectrum in 20 cm region 8=12195
- H_2^+ - H_2 , He, Ar, Ne, N_2 collisions, 20-120 keV, cross-section for prod. of H atom in 3s state 8=21191
- H_2^+ - H_2 , He, Ar, Ne collisions 100 KeV, cross-section for prod. of H atom in 3s state 8=21191
- $He^{2+} \rightarrow He^+ + H^+$, e capture probability calc. 8=1192
- ZnS:Ag film, energy loss in passing through 8=8758

neutral atoms

- α -particle capture of electrons in H_2 , collision process 8=12101
- atom in 1s state, e-impact ionization cross-section obs. 8=21273
- atomic beam, photoionization 8=21020
- atomic beam, prod. by thermal dissociation, dissociation temp. var. 8=7474
- atoms, collisions, excitation of fine-structure levels 8=1193
- atom, and Coulomb potential energy of two charges 8=7378
- atoms, discrete spectrum and radiodiapason obs. 8=7377
- atoms—fast H^+ and He^+ collision processes rel. to astrophysics 8=16230
- atomic interactions, hyperfine splitting of energy 8=12105
- atoms, line broadening, electron concentration meas. 8=4062
- atom position in $BaAl_2Si_2O_{10} \cdot 4H_2O$ 8=18456
- atomic-stopping cross section in Al 8=2022
- Balmer- α line excitation by electron impact, cross section and polarization meas. 8=20979
- Balmer series emission, auroral zones 8=18946
- beam detector, ZnO crystal, change in surface conductivity 8=7475
- coherent, elastic scatt. of photons 8=7379
- elastic resonance in electron scattering 8=16222
- e capture by μ^+ , cross section calc. using Born approx. 8=7481
- e and p scatt. simplified second Born approx. 8=20996
- e + H, collision, polarization of Lyman-alpha radiation produced 8=12096
- e^+ impact, formation of positronium 8=12095
- electron scattering, correlation method analysis 8=7441
- electron scattering, effect resonances on excitation 8=7443

Hydrogen—contd**neutral atoms—contd**

- electron scattering, excitation to $n = 2$ level, theory and expt. 8=7442
- electron scattering, low-energy, expansion approach 8=20994
- electron scattering, six-state close-coupling at low energy 8=7440
- e scattering theory using Hulthén, Kohn and Malik variational methods 8=7448
- e. s. r. transitions involving changes in spin states of up to 3 neighbouring protons 8=16227
- energy of interact. in ground-state, by Gaussian-type functions 8=1198
- $F = 1$ level of ground state, relax., appl. to H maser 8=12049
- frequency standard, comp. with Cs for average freq. and freq. stability 8=10483
- Gaussian wavefunctions, improved 8=21080
- Green function 8=4035
- ground state, differential polarizability 8=12048
- hydrated, bimolecular rate constants in aqueous solns. 8=2510
- hypervirial operators 8=3408
- interaction with radiation field, Coulomb-Green's function calc. 8=12047
- ionization by e impact, asymptotic form of wave function 8=16443
- ionization, by passage through hot-cathode discharge 8=21274
- ionization recombinations and wall effects 8=1363
- maser, dynamic behaviour near equilib. osc. level 8=19919
- model for diatomic mol. rel. to auto-ionization 8=21034
- one-centre perturbation calc. 8=4138
- oscillator strength sum rules, 2 1 -pole, recurrence formula derivation 8=7380
- photon elastic scattering, evaluation of Kramers-Heisenberg matrix element 8=16221
- photon scatt. analytic expression and numerical computation 8=1196
- polarized, for prod. of polarized e beam by spin exchange 8=15304
- polarized source, atomic conc. from H_2 dissociation in h.f. discharge 8=21018
- positronium formation from positron cross-section calc. 8=1195
- positronium formation in e^+ -H collisions, cross-section calc. 8=16223
- positrons, elastic scatt. 8=20995
- p e capture on He, Ar, Ne, N_2 , H_2 , O_2 with 3s, 4s states obs. 8=7462
- p-H collision, charge transfer, 1D model 8=20152
- p polarized beam scatt., 300-700 MeV, polarization parameter 8=6927
- quantum theory, applic. of factorization theory with absence of Inonu-Wigner contraction 8=20145
- quantum theory, insertion of barrier and change of symm. 8=11371
- radius, mean square, expectation value, variational method 8=20146
- reaction with acetaldehyde 8=18668
- reaction with F^- ions, formation of hydrated electrons 8=18679
- reaction with O_2 8=5743
- reactions with simple hydrocarbons, e. s. r. study 8=14376
- recombination with O_2 in shock tube 8=14367
- resonance scatt. of light and level crossings 8=4064
- spin exchange cross-section in H-H collisions 8=21008
- surface density in interstellar clouds 8=23574
- 3s state prod. in H_2^+ , H_2^+ collisions with H_2 , He, Ar, Ne, N_2 8=21191
- trapped in irradiated frozen aq. solns. 8=18423
- two, long-range interact., appl. of electrostatic Hellman-Feynman theorem 8=1197
- two-photon absorpt. calc. 8=16286
- W Centauri and 47 Tucanae clusters, limits to content 8=23555
- Zeeman effect, Lamb shift and quantum electrodynamics 8=1158
- $H\alpha$ line profiles of β Doradus rel. to atmos. 8=10133
- H-C collisions, excitation of fine-structure levels 8=1193
- H-H collisions, e transfer and ionization cross-sections 1.25-117 KeV 8=21276
- H-H, H- H_2 collisions, ionization and e capture obs. 8=21007
- H-H Van der Waals interaction, self-consistent calc. 8=21002
- H-O collisions, excitation of fine-structure levels 8=1193
- H(1s)- H^+ elastic and resonant exchange collisions, nuclear symmetry 8=12106
- $H(1s) + He^{2+} \rightarrow He^+(1s) + H^+$, back-coupling and distortion 8=7466
- H^0 or H^+ + H^+ fluxes, 1-10 keV, an energy independent detector 8=7381
- N_2 -H collisions, optical emission rel. to Aurora 8=12212
- NH_3 gas radiolysis, effect of scavengers 8=23162

neutral molecules

- Born inelastic differential cross-sections 8=12191
- coherently vibrating molecule static field effect 8=16283

Hydrogen—contd

neutral molecules—contd

- collective states analogy with nuclear orthostates 8=20653
 collisions with inert gases, total scatt. cross-sections 8=7634
 dipole polarizability, refractive index, Rayleigh and Raman scattering calcs. 8=7517
 dissociation in h.f. discharge of polarized atom source 8=21018
 dissociative attachment of e, vibrational resonances obs. 8=21182
 electron collisions, Lyman- α prod. 8=12050
 electron scatt., low-energy elastic 8=7516
 e impact excitation cross-sections and dissociation 8=1241
 excitation of c^3H_2 states by trapped-electron method 8=16281
 excited states, Weinstein calcs. 8=16254
 formation in pre-galactic clouds 8=23483
 Gaussian wavefunctions, improved 8=21080
 i.r. absorpt. bands, press. induced, anal. of profiles 8=12188
 in interstellar clouds, reduced estimate 8=23577
 ionization by fission fragments, pair production energy 8=1361
 molecules vibr.-rotational spectrum for e ground state, VKB calc. 8=1246
 ortho, in solid para- H_2 , crystal-field splitting by n.m.r. obs. 8=13010
 positron cross-section for rotational excitation 8=12168
 perturbation-variation calc. 8=21079
 predissociation, absorption spectral evidence 8=12189
 production, ethylene radiolysis, as dosimeter 8=614
 p annihilation in H_2 and D_2 , rates rel. to initial state 8=20537
 quenching of $Hg^*(^3P_1)$ atoms, phase-space theory 8=14436
 Raman effect, stimulated, meas. in terms of laser oscillator and amplifier theories 8=21081
 Rydberg states 8=1250
 solid, ortho molecular rot. at 0°K 8=8233
 two-photon absorpt. calc. 8=16286
 H-H⁺ interaction pot. using isotope effect in dissociative attachment 8=21075
 H- H_2 collision, 2-60 keV ionization and e capture obs. 8=21007
 H₂-air system, free convection, heat transfer and diffusion 8=4491
 H₂ arc lamp for high intensity u.v. 8=6518
 H₂-CO₂ gas mixtures, thermal conductivity 8=4473
 H₂-CO₂ mixture, meas. of thermal-diffusion factors 8=1488
 H₂ + D₂ homogeneous reaction 8=5697
 H₂, dense gas and liquid states, thermal conductivity calc. 8=4476
 H₂ e-impact ionization spectrum, long autoionizing lifetime of some states 8=21272
 (H₂, D₂) exchange reaction, vib. versus translational energy importance 8=4257
 H₂, H₂-p, Balmer emission radiation 8=12190
 (H₂, H₂) exchange reaction, vib. versus translational energy importance 8=4257
 H₂-H₂ system, self-consistent group calc. 8=12372-3
 H₂-He mixture, composition-depend. of thermal-diffusion factor 8=1493
 H₂-He, thermal conductivity, normal composition variation 8=7924
 (p, H₂, He) system, translation-rotation energy transfer calc. 8=12374
 H₂ + HeH⁺, energy hypersurface, MO calc. 8=16285
 H₂ + I₂ reaction kinetics 8=5706-7
 H₂ + I₂ reaction paradox 8=23105
 H₂ in liq. Ar, induced rot-translation spectra 8=1564
 o-H₂, solid, orientational ordering of mols. in c.c.p. lattice 8=1793
 H₂ mol, B² Σ_u^+ state, Rydberg-Klein-Rees curve 8=1227
 H₂-N₂ gas mixtures, thermal conductivity 8=4473
 H₂-Ne liquid-vapour phase equilib., 26°-42.5°K, 10-25 atm. 8=16937
 H₂-O₂ combination at 325°C, Cu epitaxial film catalyst changes obs. 8=8318
 H₂ + O₂, slow reaction rate, computer calc. 8=18678
 H₂, potential energy curves calc. 8=12149
 H₂-p e capture excitation of 3s, 4s states of H 8=7462
 H₂-T₂ mixtures, equilibria and reaction rates 8=14448
 H₃, ground state calcs., and potential-energy surfaces 8=4130
 H₃, potential-energy surface 8=12193
 H₃ rainfall input to North Pacific rel. to water mixing time calc. 8=23247
 H₃ system, single-centre expansions 8=12192
 H₂⁺ + H₂ → H₃⁺ + H, cross-section obs. 0.1 ≤ W ≤ 10 eV 8=21192
 H₂ geometrics and binding energies 8=12194
 HD in liq. Ar, induced rot.-translation spectra 8=1564
 α -Ti(H₂D₂) system, thermodynamic props. 8=21858
 Xe-H₂ couples in binary mixtures, translation spectra 8=7425

Hydrogen compounds

See also Ice; Steam; Water.

- heavy hydrides, rot. energy levels of 1/2 states 8=1220
 hydrides, diatomic, charge distrib. and binding 8=7496
 hydrides, diatomic, Platt's model 8=4151
 metal carbonyl hydrides, Platt's model 8=4152

Hydrogen compounds—contd

- BD₄-like, electric field gradient calc. using one-centre expansion wave function 8=7513
 DBR, infrared laser transitions 8=6476
 DCl, far i.r. microwave absorpt. spectra 8=7523
 DCl, infrared laser transitions 8=6476
 DF, chemical laser, during flash photolysis of UF₆ with D 8=424
 D₂O as buffer for vibr. relaxation of CO₂ meas. with sound absorpt. and vel. 8=21071
 D₂O ice, O¹⁷ n.m.r. 8=18470
 D₂O isotopic shifts in uranyl salt 8=5641
 D₂O lasers, gas, far i.r., construction and characts. 8=425
 D₂O, press. broadening obs. using CN maser 8=21073
 D₂O in solid N₂, i.r. absorpt. spectrum 8=22977
 D₂O in soln., absolute i.r. intensities rel. to meas. in gas phase 8=1561
 D₂O, at 77°K, γ -irrad., e.s.r. of OD radical 8=9439
 DOCl, i.r. spectrum, rot. const. and geometry of mol. 8=21083
 D₂S, harmonic freqs., empirical estimation 8=21072
 D₂Se, harmonic freqs., empirical estimation 8=21072
 Er-H₂ system, phase analysis by X-ray exam. 8=17058
 H-foreign gas Van der Waals complexes bound states 8=6523
 H₂⁺, excited states, Weinstein calcs. 8=16254
 H₂, para, rotational h.f.s. 8=16284
 H₂, calc. using 1s Gaussian basis functions 8=16282
 HBr, far i.r. microwave absorpt. spectra 8=7523
 HBr, ferroelect. in solid lowest temp. phase, obs. 8=13889
 HBr, gaseous, spin-lattice relax. 8=12697
 HBr, infrared laser transitions 8=6476
 HBr, solid film at 80°K, u.v. absorpt. rel. to intermol. interactions 8=18510
 HBr, in solid N₂, i.r. absorpt. 8=9554
 H₂C₂, spectra and approx. to excited states 8=1213
 HCF, spectra and approx. to excited states 8=1213
 HCN, CW submillimeter laser lines, absolute freq. meas. 8=422
 HCN, excited state, effects of quasi-linearity 8=1243
 HCN laser, 337 μ harmonics mixed with 190 μ and 180 μ for i.r. lasers 8=19950
 HCN and DCN, microwave and i.r. spectra 8=7522
 H₂CO, spectra and approx. to excited states 8=1213
 HCl dimers, far i.r. spectra 8=18532
 HCl, infrared laser transitions 8=6476
 HCl, far i.r. microwave absorpt. spectra 8=7523
 HCl, ferroelect. in solid lowest temp. phase, obs. 8=13889
 HCl, gaseous, γ -irrad., ion lifetimes 8=23164
 HCl, gaseous, spin-lattice relax. 8=12697
 HCl impurity in ice, dielec. dispersion obs. 8=18188
 HCl, i.r. spectra in inert-gas matrix 8=9537
 HCl laser, electrically pulsed 8=20007
 HCl, pressure effect on rot. and vibr. spectra 8=21077
 HCl, rot. line strengths, by Fourier transform. 8=1253
 HCl, in solid N₂, i.r. absorpt. 8=9554
 HCl, vapour corrosion of mild steel 8=23103
 HCl-HCN, concurrent ion-molecule reactions with D₂ and CD₄ 8=4312
 HCl.2H₂O, crystal structure and H bonding 8=8504
 HCl.2H₂O and HCl.3H₂O, structure rel. to proton hydration 8=17196
 HCl.3H₂O, crystal structure and H bonding 8=8505
 HClO₄.2H₂O, structure rel. to proton hydration 8=17196
 HCo(CO)₄, metal-H bond distance, anal. from n.m.r. 8=5559
 HD, autoionization process, calc. using H atom model 8=21034
 HD solid with H₂ impurity, high proton spin polarization 8=1639
 HD-D₂ system, thermal diffusion factor 8=1494
 HF, chemical laser, during flash photolysis of UF₆ with H 8=424
 HF, correlation energy and molec. props. 8=1252
 HF impurity in ice, dielec. dispersion obs. 8=18188
 HF, labelled with F¹⁸, use of etches in study of fluoride chemisorption on Si and SiO₂ surfaces 8=18697
 HF, laser emission from rotational transitions 8=423
 HF, rotational spectrum, frequencies and linewidths 8=12198
 HF, single-centre LCAO SCF calc. 8=7524
 H₂F₃, structure 8=2425
 HI, gaseous, spin-lattice relax. 8=12697
 HMn(CO)₅, metal-H bond distance, anal. from n.m.r. 8=5559
 HNCO, matrix-isolated photolysis, spectra of NCO 8=16369
 H₂NH₂PO₃ films, i.r. absorpt in polarized light, 400-4000 cm⁻¹ rel. to internal vibrations 8=14224
 HNO, spectra and approx. to excited states 8=1213
 HO₂ destruction on various surfaces 8=18704
 HO₂⁺, dissociation lifetime 8=5743
 HO₂, e.s.r. in Ar at 4.2°K 8=18424
 H₂O, Brillouin shifts, temp. dependence, hypersonic velocity and compressibility deduction 8=1502
 H₂O molecule, one-electron props. 8=4148
 H₂O, spin-rotation constant 8=1242
 H₂O in soln., absolute i.r. intensities rel. to meas. in gas phase 8=1561

Hydrogen compounds—contd

- H_2O_2 , chemiluminescent reactions with H_2O_2 and fluorescent compounds 8=18685
 H_2O_2 , decomposition thermodynamics and kinetics 8=1466
 H_2O_2 destruction on various surfaces 8=18704
 H_2O_2 impurity in ice, dielec. dispersion obs. 8=18188
 H_2O_2 , reactions with electronneg. subs. aryl oxalates and fluorescent cpds. chemiluminescence 8=18672
 $H_9O_4^+$ group in polystyrene sulphuric acid film, i.r. spectroscopic investigation 8=4150
 $HOCl$, i.r. spectrum, rot. consts. and geometry of mol. 8=21083
 HPF_3 , n. m. r., sign of coupling consts. 8=4232
 H_2S , effect on contact resistance of Ag and Ag-alloy contacts 8=22512
 H_2Se , harmonic freqs., empirical estimation 8=21072
 H_2Se , sum rule analysis of interacting (2,0,0) and (1,0,1) states 8=12199
 $HSiF_3$, n. m. r., sign of coupling consts. 8=4232
 O_2 in H_2O_2 -urea addition compound, single crystal, γ -irradiated at 77°K, e.s.r. 8=2373

Hydrogen ion concentration. See Electrochemistry

Hydromagnetics. See Magnetohydrodynamics.

Hydrometry. See Flowmeters.

Hydrophones. See Acoustic transducers; Oceanography.

Hydrostatics

- liquid level, magnetostrictive sensing 8=10872
 magnetohydrostatic bearing, circular step, squeezing effects 8=16751
 non-Newtonian liquid, boundary layer 8=12720
 oscillations of buoyant disk, gravity wave damping 8=16770
 pressure deform. of Al circular foils 8=5044
 pressure to 60 kbar, technique 8=7971

Hygiene. See Medical science.

Hvgrometers.

- frost point, sensing element with fast response 8=9838
 BaF_2 film element, storage stability 8=18856

Hyperfine structure. See Paramagnetic resonance and relaxation; Spectra.

Hyperfragments. See Hypernuclei.

Hypernuclei

- decay rel. to non-leptonic 4-fermion hadron interactions 8=20400
 double and $\Lambda\Lambda$ interaction 8=20735
 hyperfragment decay, π -p-r rel. to Λ nuclear pot. well depth 8=11795
 light, binding energy determ. 8=20734
 light hyperfragments, non-mesic to π^- mesic ratio calc. 8=7115
 of Λ n instability 8=20733
 π^- decays, final state interaction effects 8=16008
 production in Σ^- capture by emulsion nuclei, model for 8=7218
 resulting from K^- interacts., binding energies 8=11794
 s-shell, Λ -N pot. 8=16009
 spallation, prod. by 6 GeV/c K^- on heavy emulsion 8=3949
 $\Lambda Be^0 \rightarrow \alpha + \alpha + p + \pi^-$ energy distribution calc. 8=949
 $\Lambda\Lambda Be^{11}$, calc. for 2π and K ranges of ΛN interaction 8=3849
 $\Lambda\Lambda He^3$, effect ΛNN force on binding energy 8=950
 $H_\Lambda^+ \rightarrow He^4 + e^+ + \nu_e$ 8=11796
 $H_\Lambda^+ \rightarrow He^4 + \mu^- + \bar{\nu}_\mu$, possible checking of V-A theory 8=11796
 ΛHe , non-mesonic- π -mesic decay ratios, obs. of K^- stars in nuclear emulsion 8=20736
 ΛHe^4 , non-mesonic and total decay rates obs. from K^- stars in emulsion stacks 8=20736
 ΛHe^5 , effect ΛNN force on binding energy 8=950
 ΛHe^5 non-mesonic- π -mesic decay ratios, obs. of K^- stars in nuclear emulsion 8=20736
 $\Lambda\Lambda He^6$, pot. yielding and binding energy 8=3847
 ΛHe^6 pot. yielding and binding energy 8=3847
 ΛLi^6 , existence rel. to charge symm. violation in Λ -N interaction 8=11793
 $\Lambda Li^8 \rightarrow \pi^- + p + p + He^4$ obs. in nuclear emulsion 8=3848

Hyperons

- hyperfragments produced by 800 MeV/c K^- 8=20817
 Λ binding energy in nuclear matter 8=3766
 Λ binding energy in nuclear matter 8=15857
 Λ , NAK coupling constant determ. 8=6891
 $\Lambda\pi$ and NK composite model of Σ 8=11633
 Λ polarization in $\pi^- + p \rightarrow \Lambda + K^0$ at 1.03 GeV/c and 1.06 GeV/c 8=6971
 Λ pot. central depth from $K^- + He^4 \rightarrow \Lambda^0 + p + d + \pi^-$ 8=20417
 Ω as bound state of ΞK , test of bootstrap theory 8=6978
 Σ , composite model as bound state of $\Lambda\pi$ and NK 8=11633
 Σ , $N\Xi K$ coupling constant determ. 8=6891
 Σ in p-p and π -p collisions, charge ratio 8=11524
 Σ pot. central depth from $K^- + He^4 \rightarrow \Lambda^0 + p + d + \pi^-$ 8=20417
 Ξ , Ω as bound state of ΞK 8=6978

absorption

No entries

capture

No entries

decay

- cosmic γ spectrum, effect on 8=23489
 4-body semileptonic by Cabibbo current, PCAC and soft π hypothesis 8=3727

Hyperons—contd**decay—contd**

- Λ decay, meas. of time-reversal parameter 8=6972
 $\Lambda \rightarrow N\pi$, amplitude derived in superconductivity model with $SU(3) \times SU(3)$ 8=11501
 $\Lambda \rightarrow p + \pi^0$ β parameter rel. to T-invariance 8=6971
 Λ^0 lifetime using $K^- + p \rightarrow \Lambda^0 + \pi^+ + \pi^-$ 8=20572
 mesonic, nonleptonic, s and p-waves 8=3728
 nonleptonic, current algebra anomalies 8=3729
 nonleptonic, model of T violation 8=6820
 nonleptonic, quark model, parity violation and conservation explained 8=3726
 non-leptonic, radiative corrections estimation 8=6976
 non-leptonic, review 8=857
 non-leptonic, $\Delta T = 1/2$ rule 8=11630
 nonleptonic $SU(3)$ Chew-Low static and bootstrap models 8=11629
 $\Omega \rightarrow \Lambda K$, ratio with $\Omega \rightarrow \Xi\pi$ calc. 8=20576
 $\Omega \rightarrow \Xi\pi$, ratio with $\Omega \rightarrow \Lambda K$ calc. 8=20576
 $\Omega^- \rightarrow B(\frac{1}{2}^- \text{ or } \frac{3}{2}^-) + M(0^-)$ using current algebra 8=20576
 $\Omega^- \rightarrow \Lambda + K$, $\Xi + \Pi$ ratio prediction 8=3726
 $\Omega^- \rightarrow \Lambda K$ obs. 8=15803
 $\Omega^- \rightarrow \Xi^- + 2\pi^0$, comparable with $\Omega^- \rightarrow \Xi^- + \pi$ 8=6979
 $\Omega^- \rightarrow \Xi^0 \pi^-$, $\Xi^- \pi^0$, $\Delta I = 1/2$ rule, rel. to $\Omega \rightarrow \Lambda K'/\Xi\pi$ ratio 8=20576
 P-wave in vector meson-dominance models 8=11632
 radiational, weak, and quark model 8=20571
 $\Sigma \rightarrow \Lambda$, non Hermitian weak hadronic current 8=860
 $\Sigma^- \rightarrow \pi^-$, zero asymm. rel. to $\pi^- p \rightarrow \Sigma^- K^+$, 1170 MeV/c 8=20449
 $\Sigma^- \rightarrow n + \pi^-$, parameters 8=861
 Σ^+ , experimental limit on $\Delta S = -\Delta Q$ leptonic decays 8=11634
 $\Sigma^- \rightarrow n\mu^+ \nu$, possible violation of $\Delta S = \Delta Q$ 8=20575
 $\Sigma^+ \rightarrow n\pi^+$, purely p wave 8=3728
 $\Sigma^+ \rightarrow n + \pi^+$ S-wave theory using quark model of baryons 8=6975
 $\Sigma^+ \rightarrow p + e^+ + e^-$, CP conservation, possible tests 8=6914
 S-wave as test of octet dominance in weak, e. m. and strong interactions 8=3516
 $\Xi \rightarrow \Sigma^- + e^- + e^+$, CP conservation, possible tests 8=6914

 stellar system, one-dimensional, a variational principle 8=19209
 stellar wind, flow recombination shell between HI and H II 8=23576
 thermal radiation from, far i. r. sky survey 8=19197
 H spatial structure, 21 cm obs. with 300 foot telescope 8=23565
 HI regions, i.r. emission and m.h.d. shock waves 8=23566
 H II in M33, kinematical and physical data from interferometric obs. 8=23568
 H II regions in anticentre region, electron temp. determ. by radio obs. 8=19199
 H II regions, higher-order high-quantum H recombination lines 8=23569
 H II regions, interference photography 8=19200
 H II regions, obs. at 178 MHz, contour maps of brightness temp. 8=10240
 H II, stimulated emission of r.f. lines, enhancement by small departures from thermal equilb. 8=23567
 H₂ abundance, reduced estimate 8=23577
 H₂ formed by chemical-exchange reaction, upper limit on abundance 8=5926
 H₂ in Galactic corona, maser effect 8=5924
 H₂, maser action on 21 cm radiation 8=5923
 OH 18cm transition, calc. of Einstein A coefficient 8=10169
 OH, 18-cm transitions, Einstein A coeffs. 8=12351
 OH molecules, polarization theory of 18 cm lines 8=7543
 OH normal emission in dust clouds 8=23573

Interstellar matter--contd

- OH radical, radio absorpt. obs. 8=23581
 OH, CH and CN, collisional excitation by charged particles 8=10244
 Interstitials. See Crystal imperfections/interstitials.
 Iodine
 adsorption by atmos. particles 8=9892
 additive in Cs arc diode, effect on performance 8=15225
 atomic, new Rydberg absorpt. series and ionization pot. 8=1165
 charge transfer complexes with subs. pyridines, spectro-photometric obs., rel. to struct. and stability 8=4216
 compressibility, of solid 8=13578
 crystalline, insulator-metal transition from diatomic bond destruction under high pressure 8=2084
 diatomic mol., electron spin polarization meas. 8=1232
 dissociation and assoc. of gas at h.p. 8=23080
 ionization in supersonic Hg vapour jet, charge distrib. 8=7716
 ions I⁻ on Hg electrode, partial charge transfer react. 8=18722
 ions, registration in olivine and hypersthene crystals 8=11325
 liquid, elec. cond. of salt solns. 8=21719
 melting temp. under high pressure 8=4644
 molecular beam, laser-induced fluorescence 8=16288
 pure quadrupole reson. in tetraiodothallates 8=18477
 spectrochem. anal. in vac. u.v., quantitative 8=18788
 vapour, interactions with W surface 8=18699
 vapour, reflection coeff., from surface of single crystal Ge 8=8382
 in BiTeI, electrotransport, obs. 8=17564
 H₂+I₂ reaction paradox 8=23105
 I⁺, photodetachment probability for simultaneous two-quantum absorpt. 8=12437
 I(⁵P_{1/2}), excited, reaction with propane 8=5745
 I(⁵P_{3/2}), time resolved emission obs. 8=4079
 I²⁷ quadrupole spectrum in paramag. and antiferromag. U₃ 8=9469
 I²⁹ abundance in early solar system 8=23468
 I²¹, use in metals-iodine reaction study 8=23093
 I¹³¹, self-diffusion in CsI single crystals and polycrystalline samples 8=8674
 I-131 as tracer for groundwater flow obs. 8=2568
 I-I system, 2nd virial coefficient for different electron states at 2000-6000°K 8=1469
 I₂ beam, reaction kinetics with K and Cs atoms 8=1202
 I₂ crystals, intermediate triplet excitons props., theory 8=22479
 I₂, 5350 Å band, resolving power test 8=16289
 I₂, orientation of transition moment in photodissociation 8=1307
 I₂-Ar mixtures, vibr. relax. time meas. 8=7932
 I₂-He mixtures, vibr. relax. time meas. 8=7932
 I₂-CCl₄ solns., stimulated thermal Rayleigh scatt. obs. 8=8068
 I₂+H₂ reaction kinetics 8=5706-7
 Iodine compounds
 chemical shifts of inner levels, determ. by photo-emission 8=16971
 tetraiodothallates, pure quadrupole reson. of I 8=18477
 IBr, crystal structure refinement 8=22027
 ICl, impurity-dope in graphite, effect on anelasticity 8=13541
 IF₅, liq., Raman spectra and vib. assignment 8=1568
 IF₇, molec. struct. 8=21107
 Ion beams
 See also Ion optics; Mass spectrometers; Particle accelerators; Particle range; Sputtering.
 accelerators, high current target design 8=3231
 accelerator, h.f. with static mag. field gradient, obs. 8=21405
 chopper for spark source mass spectrography 8=18767
 collective interact. with plasma, and instability caused 8=16595
 constant diameter, focussed by uniform magnetic field, perturbations 8=15278
 deflection by current carrying plasma 8=6336
 d, polarized, prod. from T(d,n)He⁴ 8=11602
 electron, ion and laser beams technology, conference, Berkeley, USA (1967) 8=15283
 electronic integrator to control magnetic field 8=3597
 emittance in duoplasmatron source linked to single gap accelerator 8=20229
 energy losses on traversing crystal lattice channels 8=17695
 excited by thin foils, spectroscopic props. 8=6535
 extraction from gas discharges 8=342
 focusing, by mag. field, theory 8=10919
 heavy, penetration in Au, Al and W, effect of atomic thermal motion 8=2024
 injection for accelerator with multiple pulse width and intensity capability 8=15658
 injector for electrostatic generator 8=3150
 intense, production using magnetised plasma 8=15349
 intense, for thermonuclear expts. 8=16139
 ion-electron, emitted by a plane, neutralization 8=3225
 loss detector, ionization chamber 8=20227
 magnetic slit for momentum definition and beam separation 8=6700

Ion beams—contd

- micro-machining performance 8=6339
- multiple acceleration in electric field by charge exchange 8=630
- neutralization by supersonic gas jet 8=6335
- oscillations, beam-plasma interaction 8=12548
- path stabilizer, automatic 8=3224
- Penning discharge in vacuum, energy spectra 8=7648
- plasma density contour meas. using mol. ion beam breakup 8=7791
- polarized, depolarization due to magnetic focusing 8=10888
- for processing, and colour obs., apparatus 8=15351
- production by electron bombard. ion thruster 8=10917
- progress in nuclear techniques and instrumentation, book II 8=15648
- p in 4 MV accelerator, 1 mA current 8=15650
- p injection into centre of cyclotron 8=11342
- p polarized, prod. method in $2S_{1/2}$ state 8=11602
- pulsed, current converters for 8=629
- pulsed, submicrosecond, hot cathode source 8=3223
- reflection from crystal surface, rel. to surface micro-structure 8=13201
- spectral-line profiles for fast-ion-beam source 8=341
- spherically diverging current, neutralization and pot. behaviour of subsequent flow 8=15350
- unipolar, effect of resonant charge exchange collisions with neutral gas 8=7707
- Ar duoplasmatron, relative abundance of ions 8=7780
- Cs plasma, synthesized, electrostatic oscillation obs. 8=16584
- D⁺ prod. by charge exchange polarization obs. 8=15352
- D⁺ channeling in crystals, transparency model 8=22243
- D⁺, critical angles for channeling in thin Au films 8=17704
- D⁺ transmission through thin films 8=22242
- in Ge, $^1H^+$, $^2D^+$ and $^3He^{++}$, channelling props., diff. calc. 8=13485
- H from accelerator, bunched 8=10916
- H, from duoplasmatron source 8=3222
- H⁺, critical angles for channeling in thin Au films 8=17704
- He⁴⁺ prod. by charge exchange of He⁴⁺ from duo-plasmatron 8=15347
- He⁺, critical angles for channeling in thin Au films 8=17704
- $^3He^{2+}$, prod. by r.f. ion source 8=10914
- K, range distrib. in amorphous Al_2O_3 8=13476
- Kr, range distrib. in amorphous Al_2O_3 8=13476
- Na, range distrib. in amorphous Al_2O_3 8=13476
- O₂ from accelerator, bunched 8=10916
- Xe, range distrib. in amorphous Al_2O_3 8=13476
- Xe⁺ in O₂, monitoring of Xe⁺ $^{232}P_{3/2}$ conc. using charge transfer 8=12454
- $^{133}Xe^+$, penetration distrib. in Au, effect of target temp. 8=2023

effects

- density effect for the ionization loss of charged particles in solid media 8=8775
- detector plates, sensitivity vs. ion energy 8=16179
- discharges, low-pressure, r.f., time-averaged potentials, meas. using probe 8=21224
- glass, ion-bombardment-induced emission of gas 8=17173
- glow-discharge tubes, cathode sputtering variation 8=2019
- hypersthene crystals, registration of As and I ions 8=11325
- inert gases, re-emission from W and Au 8=17701
- ion-molecule reactions, mass spectrometry, pulsed-source method 8=10918
- ionization of molecules adsorbed to a surface by energetic ion bombardment 8=16435
- metal polycrystals, corrosion, angle of incidence 8=13522
- metallic surfaces, u.v. emission on K⁺ ion bombardment, analysis by spectral micrography 8=14299
- nuclear bombard., γ -ray emission, E2 and M1 transition calc. 8=932
- olivine crystals, registration of As and I ions 8=11325
- semiconductors, implantation techniques 8=18014
- Ag foil, deceleration of 0.2–40 keV H and D ions 8=2020
- Ag, Ar-ion bombardment, LEED study 8=22240
- Al range-energy curve of Po. At recoils 8=13473
- Al_2O_3 , of 2.5–10 keV Cs ions, sputtering 8=8760
- Al_2O_3 range-energy curve of Po. At recoils 8=13473
- Ar, paraboloid eroded by ion bombardment 8=13466
- Ar⁺ emission function for var. targets 8=6626
- Au single crystal film, structural and texture changes 8=17124
- Au-Cu alloy single crystal film, structural and texture changes 8=17124
- Au films, D⁺ blocking effects 8=22241
- C, stopping cross-section for ions with $21 \leq Z_1 \leq 39$ betw. 200–1500 KeV 8=13482
- C target thin, 2 MeV beam passing through, N spectrum obs. 8=20960
- CdS films, on elec. props. 8=13791
- CdTe thin films effect on resistance 8=5244
- Cr, deposition from low-energy source 8=19796
- Cu crystal, reflection of Cu and Ar ions for oblique incidence 8=8767
- Cu foils, agglomerates formation and density 8=13417
- Cu foils, defect clusters, type and configuration analysis 8=13416
- Cu single crystal film, structural and texture changes 8=17124

Ion beams—contd**effects—contd**

- GaSb, cleaned by ion bombard. effect on (111) surface stress 8=8849
- Ge, cleaned by ion bombard. effect on (111) surface stress 8=8849
- Ge, irradiation, low-energy, by He⁺ and Xe⁺ 8=8772
- p-Ge, on microhardness 8=17810
- He target excitation by H⁺, D⁺, H₂⁺ and H₃⁺ 8=16217
- He⁴, D, Fe⁵⁴ in M (M = V⁵¹, Zr⁹⁰, Au¹⁹⁷, Ni⁵⁸ or Li⁶), recoil range 8=13489
- He⁺ on Cu crystal, u.v. emission 8=2025
- InSb, cleaned by ion bombard. effect on (111) surface stress 8=8849
- (Mg, Fe), SiO₄, iron ion tracks 8=8768
- Mo, Auger electron yield on Ar⁺ and He⁺ bombardment 8=9279
- Ni films, thin, bombardment rel. to induced mag. anisotropy 8=22829
- NO₂⁻ production using NO₂ beam crossed with O⁻, O₂⁻, O₃⁻ and OH⁻ beams 8=1367
- O¹⁶ in Au, Ag, 10–30 MeV obs. discrepancy due to auto-ionization 8=13477
- S³² in Au, 19–40 MeV obs. discrepancy due to auto-ionization 8=13477
- Si, B-doped by ion bombardment, B distrib. profiles 8=18071
- Si, surface properties after irradiation with 50 keV nitrogen, boron and helium ions 8=18078
- Si, surface structure, temp. dependence 8=5278
- ZnO:Zn phosphor deterioration, heavy ion irradi., obs. 8=18623
- ZnO:Zn phosphor of H, He, N, Ar and Kr, deterioration depth obs. 8=18624
- ZnS:Ag, deterioration depth under prolonged heavy ions bombard. obs. 8=4998
- ZnS:Ag, made nonluminescent to det. ion energy loss 8=8758

Ion counters. See Counters.

Ion emission

- emission from and adsorpt. on a substrate surface in equilib. with ionized vapour 8=18263
- field-ion specimen tips, electron microscope exam. 8=18285
- on laser light interaction with conductors, semiconductors and dielectrics 8=18272
- solid solution alloys, field patterns, computer simulation 8=8453
- Ag target, Ar bombard, emission function var. 8=6626
- Al target, Ar bombard, emission function var. 8=6626
- Au target, Ar bombard, emission function var. 8=6626
- Be, multicharged rel. to laser intensity, and X-ray emission 8=13947
- Be target, Ar bombard, emission function var. 8=6626
- C, multicharged rel. to laser intensity, and X-ray emission 8=13947
- C target, Ar bombard, emission function var. 8=6626
- Cu target, Ar bombard, emission function var. 8=6626
- MgO surfaces, gas emission 8=2272
- Mo, multicharged rel. to laser intensity, and X-ray emission 8=13947
- Mo target, Ar bombard, emission function var. 8=6626
- U atoms from uranium oxide pellets 8=20859
- W, due to laser irradi., study of masses, energies and numbers of ions 8=13948

secondary

- alloys rel. to chemical analysis 8=18286
- magnetron anodes, cathode bombardment 8=15334
- review 8=2283
- Al alloys, mass spectroscopic investigation 8=18287
- Fe alloys, mass spectroscopic investigation 8=18287
- NaCl, of Cl⁻ on electron bombardment rel. to surface potential meas. 8=5425

thermionic

- from refractory compound surfaces, cesiated, rel. to stable, at 1500°. low work function surface 8=18262
- and surface ionization, stress depend. 8=13946
- thermionic conversion Specialists Conference San Diego USA October 1967 8=6273

Ion exchange. See Exchanges, chemical: Ions. electrolytic.

Ion microscopes

- field, atom-probe type with mass spectrometer 8=15353
- field, computer simulation for interstitial solid solutions 8=21817
- field-ion images from asymmetric specimens, streak contrast 8=8452
- field-ion micrograph interpretation of contrast from dislocation loops 8=17633
- field-ion, pumped by sputter-ion pumps, gas contamination 8=6338
- field-ion specimens, automatic electropolishing supervisor 8=17273
- field-ion specimen tips, electron microscope exam. 8=18285
- field microscopy, use of fibre optic window 8=6512
- field, preparation of tungsten specimens 8=15354
- field, single crystal tip pattern, approx. to collection of Fresnel zones 8=3230
- field, tip radius variation rel. to operation 8=343

Ion microscopes—contd

- field, W field evaporation end form 8=4735
 microprobe mass analyzer development 8=6340
 scanning, performance 8=6339
 ultra-high vacuum field, specimen transfer device 8=3229
 ultra-high vacuum metallic dismountable apparatus
 for obs. 8=15320

Ion mobility. See Ion velocity.**Ion optics**

- See also Alpha-ray spectrometers; Ion microscopes;
 Mass spectrometers; Particle optics.
 duoplasmatron ion source 8=15340
 electronic integrator to control magnetic field 8=3597
 electrostatic sector fields, image aberrations 8=19802
 field, rot. symm., 3D, quadrupole, trapping,
 trajectories 8=19799
 focusing, by mag. field, theory 8=10919
 magnetic spectrograph, split-pole 8=3228
 of mass spectrometers 8=20915
 quadrupole magnetic lens using ceramic magnets 8=3226
 quadrupole mass filter, resolution 8=3227
 quadrupole mass filter, rod mounting, simplified 8=7357
 retardation lens to improve abundance sensitivity of
 mass spectrometer 8=4040
 selectors, useful current calc. 8=19773
 synchrocyclotron, increasing of p beam current 8=3499
 trajectories in accelerating tube of neutron
 generator 8=3714
 trajectory meas. in magnetic field 8=3192
 transmission of a system, Monte Carlo calc. 8=19801

Ion pumps. See Vacuum pumps.**Ion sources**

- See also Ion emission/thermionic.
 accelerator, tandem, p and d 8=6694
 calutron, ionized spectrum, Doppler shift due to charge
 exchange 8=6334
 cyclotron, cold-cathode high intensity 8=15346
 duoplasmatron, comp. of H ion beam 8=3222
 duoplasmatron, expanded plane plasma front 8=15340
 duoplasmatron, with expansion cup 8=15341
 duoplasmatron, improvements 8=15661
 duoplasmatron linked to single gap accelerator, beam
 emittance 8=20229
 duoplasmatron prod. of He⁺ used to produce He⁺ by charge
 exchange with K 8=15871
 dynamag, with open cylindrical extractor 8=15344
 electron bombardment, for radioisotope
 implantation 8=15343
 films, thin, ion bombardment apparatus 8=17121
 heavv. highly stripped, HIPAC type source 8=19797
 high-vacuum, without focusing field 8=3221
 hot cathode for submicrosecond ion pulses 8=3222
 ionizer, e-bombard. weak field 8=19798
 magnetized plasma emitter, density and temp.
 meas. 8=1432
 magnetron anodes, occluded gas and vaporized
 material 8=15334
 magnetron cold cathode for ultrahigh vacuum residual
 gas analysis 8=4039
 mass spectrometer, cathode -temp. effects 8=16177
 Nier type, optimum conditions for electron beam 8=6332
 output calculation, from simple open source with longit.
 ionization 8=6333
 Penning discharge, high brightness 8=15345
 Penning ionization gauge as low pressure 8=15338
 Penning ionization gauge, characts. 8=10913
 Penning for tandem accelerators investigated 8=11338
 polarized targets and ion sources, conference, Saclay
 France (1966) 8=15629
 spectral-line profiles for fast-ion-beam source 8=341
 surface ionization applic. 8=15348
 Van de Graaff accelerator, polarized p and d 8=6692
 Cr, deposition, low-energy 8=19796
 Cs, improvement by Ta precoating 8=15342
 D⁺ polarized beam prod. by charge exchange for
 accelerators 8=15352
 H⁺ and D⁺, polarization increase 8=10915
 H₁⁺, from duoplasmatron, for charge-exchange
 generator 8=15339
 H₁⁺, D₁⁺ and T₁⁺ injector for charge-exchange
 generator 8=7713
 He⁺ beam prod. for Van de Graaff accelerator 8=15347
 He using Cs vapour exchange 8=15872
 He prod. from He⁺ by K charge exchange 8=15871
 He for Van de Graaff accelerator improved by K vapour
 exchange 8=6693
³He²⁺ r.f. prod. 8=10914
 O₂ with Xe beam to determ. relative charge transfer
 efficiencies of ²P_{3/2}, ²P_{1/2} of Xe⁺ 8=12454
 Re, thermal ionization sources, isotopic anal. 8=7479
 Ti anode, discharge in desorbed H₂ 8=21227

Ion velocity

- acceleration in electron beams, apparatus and
 meas. 8=15337
 in biological membranes, device to meas. V-I
 characts 8=5988
 carrier mobility estimation 8=4612
 drift with interconversion Tyndal drift-tube expt.
 interpretation 8=7704

Ion velocity—contd

- effect on efficiency of a continuous channel electron
 multiplier 8=6635
 electron diffusion in gases, time-of-flight meas. 8=7702
 in gases under influence of electric fields 8=7705
 liquid membrane and elect. props. 8=4560
 translational energy meas. with time-of-flight
 spectrometer 8=7703
 Cs silicate glass ionic conduction, n.m.r.
 absorption 8=9197
 HeII, discontinuity above 1.1°K 8=19697
 N ions in N drift vels. and reactions at 300°K,
 0.5-1 Torr in elec. field 8=7718
 Tl silicate glass ionic conduction, n.m.r.
 absorption 8=9197
 ZrO₂, cubic, influence of neutron irradiation on ionic
 mobility 8=5152

electrolytic

 ion collection in Bayard-Alpert gauge, calc. 8=4306
 ions, multiple acceleration in electric field 8=630
 ionizer, e-bombard. for ion source 8=19798
 metastable transitions obs. in time-of-flight mass
 spectrometer 8=16438
 molecule, diatomic, H atom model applied to H₂ 8=21034
 molecule, photoionization cross-section calc. 8=21259
 multiple in heavy particle atomic collisions 8=7451
 non-equilibrium in low voltage arc. 8=21254
 nuclear emulsion, by π, p beams at relativistic vel. 8=15647
 nucleic acid components in frozen solns., photo-
 ionization 8=9650
 precursor to shock wave in e.m. tube, meas. 8=6137
 preferential assoc. of pos. charge with butadiene
 fragment in 4-vinylcyclohexene mass spectra 8=4320
 pressure gauge, e ionization of molecules, character-
 istics 8=4500
 resonant exchange collisions, with neutral gas, effect on
 unipolar beam 8=7707
 spark-gap-switch deionization det. 8=7679
 wave equations, asymptotic stability 8=7845
 Ag, electron-impact cross-sections 8=12428
 Ag⁺, electron-impact cross-sections 8=12429
 Ar²⁺ + Ar, reaction cross-sections 8=4310
 C⁴⁺ by e impact, cross-sections calc. 8=12435
 C⁵⁺ by e impact, cross-sections calc. 8=12435
 CF₃ free radical, photoionization 8=7724
 CH₃, by ion-molecule reactions, 8.10⁻⁶-10⁻³ mm Hg 8=4258
 CN halides, photoionization 8=12433
 C₂N₂, photoionization 8=12433

Ionization—contd

- CO by proton beam, cross-section, and charge transfer 8=1357
 $\text{CO}^+ + \text{CO}_2$, reaction cross-sections 8=4310
 $\text{CO}^{2+} + \text{CO}$, reaction cross-sections 8=4310-11
 Cs vapour, charge exchange H^+ to H^- 8=12441
 CuO_2 cryst. excitons photoionization, assoc. absorpt. coeff. calc. 8=9529
 Fe X-XVIII , autoionization rel. to rates and equil. 8=16442
 Ge, electron-impact cross-sections 8=12428
 H , neutral atoms, by passage through hot-cathode discharge 8=21274
 H^+ , photoionization in u.v., study of resonance near $n = 2$ level 8=7444
 H-H , 2-60 keV ionization and e capture obs. 8=21007
 H at. beam, photoionization 8=21020
 H atom in H-H collisions 1.25-117 KeV cross-section function of projectile quantum number 8=21276
 H , by e impact, asymptotic form of wave function 8=16443
 H in 1s state, e-impact ionization cross-section obs. 8=21273
 H-H , 2-60 keV ionization and e capture obs. 8=21007
 H-H , 2-60 keV ionization and e capture obs. 8=21007
 H^+ , H_2^+ in N_2 , O_2 , CO_2 , H_2O , charge exchange 40-1500 eV 8=21275
 H_2 , autoionization lifetime calc. using H atom model 8=21034
 H_2 , by CF^{252} fission fragments, energy per ion pair 8=1361
 H_2 e-impact obs, derivative spectrum rel. to photoionization, autoionization 8=21272
 HCl-HCN mixtures with D_2 and CD_4 8=4312
 HD autoionization lifetime calc. using H atom model 8=21034
 HF energy and core rearrangement 8=7701
 He atoms by e impact, cross-section calc. 8=12084
 He , double by fast p, 1-3 MeV using wave functions which are products of H -like orbitals 8=21280
 He , with simultaneous excitation by p, d impact, obs. compared with theory 8=7385
 He^+ , lifetime, photodetachment cross-section obs. 8=20944
 He -like atoms, 1'S state conservation prob. in β -decay 8=7426
 He^+ , below $n=3$ level, autoionization 8=4091
 He^+ , below $n=3$ level, autoionization 8=4092
 He^+ in N_2 , O_2 , CO_2 , H_2O , charge exchange 40-1500 eV 8=21275
 Kr atomic spectra, autoionization 8=20954
 K X-ray prod. following β scatt., Bethe-Born and Bang-Hansteen approx. 8=20930
 Li to Kr , atoms by β decay, probabilities calc. 8=4090
 N atomic beam, photoionization 8=21022
 N , atomic, enhancement at 100 km with natural incidence of auroral electrons 8=9929
 $\text{N} + \text{O} \rightarrow \text{NO}^+ + \text{e}$, ionization cross section calc. 8=4111
 N_2 -p collisions, 0.15-1.0 MeV, populations obs. 8=12213
 $\text{N}_2 + \text{N}_2$, reaction cross-sections 8=4310
 $\text{N}_2\text{O}^+ + \text{N}_2\text{O}$, reaction cross-sections 8=4310
 by NaCl , KCl solns. evaporation 8=4307
 Ni^{63} electron absorpt. detector 8=14505
 O atomic beam, photoionization 8=21021
 Pb , electron-impact cross-sections 8=12428
 Pm^{147} β decay, K ionization probability obs. 8=12419
 Sn , electron-impact cross-sections 8=12428
 Tc^{99} β decay, K ionization probability obs. 8=12419
 Xe atomic spectra, autoionization 8=20954
 $\text{Xe}^+ + \text{Xe} \rightarrow \text{Xe}^+ + \text{X}^+$, relative charge-transfer efficiencies of $^2\text{P}_{3/2}$, $^2\text{P}_{1/2}$ states 8=12454

gases

 acetylene, cross-sections for 100-2000 eV electrons 8=12446
 acetylene, electronic energy levels 8=1371
 air, effect on discharging of insulators 8=15192
 air, high temp., r.f. rates meas. 8=16430
 air, ionization energy per ion pair formed by H^+ β particles 8=4315
 air, Joule heating by low-voltage d.c., 6700-7800°K and 10-20 atm. 8=12421
 air, by laser spark and resulting breakdown voltage 8=7670
 air, shock wave profiles 8=4460
 alkaline-earth metals, temperature in flames meas. 8=7946
 atoms by multiquantum absorpt. and laser coherence meas. 8=20986
 atoms, by p impact classical binary approx. calc. 8=12417
 benzene ion reactions with benzene 8=16452
 n-butane, photoionization 8=4319
 butane, probability by RPD mass spectrometry 8=21283
 in charged aerosol jets caused by aerodynamic discontinuities 8=4301
 chemi-ionization in upper atm., model 8=23307
 chloroethylene, ion-molecule reactions, study by ion cyclotron reson. spectroscopy 8=16453
 collisions, effects of excited particles 8=16373
 comet interaction with solar wind, laboratory simulation 8=23678
 conditional ionization in columnar contraction, neutral gas temp. var. effect 8=16431

Ionization—contd

gases—contd

- conductivity, electrical, approx. calc. 8=4487
 effect on discharge shape in dielectric-bounded cavity 8=7681
 electron collision cross section data, low energy bibliography 1925-1966 8=20990
 e impact of atoms and ions, Gell-Mann-Goldberger theory 8=12420
 electron impact cross sections, semi-empirical 8=1350
 by electron impact, single and double ionization, energy depend 8=21264
 electron temperature shock structure in partially ionized gas 8=4361
 electron transport coeffs., fifth and sixth approx 8=21260
 electron velocity distribution function, power series expansion 8=4300
 eqn. of state in Debye-Huckel approximation 8=10623
 ethane, photoionization 8=4319
 exploding wire discharge, precursor, rel. to gas, wire distance, press. and capacitor 8=16433
 flow over biased arbitrary bodies in side-wall of shock tube 8=10712
 fragmentation patterns, beam-modulation mass spectra 8=16439
 fusion, inertial-electrostatic confinement 8=1352
 helium, electron impact cross sections 8=1347
 hexafluoroethane, secondary ion-mol. reactions, ion cyclotron reson. 8=21284
 ideal, multiply ionized, Raizer's method of calc. degree applicability 8=21257
 ion collection from subsonic stream 8=21261
 ion-formation energy of charged particles 8=21262
 ion-molecule reactions, energy depend. 8=16432
 ion-molecule reactions, studied in corona discharges 8=12409
 ions in flow discharges, mass spectra 8=16429
 kinetic electron ejection from gas covered surfaces 8=16435
 laminar boundary layer, two temp. ionized gases 8=7900
 laser beam, <1 atm, e prod. by inverse bremsstrahlung, thin e-impact ionization 8=16434
 in magnetized plasma, and nonthermal particles 8=4351
 metallic plasma 8=4343
 methane, dissoci. attachment of electrons, isotope effects 8=16454
 methane, electronic energy levels 8=1373
 microwave meas. electron density and ionization time 8=12518
 mixture, composition and thermodynamic props. 8=12422
 mixture, slightly ionized, ion slip estimation 8=16436
 monatomic mixtures, transport props. 8=4304
 monatomic, by multi-photon absorption, ionization probability 8=7697
 multicomponent mixtures, electric conductivity max. rel. to thermodynamic parameters 7=1354
 noble-gas mixtures, by fission fragments, rel. to thermionic energy conversion 8=15215
 nonuniform electrical conduction in MHD channels 8=16437
 optical pot. in terms of self-energy of single particle Green's function 8=20992
 between parallel plates, field distortion, calc 8=21248
 partially, in elect. and magnetic field, e vel. distrib. calc. 8=12423
 Penning, by metastable He atoms 8=21258
 photo, in soft X-ray range, Z depend. in central pot. model, calc. 8=12418
 photoelectron spectrometer, single grid 8=16441
 photoionization, microwave plasma light source 8=3355
 plasma, collisional rel. to spectra 8=12470
 plasma generation, equilibrium and non-equilibrium states 8=288
 plasma, two-temp., inelastic losses and population of levels 8=12460
 prebreakdown spark discharge, channel parameters 8=7671
 propane ion reactions with mols. 8=14381
 propane, photoionization 8=4319
 radiolysis systems, ion lifetimes meas. 8=23163
 rare gases, ionic wave propagation excited by impulsion 8=12427
 shock wave investigation pipe 8=4305
 by short laser pulses, many-photon interact. 8=399
 solar corona, effect of doubly excited levels 8=2863
 stellar atmospheres, line-blanketing 8=14761
 Townsend coefficients, influence of photon absorption 8=7699
 Townsend-Huxley swarm techn., space charge effects 8=7698
 Ar, beam scattering, short range forces 8=1364
 Ar, behind shock front, ioniz. relaxation 8=1356
 Ar, caesium-reeded, tensor electrical conductivity, third Chapman-Enskog approx. 8=12432
 Ar, cross-sections for 100-2000 eV electrons 8=12446
 Ar, by evaporated Fe atoms, ionization ratio meas. 8=1359
 Ar, gamma and neutron irradiated, wall effect 8=1363
 Ar, to ground and excited states of Ar^+ , cross-sections 8=21267
 Ar, ionization energy per ion pair formed by H^+ β particles 8=4315
 Ar, near threshold by electron impact 8=7711

Ionization—contd**gases—contd**

- Ar, rate measurement by spectrograph 8=7709
 Ar, shock layer e density meas 8=21265
 Ar by shock wave, electron density and collision freq. microwave obs. 8=12431
 Ar, shock wave interferometry 8=4311
 Ar, structure of normal ionizing shock wave 8=21490
 Ar supersonic flow, by h.f. induction, electronic and ionic properties 8=21266
 Ar⁺, highly excited, autoionization prod. by electron impact 8=12430
 Bi₁ and Bi₂, electron-impact fragmentation 8=4239
 C, chemi-ionization on gaseous oxidation 8=5699
 CO, kinetic energies in time-of-flight mass spectrometer 8=7721
 CO₂, by electron impact, absolute cross section 8=21268
 CO₂, due to electron impact, curve shape 8=12434
 CO₂, by evaporated Fe atoms, ionization ratio meas. 8=1359
 CO₂, Franck-Condon factors calc. 8=21269
 CO₂, ionization energy per ion pair formed by H³ particles 8=4315
 CO₂, ions and fragments, sequential mass spectrometry 8=21270
 CS₂, ions and fragments sequential mass spectrometry 8=21270
 Cs, absolute values of cross-section close to threshold 8=12436
 Cs, by resonance irradi. by Cs vapour discharge 8=4362
 Cs, two-quantum photoionization rate 8=12437
 Cs vapour, decay microwave cavity studies 8=21271
 Cs₂⁺ form. by collision of two excited atoms 8=12438
 D, mag. drift vel. and deflection coeff. for slow electrons 8=7712
 D, temporal growth and secondary processes 8=12439
 D₂ autoionization, kinetic energy 8=12443
 H atom, multiphoton process 8=12440
 H, gamma and neutron irradiated, wall effect 8=1363
 H and other ions, collision cross-sections determ. by ion cyclotron reson. 8=12442
 H, mag. drift vel. and deflection coeff. for slow electrons 8=7712
 H₂⁺, collision-induced excitation, angular dependence 8=1362
 HCl, γ -irrad., ion lifetimes 8=23164
 H₂O, partial photoionization cross-sections by photoelectron spectra 8=1369
 H₂O vap., irradi., H⁺ solvation, kinetics and thermodynamics 8=18661
 He⁴⁺ beam prod. by charge exchange with K 8=15347
 He, autoionization by collisions 8=7714
 He, autoionizing D states, character 8=12445
 He autoionization, kinetic energy 8=12443
 He, beam scattering, short range forces 8=1364
 He, cross-sections for 100-2000 eV electrons 8=12446
 He, double by photon, e, atomic correl. effect 8=7715
 He, electron impact cross section 8=16446
 He, electron and proton impact, classical model 8=12444
 He, by evaporated Fe atoms, ionization ratio meas. 8=1359
 He⁺ + H₂ and He⁺ + HD reactions 8=21277
 He⁺ photoionization reactions with N₂ and O₂ 8=16444
 I, photo detachment probability due to two-quantum absorpt. 8=12437
 I₂, in supersonic Hg vapour jet, charge distrib. 8=7716
 K, electron-impact ionization, empirical calculations 8=12448
 K vapour, charge exchange H⁺ to H⁻ 8=12441
 K vapour, photoionization 8=12447
 Kr, beam scattering, short range forces 8=1364
 Kr, by evaporated Fe atoms, ionization ratio meas. 8=1359
 Li, electron-impact ionization, empirical calculations 8=12448
 Li, electron and proton impact, classical model 8=12444
 Li, photoionization cross section as function of wavelength 8=7717
 N, electron and proton impact, classical model 8=12444
 N₂ afterglow 8=21239
 N₂, by e collisions 8=16448
 N₂, electron impact cross sections 8=1348
 N₂, by evaporated Fe atoms, ionization ratio meas. 8=1359
 N₂, ionization energy per ion pair formed by H³ particles 8=4315
 N₂, kinetic energies in time-of-flight mass spectrometer 8=7721
 N₂, partial photoionization cross-sections by photoelectron spectra 8=1369
 N₂⁺, absolute electron impact excitation cross-section 8=7720
 NH₃, photoionization 8=4314
 N₂O, due to electron impact, curve shape 8=12434
 N₂O, photoionization 8=16449
 N₂O, photoionization coeff., 600-1000 Å 8=16447
 NO, kinetic energies in time-of-flight mass spectrometer 8=7721
 NO₂, photoionization 8=16449
 NO₂⁺ production by electron transfer from O⁺, O₂⁺, O₃⁺ and OH 8=1367
 NO₂, rate of electron attachment 8=12449

Ionization—contd**gases—contd**

- Na electron-impact ionization, empirical calculations 8=12448
 Na-like atoms, structure of ionization curves 8=21256
 Ne, beam scattering, short range forces 8=1364
 Ne, cross-sections for 100-2000 eV electrons 8=12446
 Ne, by evaporated Fe atoms, ionization ratio meas. 8=1359
 Ne, rate temp. dependence correction 8=12450
 Ne, e-temp. depend. of e-ion recombination 8=12351
 O, atomic, photoionization cross sections for $\lambda > 25\text{Å}$ 8=12452
 O₂, by e collisions, comparison with photoionization 8=16451
 O, electron and proton impact, classical model 8=12444
 O II, equilibrium population of states in plasma 8=7418
 O₂, electronically excited, photoionization 8=16450
 O₂, electron impact cross sections 8=1349
 O₂, by evaporated Fe atoms, ionization ratio meas. 8=1359
 O₂ by extreme u.v. radiation produced on O₂ dissociation by e-collisions 8=7722
 O₂, ionization energy per ion pair formed by H³ particles 8=4315
 O₂, partial photoionization cross-sections by photoelectron spectra 8=1369
 O₂, photoionization and dissociation meas. 8=12453
 O₂, secondary ionization coeffs. at press. up to atm. 8=4316
 O₂, thermal electron capture 8=7723
 SrI, 5s² 1S_g-4dnp, nf spectrum, analysis of autoionization resonance structure 8=20968
 TaO⁺, transition, in TaO electronic bands rot. anal. obs. in arc between Ta rods 8=1267

liquids

- acetic acid, ionization const. in propanol-H₂O mixtures 8=21720
 aqueous solutions, dissociation rate from ultrasonic relaxation study 8=18712
 carrier mobility estimation 8=4612
 energy to create ion pair in dielec. liqs. 8=21723
 hydrocarbons, energy to create ion pair 8=21723
 ionic recomb. rate, electrostatic model 8=4611
 nonpolar, by X- and γ -irrad., theory of separated ion pairs 8=2539
 LiNO₃ solns., ion assoc. 8=21715
 NaClO₄ solns., ion assoc. 8=21716

solids

- alkali halides, ion overlap meas. by strain polarization 8=23003
 anthracene, autoionization and exciton annihilation 8=17890
 in cold gas 8=2274
 colour centres, F⁺, photo-ionization theory 8=8740
 crystal fields, energy level integrals 8=1628
 semiconductors, radiative capture by impurities 8=5228
 Ag, K-ionization by relativistic electrons, theory 8=4994
 GaAs, due to high field domains and subsequent recombination processes 8=2192
 GaAs, impurity photoionization, quantum defect study 8=2207
 GaAs-GaP 50% alloy, impact, and charge transport 8=18038
 Ge, impurity photoionization, quantum defect study 8=2207
 Ge(Li), γ -ray detector current pulse generation 8=11430
 Hg-Mo system, mobility, work function 8=21903
 Hg-W system, mobility, work function 8=21903
 K-ionization by relativistic electron theory 8=4994
 Si detectors, measurement of effect within solid from which constructed 8=2212
 Si, impact, transition probability 8=13665
 Si, impurity photoionization, quantum defect study 8=2207
 Si surface barrier detection, pulse height defect 8=3465
 Sn, K-ionization by relativistic electrons, theory 8=4994

Ionization, atmosphere

- See also Atmosphere/radioactivity; Ionosphere.
 density profiles and e.m. wave propagation 8=9909
 EAS radio pulses due to slow electron movement in elect. field 8=15900
 F region, vertical displacements, apparent-vel. distribution rel. to geomag. latit. 8=23416

 ionosphere, low-lying nocturnal N(h) profiles 8=23397
 meteors, possible cause of geomagnet. micropulsations, math. model 8=2734
 oxygen line excitation, and heating, by conjugate photoelectrons 8=18975
 photoelectrons, ionospheric, velocity distribution and Landau damping near 600 km 8=23362
 sporadic E layer, positive ion comp., Aerobee rocket obs. 8=14685
 by thermonuclear explosion γ -glow 9 July 1962, riometer obs. validity 8=14636
 topside, spread, Alouette 1 obs. 8=2714

Ionization, surface

- See also Electron emission, thermionic; Ion emission/thermionic; Work function.
 dyes, adsorbed, energy 8=5424

ionization, surface—contd

- ion source for various elements 8=15348
 magnetron anodes, occluded gas ions 8=15334
 Saha-Langmuir equation and application, modifications 8=13949
 substrate in equilib. with ionized vapour, adsorpt. on and emission from 8=18263
 and thermionic emission, stress depend. 8=13946
 Ba, on W surface, coeff. meas. 1800-2600°K 8=18288
 Cs plasma, in mag. confinement device 8=1415
 Cs thermionic converter, departure from Saha-Langmuir ionization reln. 8=15238
 Mo, positive and negative 8=13950
 Pt, of K, Rb, Cs and Tl atomic beams 8=12110
 W, of K, Rb, Cs and Tl atomic beams 8=12110
- ionization chambers**
 accelerator beam loss monitor, applic. 8=20227
 bremsstrahlung meas. with scintillation spectrometer 8=3582
 calibration factors for low-energy γ -ray emitters 8=11431
 calorimeter, simulation of operation 8=15635
 cavity, fabrication, low cost 8=6640
 for double pulse, for fission energy and mass distrib. obs. 8=1106
 environmental radiation, new obs. technique 8=20190
 fission chamber, employed for reactor n flux meas. 8=4026
 n-hexane, recombination after irradiation with γ -rays 8=6628
 human tissue equivalent response 8=606
 for leakage of bremsstrahlung energy from calorimeter absorber meas. 8=11447
 magnetron gauges, gas pressure conversion consts. 8=7958
 X-ray dosimetry 8=15595
 Ar, extreme u.v. absolute detectors, comparison with thermopile 8=11162
 C⁶⁰ absolute γ -activity obs. 8=20749

ionization gauges. See Vacuum gauges.

ionization potential

- acetylene 8=1371
 benzene, σ states 8=12257
 benzene, SCF calc. 8=7565
 chloroform under 120 atmospheres with dissolved O₂ and electron donors 8=7708
 contact charge transfer spectra for evaluation 8=7708
 diphenyls, 4-monosubstituted, rel. to absorpt. peak shift, obs. 8=4212
 1,4-distyrylbenzenes, 4-monosubstituted, rel. to absorpt. peak shift, obs. 8=4212
 N-heterocyclic mols., from charge-transfer absorpt. of complexes 8=12455
 hydrogenic atom, lowering effect and e partition energy 8=1157
 methane 8=1373
 pyridine positive ion, MO calc. 8=12294
 reaction rates dependence on I.P. 8=14357
 trans-stilbenes, 4-monosubstituted, rel. to absorpt. peak shift, obs. 8=4212
 terphenyls, 4-monosubstituted, rel. to absorpt. peak shift, obs. 8=4212
 Ar-C₂H₂ mixture, defect meas. 8=7710
 Be⁺, e affinity calc. by superposition of configurations 8=21281
 Br, atomic, rel. to new Rydberg series of absorpt. 8=1165
 CF₃ free radical 8=7724
 C₆H₆⁺ 8=21120
 C₆H₅F⁺ 8=21120
 CO, in time-of-flight mass spectrometer 8=7721
 CO, to CO₂²⁺, by sequential mass spectrometry 8=21270
 CS₂ to CS₂²⁺, by sequential mass spectrometry 8=21270
 Cl, atomic, rel. to new Rydberg series of absorpt. 8=1165
 F, atomic, rel. to new Rydberg series of absorpt. 8=1165
 I, atomic, rel. to new Rydberg series of absorpt. 8=1165
 K⁺, e affinity calc. by superposition of configuration 8=21281
 Li⁺, e affinity calc. by superposition of configuration 8=21281
 Mg⁺, e affinity calc. by superposition of configurations 8=21281
 N₂, in time-of-flight mass spectrometer 8=7721
 NH₃ 8=4314
 NO, in time-of-flight mass spectrometer 8=7721
 Na⁺, e affinity calc. by superposition of configuration 8=21281
 of Na atom clusters, up to 8 atoms, rel. to metallic props. 8=16231

ionized gases. See Ionization/gases; Plasma.

 auroral absorption of cosmic noise in conjugate high latit. regions 8=23335
 auroral absorption rel. to luminosity, narrow beam obs. 8=23338
 auroral absorption structure over 300 km and conjugate region correlation, obs. 8=18987
 auroral, elect. fields parallel to mag. field, expt. investigation 8=23354
 auroral electrojet circuit, closure soln. from magnetosphere meas. 8=9951
 auroral, electron density, r.f. capacity probe obs. 8=2666
 aurora electron precip., bremsstrahlung obs. 8=2635
 auroral, electron temp. and flux obs. indicating geomag. caused layer structure 8=9938
 aurora, proton, secondary ionization processes 8=14683
 auroral radar echoes rel. to particle precipitation satellite obs. 8=9942
 aurora radar echoes, wavelength dependence and aspect sensitivity 8=2637
 auroral zone, winter, total electron content and variations 8=9960
 auroral-zone X-ray events, pulsating, E-W movement balloon obs. 8=18943
 backscatter, h.f., synthesis assuming irregularity motion at constant height and speed 8=23401
 blackouts in polar cap and auroral zones rel. to solar wind activity, 1957-65 8=23363
 Canadian national report 8=14639
 composition and reactions 8=23361
 composition and temp. from topside sounder electron scale height data 8=2665
 cosmic noise absorption rel. to micropulsations of impulsive Pi subtype 8=2736
 coupling with outer magnetosphere, rel. to geomag. field topology 8=9910
 dissipation as limitation to magnetospheric convection 8=9918
 disturbances, travelling ray tracing simulation of h.f. radio obs. 8=23392
 disturbance due to SF₆ release near F2 peak, ray tracing synthesis of ionogram obs. 8=23383
 drifts, comparison of anal. methods 8=19000
 drift and diffusion, review 8=18999
 drifts over mag. equator, seasonal var. obs. 8=19016
 drifts, 3D, statistical determination 8=9990
 drifts, winter, during quiet-sun period 8=19004
 E and F1, sub-peak electron content diurnal asymmetries 8=10009
 E-W trough of low I_p, inference from Explorer 20 reception of Loran transmissions 8=2684
 electric currents induced by nonperiodic winds 8=23387
 electric field meas. 8=9913
 electrojet, equatorial, in India, prelim. results 8=18948
 electrojet, equatorial, model involving meridional currents 8=18949
 electrojet equatorial Sq currents, S. America IGY obs. 8=2640
 electromechanical wave propag. by refraction 8=19566
 electron beam attenuation at different levels 8=18972
 electron conc. diurnal vars. and temp. changes, 160-200 km 8=23355
 electron concentration profiles, prediction 8=23393
 electron concentration profiles during sunspot maximum and minimum 8=23357
 electron conc. and temp., sounding rocket obs. 8=23396
 electron content, abnormal increase, search for explanation 8=14665
 electron content, daily variation February-March and July-October 1964 from Sputnik obs. 8=5805
 e-content distrib. parameters 8=2659
 e-content, Early Bird meas. using Faraday effect 8=2662-3
 e-content, geographic var. 8=2664
 electron content and horizontal gradient by satellite signals above Haifa, Israel 8=14669
 electron content irregularities, satellite obs. 8=2668
 e-content meas. at Delhi from Faraday fading 8=2658
 e-content meas. by Syncom-3 with Faraday effect 8=2661
 electron content over Texas from Faraday rotation of radio waves from satellites 8=14663
 electron content over Texas from satellites obs. 8=5802
 e content, total, from Faraday fading of Explorer 22 signal 8=2660
 e-content, total, depend. on geomagnetic activity 8=2657
 electron density ang. distrib. in wake of satellite 8=14664
 electron density data, estimation of solar-flare spectra from 8=10425
 electron density, detm. by coherent frequency method 8=14670
 electron density, lunar tidal variations at fixed real heights 8=9962
 electron density, lunar tidal variations near magnetic equator 8=2656
 electron density perturbations, rocket obs. 8=9968
 electron density profiles, determination from ionograms, review 8=2699

 heat conduction waves propag. 8=2614
 heating during storm by hydromagnetic waves 8=23386
 height, virtual, meas. errors using phase ionosonde 8=9992
 high-latitude, effect on u.l.f. e.m. radiations 8=9971
 hydromagnetic gradient waves 8=14674
 induced currents and sudden mag. storms, explanation 8=2729
 inhomogeneities, correlation analysis applicability 8=9993
 internal gravity wave propag. rel. thermal conditions 8=9994
 investigations, at NIRFI for 1957-1967 8=23369
 ion composition and recombination coeff. var. 8=9961
 ion-molecule reaction rates 8=18973
 ion temperature, Elektron 2 satellite obs., 4000-8000 km 8=14659
 ionization, low-lying nocturnal N(h) profiles 8=23397
 ionization-neutralization constants and dynamic processes 8=23391
 ionograms, multifreq., conversion to electron density profiles 8=2695
 ionograms, overlapping-polynomial analysis 8=2698
 ionograms, true heights at selected freq. by 10 point reduction method 8=2693
 irregularities caused by earthquake acoustic waves 8=23395
 irregularities, isolated, rocket studies 8=14679
 irregularities, large, changes in size and electron density obs. 8=9988
 irregularities, large scale, radio interferometer obs. 8=9986
 irregularities, large scale, spatially and temporally periodic disturbances 8=23385
 irregularity magnitudes, deduction from backscatter 8=23394
 irregularities, nocturnal radio star obs., 22-38 MHz, Puerto Rico 8=9989
 irregularities, sub-auroral, satellite scintillation transition obs. 8=18945
 Jupiter, decametric radiation, effect 8=2819
 local electron conc., determ. from Doppler dispersion meas. of satellite radio beacons 8=23358
 lower, electron concentration and collision freq. from rocket obs. 8=9963
 lower, electron content inhomogeneities 8=9964
 lower, electron density distrib. through impact and photoionization 8=18969
 lower regions, review 8=19011
 lower, wind profiles from rocketsonde parachutes 8=2681
 lunar tidal variations in equivalent slab thickness over Hawaii 8=9991
 rel. to magnetic storms, e conc. at 640 km 8=2667
 magnetodynamic turbulence at low mag. Reynolds number 8=19813
 meteor echoes during v. h. f. forward scattering, diurnal and seasonal vars. 8=19267
 model for e.m. wave propag., viscosity and thermal cond. effects 8=19903
 monotonic and nonmonotonic models, virtual height tables 8=2688
 morning ionospheric perturbations, relation with v.l.f. emissions 8=23318
 motion of low energy charged particles in geomagnetic field, perturbing forces effects 8=19052
 movements, real 90 km, v.l.f. cross spectrum meas. 8=14677
 neutral-positive ion reactions, laboratory rate coefficients 8=14662
 N(h) parameters, vars. during IGY and IQSY 8=18970
 night, negative ion conc. rel. to sub-e.l.f. var. of Earth's mag. field 8=14699
 nocturnal movement of disturbances, vertical 8=9995
 no-echo occurrences and absorption of cosmic radio noise 8=9980

Ionosphere—cont'd

no-echo occurrences using ionograms data 8=9999
 noise and geomag. micropulsations, review 8=18995
 outer region, to 2000 km, review 8=19018
 outer, transition to interplanetary medium 8=2689
 oxygen line excitation and heating, by conjugate photoelectrons 8=18975
 PCA midday recovery, Sept. 2, 1966, end-phase obs. 8=14661
 parameter calc., manual, using single polynomial analysis 8=2694
 phase perturbations, v.l.f., produced by solar protons February 5, (1965) 8=18990
 phase refractive indices, use on reducing $h'(f)$ waves to N(h) profiles 8=2697
 photoelectron heating efficiency 8=23359
 photoelectrons, 7-20 eV, velocity distribution and Landau damping near 600 km, radar scatt. obs. 8=23362
 plasma scale height, local, error minimization 8=2691
 polar caps, electric currents 8=23351
 polar, electron density and radio absorpt. during solar event, 1961 8=2655
 positive ion-neutral reactions, rate coeffs., laboratory meas. 8=14657
 precursor whistler generation, obs. 8=18895
 proton gyroresonance observed in incoherent scattering of e.m. waves 8=2669
 radar backscatter from vehicle wake 8=14676
 radar determination of electron content, effect of density fluctuations 8=5803-4
 radio aurora and electric current, two-stream plasma instability model 8=2638
 radio behaviour, indices, book 8=19005
 r.f. waveguide regions below F_2 layer maximum 8=14675
 radio pulse reflections received by E-W aerial, anomalous phase path variations 8=9978
 radio signals, incoherently scattered, and meas. electron conc. profiles 8=23398
 radio waves, group path-phase path relation 8=385
 riometer quiet day curve determination 8=9997
 rotating and stratified non-rotating fluids, analogous behaviour 8=1445
 S-current system and 10.7 cm radio noise flux, study of Schmidt's phenom. 8=18968
 satellite, electron-emitting, pot. build-up, theory 8=14710
 solar eclipse effects of May 30, 1965, obs. 8=9959
 SIDs and geomag. rel. to solar activity, review 8=18996
 solar radiation, and gravit. tides, contrib. to geomag. var., calc. 8=14678
 solar X-ray flare, effects 8=18967
 soundings, oblique, and ray tracing, nomenclature 8=2690
 statistical props., effect on radio absorption meas. 8=9973
 storms, review 8=19002
 sudden freq. deviations, rel. to solar flare X-radiation 8=9985
 temp. and density from ALO trail obs., 105-165 km 8=2613
 tides at 90 to 120 km from wind distribution obs. 8=18998
 topside, over the Americas, Alouette I obs. 8=2652
 topside, corpuscular radiation effects, ionogram obs. 8=2709
 topside, use of ionograms for electron distribution determ. 8=2704
 topside proton gyro-effects, Alouette 1 obs. 8=2685
 u.l.f. emission rel. disturbances, mag. activity and earth current var. 8=9974
 Venus, re-examination of porous model 8=14848
 vertical elec. soundings, methods of interpretation 8=19007
 v. h. f. aurora at sunspot maximum, echo movement obs. 8=9947
 v.l.f. amplitude perturbations, Antarctic, due to Starfish explosions July 9, 1962 8=23389
 v.l.f. hiss at very low L values, obs. 8=23353
 waves, period ~ 1 minute, due to nuclear explosions, obs. 8=23388
 wide band signal reception and inhomogeneities 8=23364
 winds, nocturnal variation from gun projectile luminous trail obs., Barbados 8=2683
 wind parameters, statistical meas. 8=19001
 wind system, middle and upper, derivation 8=9996
 H distribution, solar cycle and diurnal variations 8=2615
 H⁺ temp. determ. from proton whistlers 8=23356
 N₂ atomic, enhancement at 100 km with natural incidence of auroral electrons 8=9929
 N₂⁺ reaction with O₂, rate coeff., study by photo-ionization mass spectra tech. 8=14666
 N₂⁺, NO⁺ dissociative recombination rates 8=9961
 O⁺ concentration and temp., equatorial, Dec. 65, March-May 66, Jicamarca 8=18974
 O⁺ reaction with O₂ and N₂, rate coeff., study by photo-ionization mass spectra tech. 8=14666
 O⁺ + O₂ → O₃⁺ + O rate constants energy var., drift tube meas. 8=14667-8
 O₂⁺ dissociative recombination rate 8=9961
 O₂ reaction with N₂ and NO, rate coeff., study by photo-ionization mass spectra tech. 8=14666

D-region

disturbance by radio pulse, electron concentration var. estimation 8=10000

Ionosphere—contd

F-region—contd

- electron density distribution obs. 8=14681
- electron density distributions from propagation data 8=5808
- electron densities during IQSY's at 19°S, 35°N, 60°N and 69°N 8=10001
- equatorial, u. h. f. radar returns from 75 km 8=10002
- formation, effect of corpuscular streams and electron photo-detachment 8=14682
- height from analysis of N(z) profile 8=23403
- midlatitude, winter anomaly 8=19009-10
- upper atm. >40 keV e flux rel. to form, <100 km 8=14680

E-region

- current system rel. to equatorial anomaly 8=10008
- drift meas., comparison of similar fade and max. cross correl. methods 8=14684
- drift velocity, height var. obs. 8=23411
- Es, blanketing freq. and occurrence vars., latit. ± 600 8=2706
- E_s clouds, mid-latitudes, v.h.f. forward scattering obs. 8=10006
- foEs, dependence on absorption 8=19015
- E_s layer, disturbances, velocity and direction of propagation 8=23415
- E_s parameters fb, f and fo, physical significance from simultaneous rocket and ionosonde obs. 8=23414
- Es, range of semitransparency 8=23406
- f_oE, ratio of morning to afternoon values 8=23408
- Es stability coeff. calc., nomogram 8=23407
- electron and ion temps., by Thomson diffusion 8=23410
- F2 ionization drift rel. to current systems in dynamo region obs. 8=23420
- irregularity magnitude calc. 8=23394
- recombination coefficient and coronal contribution to ionosphere, solar eclipse obs. 8=19014
- recombination coefficient, effect of ion vibration level 8=23409
- resonance relaxation sounder for electron density 8=19012
- scattering propagation caused by field aligned irregularities on v. h. f. band, obs. 8=5809
- solar daily disturbance var., 1961-64 8=14687
- sporadic, auroral 'flat-type', rel. to mag. disturbance 8=10005
- sporadic cutoff freqs., long periodic vars. 8=23405
- sporadic, cut-off freq. var. 8=10007
- sporadic-E, correlation with meteor activity 8=10362
- sporadic E, form. in middle latitudes 8=23412
- sporadic rel. to mag. activity 8=10004
- sporadic and mag. activity 8=23404
- sporadic rel. to meteoric and magnetic activity 8=2707
- sporadic E layer, positive ion comp., Aerobee rocket obs. 8=14685
- sporadic E, prod. near geomagnetic pole 8=19013
- sporadic layers in temperate zone, formation allowing for neutral wind profile with descending phase vel. 8=23413
- sporadic, effect of wind on, formation time constants 8=2708
- sporadic, E, and wind struct. 8=14686
- wind structure and meteor influx from sporadic E blanketing freqs. obs. 8=2705
- wind velocity and diffusion coeff. at 96 km from artificial luminescent cloud obs. 8=10003
- OH(8, 3) band, OI 5577 Å line and continuum at 5775 Å, nocturnal, mid-latit., rocket obs. 8=2631

E-region

- conjugate regions, rectilinear model 8=10011
- densities and temps. at sunspot minima, 1964 8=14688
- disturbances, vertically moving and rel. structure 8=10013
- e. m. wave whispering gallery, expt. design 8=2716
- electron content, peak density height and characteristic thickness, synoptic obs. 8=2713
- electron density peak, seasonal, non-seasonal and semi annual var. 8=5810
- electron-ion gas distribution, vertical, with weak diffusion flux sources 8=10014
- electron temp. from cosmic noise absorption at 25 and 21.3 MHz 8=10015
- equatorial, F2, electron content anomaly, obs. 8=2719
- F1, solar daily disturbance var., 1961-64 8=14687
- F2, electron concentration rel. to 10 cm solar flux 8=23423
- F-2, electron loss rate, effect of high altitude nuclear explosion 8=14691
- F2, equatorial meridional winds and e. m. drifts 8=10020
- F2 equatorial night, max. rel. to electrodynamic drift 8=14690
- F2, field aligned layers, satellite signal Faraday rot. obs. 8=2715
- F2, height of peak at middle and high-latitudes, effect of atmospheric winds 8=10022
- F2, ionization space-time distribution at high southern latits. 8=23421
- h_pF2 latitudinal variations of (m-3000)F2 and statistical result 8=23422
- F-2 layer, changes in electron densities and heights due to nuclear explosions 1962 8=2721
- F2, low and mid latits., electron concentration diurnal obs. 8=2720

Ionosphere—contd

F-region—contd

- F2, noon electron density lunar tides 8=23424
- F2, obs. during 5 different storms 8=2718
- F2 peak, effect of meridional winds in neutral air 8=10019
- F2, response to upper atmospheric neutral temp. and geomag. activity changes, obs. 8=10018
- F2, summer-night in mid-latits., abnormal f_o diurnal vars. due to large electron conc. 8=23425
- F2, temp. from electron conc. profiles 8=10021
- F2 during 3 solar eclipses, obs. 8=2717
- geographic distribution of electrons, approx. 10 ev. 8=23417
- global morphology, structure and processes, review 8=19017
- IF2 index, system, based on this, for prediction of radiowave conditions 8=18991
- ionization spread, Alouette 1 obs. 8=2714
- ionization vertical displacements, apparent-vel. distribution rel. to geomag. latit. 8=23416
- irregularities, effects on radiowave propagation, book 8=18978
- midlatitude electron and ion temps. at sunspot minimum 8=14689
- nighttime ionic velocities obs. and recombination calc. 8=19020
- nocturnal behaviour and maintenance 8=19022
- nocturnal drifts over Thumba, obs. 8=19023
- polar at sunspot min., mean structure and storm-time changes, Alouette 1 data 8=19021
- profile parameters from routine world netwk. obs. 8=2711
- radio beam transmissions, effect on critical freq. and isoconcentration surfaces 8=19019
- radio reflection phenomena, high latitudes associated with atmospheric winds at certain universal times 9=10012
- spread, nocturnal, rel. to mag. activity at Kodaikanal 8=10010
- spread-F occurrence over half sunspot cycle 8=23419
- sunrise effect in summer, onset time and plasma temp. rise 8=23402
- topside, delay of remote-resonance ionogram traces, explanatory model 8=2712
- topside, m. f. conjugate echoes, Alouette II sounder obs. 8=18981
- during total solar eclipse, May 20, 1966, obs. from 6 African stations 8=2710
- travelling disturbance associated with nuclear detonations 8=10016-7
- travelling disturbance following low-altitude nuclear explosion, spatial model 8=23418
- v. l. f. wave normals, influence of horizontal e density gradients on direction 8=23367

Ionosphere measuring apparatus

- field height, mean, from fading of satellite transmissions 8=9998
- ionograms, precautions for identifying no-echo occurrences 8=9999
- panoramic vertical soundings data processing 8=2703
- phase ionosonde, virtual height meas. errors 8=9992
- probe, Faraday cup type assembly 8=23400
- probes, effect of plasma sheath, book 8=14706
- r. f. capacity probe 8=2666
- resonance relaxation sounder for electron density 8=19012
- riometer quiet day curve determination 8=9997
- satellites, for electron content over Texas 8=14663
- satellite plasma expt., laboratory simulation 8=2692
- sounding, multiple freq., scanning range 50 KHz to 15-20 MHz 8=19006
- sounding rockets, positive ion density and electron temp. at 140 km, 360 km and 1824 km 8=2654

Ions

- See also Atoms; Ion emission/thermionic; Molecules; Plasma.
- in air, density profiles in expanded shock tube flows 8=15050
- atomic, elastic and resonant exchange cross-sections 8=4104
- in chloroethylene, reactions with molecules, study by ion cyclotron reson. spectroscopy 8=16453
- collection in Bayard-Alpert gauge, calc. 8=4306
- in crystals, with incomplete shells, spectra calcs. rel. to structure parameters 8=13033
- in crystal, 3d⁺ configs. splitting by octahedral field 8=1654
- cycloparaffins, chem. ionization mass spectra 8=1374
- detector for fast scanning mass spectrometer 8=1141
- diffusion with var. elec. and mag. fields by violation of 3rd adiabatic invariant 8=7706
- dihydroanthracenes and their Li salts, ion-pair struct. from n. m. r. 8=7559
- 1, 1-dimethoxy-2, 4, 6-trinitro-benzene ion, structure 8=8572
- gauge based on storage in 3D rot. symm. quadrupole field 8=19799
- identification, and metastable transition meas., by semi-automated mass spectrometer 8=1138
- in ignited thermionic converter, generation mech. rel. to electron energy distrib. 8=15221
- inactive, induced optical activity 8=16214

Ions—contd

- inert gas in W surface, interaction energy rel. to trapping of 8=13081
 interactions, second-order three-body, with Gaussian wavefronts 8=7457
 ionospheric ion-molecule reaction rates 8=18973
 ion slip in slightly ionized gas mixture 8=16436
 d^{2+} ions in tetragonal cryst. fields, e.p.r. and optical spectra 8=21798
 ketones, aromatic, decomp. rel. to charge and radical sites 8=4308
 line broadening, influence of elastic collisions 8=12099
 in liquids, short-range non-Coulombic interactions rel. to thermodyn. and electrokinetic props. 8=21602
 in liquid He, vortex ring formation, evidence for peeling model 8=10797
 mass spectrometry, anomalous glow discharge 8=7658
 metal, promotion of atom-transfer oxidation-reduction reactions 8=14401
 movement in gases, under influence of electric fields 8=7705
 multiply-charged, appl. in gas laser 8=15449
 negative, config. rel. to neutral, obs. effects 8=4140
 negative, effect on double space-charge sheaths 8=16549
 negative, in late-type stars 8=10154
 nitrate in alkali halides, lattice vibration and i. r. absorption spectra 8=17471
 nonexistent molec. ions, detect. 8=16440
 organic, non-classical, 1,2-rearrangements, MO description 8=21057
 oxalate, i. r. and Raman spectra and symmtry 8=21154
 pair association constants and solvent composition 8=8009
 pair form. in liquid membranes, transport and elect. props. 8=4560
 plasma, hydromagnetic Larmor radius included in collision damping theory 8=12486
 positive, detection efficiency of a continuous channel electron multiplier 8=6635
 in radiolysis systems, lifetimes meas. 8=23163
 reacting system with drift, vel. calc. 8=7704
 relative equilibrium in rotating system of reference 8=7674
 removal from plasma, acoustic wave generation 8=12569
 S-state, dipole polarizabilities, bounds, from oscillator-strength sum rule 8=7373
 spectra, first transition ion impurities in solids 8=14171
 temp. and density in theta pinch plasma, laser scatt. expt. 8=16553
 transition metal, recent Japanese work 8=16992
 transport in redox reactions of living cell, rel. to separation of positive and negative charges 8=23762
 trapping in 3D rot. symm. field rel. to meas. spectrometer 8=19800
 tribromide, charge distrib. in different crystals. 8=5567
 X-ray scattering factors calc. from Hartree-Fock wave functions 8=16189
 Ar binary mixture glow discharge, mass analysis 8=7665
 in Ar, density profiles in expanded shock tube flows 8=15050
 Ar in ZnO:Zn, energy loss and phosphor deterioration depth obs. 8=18624
 Ar⁺ and Kr⁺, multielectron ionization in close collisions, with Ar and Kr atoms 8=21012
 Ar²⁺, identification from mass spectra 8=12056
 Ar₂⁺, identification from mass spectra 8=12056
 BO₂⁺ in alkali halides, vibr. spectrum and bonds, obs. 8=22946
 C⁴⁺ ionization by e impact, cross-sections calc. 8=12435
 C⁵⁺ ionization by e impact, cross-sections calc. 8=12435
 C₆H₆⁺, lowest electronic states 8=12257
 C₆H₆⁺, position of electronic states 8=21120
 C₆H₆F⁺, lowest electronic states 8=12257
 C₆H₆F⁺, position of electronic states 8=21120
 CO₃²⁻, electron absorpt. spectra 8=12793
 CO₃²⁻, CO₂, injected in alkali halides, i. r. absorption 8=5583
 Co²⁺ in KCoF₃, polarizabilities and dipole moments from i. r. studies 8=2426
 CS₂²⁻, electron absorpt. spectra 8=12793
 CSe₂²⁻, electron absorpt. spectra 8=12793
 from Cs thermionic converter, anal. of dominant species 8=15211
 D₂⁺ chemical reactions with He, cross sections 8=14348
 D₂⁺, kinetic energy of autoionization 8=12443
 D₃⁺, reaction with alkanes and alkenes, energy transfer and deactivation 8=1358
 Fe X-XVIII, autoionization rel. to ionization rates and equilib. 8=16442
 Fe³⁺ in Ca₂Fe₂Si₂O₁₂, 3d⁵ configs. splitting by cryst. field 8=1654
 Fe³⁺,³⁺, ground states, universal potential field calc. 8=20952
 Ga V, 3d⁹-3d⁸4p transition spectra 8=12082
 Gd³⁺, energy structure 8=2421
 Ge VI, 3d⁹-3d⁸4p transition spectra 8=12082
 H, decay in collisions with thermal electrons 8=1360
 H in ZnO:Zn, energy loss and phosphor deterioration depth obs. 8=18624
 H₁⁻, duoplasmatron source for charge-exchange generator 8=15339

Ions—contd

- (H₁⁻, D₁⁻, T₁⁻), gen. purpose injector for charge-exchange generator 8=7713
 H⁺, energy distrib. function when moving in H under influence of electric field 8=7705
 H₂⁺, accurate wavefunction, James function as approx. to Guillemin and Zener 8=1249
 H₂⁺ chemical reactions with He, cross sections 8=14348
 H₂⁺, cross-sections for photo-dissociation 8=21188
 H₂⁺, energy distrib. function when moving in H under influence of electric field 8=7705
 H₂⁺ polarizability, longit. and transverse, variational calc. 8=1254
 H₂⁺, props. of 3d₀ and 4f₀ states 8=1244
 H₂O₄ group in acid soln., i. r. spectroscopic investigation 8=4150
 He, atomic and mol. mobility, 195-665°K 8=16445
 He-like, Hartree-Fock equations for 1s2p, ³P and ¹P states, perturbation treatment 8=20921
 He II, interference of fine-structure levels 8=4066
 He II, 4 → 3 transition excited by d bombard. 8=7384
 He in ZnO:Zn, energy loss and phosphor deterioration depth obs. 8=18624
 He⁺, electron-impact excitation and auto-ionization 8=4092
 He⁺, kinetic energy of autoionization 8=12443
 He⁺, 2s state, close-coupling calc. of electron-impact excitation 8=4091
³He²⁺, ⁴He⁺, in solar wind, Vela satellite meas. 8=23715
 He⁺, positive ion mobility, T, -1.4°K 8=15141
 He⁴⁺, 3.9% He³, positive ion mobility, T, -1.4°K 8=15141
 Hg discharge, ion-acoustic waves, propagation and damping 8=4313
 K, charge composition, effect of target state 8=1365
 Kr in ZnO:Zn, energy loss and phosphor deterioration depth obs. 8=18624
 L³⁺, (L=Ce, Pr, Nd, Sm, Gd, Dy, Er and Yb), 4f electron radial wave functions 8=1168
 Li, charge composition, effect of target state 8=1365
 Li dihydroanthracene salts, structure of ion-pairs from electronic spectra 8=7558
 Mg²⁺ in KMgF₃, polarizabilities and dipole moments from Mn²⁺:CaZrO₃, paramag. reson. spectrum 8=14118
 Mn²⁺ in KMnF₃, polarizabilities and dipole moments from i. r. studies 8=2426
 Mo₇O₂₄ in a crystal of ammonium heptamolybdate tetrahydrate, structure 8=8234
 MoS₂²⁻ and WS₂²⁻, in aq. soln. electron absorption spectra 8=12792
 N II, Stark effect in multiplet lines 8=4084
 N II-V, lifetimes meas. by decay of optical radiation 8=7412
 N in ZnO:Zn, energy loss and phosphor deterioration depth obs. 8=18624
 NO₂, NO₃, injected in alkali halides, i. r. absorption 8=5583
 Na, charge composition, effect of target state 8=1365
 Nd³⁺ in rare-earth trichlorides, new satellite structure 8=12070
 Ne (IV and V), mean lines of some excited levels 8=4097
 Ni²⁺ in KNiF₃, polarizabilities and dipole moments from i. r. studies 8=2426
 O (III and IV), mean lines of some excited levels 8=4097
 O⁶⁺ in solar wind, Vela satellite meas. 8=23715
 O⁺, photodetachment cross-sections and polarization 8=4101
 O⁺ from fermalta anode, cathode poisoning 8=15330
 Pr³⁺, wave functions 8=7419
 RaA, capture on metal disk 8=1370
 Rb²⁺ in RbMnF₃, polarizabilities and dipole moments from i. r. studies 8=2426
 Tb³⁺ in phosphors, radiative transition probabilities 8=4683
 Ti (III), hexahydrated, electronic struct. 8=16995
 Ti³⁺ in SrTiO₃, electronic ground state structure 8=9445
 V²⁺ and Ni²⁺ superexchange interaction in MgO 8=9355
 V (III), hexahydrated, electronic struct. 8=16995
- recombination**
 in columns, theory 8=12425
 energy partition between radiation and e-collision 8=1355
 n-hexane, after irradiation with γ-rays 8=6628
 ionosphere, E region, effect of vibrational level 8=23409
 ionosphere, F-region, coeff. calc. from nighttime velocities obs. 8=19020
 irradiated dipolar systems 8=2541
 three-body process with general third body, low density limit to rate, state anal. 8=12426
 three-body recomb. rate 8=21263
 Ar, gamma and neutron irradiated 8=1363
 Cs, electron, at 6P and 5D levels, cross section obs. 8=12080
 Cs vapour, ionization decay, microwave cavity studies 8=21271
 H, gamma and neutron irradiated 8=1363
 H₂ + e → H⁺ + H⁻, reactions of decay 8=1360
 HCl, γ-irrad., ion lifetimes 8=23164
 He- lifetime obs. 8=20944
 He afterglow, differential level decay 8=21237
 He⁺⁺ → He⁺ + H⁺, e capture probability calc. 8=1192
 He³⁺, e-capture on N₂ target 7.7-166 MeV 8=21279

ns—contd

recombination—contd

- He³⁺ single and double e-capture cross-sections obs.
 in He ³⁺-He. 7.2-181 KeV 8=21278
 N₂⁺ e-ion, temp. depend. obs. 8=7719
 N₂⁺ + N₂, is N₂⁺ produced? 8=1366
 Ne, e-temp. depend. 8=12451
 Ne₂⁺ rate, obs. of temp., press. depend. 8=21282
 O₂ radiolysis, ion lifetimes meas. 8=23163
 Pb halides, gaseous, recomb. rates 8=4317
 Si surface barrier detection, pulse height defect 8=3465
 Tl halides, gaseous, recomb. rates 8=4317

scattering

- alkali ion scatt. at He atoms 8=7464
 double-scatt. effect on cross-section meas. 8=10893
 0.5-3 keV, by atoms and mols., cross-sections determ. 8=1139
 on nuclei, with mutual excitation, diffraction theory 8=1102
- ns, electrolytic
- See also Conductivity, electrical/liquids, electrolytic; Dissociation/electrolytic.
- acetate, oxidation by K₂S₂O₈, Ag catalysis 8=23094
 alkali halide crystals, impure, cation vacancy generation 8=9718
 anions, adsorpt. maxima 8=4760
 anions, change in chem. potential on transfer from protic to dipolar aprotic solvents 8=14418
 cations, adsorpt. maxima 8=4760
 cation hydration, charge-dipole model 8=9670
 cation off-centre displacements in octahedral environments 8=13172
 contact pairs, effect of ionic polarizability on equilib. const. 8=8118
 4,4'-dimethoxyazobenzene anion, e.s.r. 8=12303
 dissociation rate, computation from ultrasonic relaxation study 8=18712
 dipyrindyl mononegative ion and alkali metal ion biradical, e.s.r. and structure 8=4247
 durosemiquinone, ion-pair assoc. 8=1591
 exchange, use of Rumanian molecular sieves 8=18652
 macroions of rigid-sphere potentials, potential of average force 8=21203
 methylene blue, water induced dimerization, absorpt. spectrum obs. 8=8123
 methyl viologen cation, aq. and alcoholic solns., water induced dimerization, e.s.r. spectra obs. 8=8123
 γ-picoline-halogen complexes, ionization in polar solvents, i.r. spectra obs. 8=7592
 recombination rate, electrostatic model 8=4611
 solvation, thermodynamic functions 8=12807
 tetracyanoquinodimethane anion, aq. and alcoholic solns., water induced dimerization, e.s.r. spectra obs. 8=8123
 zeolites, synthetic, ion exchange theory 8=18651
 AlCl₃, p.m.r., determ. of coord. no. in aq. mixtures 8=16888
 Br⁻, passivity breakdown of stainless steel 8=23147
 Cl⁻, passivity breakdown of stainless steel 8=23147
 Co²⁺ ion hydration, n.m.r. 8=12937
 H⁺, competitive solvation in water-methanol vapour 8=14443
 ZnSO₄ soln. in H₂O-glycol, ion assoc. 8=8062

asers. See Lasers.

dium

- brittleness, on hot and cold working 8=22390
 films, ultra-thin, vacuum-deposited, structure from e-diffr. and microscopy 8=17292
 Schottky deviations for thermionic emission at 1500-2000°K 8=5415
 Al-coated, u.v. reflectivity calc. 8=14227
 with Cs film, adsorption and electron emission 8=9268
 Ir(III), spectra in fused LiCl-KCl 8=1567
 Ir¹⁹³, mag. fields in Ir-rare-earth cpds 8=1634
 Ir⁴⁺, substitution in spinel ferrites, spin wave line-width variations 8=5495
 on SiO₂, chemisorpt. of HCN, C₂N₂ and BrCN 8=23127
- dium compounds
- alloys, superconductivity, mag. susceptibility and sp. ht. 8=13752-3
 Mössbauer effect of Ir¹⁹³ 8=4679
 IrCl₆²⁻, electron transfer bands in crystals at 20°K 8=22992
 IrO₂, resistivity, temp. depend. 8=17939
 Ir₂Se₃, Rh₂Se₃ and Rh₂Se₃, octahedron pairs, crystal structure 8=1807

on

- absorption coeff. for AgKα radiation, meas. 8=2436
 abundance, problem of 8=2769
 abundance, in sun and meteorites 8=23682
 additions to Ti alloys, superconducting props., phase transformations 8=22563
 analysis, Cu determ. by at. absorpt. spectrometry 8=2545
 anodic behaviour in H₂SO₄ and alkaline solutions 8=14432
 armco, explosive formation, residual strains and hardening 8=13564
 armco, lattice parameters obs. 8=8521
 Armco, lower yield stress rel. to grain size 8=17798
 armco, strain-aged, tensile stress strain relations 8=17792
 armco, strain ageing, effect of preliminary deformation 8=17786
 atoms, ionization of various gases, ionization ratio meas. 8=1359

Iron—contd

- atom and ions, ground states, universal potential field calc. 8=20952
 atom, photoelectric cross-section for K-Mv subshells for X-rays 412-1332 keV 8=7438
 atomic scattering factor, absolute 8=8519
 b.c.c., critical values for Bloch wall types 8=9320
 b.c.c., density of states 8=22460
 b.c.c., screw dislocation core structure 8=4976
 b.c.c., O migration energy and solubility 8=22150
 caked powder ceramic, porosity and thermal conductivity 8=13388
 cast, austenitic, effect of Ce on struct. 8=21988
 compressibility, 4.2-300°K 8=5061
 corrosion rate rel. to impurities 8=18664
 corrosion in H₂SO₄, thiourea inhibition and K₂Cr₂O₇, NH₄CNS and KI effects 8=2518
 critical magnetic scattering of neutrons, spin correlation 8=2026
 crystals, having [100] and [110] axes, tensile deformation, -70°C to 250°C 8=13553
 Debye-Waller-factor and Mössbauer-thermal-shift meas. 8=8214
 deformation microcontours, during fatigue testing 8=2053
 dissolved in Zn, magnetic moment, revision of superconducting props. 8=9344
 distribution of additions during oxidation 8=1917
 elasto-plastic behaviour study of pure mono-crystalline sheets 8=8848
 electron irradi., anisotropy of defect production 8=8770
 electron irradiated, resistivity studies 8=5180
 electronic sp. ht. calc. by band model 8=4932
 etching, thermal in vacuum 8=17652
 fatigue damage from intergranular weakness 8=5060
 ferromagnetic lattice, hyperfine magnetic field on Sm¹⁵⁰ 8=2335
 ferromagnetic, maximum susceptibility 8=18338
 ferromagnetic powders, magnetic props., lattice parameters 8=14033
 films, electrolytically deposited, growth rate rel. to structure and ferromag. props. 8=13999
 fractionation in Solar System 8=10323
 frictional forces of moving dislocations 8=22206
 v-beam scatt., differential albedo obs. 8=16844
 glass-doped, granular structure, orientation, after annealing, model for doped tungsten 8=17025
 grains, production in discharge, light scatt. and interstellar matter 8=4296
 h.c.p., thermodynamic props. 8=13371
 hydrostatic tension on solidification 8=21758-9
 impurity ion in Pa, range of spin perturbation 8=1655
 ions, Fe X-XVIII, autoionization rel. to ionization rates and equilib. 8=16442
 ion, Fe XVII, electron impact, Coulomb-Born calc. 8=12081
 liquid, deoxidation with Al, rel. to form. of cloud group of oxide inclusions 8=22183
 liquid, heat of solution of Al, Cu and Si 8=16799
 liq.-silica deoxidation product growth and separation, collision model 8=18658
 magnetic atoms, phonon motion studied by polarized neutron scatt. 8=14012
 magnetic properties, Anderson-type localized moments, model 8=2314
 magnetic props. from meas. of critical diffusion of slow neutrons 8=22810
 magnetic scattering of neutrons, rel. to spin correlation function 8=2325
 magnet with superconducting coil 8=15263
 magnetocrystalline energy, electronic charge, Fermi surface 8=2089
 magneto-optical props., u.v., visible and i.r. 8=18550
 martensite, atomic displacements 8=4877
 mass ejection by laser pulse 8=8759
 α, mechanical change due to tension, compression and rolling 8=5067
 metallurgy, homogeneity and interface reactions 8=5704
 meteorites, Australian, comp. differences obs. 8=23684
 Mössbauer effect in ionic cpds. at high press. 8=4674
 Mössbauer effect study of state in AgCl single crystals 8=8215
 Mössbauer effect in K ferro- and ferricyanides 8=4673
 Mössbauer-thermal-shift and Debye-Waller-factor meas. 8=8214
 nebula NGC 6960, FeX 6374 Å line, obs. 8=10225
 neutron irradi., rel. to plastic deformation, stress-strain curves 8=22348-9
 oxidation in water vapour at 550°C, effect of cold work 8=23101
 particle size range for magnetostatic accretion 8=23632
 point defects recovery after low-temp. deform. 8=13418
 polycrystalline, coarse grained, defects under tensile deformation 8=1985
 polycrystalline, lower yield stress, temp. depend. 8=13562
 polycrystalline, two-pole magneto-optical Kerr effect, 6.5-20 μ 8=18526
 potentiostatic anodic dissolution under yielding conditions obs. 8=8793
 powder dispersed in perspex, magnetization process and Mössbauer effect 8=5470

Iron—contd

purified, amplitude-dependent internal friction and modulus defect 8-13557
 pure, annealing effect on internal friction temp. dependence 8-17791
 reproducible residual resistance measurement 8-5179
 resistivity as function of temp. and magnetization 8-13716
 rod, vibrating and heated, stress distribution 8-10688
 rolled, orientation analyses by means of quantitative pole figures 8-17282
 γ -phase, self-diffusion, effect of traces of Sn, Sb, Pb and Bi 8-1930
 in silicate materials, site populations, Mössbauer effect 8-8218
 in silicate matrix, superparamagnetism 8-14013
 single crystals, relaxation and yield 8-22340
 sintered, mag. props. and eddy current losses reduction, obs. 8-22807
 sintered, mag. props. rel. to porosity, obs. 8-22808
 solubility of Pu 8-13041
 solubility in TiO_2 , X-ray examination 8-13042
 stars HR 4533 and 4657, [Fe/H] abundance 8-23533
 steel, exoelectronic emission due to sliding friction, obs. 8-18254
 surface texture 8-8295
 technical, microstructure during fatigue tests 8-13566
 whiskers, ferromag., nucleation, theor. investigation 8-18335
 whiskers surface microstruct., scanning e microscope obs. 8-17281
 X-ray diffraction line intensity after plastic deform. and annealing 8-21989
 in Ag, liquid, diffusion 8-12836
 α -AlFeSi, 4 possible phases 8-13057
 containing Au, magnetization saturation at 20°K 8-2324
 Cr diffusion in experimental obs. in 950-1265°C range 8-4951
 on Cu, hot, pseudomorphic growth 8-21880
 in ϵ Cu-Zn phase, local moment formation 8-9340
 Fe I 6302.5 Å line contours in sunspots rel. to Zeeman splitting anomalies, obs. 8-10418
 Fe II, III, beam-foil excitation 8-12079
 Fe(III) ions, sublation studies by radioactive tracers 8-23075
 Fe XIII solar emission lines, photoelectric abundance meas. during eclipse 8-5965
 α -Fe (b. c. c.), anisotropy of impurity-induced internal friction peak (Snoek's peak), for torsional vibrs. 8-13572
 Fe crystals with 8-20 p. p. m. C, n-irradiated, yield stress rel. to radiation hardening 8-17800
 α -Fe crystals, D^+ transmission 8-22242
 α -Fe, diffusion of C 8-17572
 α -Fe, dilation by C 8-17615
 α -Fe, dislocation structure rel. to plastic deform. 8-4975
 α -Fe, phonon dispersion relation at room temp. 8-1835
 α -Fe, phonons and magnons, dispersion relations 8-13331
 α -Fe, precipitation of C, n-irrad. effect 8-17059
 α -Fe, solid solutions, mechanical props. 8-22350
 α -Fe, vacancies and interstitials, calcs. 8-22179
 Fe-whiskers, nucleation mag. field strength investigations 8-5467
 Fe, H-charged internal friction rel. to H interstitial-dislocation binding 8-4965
 Fe and Mg multilayered film structure, X-ray diffraction 8-1758
 γ -Fe, NbC solubility from C content analysis at temps. 950-1050°C 8-4535
 α -Fe, 3.28%Ni addition, effect on yield and fracture behaviour at low temps. 8-22346
 Fe-Ni phase diagram and α and γ solid solubilities, e micro-probe obs. 8-17034
 Fe-Mn, (M = Mn, Ni, Sb, Sn, W) systems α - γ equilib. 8-4709
 Fe/O relative abundances in solar corona 8-23748
 Fe-4.4%Si, direct observation of twin formation 8-13125
 Fe⁵⁴, 15-60 MeV Li⁶ ions, recoil range 8-13489
 Fe⁵⁵ radioactive isotope, use as source for X-ray structural anal. 8-13227
 Fe⁵⁶-Fe⁵⁷ mass difference, from mass-spectroscopic and reaction Q-value analysis 8-21017
 Fe⁵⁷, in dilute alloys of Fe, n.m.r. spectra 8-14140
 Fe⁵⁷ isomer shift, calibration 8-16988
 Fe⁵⁷ Mössbauer expts. at 1-0.08°K rel. to Co nuclear polarization in Fe 8-4676
 Fe⁵⁷ Mössbauer spectrum, variable-freq. u.s. spectrometer obs. 8-13021
 Fe⁵⁷ in Fe(OH)₂, Mössbauer effect at 90 and 4.2°K 8-13027
 Fe⁵⁹ diffusion in Pd, obs. 8-17579
 Fe⁵⁹, extraction from aqueous soln. using 1-phenyl-3-methyl-4-capryl-pyrazolone-5 8-18750
 Fe₃Mn₂O₄, cation distrib. determ. 8-17364
 α -Fe₂O₃ easy-axis critical fields and resonance involving Dzyaloshinsky interaction 8-22871
 Fe²⁺, cubic, magnetically induced electric field gradients, theory 8-21803
 Fe²⁺, Mössbauer spectrum in BaFeSi₄O₁₀ 8-13026
 Fe²⁺ in sphalerite, i.r. absorpt. spectra 8-18570
 Fe²⁺ in MgO, microwave phonon interaction 8-9450
 Fe²⁺ ion in MgO, thermal conductivity, mag. field depend. 8-13395

Iron—contd

Fe²⁺ in MgO u.p.r. temp. depend. 8-2367
 Fe³⁺ spin-lattice relax. in K₃Co(CN)₆ 8-10994
 Fe³⁺ in CaF₂, e.p.r. spectrum 8-9437
 Fe³⁺ in Ca₂Fe₂Si₂O₁₂, 3d⁵ configs. splitting by cryst. field 8-1654
 Fe³⁺ in KAlF₄, e.p.r. spectrum 8-9426
 Fe³⁺ in KTaO₃, e.p.r. 8-9425
 Fe³⁺ in K₃Co(CN)₆, e.p.r. spin-spin interaction temp., 3 cm, 1.8°K 8-18425
 Fe³⁺ in LiF, crystal field distortions, e.s.r. study 8-13005
 H in Fe, anomalous behaviour at low temps. 8-22182
 H₂, dissolved, electromigration 8-8677
 N impurity, spectrophotometric determ. 8-23178
 NH₃ adsorption catalyst, Mössbauer spectra 8-13108
 Ni diffusion, volume and grain-boundary 8-17571
 in Ni-Mn Nivalloy, effect on mag. permeability 8-22832
 O adsorption at (011) surface, low energy electron diffraction study 8-1701
 Sb impurity, internal nucl. mag. field 8-8198
 Sb²⁴ implanted, hyperfine mag. field 8-8199
 Si-Fe, [110], necking and fracture at 293 and 473°K 8-13607
 3% Si-Fe upper yield stress rel. to etch pitting experiments 8-5065
 V:Fe⁵⁷, Mössbauer effect, recoil-free fraction and Doppler shift meas., localized modes 8-13338

Iron alloys

See also Iron compounds; Steel.
 abrasive wear resistance, influence of strengthening mode 8-8847
 Alnico, high-temp. magnetization obs. 8-22813
 alnico permanent magnets magnetization, 550-800°C 8-22806
 Alnico, structure on formation at different ageing temps. (300-800°C) 8-17077
 analysis, Mn determ. by at. absorpt. spectrometry 8-2547
 austenite formation from spheroidized ferrite-carbide aggregate, kinetics 8-21844
 austenite in Fe-Ni alloys, effect of C on Curie pt. 8-18336
 dilute, charge screening 8-13661
 drop, liquid, voids formation 8-8257
 elinvar, influence of Cr on mag. props. 8-9348
 ferritine, superantiferromag, independence on Fe content and aq. dissolution 8-14068
 invar, Fe⁵⁷ Mossbauer spectrum, plastic deform. effects obs. 8-21811
 kovar, anode desorption efficiency, photoelec. meas. 8-17167
 liquid, oxide saturated, first-order interactions rel. to oxide solubilities 8-16797
 phase equilibria by leveitation melting apparatus 8-1669
 secondary ion emission 8-18287
 silicon, notched, fracture topology rel. to crack nucleation and growth 8-17793
 solid-solution strengthening 8-22341
 sormite type, influence of Nb on hardness and structure 8-5066
 Ticonal, structure on formation at different ageing temps. (300-800°C) 8-17077
 transition metal, magnetization values 8-22811
 low-Al, storage effect on oxidation at high temps. 8-9666
 Fe-Al, elastic stiffness coefficients, experimental results and thermodynamic analysis 8-5062
 Fe-Al, electron energy losses 8-17912
 FeAl alloys, kinetic order-disorder transform. by X-ray investigation 8-17076
 Fe-0.5-6%Al, mag. props. of doubly oriented sheets, obs. 8-22789
 Fe-Al, nature of K state 8-9005
 Fe-Al 40 oil quenched alloy, source of dislocations 8-13438
 Fe-Al, paracrystals from X-ray powder patterns rel. to comp. and annealing treatments 8-17368
 Fe-Al, stiffness coefficients, long range order effects 8-5063
 Fe-20 at. %Al, structure factor variations for electrons with accelerating voltage 8-13260
 Fe-Al, yield effect from elevated temp. constant strain-rate tests 8-13555
 Fe-Al₂O₃, dispersion strengthened, and hot extruded mechanical properties 8-8842
 Fe-Au-Cu, ordered G.P. zones 8-8461
 Fe-Be, ferromag. props. rel. to transfer of electron states 8-14018
 Fe-C austenite, quadrupole splitting of Mossbauer resonance, disappearance at elevated temps. 8-21808
 Fe-C, effect of noble metal additions on toughness 8-17795-6
 Fe-C, growth of spherical graphite crystals 8-13156
 Fe-C alloys, liq., diffusion of N. at 1600°C 8-16815
 Fe-C martensite, static atomic displacements by X-ray diffractions 8-4878
 Fe-C, structural transitions from density and emissive power meas. 8-1673
 Fe-C, thermodynamic of martensite transform. 8-17075
 Fe-C-Cr solns., liq., activity of C 8-21653
 Fe-C-Mn, induction melting under vacuum at 1600°C, evaporation of Mn 8-12993

Iron alloys—contd

- Fe-C-Ni-Mn, martensitic transformation, magnetic field effect 8=17079
- Fe-Co, ferromagnetic powders, magnetic props., lattice parameters 8=14033
- Fe-Co, fine particles, mag. props. 8=5471
- FeCo, grain boundary theory 8=17258
- Fe-Co, magnetic anisotropy 8=14019
- Fe-Co-Ni-Cr, new ferromagnetic state during recrystallisation 8=9342
- Fe-Cr, electrotransfer of components at 1150–1400°C 8=4952
- Fe-Cr, mechanism of lifting and cracking of protective Cr_2O_3 scale 8=23099
- Fe-Cr(0–53%), mechanical properties after ageing at 475°C 8=8841
- σ -FeCr, mech. props. rel. to atomic ordering and co-ordination 8=17030
- Fe-Cr of 25–95%Cr comp., oxidation at 1000° to 1300°C 8=18677
- Fe-28%Cr, early growth of oxide, rel. to environment 8=21882
- Fe-Cr phase transformation, 500°C 8=13068
- Fe-30%Cr, yielding and fracture 8=13558
- Fe-Cr X-ray fluorescence analysis 8=9750
- Fe-Cr, X-ray microanalysis rel. to fluoresc. and absorpt. corrections evaluation 8=14476
- FeCrAl as ferromag. Hall probes 8=14011
- Fe-Cr-Al, high-temp. corrosion by S 8=23102
- Fe-7.9Cr-1.1C, isothermal transforms. betw. 750 and 285°C 8=17068
- (Fe,Cr)Co, (Fe,Mn)Co, Fe(CoNi) with FeCo super-structures, neutron diffraction 8=1757
- Fe-Cr-N ternary system, microstructures and nitrides 8=4845
- Fe-Cr-N ternary system, structural diagrams and phase reactions 8=4846
- Fe-Cu, Cu precip. and coagulation rel. to ferromag. props., obs. 8=22809
- Fe-Cu, fracture obs. 8=22347
- Fe-Cu, induction melting under vacuum at 1600°C, evaporation of Cu 8=12993
- Fe-Cu mixed whiskers, strength, hardness and growth mechanism 8=17249
- Fe-C-Si, growth of spheroidal graphite crystals 8=13156
- Fe-Gd films, hysteresis loops, by static method 8=9345
- Fe-In system, liq. miscibility gap, no intermetallic cpds., and solubility 8=8160
- Fe-MgO, dispersion strengthened, and hot extruded mechanical properties 8=8842
- Fe-Mn austenite, effect of plastic deform. and annealing on H permeability 8=17573
- Fe-Mn, dilute, nearest neighbour antiferromag. exchange interaction energy of Mn 8=18383
- Fe-Mn, induction melting under vacuum at 1600°C, evaporation of Mn 8=12993
- Fe-Mn, paramagnetic susceptibility of martensitic phases 8=9304
- Fe-Mn-As system, first order ferrimag. to antiferromag. transition, temp. dependence 8=9376
- Fe-Mn-N, internal friction meas. 8=8839
- Fe-Mn-N, stress change effects on creep resistance 8=5064
- Fe-Mo alloys, Fe-rich, precip. reactions and solid solns. from Mössbauer spectra 8=4678
- Fe-N alloys, tempering process and quenched structure 8=8840
- Fe-N, thermodynamics of martensite transform. 8=17075
- Fe-N, martensite lattice meas. 8=8522
- Fe-Ni alloy, refining effect of Ge in vacuum melting rel. to mag. props. 8=22815
- Fe-Ni, annealed, vacancies rel. to X-ray diffr. "tails" 8=17341
- Fe-Ni base alloy: 9 at %Cu, microstructural and mechanical strength changes on ageing 8=1759
- Fe-Ni binary solns, interdiffusion coeff. conc. dependence, by X-ray analysis 8=17570
- Fe-Ni, evaporation characteristics 8=12719
- Fe-Ni films, electrodeposited, internal stresses rel. to deposition conditions 8=17653
- Fe-Ni, heating during ferromag. resonance 8=14082
- Fe-Ni(35 wt. %)-Cr(0–20 wt. %) alloys (in as-coldworked state), strain gauge factor in relation to electrical and magnetic properties 8=9006
- Fe-Ni, mag. thin film, evaporated with oblique incidence, structure 8=14017
- Fe-Ni, mag. and mech. anisotropies, by diffusion 8=22814
- Fe-50%Ni mag. props., metallic impurities effects, obs. 8=22825
- Fe-Ni, martensitic transformation, calorimetric study 8=17069
- Fe-Ni, n-irradiated, mag. props. 8=2326
- Fe-Ni, phase-hardened, condition for thermal stability 8=17066
- Fe-Ni, rapid heating effect during reverse martensite transform. on high temp. stability 8=17065
- Fe-Ni, sintered, mag. props. and eddy current losses reduction, obs. 8=22807
- Fe-Ni, surface relief rel. to supercond. transition 8=19686

Iron alloys—contd

- Fe-Ni thermal bimetal strip, ageing 8=22345
- Fe-Ni-Al-Ti, microstruct. and mech. props. 8=21987
- Fe-Ni-As constitution diagram, up to 50 wt. %As 8=17074
- Fe-26%Ni-0.4%C alloy, effect of prior plastic deformation of austenite on M_s 8=4710
- Fe-Ni-C martensites, ferrous, hardness change due to deformation 8=22352
- Fe-Ni-C, mech. props., effect of rapid re-austenitizing 8=17807
- Fe-Ni-Co-Al coercivity and energy increase by Ti and Si, Se or Te addition 8=22805
- Fe-Ni-Cr aged, dislocation structure and grain size effect on validity of Cottrell-Stokes law 8=8721
- Fe-Ni-Cr, ang. depend. of mag. phenomena in interacting particle chains 8=5429
- Fe-Ni-Cr, mag. props., ht. treatment, comp. and external field dependence 8=18337
- FeNi-FeNiMn films with ferro-antiferromagnetic coupling, study 8=9346
- Fe-Ni-Mo, sintered, mag. props. and eddy current losses reduction 8=22807
- Fe-Ni-Te, structural changes during martensite ageing 8=17064
- Fe-Ni-Ti, ageing during $\alpha \rightarrow \gamma$ martensitic transformation 8=17070
- Fe-Ni-Ti alloy of Invar type, Young modulus anomalies 8=17790
- Fe:Pd and Fe:Pt, giant moments theory 8=9302
- Fe(Pd,Pt_{1-x})₃ alloys, antiferro-ferro, transitions 8=5465
- Fe-Rh, structural defects, phase transformations crystal lattice parameters 8=9395
- Fe-Ru alloys, h.c.p., high electronic sp.ht. 8=13369
- Fe-Ru, h.c.p., thermodynamic props. 8=13371
- Fe-Si, annealing effect on physical props. 8=23778
- Fe-Si, chemical polishing 8=1687
- Fe-3%Si crystal, dislocation movement 8=17661
- Fe-3wt.% Si single crystals, X-ray interference fringes rel. to domain arrangements 8=22021
- Fe-Si, ferromagnetic after-effect by plastic deformation 8=5466
- Fe-Si, grain-oriented, domain wall mobilities rel. to alternating field freq., obs. 8=22841
- Fe-3%Si, grain-oriented, hysteresis and eddy current losses rel. to domain wall motion, obs. 8=22842
- Fe-Si, grain-oriented transformer sheet, magnetostriction 8=22839
- Fe-4.5%Si, growth obs. on Neumann bands by high-speed photography 8=4783
- Fe-Si, magnetic Zener relaxation, diffusion mechanism 8=9451
- Fe-Si, Mössbauer spectra near ϵ -phase 8=8242
- Fe-Si sheet, initial permeab. depend. on demag. freq. 8=5464
- Fe-Si sheet, iron losses in alternating mag. fields, ≤ 24 kGauss 8=22804
- Fe-Si, sintered, mag. props. and eddy current losses reduction, obs. 8=22807
- Fe-SiO₂, dispersion strengthened, and hot extruded mechanical properties 8=8842
- Fe-Sn, induction melting under vacuum at 1600°C, evaporation of Sn 8=12993
- Fe-Ta system, liquid and solid δ -phases 8=8161
- Fe-TaC, fracture obs. 8=22347
- Fe-3.5 at. %V, frictional forces of moving dislocations 8=22206
- Fe-V-C, anomalous Snoek peak 8=13559
- PbTe-Fe pseudobinary phase equilibria 8=17097
- S solubility at 1000°C, effect of Cr, Cu, Ni and V 8=17012
- Si-Fe, (b. c. c.), impurity-induced internal friction peak (Snoek's peak), for torsional vibrs., anisotropy 8=13572
- Si-Fe, dislocation structure and ductility, low-temp. creep effects 8=13571
- Si-Fe, intercrystalline fracture 8=13567
- Si-Fe thin tapes, dynamic hysteresis phenomena 8=5483

Iron compounds

- See also Ferrites; Iron alloys; Steel.
- alum, ammonium, n.m.r. obs. 8=2385
- borides, transfers of electronic states 8=5461
- botryogen, cryst. struct. 8=4876
- carbides, precipitation in tempered martensite 8=17080
- carbides, transfers of electronic states 8=5461
- ferrian ilmenites in basalts, electron probe 8=14703
- ferric oxides, hydrous, colloidal, mineralogical comp. 8=12954
- ferric oxyhydroxide, structure determ. by Mössbauer spectroscopy 8=17370
- ferrocene-tetracyanoethylene complex, cryst. struct. 8=1792
- ferrous ions in ice, Mössbauer effect 8=4675
- fluorotitanate complexes, F-F coupling consts. 8=4230
- goethite dehydration and haematite/magnetite formation rel. to c. c. p. orientations 8=4875
- hematite, natural, stress induced mag. anisotropy 8=22748
- hexaferrites, Al-Fe substitution by i.r. spectroscopy 8=16999
- ionic, Mössbauer effect, at high press. 8=4674

Iron compounds—contd

- iron(II)-bis(α -diimine) complexes Fe^{2+} Mossbauer spectra 8=8200
- iron oxide scale, hematite phase physico-chemical state 8=17201
- isomer shift of Fe nucleus 8=4681
- magnetite, acoustic loss peak, electronic mech. 8=1852
- magnetite film on Fe, formed by corrosion, crit. tensile fracture strains 8=21875
- magnetite, self-diffusion of O, 8=22151
- magnetite, thermal cycling, effect of compression 8=22798
- oxides, bond distances and angles, cryst. struct. 8=22022
- oxides (hematite, maghemite, magnetite), reduction processes below 400°C 8=5703
- oxyhydrates, bond distances and angles, cryst. struct. 8=22022
- phosphides, transfers of electronic states 8=5461
- tetracarbonyl (fumaric acid) iron racemate 8=1790
- titanomagnetites in basalts, electron probe 8=14703
- wüstite, hole mobility obs. 1000-1300°C 8=13697
- wüstite, Seebeck coeff. grain size and Mg doping dependence rel. to p to n transition 8=5387
- Fe-I-boracite, ferroelectric orthorhombic phase, optical study 8=22980
- Fe carbonyl toluene complex, crystal structure, by X-ray analysis 8=4874
- Fe(III) oxide, mobility evidence from Zn ferrite form. at 400°C 8=23117
- FeBr_2 , hyperfine structure at 78°K and 4°K, Mössbauer effect obs. 8=13025
- Fe_2C , Hägg iron carbide, lattice structure 8=17372
- $\text{FeCl}_2 \cdot 2\text{H}_2\text{O}$, antiferromag., magnetization process from exchange interactions 8=2349
- FeCl_2 , hyperfine structure at 78°K and 4°K, Mössbauer effect obs. 8=13025
- FeCl_2 , metamag. phase transform. and hysteresis 8=9396
- $\text{FeCl}_2 \cdot \text{Fe}^{3+}, \text{Mn}^{2+}$, impurity spin resonance at low temps. 8=14108
- $\text{FeCl}_3 \cdot 6\text{H}_2\text{O}$, cryst. structure 8=1791
- FeCl_3 -graphite cpd., electron microscopy 8=1972
- FeCl_3 , hyperfine structure at 4°K, Mössbauer effect obs. 8=13025
- FeCl_3 , monomeric, mol. structure from gas e-diff. exam. 8=16264
- $\text{Fe}(\text{CN})_6^{-3}$ aqueous con., cathodic reduction on ZnO 8=14423
- FeCO_3 , quadrupole Mössbauer doublets, vibrational anisotropy 8=16983
- FeCO_3 , Fe^{57} asymmetry of quadrupole splitting components 8=21806
- $\text{Fe}_3(\text{CO})_{12}$, C^{14}O isotope exchange reactions 8=2506
- FeCo, micro-strain and hardness under deformation 8=13596
- FeCr_2S_4 containing Fe^{2+} , Mössbauer spectra 8=8216
- FeCr_2S_4 , effective fields in Fe^{57} Mössbauer spectra 8=1647
- FeCr_2Se_4 , structural, electrical and thermal parameters rel. to d-orbital interactions 8=5391
- FeF_2 , spectrum, near i.r., mag. effects 8=18525
- FeF_2 , tetragonal antiferromagnet, scattering of light by one- and two-magnon excitations 8=18546
- FeF_3 , antiferromagnetic, Mossbauer spectra, interpret. of broadened and shifted lines 8=21807
- $\text{Fe}_{1-x}\text{Ga}_x\text{O}_3$, ferrimag. structure considerations 8=18360
- $\text{Fe}_{1-x}\text{Ga}_x\text{O}_3$, magneto-electric susceptibility versus temp. 8=5427
- FeGe hexagonal single crystal, magnetic torsion measurements 8=14069
- Fe_2 , hyperfine structure at 78°K and 4°K, Mössbauer effect obs. 8=13025
- FeIn_2S_4 containing Fe^{2+} , Mössbauer spectra 8=8216
- FeLiO_2 , Q_{11} (or β) phase, X-ray diff. results rel. to periodic antiphase model 8=17386
- Fe-Mn carbides, cell volume obs. 8=22019
- $\text{Fe}_2\text{Mn}_3\text{TO}_3$, (T = rare earth), structure and mag. props. rel. to x value (0 to 1) 8=22851
- Fe, MnWO_4 X-ray microanalysis, atomic number effect correction, obs. 8=14479
- $\text{Fe}_2(\text{MoO}_4)_3$, crystal structure refinement and formation 8=17374
- $\text{Fe}_2(\text{MoO}_4)_3$, structural type 8=8526
- Fe-N supersaturated solutions, n-irrad. rel. to nitride precipitation 8=17060
- Fe-N₂ solid solns., N₂ desorption kinetics 8=1704
- $\text{Fe}(\text{NCS})_2 \cdot 4\text{Py}$, Mössbauer effect probabilities 8=8213
- FeNeMo/SiO₂/Fe double layer magnetic film, hysteresis loops theory and experimental 8=5458
- $\text{Fe}(\text{NH}_4)_2(\text{SO}_4)_6 \cdot 6\text{H}_2\text{O}$, isothermal dissoln. and growth, mag. field effect 8=8411
- $\text{FeNH}_4(\text{SO}_4)_6 \cdot 12\text{H}_2\text{O}$, sp. ht. and mag. susceptibility calcs. at very low temps. 8=13370
- FeNi films, electrodeposited, mag. props. 8=9347
- $\text{Fe}(\text{NO}_3)_3 \cdot 9\text{H}_2\text{O}$ magnetic relaxation, Mössbauer spectra 8=2378
- $\alpha\text{-Fe}_2\text{O}_3$, antiferromag., spin waves and mag. exchange interacts. 8=18379
- FeO, high-pressure synthesis of stoichiometric cpd. 8=13259
- FeO, Néel temp., effect of hydrostatic pressure 8=9394
- FeO- Fe_2O_3 -ZrO₂-SiO₂ system, phase equilib. 8=17072
- Fe_2O_3 adsorption of poly(dimethyl siloxane) from CCl₄ and xylene solns. 8=8336
- Iron compounds—contd**
- $\alpha\text{-Fe}_2\text{O}_3$, antiferromag. resonance obs. 8=22892
- $\alpha\text{-Fe}_2\text{O}_3$ crystals, domain walls, n.m.r. obs. 8=5557
- $\alpha\text{-Fe}_2\text{O}_3$, ferromag. ultrafine particles, Mössbauer study of mag. props. 8=2318
- Fe_2O_3 , γ to α transformation, liquid N₂ temp. 8=13066
- Fe_2O_3 (hematite), magnetization and susceptibility rel. to temp. 8=5469
- $\delta\text{-Fe}_2\text{O}_3$ (hydrate), crystal structure 8=22023
- $\delta\text{-Fe}_2\text{O}_3$, mag. props., effect of struct. and chem. alterations 8=17627
- $\alpha\text{-Fe}_2\text{O}_3$, magnetisation process up to 80 kOe from 4.2-290°K, transitions and Morin point entropy change 8=9281
- $\alpha\text{-Fe}_2\text{O}_3$, Morin transition, surface effects 8=2323
- $\alpha\text{-Fe}_2\text{O}_3$, new type of antiferromagnetic resonance 8=2360
- $\alpha\text{-Fe}_2\text{O}_3$, paramagnetic, anomalous Hall effect 8=17914
- Fe_2O_3 powders, Mossbauer fraction rel. to packing 8=21805
- Fe_2O_3 powder, pH depend. of adsorp. of the anions VO_3^- , WO_3^- , MoO_4^{2-} and $\text{Cr}_2\text{O}_7^{2-}$ 8=8342
- Fe_2O_3 , superpar-, ferro- and antiferromag., Mössbauer effect 8=14016
- $\alpha\text{-Fe}_2\text{O}_3$, transition from antiferro. to weakly mag., from magnetization obs. 8=5503
- $\alpha\text{-Fe}_2\text{O}_3$ whiskers on Fe, morphology and growth 8=17250
- $\text{Fe}_2\text{O}_3\text{-Al}_2\text{O}_3$ solid solns., mag. susceptibility 8=13972
- $a(\text{Fe}_2\text{O}_3) + b(\text{Cr}_2\text{O}_3) + x_1(\text{NiO}) + x_2(\text{ZnO})$ ferrites, complex dielec. const. and mag. susceptibility 8=9371
- Fe_2O_4 crystals, growth by arc-transfer 8=4806
- Fe_2O_4 , diffraction of slow electrons at octahedral surface 8=8520
- Fe_3O_4 , fine grained, coercivity rel. to edge dislocations 8=9343
- Fe_3O_4 , hyperfine mag. fields rel. to sublattice magnetizations 8=21809
- Fe_3O_4 magnetite, weak reflections obs. in diff. pattern 8=22020
- Fe_3O_4 , order-disorder transition, constant entropy below transition 8=17067
- Fe_3O_4 spinel phase, methods for its characterization 8=5703
- $\text{Fe}(\text{OH})_2$, Fe^{57} Mössbauer effect at 90 and 4.2°K 8=13027
- $\text{Fe}(\text{OH})_3$ from degraded protein, superantiferromag. 8=14068
- $\text{Fe}(\text{OH})_3$ suspension, flow meas. by Br⁹² 8=21727
- $\alpha\text{-FeOOH}$ antiferro-paramag. transition temps., e. s. r. obs. 8=22879
- $\alpha\text{-FeOOH}$, mag. structure and hyperfine field 8=22878
- β - and $\delta\text{-FeOOH}$, susceptibility and magnetization 8=22747
- FePO_4 , calcinated, Mössbauer effect studies of magnetic ordering 8=8217
- $\text{Fe}_3(\text{PO}_4)_2 \cdot 8\text{H}_2\text{O}$, vivianite, mag. symmetry 8=5502
- $\text{Fe}_{0.88}\text{S}$, pyrrhotite, mag. structure from Fe^{57} resonance 8=16985
- FeS, troilite, mag. structure from Fe^{57} resonance 8=16985
- FeS_2 , effect of pressure on Mössbauer resonance 8=1652
- FeS_2 X-ray microanalysis, atomic number effect correction, obs. 8=14479
- Fe_2Se with NiAs structure, Mössbauer effect 8=16981
- Fe_2S_8 magnetisation process up to 90 kOe at 1.2°K, 201°K and room temperature 8=9281
- Fe_2Se_8 , magnetocryst. anisotropy const. 8=2321
- $\text{FeSiF}_6 \cdot 6\text{H}_2\text{O}$, Mössbauer spectra for hyperfine interactions 8=8220
- $\text{FeSiF}_6 \cdot 6\text{H}_2\text{O}$, pure and diluted crystals, ligand field behaviour and mag. susceptibility 8=18297
- Fe_2SiO_4 , hydrothermally synthesized, melting curve at press up to 40 kb 8=1615
- FeSn, antiferromag. with Néel temp. at 163°K, Mossbauer study 8=18339
- Fe_2Sn , ferromag., moments of Fe and Sn nuclei, Mossbauer study 8=18339
- FeSn, mag. structure from n diff. study 8=2320
- $\text{Fe}(\text{SO}_3\text{F})_3$, i. r. spectra and mag. props. 8=9562
- $\text{FeSO}_4 \cdot \text{H}_2\text{O}$, antiferromag. structure (spin order) 8=18380
- FeTiO_3 , mag. props., theoretical interpretation 8=9399
- FeTiO_3 , mag. resonance and susceptibility 8=9398
- FeV_2O_4 , lattice vibration, effect of deformation 8=8614
- (Mg, Fe) SiO_4 , iron ion tracks 8=8768

 Cs¹³⁷-Ba^{137m} generator 8=1207
 Er, n scatt. resonance parameters 8=1073
 Er¹⁷³, new radioactive 8=20756
 Fe⁵⁶-Fe⁵⁷ mass difference, from mass-spectroscopic and reaction Q-value analysis 8=21017
 He³ in He⁴ dissolution refrigerator 8=19682
 Hg, Holtsmark collisions 8=7468
 Hg, new isotopes prod. by Yb¹⁷⁰ + Ne²⁰, Sm¹⁴⁷ + Ar⁴⁰, Tm¹⁶⁹ + Ne²² reactions 8=7148
 Hg¹⁹⁹ and Hg²⁰¹, 6¹P₁ level hyperfine structures 8=7404
 Ho¹⁵⁴, new α -active isotope 8=3883
 LiF, with various Li isotope ratios, growth control using Stockbarger-Bridgman method 8=1742
 Nd, specific shift and deformation coefficient 8=21024
 Ni, ground state energy calc. 8=922
 Re¹⁸⁷, Os¹⁸⁷ terrestrial rel. to p charge time var. 8=15826
 Sn^{116,120,124}, charge density changes from 150 MeV electron elastic scatt. 8=1046
 Sn, neutron scattering amplitudes from powder patterns of SnO₂ 8=1809
 U^{233,235} fission, relative neutron yields, 0.08-1 MeV 8=7264
 Xe, fission products of Cf²⁵² 8=20858
 Z=102 synthesis by O^{16,18} + Pu²⁴² 8=1206
 103^{256,257} prod. by bombard. of Am²⁴³ with O¹⁸ 8=7151
 126³¹⁰ production possibility calc. 8=3972

detection

- See also Mass spectra; Radioactivity.
 abundance measurements, conference Japan 1966 8=16235

Isotopes—contd**detection—contd**

$\text{Ac}^{209,215}$ mass number assignment 8=20759
 Cs^{137} , Sr^{90} and Ce^{144} activity, in rain water, Sydney 8=14632
 H_2O , isotopic anal. of micro quantities 8=22151
 $\text{H}_2\text{O}-\text{D}_2\text{O}$ mixtures, comp. determ. by F^{19} n.m.r. 8=14454
 O_2 stable isotopes, microanal. by nuclear reactions 8=14453

relative abundances

See also Elements/relative abundances.
 anomalies, explanation by cosmic annihilation 8=7116
 graphite, noble gas anomalies, origin 8=9793
 ocean, U isotope deposition meas. 8=9813
 ratio meas. by peak matching in mass spectra 8=4112
 C^{14} , excess deposit after nuclear explosion, decay calc. 8=2610
 Er^{167} , after neutron capture, using mass spectrometer 8=11910
 H, in atmospheric precipitation 8=2503
 $\text{He}^{3,4}$, implications of Brans-Dicke theory 8=23478
 O and H, vars., firm core in W. Antarctica 8=14563
 O^{16} and O^{18} in minerals, liberation for mass spectrometry 8=12112
 Pb, common, abundance ratios, interpretation, generalized model 8=16236
 Re, by mass spectra from thermal ionization source 8=7479
 $\text{U}^{233}-\text{U}^{235}$ mixtures, radiometric anal. 8=4113

Jahn-Teller effect. See Molecules.

Jet stream. See Atmosphere/movements.

Jets

See also Sprays.

air/air, free, nozzle-fluid concentration field 8=4453
 air, cold axisymmetric, turbulent mixing with room temp. stagnant, obs. 8=16669
 air, impingement on liquid surface 8=12757
 air into compressible turbulent boundary layer, transformation 8=12665
 arc jet, thrust calc., mass flow rate 8=4421
 axisymmetric exhausting into quiescent atmos., length of supersonic core 8=16680
 axisymmetrical, and radial turbulent, appl. of boundary layer eqns. 8=19634
 capillary, oscills., infinite electric conductivity, in magnetic field 8=1518
 charged aerosol, ionization caused by aerodynamic discontinuities 8=4301
 circular jet along cylinder axis, electrostatic instability 8=12761
 compressible free, model for mixing with moving environment 8=16661
 compressible, turbulent, free jets, momentum and heat transfer 8=12652
 conducting, 2D, annihilation by transverse mag. field 8=352
 cylindrical, in immiscible liquid systems, Tomotika stability analysis 8=12760
 decay of axisymmetrical free flows with rotation 8=21463
 fluid, incompressible, three dimensional, turbulent, bulk properties 8=12585
 fluid, turbulent swirling, axial velocity and shear stress profiles 8=12626
 free and choked, with periodic structure, acoustic radiators 8=10722
 gas, diatomic, macroscopic radial distrib. rel. to vibrational temp. obs. 8=7499
 gas, impinging on liq. surface 8=12728
 gas from nozzle, plume geometry calc. 8=21453
 gas, rotating, generation of strong, travelling, transverse acoustic modes 8=15063
 hydromagnetic stationary 8=6359
 laminar, entrainment model 8=4437
 liquid, breakup rate and penetration in gas stream 8=16779
 liquid, high-pressure, pulsed, study by spark photography 8=16778
 liquid laminar, fluid mechanics 8=7989
 liquid, Landau thermal, temp. distrib. 8=16777
 liquid, micro, trailing an imploding gas bubble 8=12658
 M87 galaxy, radiation and props. 8=23592
 MHD, stability of 8=15367
 MHD, turbulent, incompressible 8=15377
 microcalorimeter for spatial distribution of particle energy 8=1457
 oscillation in the presence of a separator 8=16780
 parietal, spatial velocity correlations 8=7990
 penetration in basic O_2 furnace 8=10454
 phasograms with laser phase contrast system 8=7792
 plane, conducting liquid, propagation in mag. field and damping 8=19807
 plane laminar, eigensolutions 8=21424
 plane non-isothermal, turbulent mixing, velocity, temp. and pressure 8=4515
 plasma, coating of metallic materials 8=19337
 radial wall, turbulent, mass transfer from axial source 8=1451
 round, vortex evolution 8=21437
 rotating, acoustic energy density spectrum 8=19551

Jets—contd

smoke distribution, pulsed laser obs. 8=8152
 thin, injection into uniform stream 8=21445
 two-dimensional vertical, under gravity 8=21583
 viscous liquid, two-dimensional flow under gravity 8=21562
 wall-jet, laminar, over curved surface 8=21443
 Ar clusters in nozzle beams, dimer concs. 8=12379
 Ar, subsonic, electron densities, Langmuir probe 8=1409
 H, dense supersonic in high vacuum, in charge exchange target 8=21451
 Hg, turbulent, velocity profile in axial mag. field, obs. 8=7991
 He-Ar mixtures, separation 8=21471
 N_2 -He mixtures, diffusive separation obs. 8=19537
Jets, cosmic-ray. See Cosmic rays/showers and bursts.
Jogs. See Crystal imperfections/dislocations.
Johnsen-Rahbek effect. See Adhesion; Electrostatics.
Johnson noise. See Fluctuations/electrical.
Jordan-Thiry field. See Cosmology; Relativity/general.
Josephson tunnelling effect. See Superconductivity.
Joshi effect. See Discharges, electric/glows.
Joule-Thomson effect
 porous-plug expt. analysis, consistency in different reference frames 8=6061
 Ne-He mixture, integral effect 8=15139
Jupiter. See Planets.

K-capture. See Radioactivity/electron capture.

KDP. See Potassium compounds.

Kaons. See Mesons.

Keratin. See Proteins.

Kerr effect. See Electro-optical effects; Magneto-optical effects.

Kicksorters. See Counting circuits.

Kikuchi lines. See Electrons/scattering.

Kinematics

acceleration, referred to moving curvilinear coordinates 8=10531
 coupled oscillators and normal coordinates 8=10532
 equations of motion, computer formulation using tensor notation 8=19380
 Euler angles, helicity formalism for 4 identical particles 8=15912
 mechanisms with more than one degree of freedom,
 dynamic acceleration analysis 8=34
 nuclear reactions, simplified calc. 8=20766
 periodic motions of systems with impulsive interaction 8=10530
 potential flow, numerical solution for flux components 8=19365
 relativistic, of rigid rotor 8=11383

Kinetic theory

Boltzmann systems, spectrum and evoln. for soft potentials 8=1462
 boundary-value problem for Boltzmann eqn. 8=16687
 e.m. wave propag. through plasma in magnetic field 8=1392
 fluid diffusion, corrections 8=21416
 fluid transient Couette flow problem 8=21423
 m. h. d., wave correlations in uniformly turbulent weakly non-linear systems 8=4352
 Morse oscillator, one- and two-dimens, energy levels 8=1217
 photophoresis of particle in Knudsen gas 8=4629
 plasma, cylindrical column, model 8=16457
 plasma, Gibbs entropy calc. outside equilb. 8=4334
 plasma, inelastic processes 8=21303
 plasma, with inelastic processes 8=1379
 plasma, relativistic, momentum distribution after adiabatic compression 8=7731
 Poisson-Boltzmann eqn. rel. to internal energy of free p and e in H plasma 8=12469
 radiation fluctuation, detection 8=3010
 solar wind, two fluid model (electrons and protons) 8=23710
 stellar system, self-gravitating, with uniform rotation 8=23502

gases

See also Association/gases; Brownian movement; Collision processes; Diffusion in gases; Equations of state/gases; Joule-Thomson effect; Molecules/intermolecular mechanics.

Boltzmann's distrib. law, evaluation of exponent 8=19446
 Boltzmann equation, Chapman-Enskog method 8=134
 Boltzmann equation, linear and stationary solution 8=19474

diatomic, thermodynamic functions with molecules in Σ^3 state 8=1467
 dilute, correlation function when using Boltzmann and Fokker-type integrals 8=1463

Enskog-Chapman, appl. to thermal diffusion 8=21525
 exchange of energy between non-equipartition mixtures 8=16688
 fluctuation theory based on heirarchy eqn. 8=21501
 free-flight theory of mixtures 8=4467

free-molecule theory, applic. of Nocilla wall reflection model 8=21495
 hard-sphere, sequence of relaxation constants 8=133

Kinetic theory--contd**gases--contd**

inverse velocity space spectra and kinetic equations 8=10645

linearized collision operator, matrix elements 8=21499

loaded-sphere gases 8=4495

loaded sphere-smooth sphere mixture, thermal diffusion 8=12705

long-range attraction, kinetic equation 8=7908

Lorentz gas, non-analytic density behaviour of diffusion coeff. 8=16720

mixtures, equilibrium and nonequilibrium 8=118

mixtures, viscosity calc. 8=21522

molecular flow in long cylindrical tubes, soln. of Clausing's integral eqn. 8=21529

mols. vel. distrib. function near solid wall in non-uniformly heated gas 8=21494

Onsager relations, relativistic 8=21500

partially ionized 8=21497

plasma, multicomponent, Fokker-Planck eqn. 8=4327

plasma, partially ionized in time dependent mag. and e. m. fields 8=16466

polyatomic gases 8=16684

polyatomic, gyro-thermal effect in mag. field 8=12672

polyatomic relaxation and transfer eqns. 8=21502

polyatomic, transport processes, effect of varying elec. and mag. fields 8=1465

resistance to relative motion of gases 8=16686

Rice-Allnatt assumption in low-density limit 8=1464

scattering of short waves, eqns. 8=7911

shock wave density discontinuity, evolution governed by Boltzmann collision integral 8=7933

Stokes paradox 8=21496

thermal equil., approach through black-body radiation interaction 8=12673

transition state and Arrhenius parameters of reactions 8=4465

ultrasound propagation in mol. gas 8=4479

Van der Waals, fallacies 8=21503

van der Waals gas, Yang-Lee distrib. of zeros 8=12671

velocity distribution function, tail filling rate 8=7910

Ar on W surface, translation accommodation coeff. 8=17113

He⁴, virial coefficient, 2nd, for exponential repulsion potential 8=12678

N₂ on W surface, translation accommodation coeff. 8=17113

NH₃-H₂O-N₂-H₂ system, fugacities 8=12977

O₂ on W surface, translation accommodation coeff. 8=17113

liquids. See Liquids/theory.

link pairs. See Crystal imperfections/dislocations; Plastic deformation.

Markendall effect. See Diffusion in solids; Precipitation.

neutrons. See Electron tubes.

night shift. See Nuclear magnetic resonance and relaxation.

Nudsen number. See Flow; Hydrodynamics.

phon effect. See Crystal electron states; Crystals/lattice mechanics.

ramers-Kronig relations. See Dielectric phenomena; Optical properties of substances.

trypion

additive in Cs arc diode, effect on performance 8=15225

adsorption on zeolite LiX 8=1713

atom, influence of autoionization on spectra 8=20954

atom, spectral foreign gas broadening and shift due to Ne, Ar, He 8=20956

atoms, electron scatt., 40 keV 8=7447

atoms and ions, multielectron ionization in close collisions 8=21012

atoms and Rb, optically pumped, collisions, relax. correl. times 8=7472

condensation coeff. at 4.2°K 8=12981

excitation cross sections for some of the states of 4p²-5p configuration 8=20973

excitation functions of spectral lines by electron-atom collisions 8=4096

free-carrier drift-velocity studied in liquid and solid state 8=8119

gas, self-broadening and resonance oscillator strengths 8=20955

gas, spectral self-broadening and oscillator strengths 8=7416

ion, energy loss in passing through ZnS:As film 8=8758

ions, incident on polycrystalline targets rel. to sputtering coeff. 8=8766

ions, range distrib. in amorphous Al₂O₃ 8=13476

isotopic comp. with Xe, in B carbonaceous chondrites 8=19276

isotope mixtures, thermal diffusion props. 8=1492

liquid, sound velocity and law of corresponding states 8=1552

purification by directional freezing 8=4810

radioactive, luminescence due to atomic rearrangement, and inelastic collisions with electrons 8=7406

resonance lines, oscillator strength meas. 8=7449

scattering ionization, short range forces 8=1364

solid, compressibility 8=5075

solid, free carrier mobility 8=17863

solid at 0°K, parameters from interact. potential of gas 8=1468

solid, longitudinal sound velocity meas. at 4.2°K, 77°K and 90°K 8=17500

Krypton--contd

solid, phonons anharmonic effects 8=17481

solid, zero-point energy, effect of long-range 3-body forces 8=22083

solidified, vapour pressure, binding energy and mean vibration freq. 8=16960

superradiant transitions 8=7398

thermal conductivity, hot-wire cell meas., 30°-100°C, 120-150 torr 8=16700

thermal plasma, continuous emission spectrum 8=16207

trapped in diondrites, isotopic composition 8=19275

H⁺ on Kr scattering, charge transfer 8=1203

In-doped solid film, absorption spectra 8=9541

Kr₂, 2nd virial coeff. obs. 8=7913

Kr⁸³ in Br⁻ and BrO₃⁻ crystals, Mössbauer studies 8=8221

Kr⁸⁵, diffusion in multicomponent gaseous mixtures 8=1491

Kr-Ar binary mixture, spectra in vapour, liq. and solid states 8=7425

Kr-CO system, binary diffusion, unlike interactions 8=7943

Kr-NO system, binary diffusion, unlike interactions 8=7943

in ZnO:Zn, ions energy losses obs. 8=18624

Krypton compounds

KrF₂, absence of Fermi reson. 8=7528

KrF₂, ht. of formation 8=2519

KrF₂, identification and struct. by electron diffr. 8=17383

Kuhn-Thomas sum rule. See Molecules/electronic structure.

Kurie plots. See Beta-decay theory; Beta-ray spectra.

Kyropoulos method. See Crystals/growth.

LCAO calculations. See Molecules/electronic structure; Orbital calculation methods.

LS coupling. See Atoms; Spectra/atoms.

Laboratories

See also Acoustical laboratories.

electricity and magnetism unstructured, project type 8=15159

Frascati gas ionization, high-temp. plasma study 8=7798

modified open-ended, mechanics at general-physics level 8=10469

Naval Research (USA), optical studies 8=15490

Laboratory apparatus and technique

absorbing film containing pinholes, meas. of optical transmission 8=9483

acoustic drying of capillary-porous materials 8=19575

acoustic wave absorption in rocks, u.s. meas by bending vibration method 8=22095

airlock chamber for Siemens Elmiskop I 8=5993

alkali metal purification by preferential contact in magnetoplasma device 8=4302

alloys, preparing ball-shaped samples for mag. meas. 8=10859

alpha particle range, simple stand for determination 8=883

amplitude modulated, vibrations, mechanical demonstration apparatus 8=10679

automatic supervisor for electropolishing field-ion microscope specimens 8=17273

automatic temp. regulator for interval 10 to 150°K 8=15122

blender-reactor, jacketed 8=23091

calibrated leak prod. app., adapted for mats. with m. p. s. above room temp. 8=14907

carrier distillation, electrodes, apparatus for rapid prep. 8=14903

cathode-ray oscilloscopes, use in schools 8=10818

cell for adsorption study by i. r. spectrography 8=17157

cell for electrotransport meas. in liq. alloy systems 8=12816

ceramic, preparing ball-shaped samples for mag. meas. 8=10859

charged-particle detector expts. for students, using semi-cond. counter 8=609

cleaving device, in ultra-high vac. 8=21926

coating of fuel particles for 'Dragon' reactor expt. 8=7336

column for crystal purification with cyclic solids movement 8=17223

compression loads, meas. app. in controlled atmos. 8=5019

control device for filling liq. He storage dewars 8=15147

creep apparatus, for low temp. meas. 8=22256

cryogenic expt. for undergrad., mini-Dewar apparatus 8=254

crystal rotating head apparatus 8=8361

detection of conductor movement in homogeneous mag. field, possibility 8=10344

display of statistical data from nuclear expts. 8=6631

double cantilever beam specimens, use in determ. plane strain fracture toughness of metals 8=17721

dual-temp. system with open circuits, for isotope separation 8=7477

for efficiency meas. of cryogenically cooled pumping plane 8=7950

electricity and magnetism, project laboratory 8=15159

electron beam drilling of diamond dies 8=14906

electron beam zone refiner, conversion to r. f. heating 8=23774

Laboratory apparatus and technique—contd

electronic digital integrator 8=10817
 electronic furnace for electron beam smelting of rare metals 8=10457
 electropolishing of thin foils, for electron microscopy, specimen temperatures 8=4836
 embedding media for electron microscopy 8=6315
 field effect microscope, ultra-high vacuum metallic dismountable apparatus 8=15320
 films, thin, production and ion bombardment 8=17121
 flat discs for electropolishing, prod. by trepanning from bulk mat. 8=5996
 flaw detection and erosion rate meas. by microwave interferometry 8=5032
 foil, source supporting, e^+e^- annihilation 8=13693
 foils, simultaneous prep., by chemical thinning 8=8449
 Frascati Lab., plasma shock wave prod. 8=7798
 Fresnel zone plate generation 8=6551
 gas-tight thermobalance-load seal for corrosion studies 8=5991
 glass-fibre drawing apparatus 8=5073
 graphite soldering to metals, by first electroplating with Cu 8=5998
 high-pressure chambers, to 19 kbar, working at liq. He temp. 8=10464
 high-temperature electromagnetic stirrer 8=10455
 hydraulic feeding device for zonal melting of thin layers 8=8394
 hydrostatic weighing app. for meas. thermal expansion of polymorphic solids 8=17531
 image furnace for simulation of thermal effects of nuclear weapons 8=3986
 injector of T_1^+ , D_1^+ and H_1^+ ions for charge-exchange generator 8=7713
 instrument for digitizing continuous waveforms on paper or film 8=10816
 interferometer-LIN-1 8=6545
 interferometer, u.v. region, simple 8=6548
 internal friction and elastic modulus measurement at low frequencies 8=8784
 ion sublation using anionic and cationic collectors, radioactive tracer structures 8=23075
 isotope separation by thermal diffusion 8=16237
 Langmuir probe curve second derivative plotting devices, comparison 8=1335
 lens, determ. of longit. spherical aberration 8=470
 liquid drops, coalescence cell and bridge 8=12765
 liquid phase horiz. thermal diffusion column 8=12838
 for measuring liquid quantity 8=21575
 mechanics, demonstrations using electrical readout 8=10472
 metal chamber for meas. of elec. props. of organic semiconductors 8=9092
 metals, corrosion testing under heat transfer 8=18665
 microwave system, expt. and demonstration 8=6366
 miniaturized King furnace for absorpt. spectra of metal vapours 8=7393
 model expts. on gravity effect on tectonic processes 8=14512
 modified open-ended laboratory in mechanics at general-physics level 8=10469
 neutron diffraction installation on thermal column for meas. on liquid metals 8=8002
 neutrino expts. at CERN 8=15724
 new materials and processes in instrument manufacture, conference Eastbourne, 1965 8=2872
 nuclear phys. expt. based on $F^{19}(p,\alpha)O^{16}$, for senior students 8=1059
 nuclear structural engineering research facilities 8=4034
 parallel wire resistance wavemeters, dynamic testing 8=7986
 particle size comparator 8=5
 pen recorder for gas reaction kinetics 8=14353
 photometer for geology students 8=460
 polymeric mats., engineering, design problems and appls. 8=23773
 pore size distrib. meas. in solids, automatic control 8=17022
 profile projector modification for strain meas. by moiré tech. 8=13501
 radial grating dividing engine of high accuracy 8=11181
 real-time electro-optical signal processors, with coherent detection 8=6532
 recording Snoek spectra of metal wires at low freq. 8=8786
 reed pendulum for internal friction meas. 8=13495
 resonators, filled with TiO_2 dielec. discs, h. f. props. 8=19829
 rollers, at temps. between 42 and 300°K 8=19335
 rotating head, automatic, for single cryst. studies 8=8361
 sealing of glass illuminators of H bubble chamber, using pneumatic packing 8=15645
 sealing piston of pressure booster with rubber ring 8=10465
 seismology model, accuracy rel. to receiver-model coupling 8=14525
 ship performance measurement 8=5995
 shock-decating of eutectics 8=8170
 single channel recorder, device for conversion to multi-channel sequential recorder 8=6239

Laboratory apparatus and technique—contd

slitting thin foil, 25 μm , method 8=14904
 slotted disk velocity selector, construction by electric discharge machining 8=10453
 small high-press. gas vessel, for direct weighing of mass of large vol. 8=7890
 solar energy receivers, cylindrical cavity, optimal dimensions 8=19676
 solids under high press. 8=2873
 spectral lines, hyperfine structure obs. 8=7078
 static high-press., low-temp. seal 8=14910
 Stern-Gerlach app. for expt. on space quantization of atomic ang. momentum 8=1144
 surface contour meas. using gas laser probe 8=19339
 strain free polishing of accurate flats 8=5989
 targets, obtained by directed evaporation in high vacuum 8=23775
 Tremschaukel, four-tube all glass, new design 8=1488
 valve packing for cryogenic service 8=3139
 verneuil crystal growth, plasma heat transfer 8=21936
 vibrating quartz microbalance, transistorized temp. regulator 8=19671
 viscometer-gelation timer 8=16810
 water baths, const. temp., minimizing evaporation 8=16947
 water vapour counter for tritiated water analysis 8=9748
 X-ray microanalyser for industrial lab. 8=14492
 zone melting device, automatic 8=4800
 Al purification using fractional crystallization 8=4801
 Be polishing and etching by metallographic technique 8=4790
 Co(II)-Ni(II)-Mn(II)-V(V)-Mo(VI) chloride systems, extraction separation studies 8=23077
 Cu-base mats., oxidized, pickling in dilute H_2SO_4 , effect of u. s. vibs. 8=23780
 Cu wire, drawing process with lubricant under externally generated pressure 8=2052
 He³-He⁴ dilution refrigerator, rapid start-up 8=15145
 MO(VI) extraction with TBP, mechanism study by radioisotopes 8=23076
 Si, pellet bonding 8=22608
 Si polishing 8=10452
 W wire, recrystallized, sample prep. for transmission e-microscopy 8=17267
Lamb shift. See Spectra/atoms.
Lambda (λ) point. See Helium/liquid; Phase transformations.
Lamps. See Light sources.
Landé splitting factor. See Spectra; Zeeman effect.
Langmuir probes. See Discharges, electric; Plasma/measurement technique; Space vehicles/instrumentation.
Lanthanides. See Rare earth metals.
Lanthanons. See Rare earth metals.
Lanthanum
 film, superconducting, electron-tunneling meas. 8=9047
 oxidation kinetics, high temp. 8=18680
 position in periodic table rel. to densities of states in conduction band 8=8936
 La III, new spectra lines in 2000 to 12 000 Å region 8=12066
 La(Br_3 , Cl_3 , F_3), multiphonon orbit-lattice relaxation 8=133
Lanthanum compounds
 telluride phases, crystal chemistry 8=17202
 La aminoacetate mixed complex with salicylate in aqueous solution, fluorescence 8=21703
 La phosphate-vanadates, struct. and luminesc. 8=14330
 LaAlO₃:Cr³⁺, e. p. r. spectrum at room temp. 8=18426
 LaB₆ cathode modification for Bayard-Alpert gauge 8=16732
 LaB₆, powder suspension in N₂, m. h. d. generator working fluid 8=15199
 LaB₆, prep. and X-ray investigation 8=17384
 LaB₆, Cd⁺ sputtering coeff. determ. 8=17705
 LaBr₃, e. s. r. spectra of Gd³⁺ rel. to temp. 8=2369
 La-Ce alloy film, gapless superconductivity 8=5205
 La-Ce alloys, superconducting transition temp., paramagnetic impurity effect 8=9303
 La-Ce(Gd) alloys, Kondo effect in superconducting props. 8=5206
 LaCl₃ aq. soln., phenomenological coeffs. for elect. cond. and diffusion 8=12924
 LaCl₃, e. s. r. spectra of Gd³⁺ rel. to temp. 8=2369
 LaCl₃:Gd³⁺, energy levels and cryst. field 8=16975
 LaCO₃, p- and n-type, optical absorpt. by small polarons 8=2434
 LaF₃, gaseous, electronic states 8=7549
 LaF₃, condensation coeff. from thin film meas. 8=4655
 LaF₃:Nd³⁺, absorpt., luminesc. and generation spectra 8=3334
 LaF₃:Nd³⁺, stimulated emission, high-temp. effects 8=22960
 LaF₃:Nd³⁺, Yb³⁺, fluoresc. and energy transfer 8=14328
 La-Gd alloys, superconducting transition temp., paramagnetic impurity effect 8=9303
 (La, Gd)₂CoMnO₈ system, mag. interactions 8=9354
 LaH₂, sp. ht. 1.3-20°K 8=13373
 La-Lu alloy film, superconducting, electron-tunneling meas. 8=9047
 LaMg nitrate, Nd doped, proton spin-lattice relaxation 8=9462
 La₂Mg₃(NO₃)₁₂·24H₂O impurities, effect on proton dynamic polarization 8=14147

Lanthanum compounds—contd

- La₂Mg₃(NO₃)₁₂·24H₂O, ligand endor 8=22925
 La₂O₃—Al₂O₃ system, alumina-rich phase diagram 8=21746
 La₂S₃, gaseous, dissociation energies 8=7616
 La_{0.5}Sr_{0.5}CoO₃, magnetic props. near Curie point 8=18341
 La₂WO₆, prep., lattice constants and elec. resistivities 8=5709
 LaX₃, (X = Sn, Pb, Tl, In), with Cu₃Au structure, superconductivity 8=22551

Lasers

- acceleration of gravity meas. using laser-interferometer system 8=10487
 acoustic, mag. pumped paramag. salts appls. 8=15473
 advanced optical techniques, book 8=15489
 amplification coeff. meas. 8=19926
 amplitude noise and rate equations 8=11022
 appl. to gas determ. in metals 8=9747
 applications to metrology 8=6003
 applications, semi-popular review 8=401
 appl. to spectrometer scanning-function calibration 8=15539
 application to sound field spectral analysis 8=19552
 atmosphere, number density determ. of gas constituents 8=14585
 atmospheric propag., compared with nonlaser light 8=9867
 atmospheric scatter, mesosphere and above, obs. 8=9875
 atomic, multiquantum photoelec. effects as coherence meas. 8=20986
 atomic system, 2-level, statistics of 2-photon processes 8=20948
 beam effect on naphthalene, four-photon absorpt. 8=18517
 beam expansion in a turbulent medium 8=6428
 beams, intense, trapped filaments in liqs., props. 8=16832
 beam in liquids, self-trapping, obs. 8=21670
 beams in low-loss liqs, self-defocusing rel. to thermal convection and spherical aberration 8=15442
 beam modulation by Kerr cells 8=6488
 beam propagation through random medium 8=3251
 beam scanning using ultrasonic devices 8=15072
 beams, self-focused, for plasma meas. 8=16544
 beamwidth reduction, by optical antenna, radiometer check 8=20068
 calorimeter, C cone, pulse energy meas. 8=6223
 and chaotic superposed, intensity fluctuations obs. 8=20017
 cavity, reactive optical information processing 8=532
 chelates, rare-earth, in soln. 8=3338
 chloro-Al phthalocyanine, oscillation obs. 8=6475
 coherence props., quantum mechanical theory 8=19938
 coherence and quantum optics Conference, Rochester University, New York, June 1966 8=6484
 coherent field dynamics in first- and second-order processes 8=20034
 continuous-wave, appl. to electroretinography 8=11233
 continuously tunable radiation generation 8=15485
 coupling efficiency, optically pumped 8=413
 damage induced in glasses 8=8851
 damage to materials in high-power, review 8=403
 devices bibliography 8=11011
 diethylthiatricarbocyanine iodide and chloro-aluminium phthalocyanine, stimulated emission obs. 8=452
 direct reference beams for hologram construction 8=3381
 dust particles in cavity, propulsion and angular stabilization 8=6422
 dye, flashlamp excitation obs. 8=451
 dye laser, pumped by flash lamp 8=6477
 dye, longitudinally pumped, narrow-band continuously tunable 8=20006
 dye solution, wavelength dependent time development of intensity 8=20005
 effects on NaCl dislocation structure 8=17659
 elastic stress wave generation in pressure bar 8=6130
 electron, ion and laser beams technology, conference, Berkeley, USA (1967) 8=15283
 electron trapping in beam rel. to scatt. light freq. shift meas. 8=19821
 emission control devices, use of 45° X-cut ADP crystals. 8=6424
 emission, rel. to induced absorpt. effects 8=3287
 exact eqn. for distrib. function of macroscopic variables 8=3290
 experiments and explanations 8=19932
 field, N-mode photostatistics 8=412
 frequencies, dynamic behaviour 8=3296
 frequency spectrum, meas. with active Fabry-Pérot interferometer 8=20099
 frequency stabilization by induced fluorescence 8=16288
 frequency stabilization by nonlinear absorpt. in gas in resonator 8=15443
 filaments, self-trapped, type II superconductor model 8=9030
 fluctuating beams, anal. via photon counting statistics 8=6425
 fluids, filament formation, linearized theory 8=8067
 f.m., path-length-difference effects in photo mixing 8=19934
 focal evaporation, energy dependence 8=11007
 focused on nonlinear crystals., rel. to second harmonic generation 8=14166
 frequencies, dynamic behaviour, theoretical investigation 8=3297

Lasers—contd

- frequency fluctuations of field, photoelec. meas. by cross-correl. 8=11028
 frequency of radiation, increase by 3-photon process 8=408
 giant pulse spectroscopy, Fabry-Perot interferograms quasi-linear dispersion 8=6416
 giant pulse technique 8=6415
 for glass plates thickness and refractive index variation 8=14223
 gradient deflection of focused beams, spot distortion 8=11012
 harmonic freq. mixing of two different far i.r. lines up to 118 μ 8=19950
 harmonic generation with multiple-photon transitions in n.m.r. expts. 8=10984
 heating, gasdynamic processes 8=7928
 high power cavities, optimization of mirror transmissivity 8=6420
 high power, performance and limitations, review 8=10997
 hologram storage capacity of photochromic glass, meas. 8=6570
 illuminating NaCl and glass, characts. of emission rel. to damages 8=14246
 imaging of microwave acoustic beam, cross section in rutile by Bragg laser 8=6175
 impulse generation in stationary regime with mode trapping, limiting parameters 8=19946
 induced discharges, optical interferometry of 8=16403
 induced non-linear photoelectric effects in metals 8=22721
 inducing breakdown in gases, dynamics 8=1344
 incident on substances, optical absorpt. rel. to incident flux 8=12873
 information recovery from intracavity phase object 8=6578
 intense beams, interaction against single charged particles 8=19768
 intensity fluctuations at threshold, statistics 8=402
 intensity fluctuations, analogue and photon counting meas. 8=19970
 intensity noise theories rel. to photon counting distribts. 8=19939
 intensive single-freq. beam generation at second harmonic of f.m. laser 8=15444
 interaction with hypersound in laser cavity with Stokes feedback 8=11005
 interferometer, Michelson, for 6328Å use 8=6543
 interferometric determination of transducer face displacement and mode shape 8=6178
 internally scanned beam prod., with pulsed optical delay line in cavity 8=11008
 ionization of gases below 1 atm., inverse bremsstrahlung and e-impact processes 8=16434
 irradiancy, spectroscopic study of resulting plasma 8=12514
 in isotropic media, induction of elec. and mag. anisotropy 8=8106
 leuco-sapphire crystals, destruction by powerful radiation 8=2247
 light amplification, variable refractive index medium 8=400
 light frequency translation by moving grating 8=11189
 light mode and atoms, Fokker-Planck equation 8=19942
 light, modulation and demodulation 8=19933
 light source, props. of ions and electrons in plasma, expt. 8=16553
 light waves standing, obs. of deflection of 1.6 keV electrons 8=20378
 for linear velocity measurement 8=19936
 liquid, advantages and properties 8=20004
 liquids, molecular anisotropic, Rayleigh-Wing scatt. theory 8=8092
 liquid, new cavities with long capillary cells 8=11115
 liquid, organic, optimum pumping for homogeneity 8=11114
 in liquids, self-focusing, Raman and Brillouin scattering 8=4585
 in liquids, self-trapping filaments of light 8=4577
 magnetically pumped i.r., paramag. salts appls. 8=15473
 many element, mode selection props. 8=3301
 metal sheet heating, pulse frequency effect rel. to sheet thickness 8=2871
 4-methyl umbelliferone, aq. soln., stimulated emission at 454 m μ 8=6478
 microanalysis method using laser evaporation 8=14457
 mixing of emissions of Ruby and Nd, in non-linear crystal 8=14237
 mode competition by spatial hole-burning in saturable absorbers 8=11020
 mode-locked for reproducible optical second-harmonic generation 8=11024
 modes competition in laser with appl. external signal 8=411
 modes, coupled, correlation functions using thermodynamic Green's functions 8=6430
 modes, off resonance, instability 8=19947
 modulated light signal, amplification 8=19945
 modulation, ADP crystal props. 8=23002
 modulation by atmospheric turbulence 8=404
 multimode generation, during quasi-equilibrium disturbance in active medium 8=11014

Lasers—contd

- multi-mode generation rel. to spectral and spatial inhomogeneity 8=3300
- multimode generation in system with nonuniformly broadened luminesc. line 8=11004
- multimode, optical heterodyne applications 8=11030
- multimode, saturation of Ne for Landé factor meas. 8=1186
- in multiphoton absorpt. processes, stat. anal. rel. to source characts. 8=11165
- noble gas breakdown, radiative equilb. theory 8=7937
- noise, Fokker-Planck solution 8=11023
- noise and operation, quantum theory 8=19438
- noise in phase locking region, quantum mech. theory 8=3291
- noise, quantum Fokker-Planck soln. 8=19937
- nonlinear, for ultrashort light pulses 8=11145
- with nonresonance feedback, statistical props. of radiation 8=19943
- with non-resonant feedback due to scatt. 8=11003
- with nonuniformly broadened luminesc. line, spectral width and characts. 8=3289
- open resonator, diffraction losses 8=15447
- optical and magneto-optical rotation, light-intensity dependence from laser obs. 8=517
- optical parametric devices, quantum noise 8=15445
- optical parametric oscillation, theory and appl. to threshold cond. deriv. 8=11029
- optical pumping of materials 8=11010
- optical resonator with movable mirror, e.m. field 8=19944
- optical superheterodyne receiver, for communications expts. 8=6423
- oscillation disappearance with intense pumping 8=6413
- oscillator quantum noise, classical models 8=398
- oscills., stationary, diffusion effect 8=405
- oscillators, 3- and 4- level, output intensity fluctuations calc. 8=19940
- parametric amplification 8=6419
- passive Q-spoiling cells, intracavity Brillouin scatt. from CH₃OH solvent 8=16847
- 90° phase matching in KH₂PO₄, elec. field control for different freq. combinations 8=14234
- peak emission spin-orbit splitting rel. to g-factor and valence band of semiconductors 8=9094
- phase contrast system for plasma phasography 8=7792
- photomultiplier gate for stimulated-spontaneous light scattering discrim. 8=6331
- photon development of photographic grain 8=15563
- plasma heating, radiation spectra 8=16200
- plasma irradi., absorption rel. to magnetic field 8=1400
- plasma, laser-produced, u. v. emission spectra 8=7777
- plasma produced by non-Q-switched beam acting on target 8=21285
- plasma-producing in polythene films, formation mechanism 8=23034
- plasma, pulsed scatt. for calc. of e density 8=1401
- Pockels and travelling-wave modulators 8=20036
- polarization, non-linear macroscopic, calcs. using diagram method 8=406
- polystyrene soln., laser scatt. for verification of Brownian motion 8=1557
- potential as probes for study of structure of matter, with exponential amplifier 8=6421
- power stabilization by means of nonlinear absorption 8=3288
- progress in optics, book VI 8=15541
- propag. of spherical wave with Gaussian amplitude distrib. 8=20087
- pulsating conditions, theory 8=11009
- pulse energy meas., pyroelectric calorimeter 8=15128
- pulsed, induced retinal injury, melanin granules models 8=20130
- pulse irradi. of polypropylene, melting and recryst. or evap. 8=17710
- pulses, mode-locked, optical rectification 8=19931
- pulsed plasma, production and diagnostics 8=21353
- pulse reflection and transmission modes, laser rate equations 8=409
- pulsed source, high power and continuously tunable from 4820 to 5790 Å 8=11032
- pumping of ruby maser at 77°K 8=19920
- Q-spoiled, fluorescence of Nd³⁺ in glass, influence on dynamics 8=11017
- Q-switched, as light source in fluorescent photography of spray droplets 8=4636
- Q-switched, of variable pulse length, pulse duration reduction by nonlinear amplification 8=11002
- quantum mechanical calc. of photon number and amplitude fluctuation 8=11013
- quantum theory 8=19928
- quantum theory of optical behaviour 8=15441
- quantum theory of single mode operation 8=19453
- quantum theory, spectral profile 8=19929
- radar cross section, definition 8=19935
- radar selenodesy of moon 8=2813
- radar, target miss probability, atm. scintillation effects 8=9869
- radiation field, focused by optical systems with spherical aberration 8=10999

Lasers—contd

- radiation field, statistical props. by photon counting distrib. 8=10998
- radiation intensity and frequency fluctuations 8=6429
- radiation, linear and circular polarized, in optical third harmonic generation 8=11016
- radiation pulse heating of metals 8=3285
- radiation, resonance effect in field 8=20354
- Raman scattering, intense, pulsed mode, calc. 8=18488
- range finder, multipulse returns energy detect. statistics 8=6414
- rate eqns. for spontaneous emission, Lie-series soln. 8=10996
- ray focusing between concave mirrors of resonator 8=11025
- recordings detection, magneto-optic, high-density 8=14185
- regenerative amplifiers, theory, expt. and appls. 8=11027
- relativity, general, proposed test by lunar ranging 8=2953
- resonant elastic response of matter to intense light pulse, transient effects, bibliography 8=19925
- resonator, Fabry-Perot spherical mirror, utilization in spectral anal. 8=6432
- resonator, optical multicavity, use of laser mirror 8=15446
- review, materials, influence of reliability 8=10451
- rhodamine B dye, emission spectrum 8=21694
- rhodamine 6G and B, and mixtures, mode locking 8=20009
- ruby crystals, destruction by powerful radiation 8=22247
- ruby oscillator output phase vars. obs. 8=19991
- ruby, thermal effects in transparent crystals 8=4926
- scattering from gas particles, speckle pattern 8=3286
- scattering medium with negative resonance absorpt. 8=11021
- second sound effect on photostatistics 8=11192
- self-focusing of different polarizations in liqs, test of a. c. Kerr effect mechanism 8=12870
- self-focusing rel. to intensity depend. refractive index 8=11000
- self-focusing as a pulse sharpening mechanism 8=6433
- self-locked, large-signal effects 8=15448
- self-locking mode conditions 8=3302
- self-trapped filaments, study by second-harmonic-generation technique 8=11018
- self-trapped light filaments, rel. to stimulated Raman emission 8=11006
- short pulses, one- and many-photons interact. with matter 8=399
- spark discharge, surface, as light source for pumping 8=6412
- spark excitation of trace elements in powdered mats 8=23186
- spark region in air, electric breakdown 8=7670
- spark, spectroscopic investigation 8=3293
- spherical and ellipsoidal pumping chambers, optimum design 8=11019
- spin-rate sensor, two-mirror c.w. laser 8=6004
- statistical props. of light, quantized e.m. field model 8=19941
- steady-state, semiclassical and rate eqns., use for design 8=11001
- stimulated emission cross section from fluorescence changes 8=14292
- stimulated emission in selected compounds containing C, N and H or D 8=12398
- stimulated rad. from atoms during nonlinear interact. of transitions 8=417
- stimulated radiation of classical oscillators and h.f. electronics 8=3298
- stimulated Raman scatt., molec. mechanism 8=7487
- stimulated Raman scatt., quantum theory 8=3292
- streak interferometer, (or holometer), optics rel. to relative beam displacement 8=6542
- submillimeter wave, resonator modes 8=407
- super-luminescence field, correlation props. 8=19924
- surface discharge at end of active rod 8=19927
- surface interaction, production of high-energy molecules 8=18273
- theory, diagram method 8=6427
- rel. to transmission line noise theory, operation below oscill. threshold 8=19889
- 10.6 μ rad., photographic recording on thermoplastic resin film 8=6579
- tube, end windows set near Brewster angle, rel. to transmission 8=6426
- with tunable generation frequency, superior to two-quantum luminescence 8=19930
- tunable Raman laser, theory 8=11104
- ultrashort light pulse generation 8=3356
- ultrashort pulses, parametric amplification 8=11015
- wideband pulse compression using Brillouin scatt. in Bragg limit 8=10948
- Zeeman, theory 8=6417-18
- Al plasma produced, energy spectra 8=2122
- for CdS refractive index inhomogeneities and absorption saturation effects inducement 8=9515
- DBR, infrared transitions 8=6476
- DCI, infrared transitions 8=6476
- Eu, 3-diketon complexes, four-ligand, rel. to laser use 8=22978

Lasers—contd

- H₂, Raman effect, stimulated, meas. in terms of oscillators and amplifier theories 8=21081
 HBr, infrared transitions 8=6476
 HCl, infrared transitions 8=6476
 He-Xe plasma positive column, Xe-level population inversion 8=12405
 Hg⁺ hollow cathode, wide bore, fabrication 8=3294
 n-InSb, pumped by 10.6 μ CO₂ laser, tunable Raman laser 8=11104
 Nd³⁺/SeOCl₂ liquid, preparation 8=20008
 W irradiating, study of ion emission 8=13948

gaseous

- active medium gain value 8=3305
 activated U getter 8=15452
 amplifier, solution of wave equation in frequency domain 8=11040
 atmospheric absorpt. of 3.39 and 3.51 μ radiation expt. investigation 8=9880
 atomic or molec. beam, freq. stability theory 8=6438
 cavity with external mirrors, effect of windows 8=15451
 coherent properties demonstration 8=418
 confocal resonators, influence of optical defects 8=3313
 continuously operating with high radiation stability 8=11033
 cyanide, discharge, HCN mm absorption obs. 8=11055
 emitting power as function of resonator length and pumping 8=6437
 frequency changing method 8=19953
 frequency generation, isotopic frequency shift effect 8=416
 frequency of 118.6 μ m transition, freq. meas. 8=10482
 glass:Nd laser excitation of second harmonic generation in Cu₂Cl₂ 8=14213
 gyro, Langmuir flow effects 8=19952
 harmonics useful for freq. translation 8=6436
 infrared, annular output coupling 8=11038
 intensity fluctuations, theory and meas. 8=19951
 light source for hologram transmitted on television circuit, used for wavefront reconstruction 8=6573
 light sources for holography 8=15559
 in magnetic field, review 8=3306
 modes, axial and angular, phase and amplitude interactions 8=15456
 modes, axial, interaction of several waves travelling in both directions 8=15455
 mode generation during self-locking of modes 8=3303
 mode selector for, resonant prism, temperature-stabilized and tunable 8=11031
 multimode, excess photon noise in detected photocurrent 8=11039
 multimode operation, study with scanning Fabry-Pérot etalon 8=20095
 use of multiply-charged ions 8=15449
 negative ion, using mixture of oxygen and other atoms as working medium 8=19955
 oscillators, self-sustained, near threshold, noise exam. 8=6259
 parametric reson. rel. to nonlinear Zeeman effect, theory 8=6435
 perturbation theory, higher-order 8=6434
 photon distrib. in equil. and non-equilib. fields, obs. 8=19954
 power and collision broadening of transitions 8=414
 power output, broadening and shift of spectral lines, press. effects 8=11034
 processes surveyed 8=11041
 quantum theory 8=15454
 radiation, time dependent statistical props. 8=3304
 resonators, passive and active, polarization properties 8=19948
 resonators for producing single mode with optimum parameters, investigation 8=6431
 ring, counter-wave conds., polarization vector and stability 8=415
 with ring resonator, operational mode with stable travelling waves of different amplitudes 8=19949
 rocket propulsion particle velocity meas. 8=23457
 saturation and gain, information obtained from modulation expts. 8=11035
 spectrometer, Zeeman-tuned 8=490
 submillimetre c.w. construction and meas. 8=15450
 temperature compensation method 8=15453
 Zeeman, theory in presence of external static magnetic field 8=11036
 Zeeman type, monomode, polarization in mag. field 8=11037
 AgCl vapour, suggested 8=1235
 Ar, discharge ionization rate, spectrographic measurement 8=7709
 Ar for colour television display 8=11068
 Ar, high gain laser lines identification 8=7395
 Ar ion laser, c.w., resonance scatt. by Ar plasma 8=12513
 Ar ion, mode interactions 8=15458
 Ar ion, single frequency operation 8=6440
 Ar, long life construction 8=6439
 Ar, mode-locked quieting 8=15466
 Ar, multiwatt, experimental investigation 8=11146

Lasers—contd

gaseous—contd

- Ar, in thermionic hollow cathode discharge 8=15457
 Ar pulsed, inducing electron emission from W and Ta targets 8=18271
 Ar, pulsed, upper level population obs. 8=19956
 Ar, spectrum stable, magnetic field-tunable and linewidth determ. 8=11043
 Ar-ion, single-freq. operation at 5145 Å 8=19957
 Ar II, polarization in perturbed spontaneous emission spectrum 8=11042
 Ar', spectroscopic study of transition wave functions and probabilities 8=3307
 Ar', study of relevant characts. of Ar gas discharge 8=12402
 Ar-O₂ gas mixtures, mechanism for laser transitions 8=19975
 Ca, ionized vapour, pulsed, efficiency 8=11056
 CN, far i.r., characts. 8=11054
 CO, oscillation characteristics on electronic transitions 8=11069
 CO₂, amplifier gain characteristics at 10.6 μ 8=6445
 CO₂, amplifier, nonresonant multipass 8=6446
 CO₂ amplifiers, 10.6 μ gas flow effect on gain 8=11053
 CO₂, appl. with d.c. field to InAs, optical second-harmonic generation 8=5610
 CO₂, atmospheric absorpt. of radiation 8=6441
 CO₂ chem. laser possibility via excitation transfer from heated N₂ 8=16271
 CO₂, and coupled cavity interferometry for plasma diagnosis 8=12522
 CO₂ discharge, gain 8=19963
 CO₂, effect of tube structure on power and efficiency 8=11044
 CO₂, flux limits for continuous and Q-pulse gain for 10.6- μ line 8=19960
 CO₂, freq. of oscill., press. and current depend. shifts 8=15460
 CO₂, i.r. emission, effect of He or N₂ 8=12177
 CO₂, for i.r.-microwave double reson. 8=6402
 CO₂ laser excitation of second harmonic generation in Cu₂Cl₂ 8=14213
 CO₂ levels, lifetimes, effects of CO₂, He and N₂ 8=420
 CO₂, molecular, review 8=11049
 CO₂, obs. of radiation using i.r. image converter 8=19962
 CO₂, oscillations and amplifiers dispersion meas. by interferometric method 8=11052
 CO₂, output visual obs. by controlled incandescence 8=15463
 CO₂, photolysis of hydrocarbon gases 8=2538
 CO₂, plasma temperature meas. 8=15459
 CO₂, population inversion time 8=3309
 CO₂, power output increase, inexpensive 8=6444
 CO₂ radiation, second harmonic generation in α -HgS 8=5606
 CO₂, recovery time from pulse discharges 8=6443
 CO₂, review of development 8=11050
 CO₂, sealed-off, high output and long lifetime 8=11048
 CO₂, sealed tube, life expectancy rel. to form. and adsorpt. of CO and O₂ 8=15461
 CO₂, second harmonic generation in Se 8=6442
 CO₂, selective oscillation of P and R branches 8=11051
 CO₂ at 10.6 μ in SF₆ gas, self-induced transparency 8=1478
 CO₂, transitions near 10 μ , Lamb dip. obs. 8=15462
 CO₂, vibr. levels population calc. 8=15464
 CO₂, selective isotope emission 8=19959
 CO-N₂, modulation of optical cavity 8=19961
 CO₂-N₂, multipath cell for oscillator and amplifier 8=419
 CO₂-N₂-He, multikilowatt in modular form construction 8=11046
 CO₂-N₂-He, Q-switching, appls. and progress 8=11047
 CO₂-N₂-He, radiation prod. mechanism, effect of water vapour addition 8=11045
 CO₂-N₂-He, sealed, catalysed output using heated Pt wire 8=3308
 CS₂-N₂, interpretation and mechanism 8=19958
 CS₂-N₂, P-branch vibrational transition 8=3310
 Cu, atomic vapour, pulsed, efficiency 8=11056
 Cu vapour, pulsed 5106 Å, theoretical model 8=15465
 D₂O and H₂O, far i.r. oscillators, construction and characts. 8=425
 DF, chemical, during flash photolysis of UF₆ in presence of D 8=424
 H-beam, stimulated emission line shape and width obs. 8=421
 HCN, CW submillimeter lines, absolute freq. meas. 8=422
 HCN, 337 μ harmonics mixed with 190 μ and 180 μ for i.r. lasers 8=19950
 He-Ne, with axial mag. field, resonance dips in output 8=11065
 He-Ne, axial mode frequency and power, characteristics 8=19967
 He-Ne, axial mode number, from moving-mirror experiments 8=11026
 He-Ne, backscattered depolarized component rel. to multiple scatt. 8=19839
 He-Ne c.w., microcalorimeter 8=19673
 He-Ne, c.w. 6328 Å, modes 8=19971
 He-Ne, Fabry-Pérot etalon flatness quality determ. 8=20093

- He-Ne, cold cathodes for 8=11067
 He-Ne, collision processes 8=11061
 He-Ne for colour television display 8=11068
 He-Ne continuous wave, hazards to eye 8=14900
 He-Ne, and coupled cavity interferometry for plasma diagnosis 8=12522
 He-Ne, deflection by ultrasonic wave 8=6450
 He-Ne, discharge modulation noise 8=6449
 He-Ne, divergence meas., optimal conditions 8=6448
 He-Ne, double resonance spectroscopy in Ne 8=11066
 He-Ne, ears on line profile of decay transitions 8=3316
 He-Ne, growth of oscillations 8=19964
 He-Ne, i. r. interferometry of shock-tube plasma 8=16541
 He-Ne intensity correl. near threshold, 6328Å and 3.39μ 8=19970
 He-Ne, intra-cavity loss perturb. rel. to Faraday effects in glasses 8=11059
 He-Ne laser, intensity fluctuations, correlation meas. 8=3315
 He-Ne laser light source for light scatt. by He⁴ superfluid 8=8078
 He-Ne laser and monochromatic incoherent light fog scattered comparison 8=14615
 He-Ne, light absorption by air, experimental apparatus 8=7935
 He-Ne light source for Raman spectroscopy of powders 8=14175
 He-Ne, light source for velocity meas. 8=6489
 He-Ne, meas. method for depend. of gain per pass on power inside cavity 8=19969
 He-Ne mixture, pulse delay rel. to partial Ne pressure 8=3314
 He-Ne, mode-locked quieting 8=15466
 He-Ne, modulation by inactive cavity 8=19965
 He-Ne, optimum d. c. excitation 8=15470
 He-Ne, oscill. mode interaction, with spher. mirror resonator 8=427
 He-Ne, output intensity variation of, in a magnetic field 8=15468
 He-Ne, photoexcitation of GaAs p-n junction 8=9252
 He-Ne, plasma-optical effects at 0.63μ, 1.15μ and 3.39μ 8=3319
 He-Ne, plasma parameters meas. 8=3318
 He-Ne, power dependence on longitudinal magnetic field 8=3320
 He-Ne, power enhancements with double pulse excitation, comments 8=11062
 He-Ne, probability of 3s₂-2p₂ transition in Ne 8=3317
 He-Ne, properties, application: interference measurement of length 8=7
 He-Ne, radiation noise rel. to discharge stimulation 8=19966
 He-Ne, resonances due to Zeeman effect 8=15469
 He-Ne, rough reflector, noise and operation at λ = 3.39μ obs. 8=11064
 He-Ne for Rowland's ghosts, obs. 8=3372
 He-Ne single-mode, single freq., stabilization of output 8=11060
 He-Ne, spatial coherence, expt. investig. 8=19968
 He-Ne, spatial coherence and mode structure 8=6447
 He-Ne, spontaneous emission as wavelength standard 8=15467
 He-Ne, Stark effect produced frequency shifts 8=11058
 He-Ne, stationary regime and oscilln. damping 8=15471
 He-Ne, super radiant transition due to Ar addition 8=11063
 He-Ne 6328Å for contour measurements 8=19339
 He-Ne 6328 Å, self-pulsating oscillator 8=11057
 He-Ne, 3.39 μ Ne line, modulation by electro-optic gases 8=426
 HF, chemical, during flash photolysis of UF₆ in presence of H 8=424
 HF, emission from rotational transitions 8=423
 H₂O vapour, pulsed, single wavelength operation 8=3312
 H₂O vapour transition, 220μm, absolute freq. meas. 8=19972
 H₂O, Zeeman effects in 118.65μm transition 8=3311
 N₂, oscillation characteristics on electronic transitions 8=11069
 N₂ pulsed, four new lines 8=11070
 N₂ pulsed for planograms of smoke distribution in turbulent jets 8=8152
 N₂, pulsed, two-photon absorpt, in alkali halides 8=5578
 N₂, pulsed, theory 8=15472
 N₂ pulsed, u.v., Raman scatt. from atm. 8=23289
 N₂, as u. v. source with repetitive subnsec. kW pulses 8=20069
 N₂-CO₂, direct obs. of 10.6μm output beam patterns 8=19973
 Ne, i. r. Zeeman-tuned, for fine-structure anal. of absorpt. spectra 8=11160
 Ne, Zeeman type, polarization in mag. field 8=11037
 Ne-H, light vel. meas. 8=457
 Ne-He, self-oscillations, stability 8=19974
 Ne-O₂ gas mixtures, mechanism for laser transitions 8=19975
 NOCl, photodissociative chemical reversibility, solar excitation rates 8=3321

Lasers—cont'd

gaseous—cont'd

- OH, hyperfine polarization, rel. to OH cosmic rad. 8=23582
 Xe, i. r. Zeeman-tuned, for fine-structure anal. of absorpt. spectra 8=11160
 Xe, ionized, c. w. oscillation at 9697Å 8=6451
 Xe, microwave excited, new c. w. ion laser oscillation 8=6452

solid

- amplification of amplitude-modulated light signal 8=19977
 CW using vitreous substances, at room temp. 8=19998
 diodes, mag. field effect on spontaneous emission linewidth 8=19999
 efficiency of optical system with cathode luminescent pumping 8=6454
 emission in anisotropic Pérot-Fabry cavity 8=19981
 excitation cavities, geometry and continuous operation 8=19980
 exciton, quantum mechanical theory 8=6456
 external distributed resonator correction of angular divergence 8=3299
 glass fibre, passive core and Nd-doped cladding, osc. and amp. by total internal refl. 8=11073
 glass, Nd doped, Q switching with dyes 8=430
 glass: Nd, stimulated emission cross-section, from free-running oscillator output 8=19979
 glass: Nd, travelling-wave, features 8=3333
 increasing pump flux by immersion 8=433
 inert-gas crystals, laser generation of short wave-length (vac. u. v.) 8=18534
 infrared rangefinder 8=448
 injection, review of structural parameters 8=15476
 irradiated metal temp. from crater microscopy 8=8769
 junction, threshold current calc. 8=6467-8
 with large annular dispersion of light, spectral props. 8=431
 laser CW with Czochralski material, diffraction-limited emission 8=11083
 laser light on LiD and LiH target, plasma prod. 8=8774
 light polarization determ., apparatus 8=11074
 mode selection within active element 8=6455
 non-linear crystals, tuning for second harmonic 8=3322
 operation and properties, review 8=6453
 optical pumping by spherical reflector 8=11108
 oscillations, non-stationary, theory 8=19978
 photolysis apparatus, nsec range 8=9728
 pulse lamp supply for pumping, calc. 8=3323
 pulse output and mass ejection from metals 8=8759
 pumping cavities, machining assembly 8=23771
 Q-spoiled, passively, axial mode discrimination 8=3324
 quartz, stimulated Raman scattering from i. r.-active phonons 8=11112
 radiation dynamic eqns. 8=6457
 radiation, heating of plasma in magnetic field 8=7735
 ruby, alignment method, rapid and accurate 8=19988
 ruby, amplification of R₂ line in stimulated scattering system in CS₂ 8=9520
 ruby, appl. to biological microscope 8=6503
 ruby, axial emission modes, self-locking 8=11087
 ruby, beam divergence testing 8=15478
 ruby, cavity, for stimulated Brillouin scattering in methanol 8=4584
 ruby, change and stabilization of operating wave-length 8=19987
 ruby, continuous, power output and efficiency 8=437
 ruby, damage on semiconductor surfaces 8=2028
 ruby, effect of giant pulse irradiat. 8=3327
 ruby, effect of internal modes on operation 8=19986
 ruby, excitation of quartz, rel. to stimulated Mandel'shtam-Brillouin scattering 8=5632
 ruby, excitation of Raman spectra 8=9570
 ruby, expts. on phonon terminated laser amplification 8=14196
 ruby, Faraday Q-switch 8=435
 ruby, giant pulse, dynamics of generation field, spectrum and coherence 8=3329
 ruby, giant pulse, frequency drifts, inversion depend. 8=19984
 ruby, giant-pulse mode selection 8=15479
 ruby illumination, pulsed hologram formation 8=529
 ruby, induced changes in GaAs optical properties and carriers density 8=5633
 ruby, induced changes in Si optical properties and carriers density 8=5633
 ruby, interferometers for fluid mechanics 8=16618
 ruby-laser filaments, diffraction-coupling 8=19990
 ruby, with lens system, spectral characts. and radiation kinetics 8=19989
 ruby, light interaction with conductors, semiconductors and dielectrics 8=18272
 ruby, loss measurement, new method 8=11085
 ruby, losses of resonant cavity, meas. by comparison of R₁, R₂ thresholds 8=11080
 ruby, Lummer-Gerke plate application 8=3328
 ruby rel. to macroparticles accel. by radiation-reaction 8=10885
 ruby, mode competition caused by saturable absorbers 8=11020

- Lasers—contd**
solid—contd
- ruby, mode self-synchronization in broad spectrum giant pulse, obs. 8=11076
 - ruby and Nd, radiation mixing 8=436
 - ruby, nonlinear absorpt. by K_2 vapour 8=7527
 - ruby, nonlinear propag. in dielectrics 8=22931
 - ruby, non-Q-switched, picosecond substruct. of laser spikes 8=20002
 - ruby, with non-resonant feedback due to scatt. 8=11003
 - ruby, output spectra rel. to linewidth determ. mechanism in YAl garnet:Nd 8=11111
 - ruby, phonon breakdown theory 8=22952
 - ruby, picosecond pulses, spontaneous appearance 8=439
 - ruby, plasma scattered light, 12-channel Doppler-profile spectrophotometer 8=3357
 - ruby, precise wavelength meas. by Fabry-Perot interferometer 8=19992
 - ruby, production of single longitudinal mode 8=6459
 - ruby pulse laser, 50 Hz, emission 8=3326
 - ruby, pulsed, calorimetric meas. of output energy 8=11084
 - ruby, pulsed, pure transverse modes from special cavity 8=11086
 - ruby, pulses photography of plasma sheath 8=12526
 - ruby, pump power and efficiency calc. 8=3331
 - ruby, pumping of quartz rel. to quartz behaviour as Ramn oscillator 8=2453
 - ruby, Q-switched, energy losses 8=6458
 - ruby, Q-switched, feedback control, expt. and theory 8=11079
 - ruby, Q-switched, formation time and resonator loss, exp. 8=434
 - ruby, Q-switched, giant pulse generation by external signal 8=19983
 - ruby, Q-switched, hologram resolution 8=20110
 - ruby, Q-switched, for production of C plasma 8=21357
 - ruby, Q-switched, time resolved beam structure 8=11082
 - ruby, Q-switching using liq. Se mirror as a reflector 8=11078
 - ruby, quenching of one pulsed laser osc. by another rel. to coupled rate eqns. 8=11075
 - ruby, rad. field structure rel. to optical inhomogeneities in substance 8=3330
 - ruby, resonators, prism for state and plane of polarization preservation 8=438
 - ruby, rod distortion compensation rel. to brightness gain and mode control 8=11081
 - ruby, shock wave production using solid target, and plasmoid scattering 8=19534
 - ruby, simultaneous pulsing 8=15477
 - ruby, single-mode, characts. as laser radar transmitter 8=11077
 - ruby, single-pulse single mode, with diffractive beam divergence 8=19985
 - ruby, spike smoothing by optical filter 8=11141
 - ruby, stimulated Brillouin scatt. in quartz, optical heterodyne detection 8=14267
 - ruby, with tilted plates as discrimination, modes and generation kinetics 8=3332
 - ruby, tunable, repetitively pulsed, with solid etalon mode control 8=19993
 - ruby, for two-quantum photoionization rate of Cs and Γ 8=12437
 - ruby, use in generation of hypersound in MgO:Cr crystal 8=10727
 - ruby, variable freq. monochromatic source, for study of absorption specrum in pink ruby 8=18499
 - semiconductor, degenerate, emission props. rel. to band-tail spreading energy 8=13781
 - semiconductor, freq. modulation by u.s. waves 8=11093
 - semiconductor, interband magneto-optical, theory of e. m. modes and threshold conds. 8=11071
 - semiconductor, optical pumping rel. to saturable transmission by multiphoton absorpt. 8=9478
 - semiconductor, population and current noise 8=429
 - semiconductor, potential use, capabilities 8=9589
 - semiconductor, with radiating mirrors, using electron or laser beam exciting 8=11072
 - semiconductors, review 8=19982
 - semiconductor, theory considering saturation effects 8=15475
 - spectrum, with nonuniform pumping 8=15474
 - stimulated emission in conditions of reabsorption 8=3325
 - water-cooled pumping systems for continuous operation 8=432
- A¹¹B¹¹ semiconductor cpds., (A=Zn, Cd, Hg; B=S, Se, Te) 8=18023**
- CaF₂:Dy²⁺, giant pulse, with high repetition rate 8=11090
 - CaF₂:Er³⁺, stimulated emission at $\lambda_1 = 8456 \text{ \AA}$ and $\lambda_2 = 8548 \text{ \AA}$ 8=22963
 - CaF₂:Nd³⁺, new spectral line, oscillations from ions at noncubic sites 8=3335
 - CaF₂:Nd³⁺, stimulated emission, high-temp. effects 8=22960
 - CaF₂:Sm²⁺, from giant pulse ruby laser excitation 8=11089
 - CaF₂:Yb³⁺, new spectral line, oscillations from ions at noncubic sites 8=3335
 - CaWO₄ crystals, light loss, possible scattering contribution 8=19994
 - CaWO₄:Nd³⁺, quasicontinuous 8=440

Lead

- abundance in sun, spectrometry 8=23696
 atoms, electron-impact ionization cross-sections 8=12428
 ball indentation tests and grain structure 8=13602
 collective motions of atoms in liq. state, compared with polycryst. solid 8=12796
 creep, stress sensitivity at low stresses, article discussion 8=17825
 dislocation-electron interactions, normal and supercond. 8=17864
 effect of small amounts on self-diffusion of Fe in γ -phase 8=1930
 electron emission, secondary, for large incident angles of primary beam 8=5421
 explosive welding to steel 8=10456
 fatigue mechanism, 0.5-0.85 Tm°K 8=8806
 Fermi surface 8=5114
 films, self-supporting, 250-500Å thick, prep. 8=4751
 γ -beam scatt., differential albedo obs. 8=16844
 inhibitor, in Cu-Zn alloys, selective corrosion 8=23100
 isotopes, abundance ratios, interpretation, generalized model 8=16236
 isotope meas. in New Mexico, as evidence of Zuni Lineament 8=5781
 liquid, containing Ag, Au, or Pt, thermodynamic props. 8=8043
 liquid, n and X-ray scatt. expts. rel. to structure and props. 8=12794
 liquid, n scatt., classical fluid calc. 8=7851
 liquid, optical consts and dielec. const $\epsilon_1 + i\epsilon_2$ 8=12877
 molten, electronic band struct., density of states, and resistivity calc. 8=16789
 optical props., visible to i.r., room to He temp. meas. 8=14253
 phonon dispersion relations at 80 and 300°K 8=1839
 phonon-frequency distrib. and ht. capacity 8=1868
 phonons, relns between freq. and wave vector, rel. to dispersion relns. 8=17483
 phonon spectrum, energy shifts, observed by electron-tunneling 8=2085
 solid solutions, n.m.r. spin echoes, Knight shift 8=2387
 superconducting, energy gap and electron-phonon coupling strength press. depend. 8=22557
 superconducting, far i.r. absorpt. rel. to energy gaps 8=18555
 superconducting film, frequency conversion in 3 cm band 8=22558
 supercond. films tunnelling characts., size effects 700-3200Å 8=2172
 superconducting, flux line motion in current-carrying, direct detection 8=13758
 superconducting, microwave absorption in surface-sheath regime, depairing effect of mag. field 8=13760
 superconducting and normal, thermally induced He II vaporization threshold 8=4660
 superconducting, phonon spectrum change by lattice distortion 8=22559
 superconducting, point tunnelling 8=5211
 superconducting shell, attainment of zero mag. field 8=17990
 superconducting, surface nucleation and bulk superheating fields, 1.2°K-T_c 8=17968
 superconducting, surface nucleation field 8=17971
 superconducting, thermal forces on vortices 8=13761
 superconducting, tunnelling meas. of energy gap, high pressures 8=22554

Lead--contd

- superconductive defects rel. to structure of intermediate stage 8=22556
 superconductive, irreversible magnetisation obs. 8=2160
 thermal diffusivity meas. 8=1898
 thermal vibration spectra, experimental 8=8607
 two-band conduction model for resistivity, contradictions 8=2107
 Pb-Ag system, galvanic cell studies using PbO-SiO₂ melts 8=23150
 Pb-insulator-Al tunnel junctions, electron tunnelling 8=2180
 Pb-Pb superconducting tunnel junctions, I-V characts. and 3-cm characts. emission 8=17981
 Pb²⁺ impurities in soln. grown KCl crystals, distrib. 8=17238
 Pb²⁺ in K₂B₂O₄ glass, γ -irrad., induced absorption bands 8=5639
 Pb²¹⁰ in alpine glacier, meas. in firn and ice samples 8=18831
 Pb₂CuCrO₄(As, P)O₄OH, formacite, crystal structure 8=13284
 Sb¹²⁵ in crude Pb 8=14499

Lead compounds

- acetate, i. r. spectra and thermal decomp. 8=23095
 gases, electrical resistivity and gas purification 8=4488
 halides, gaseous ions, recomb. rates 8=4317
 neutron monochromator 8=854
 Pb stearate, crystal optimization for X-ray diffraction 8=14254
 Pb zirconate-titanate ceramics, depolarization at high strain rates 8=2243
 Pb-Bi alloy, liq., cavitation damage data for venturi and vibratory systems 8=16767
 Pb-Bi liquid alloy, heat conductance 8=16823
 Pb-Bi molten alloys, free energy of mixing and elec. resistivity 8=12842
 Pb-Bi, type II superconducting foils, critical current density 8=2173
 PbB₂O₇, interface temp. of crystallizing melt 8=21960
 PbBr, emission spectrum of molecule 8=7546
 PbBr₂:Mn luminesc. excit. and emission and absorpt. spectra 8=9622
 Pb²⁰⁷(CH₃)₄, indirect nuclear spin coupling 8=4233
 PbCl₂:Mn luminesc. excit. and emission and absorpt. spectra 8=9622
 PbCrO₃, high-pressure synthesis 8=23110
 2PbCO₃ anodization and PbO₂ struct. obs. 8=23148
 PbCrO₄ adsorption of poly(dimethyl siloxane) from CCl₄ and xylene solns. 8=8336
 PbF, emission spectrum 8=21099
 PbI₂ on different substrates, exciton spectrum 8=13675
 PbI₂, optical absorpt. and photoconduction in 0.52 μ region 8=2444
 Pb-In alloy type II superconducting tube, magnetic induction meas. on wall 8=5221
 Pb-30 at. %In, superconducting sheets, transport current distrib. obs. 8=9051
 Pb_{0.88}In_{0.12}, transitions during destruction of superconductivity 8=22567
 Pb. 0.4wt% Mg alloy, structural ageing process at room temp., X-ray study 8=22389
 α -PbN₆, solid-state photodecomp. 8=9724
 Pb(NO₃)₂, photo-annealing of chemical radiation damage 8=9732
 Pb(NbFe)_{1-x}O₃, study using Mössbauer effect of Fe⁵⁷ 8=1698
 PbO anodization and PbO₂ struct. obs. 8=23148
 Pb(OH)₂ anodization and PbO₂ struct. obs. 8=23148
 PbO layers, vapour-deposited, elec. behaviour 8=8941
 PbO, orthorhombic and tetragonal forms, conversion at low temp. 8=8276
 PbO, single crystal, yellow form, optical absorption coeffs. 8=5628
 PbO, yellow, photoconductivity, surface effect 8=22697
 PbO-Al₂O₃-B₂O₃-SiO system glasses, elec. props. temp. and comp. dependence 8=18170
 PbO-TiO₂-ZrO₂ system, phase equilib. 8=17099
 PbO₂ electrodeposits cryst. struct. rel. to electrolyte impurities 8=21919
 PbO₂ from PbSO₄, Pb₂O₃, 2PbCO₃, Pb(OH)₂ and PbO anodization, struct., obs. 8=23148
 PbO₂ layers, secondary electron emission 8=18284
 Pb₂O₄ anodization and PbO₂ struct. obs. 8=23148
 Pb-PbO-As₂O₃ system, slag-metal equilibria, phase diagrams 8=8277
 PbO-B₂O₃ glass system, fraction of four-co-ord. B atoms present 8=21915
 PbS chemical films, photovoltaic effect of const. current 8=18234
 PbS, crystal growth in silica gel near ambient temperatures 8=1743
 PbS, energy-band structures and electronic props., investigation 8=22465
 PbS films, Hall effect data rel. to space charge layers on crystallite surfaces 8=5273
 PbS, mobility temp. dependence 8=18062
 PbS, sulphation 8=9698
 PbS X-ray microanalysis, atomic number effect correction, obs. 8=14479
 PbS(Te), lattice dynamics 8=13337

Lead compounds—cont'd

- Pb-S-O system, equilib. relns., diagrammatic representation 8=16920
 PbSO₄ anodization and PbO₂ struct. obs. 8=23148
 PbSe, energy-band structures and electronic props., investigation 8=22465
 p-PbSe, free carrier Faraday rot. rel. to band struct. 8=2445
 PbSe, forbidden band width and temp. depend. 8=5272
 PbSe_(1-x)Te_x, comp. variations shown by chemical polishing 8=1689
 PbSe-SnSe, optical energy gap 8=5629
 PbSe-SnTe, optical energy gap 8=5629
 Pb-Sn alloys, composite growth from melt 8=4648
 Pb-Sn alloys, lamellar stability on solidification 8=4785
 Pb-Sn alloys, liq., meas. of electrotransport 8=12816
 Pb-Sn alloy polycrystalline, atomic block theory of hardening investigation 8=8803
 Pb-Sn eutectic, undercooling at solid/liq. interface 8=16933
 Pb-Sn, Na conc. at grain boundaries 8=8344
 Pb-Sn wire cryotron relax. oscillator, as thermometer for temp. distrib. with height in He-I 8=22571
 Pb_xSn_{1-x}Te alloys, lattice parameters, redeterm. 8=22037
 Pb_{0.63}Sn_{0.07}Te, energy gaps, thermal and optical 8=2446
 Pb_{0.85}Sn_{0.15}Te, energy gaps, thermal and optical 8=2446
 Pb_{0.95}Sr_{0.05}(Zr_{0.53}Ti_{0.47})O₃, u. s. velocity and Young's modulus 8=1856
 PbTe, anomalously high-mobility from Hall meas. rel. to sample prep. 8=2138
 PbTe compatibility with metals study 8=18686
 PbTe, diffusion coeff. of Na meas. by radio tracer technique 8=17580
 PbTe films, thin, resistivity, Hall mobility and cond. 8=22603
 PbTe, p-type, Hall mobility and thermoelectric power rel. to Na doping 8=5274
 p-PbTe heavily doped thermal conductivity betw. 80-400°K 8=8662
 PbTe, helicon-phonon coupling at 4.2°K 8=18063
 PbTe, p-type, oscillatory magnetostriction 8=13964
 PbTe, reflectivity, low freq., in mag. field 8=22988
 PbTe-Au pseudobinary section 8=17098
 PbTe-Fe pseudobinary section phase equilibria 8=17097
 PbTe:Na, acceptor centre model from Na:hole ratio determ. 8=2205
 PbTe-PbS, n-type, elec. props. temp. and pressure dependence 8=18061
 PbTe-PbS solid solns., i. r. transmission spectra rel. to forbidden band optical width 8=18554
 PbTe-Sb₂Te₃ alloy system, thermoelectric props. and phase relations 8=4716
 PbTe-Se_{1-x}, effect of defects on lattice thermal conductivity 8=1892
 PbTe-SnSe, optical energy gap 8=5629
 PbTe-SnTe, optical energy gap 8=5629
 PbTiO₃-PbZrO₃-PbMg_{0.5}W_{0.5}O₃ system, dielectric polarization and thermal expansion 8=5367
 Pb-Tl alloys, electron-phonon coupling and phonon spectra, electron tunnelling studies 8=22555
 Pb-Tl alloys, superplasticity during creep 8=13603
 Pb-Tl supercond. foils, type II, sheath irreversible magnetization obs. 8=17970
 Pb-Tl(In) alloys, order-disorder transform. from superconducting transition temp. meas. 8=1680
 Pb₂V₂O₇ (chervetite), crystal structure 8=13285
 PbZrO₃, coprecipitation meas. 8=1744
 PbZrO₃ elec. cond. near antiferroelec.-ferroelec. transition rel. to ageing and relax. polarization 8=2249
 PbZrO₃, l.f. dielectric study 8=5368
 PbZrO₃ polycrystals, temp. changes of polarization at phase transition 8=13888
 PbZrO₃, rel. to ferroelec. phase, current hysteresis loops obs. 8=13887
 Pb(Zr,Sn,Ti)O₃ ferroelectric ceramics, Nb-doped, elec. props. 8=2246
 Pb(Zr-Ti)O₃ ceramics, addition of Cr₂O₃ 8=13043
 Pb(Zr_{0.98}Ti_{0.02})O₃, shock-wave compression 8=13538
 Pd complex, bis-(Ni-isopropyl-3-ethylsalicylaldiminato) palladium, structure 8=8552
 Zn determ. by atomic absorpt. spectrometry 8=23184

Leak detection

- conference 8=21531
 gas or liq., calibrated leak prod. for mats. with m. p. s. above room temp. 8=14907
 nuclear fuel, e. s. precipitator 8=20909
 oil diffusion pump, e. microscopic monitoring of molecular seive 8=21535
 omegatron efficiency, comparison of oil-free and oil diffusion pumps 8=21538
 semiconductor devices, using Xe-133, radioactive 8=2211
 sensitivity increase by use of org. liq. tracer 8=7969
 He mass spectrometer application, practical considerations 8=7359

Leather. See Materials.**See model.** See Field theory, quantum.**Length measurement**

- See also Micrometry; Strain gauges; Thickness measurement.

Length measurement—cont'd

- dilatometers, Al₂O₃ and quartz specimen for testing 8=13381
 dilatometric, from mean strain curves of corundum, 0-900°C 8=6
 displacement meas. using guarded sphere as gauging electrode 8=10823
 fibres, length distrib. 8=13054
 interference, using lasers 8=7
 interferometric apparatus comprising a laser source 8=6003
 meter bar, elongation in gravitational field 8=6002
 optical ranging system using a laser 8=14918
 pneumatic testing, method of speeding 8=14917
 precision, using an electronic contact indicator 8=14916
 rangefinder, automatic, proposed 8=475
 spherical radii, superposable spherometer 8=20053
 standard quartz metre gauges 8=10475
 Cu, length change after e irradiation 8=22338
- Length standards.** See Standards.
- Lennard-Jones and Devonshire theory.** See Liquids/theory.
- Lennard-Jones potential.** See Kinetic theory; Molecules/intermolecular mechanics.
- Lenses**
- See also Electron lenses.
- aberrations, primary, two-lens system of Ramsden type 8=6493
 advanced optical techniques, book 8=15489
 apertometer, precision, for microscope objectives 8=6507
 birefringent, in optical system, path of extraordinary ray 8=15510
 centring, vacuum technique 8=6494
 contact, tightly fitting with plane mirror for retinal image stabilization 8=15575
 equiconvex, nonlinear oscillations on plane surface 8=19511
 535 mm, objective of coronagraph, investigation of 8=536
 and holographic imaging, analogy and lens formulae appls. 8=20105
 human, thin shell deformation analysis 8=15573
 image deflectors, achromatic 8=472
 interferogram testing 8=20043
 liquid for acoustic waves, focusing props. 8=19573
 longitudinal spherical aberration, determ. by simple tech. 8=470
 optical transfer function measurement 8=6491
 pancratic systems rel. to Seidel aberrations 8=471
 point holograms as lenses 8=6568
 progress in optics, book VI 8=15541
 quadrupolar multiplet, evaluation of acceptance angle 8=15500
 quality control by modulation transfer meas. 8=11129
 single and cemented, thickening 8=6492
 small lens null compensator, algebraic soln. 8=20046
 superresolution, and Abbe resolution limit 8=6505
 telescope objective, cemented, 5th order spherical aberration 8=3351
 theory, systematic approach to teaching 8=15502
 thick concentric single, use of characteristic functions in design 8=11130
 transfer factor, meas. by harmonic analyser 8=11131
 triplets, spherical aberration evaluation 8=15501
 X-ray, Fresnel-zone and appls. 8=15591
 Nd laser focusing, spark propagation 8=3337
- aspherical**
- aplanatic Fresnel system correction 8=20048
 correction of optical system aberrations 8=3347
 double Gauss, study of use of aspherics 8=11127
 surface calc. for aberration corrections 8=20042
- photographic**
- off-axis wave aberration and optical transfer function 8=15503
 picture quality, effects of lens flare 8=11224
- Leptons**
- See also Electrons; Mesons; Neutrinos and antineutrinos.
- antineutrino scatt. by electron, cross-section 8=6799
 charge conservation and $\nu \leftrightarrow \bar{\nu}$ expts. 8=15725
 data on properties, updating 8=15671
 decay, nonleptonic, surface terms connected with reduction formulae 8=3511
 e, μ , ν as independent states of a single lepton 8=11450
 electro-pair-production, trident expts. 8=3584
 interaction, ultraweak, CP-odd, $|\Delta S| = 1$, neutral lepton currents 8=3531
 lepton-lepton long-range force due to ν pair exchange unobservable 8=20273
 mass spectrum, wave eqn. in SU(3, 1) 8=20258
 masses, extremum relationship 8=3601
 model, photon and intermediate-boson gauge fields 8=11451
 N weak decay, PCAC hypothesis, pole-dominance version 8=3696
 and nucleons form factors and structure effects in vacuum polarization 8=588
 octet, weak interactions governed by current-parity selection rule 8=11449
 π leptonic decays with intermediate boson, e. m. corrections 8=6836
 polarization rel. to Furry's theorem in quantum electrodynamics 8=20176

Leptons—contd

- polarization in $\nu_1 + N \rightarrow N^* + 1$ and $\bar{\nu}_1 + N \rightarrow N^* + \bar{1}$ 8=3585
 production in $\nu_1 + N \rightarrow N^* + 1$, N^* polarization 8=3586
 ρ vector β -decay coupling, radiative correction 8=20374
 scatt., rel. to weak interaction theory 8=3418
 statistics effect examined in μ, e reactions in PbCu 8=20392
 strange, conservation in semileptonic interactions and
 absence of neutral currents 8=20368

Lie groups. See Group theory. For applications see Elementary particles; Field theory, quantum.

Ligands. See Bonds; Molecules.

Light

See also Diffraction; Interference, etc.; Doppler effect; Radiation.

- amplification, parametric, in nonlinear medium 8=6419
 in antiferromagnets, fluctuations and scattering in strong
 magnetic field 8=5498
 atmospheric propag., comparison of laser and
 nonlaser 8=9867
 beam in random medium, fluctuations 8=20089
 beam trajectories in media with refractive index
 inhomogeneities 8=371
 chopper, feedback-stabilized with continuously variable
 frequency 8=6509
 fluctuations correl. functions, 3-channel photoelec. counting
 obs. 8=20015
 Gaussian, intensity-fluctuation distribution 8=20019
 interaction with sound and applications 8=11120
 Lorentz group, Zeeman's lemma, light-like permuta-
 tions 8=6024
 macroparticles accel. by laser radiation 8=10885
 modulated or time-varying, dispersion anal. 8=6486
 modulation by K^{π} at ground-state, optical pumping 8=12085
 modulation, u. h. f., photomultiplier meas. 8=6487
 modulation by ultrasonic fields 8=20035
 optical beam waveguides, self-aligning 8=10965
 photoelectric detect statistics, communication channel
 model 8=20010
 photon count distrib., meas. rel. to field statistics 8=20014
 photon counting distrib., meas. and analysis 8=20351
 photon number and energy density, fluctuation
 formulae 8=20016
 photothermal effects in semiconductors 8=8650
 picosecond pulses, display and meas. via two-photon
 fluoresc. in liqs. 8=8071
 propagation in elec. and mag. anisotropic media 8=515
 propagation in inhomogeneous cosmologies, statistical
 effects 8=10078
 pulse meas. with photocells, accuracy 8=9245
 pulse self-steepening 8=6480
 pulses, spatial and temporal division 8=20021
 resonator, prism, mode eqn., soln. 8=20088
 scale of optical rad., development 8=11117
 self-focusing by Kerr effect and striction 8=3377
 signal $< 10^{-4}$ W detection methods 8=15495
 statistical props. meas., photodetect. e emission
 distrib. 8=15493
 thermal effect causes self-focusing of light beam 8=14170

coherence

See also Lasers.

- advanced optical techniques, book 8=15489
 annular and disc-like objects, diffraction images under
 partially coherent illumination 8=11188
 cascaded optical systems, transfer function 8=11133
 Cherenkov radiation, coherence effects 8=20027
 coherent scatt., expt. conditions for turbid media 8=11193
 crystals, KDP type, second harmonic generation 8=5569
 degree, from intensity correlation obs. 8=20028
 diffracted field of rectangular aperture with partially
 coherent illum., calc. 8=20101
 diffraction and focusing of apertures under partially
 coherent illumination 8=6559
 diffraction pattern depend. 8=20100
 equivalence theorem and diagonal representations 8=20025
 field dynamics in first- and second-order
 processes 8=20034
 field, rel. to photostatistics of N-mode laser
 field 8=412
 fluctuating beams, anal. via photon counting
 statistics 8=6425
 fourth-order function, classical formulation, props. and
 appls. 8=20032
 fourth-order functions meas. 8=20031
 harmonic generation in optically active medium, coupled-
 wave solution 8=455
 higher-order functions and degree of coherence 8=20033
 higher-order functions, propag. in lossy media 8=5570
 higher-order, normalized functions considering
 classical and quantized fields 8=20030
 holography and spatial filtering, applications 8=11119
 image of quasi-monochromatic source, meas. of mod. of
 degree of coherence 8=6483
 laser, mode-locked, for reproducible optical second-
 harmonic generation 8=11024
 lasers, quantum mechanical theory 8=19938
 in multiphoton absorpt. processes, stat. anal. rel. to source
 characts. 8=11165
 near focus of coherent beam, energy flow and Poynting
 vector 8=6499

Light—contd**coherence—contd**

 microhardness at 20, 60 and 115°C 8=17813
 M-centre luminesc. excit. spectra and transitions, obs. 8=8747
 M-centre, upper excited states 8=2010
 n-irradiated, colloidal Li e.p.r. meas. rel. to colloid distrib. 8=9431
 neutron-irradiated, F-centre exchange interactions from optical and e.p.r. spectra 8=17684

Lithium compounds—contd**lithium fluoride—contd**

- neutron-irradiated, paramag. centre due to atomic H³ formation 8=18427
 photoabsorpt. near K-edge 8=18544
 pile-irradiated crystals, study of metallic Li colloids 8=12947
 in plastic sachet dosimeter for surface and finger-tip dosimetry 8=20204
 polarization rel. to lattice imperfection prod. during shock wave plastic deformation 8=9225
 radiation defect formation 8=13487
 radiation heating in reactor 8=13488
 R-centre, linear Stark effect 8=1993
 single crystals, X-ray studies on sub-grain boundaries by limited projection topography 8=13446
 6955Å zero-phonon line, pseudo Stark and uniaxial stress splitting 8=18542
 sphere, extinction coeff. in X-ray exam. 8=17388
 strain amplitude independent dislocation damping, recovery 8=13582
 stresses, internal, obs. by X-ray diffraction in single crystal 8=5014
 surface morphology, after etching in Fe³⁺ soln. 8=1724
 thermal cond. obs., by cryostat, 0.05 → 2°K 8=22112
 in thermoluminescence dosimeter for radiobiological work 8=14890
 thermoluminescence fading characteristics 8=14295
 thermoluminescence fading after γ doses 10-10³ rad. 8=14321
 thermoluminescence, thermal activation energies 8=18609
 third-order elastic constant, obs. 8=13579
 V_K centre, ENDOR study of lattice distortion by dipole-dipole hyperfine const. 8=2009
 water vapour adsorption on cleavage surface 8=17166
 Li⁺ mol-ion in LiF, stability study 8=22181
 LiF:Fe³⁺ system, mag. resonance studies of crystal field distortions 8=13005
 LiF-U, radioluminescence, temp. dependence 8=14323

 advances in low temp. physics, book V 8=19680
 carbon, pyrolytic, Hall effect 8=5174
 cryogenic liqs, saturated, correl. for viscosities, thermal cond. and self-diffusivities 8=15132
 Fermi hard-sphere gas at zero-temp., eqn. of state distrib. function 8=10658
 gases, diatomic, thermal conductivity and viscosity in mag. field 8=7919
 heat transfer below 0.2°K 8=15131
 parahydrogen, solid, ht. of fusion and density at up to 400 atms. 8=16928
 plastics, glass-reinforced, high-strength prop. meas. at cryotemps. 8=17840
 polystyrenes, dielc. props. 8=5359
 polyethylene, ht. capacity 2.5-30°K 8=1875-6
 Pyrex glass, 0.4°-4°K in 0-90 kG fields 8=17525
 quartz, Debye temp. meas. ~1-4°K 8=4934
 quartz piezoelec. resonator at 2°K 8=18204
 research in USSR, obs. 8=19681
 second order transitions as critical phenomena of phase equilibrium 8=8260
 steel, stainless with high N content, tensile and creep props. 8=17784
 steels, stainless, irradiation effects on tensile and shear props. at cryotemps. 8=17763
 Ukraine, research development review 8=10791
 Al alloys, irradiation effects on tensile and shear props. at cryotemps. 8=17763
 C resistors, resistance and magnetoresistance 8=17929
 CdS, green-edge fluorescence, 4.2°K 8=2479
 CeCl₃, e. s. r. and susceptibility meas 8=14097
 Cs metal, ht. capacity, 2-4°K 8=13374
 Eu, ht. capacity 5°-300°K 8=17518
 Gd Cl₃.6H₂O heat capacity singularities below 1°K 8=22115
 Gd₂(SO₄)₃.8H₂O, heat capacity singularities below 1°K 8=22115
 He adsorption, by condensed gas layers 8=8329
 He II, absorption of sound below 0.6°K 8=6235
 K₂MoCl₆ specific heat rel. to mag. ordering 1.5-20°K 8=1872
 KNO₃, irrad. cryst., e.p.r. of NO₂ at 4°K 8=5537
 LaH₂, sp. ht. 1.3-20°K 8=13373
 Li(NH₃)₄, ht. capacity, 2-4°K 8=13374

Low-temperature phenomena--contd

- in MnCu, Mn⁵⁴, anomalous susceptibility 8=13962
 Mn(NH₄)₂(SO₄)₂·6H₂O, ht. capacity 1°-4°K in mag. fields 8=17520
 Na₂HPO₄ hydrates, entropy and disorder 8=17521
 Ni alloy, irradiation effects on tensile and shear props. at cryotemps. 8=17763
 Ni-Fe, permalloy, thin films, exchange anisotropy, 4.2°K 8=2333
 NiSiF₆·6H₂O, thermodynamic and mag. props. 8=8641
 Pd, magnetic moment data at 4.2°K, limits of exchange enhancement 8=13973
 Sb, crystal resist. in mag. field 8=9016
 Sr_{0.925} Ba_{0.075} TiO₃, heat capacity, 0.3 to 4°K 8=1877
 Te, p-band absorption at 4°K 8=8945
 Ti alloy, irradiation effects on tensile and shear props. at cryotemps. 8=17763
 US, ht. capacity and thermodynamic props. 8=22848
 V(CO)₆, e.s.r. spectrum at liq. He temps. 8=18438
 ZnS, Fe²⁺ i. r. luminescence spectra, 5 and 77°K 8=2491

Low-temperature production

 cascade processes, thermodynamic efficiency 8=10792
 closed cycle refrigerator, Claude cycle, 4.5°K 8=19683
 cryogenic liquids, differential density meas. 8=19347
 Dewar cooling vessel for molecular u. v. absorpt. spectra recording 8=22930
 4.2 to 0.3°K, using charcoal adsorpt. pumps for pumping liq He⁴ and He³ 8=15133
 1.85°K, closed-cycle refrigeration 8=6224
 solid cryogenics, A, CO, H₂, CH₄, Ne and N₂, review 8=19634
 specimen cooling stage for scanning electron microscope 8=6227
 He³-He⁴ dilution refrigerator, rapid start-up 8=15145
 He³ in He⁴ dissolution refrigerator 8=19682
 KCl:OH⁻ cooling to 0.36°K by adiabatic depolarization of OH⁻ 8=1874

Low-temperature technique

- β, γ-spectrometers, improved resolution with cooling 8=6811
 calorimeter for enthalpy meas. 8=15126
 calorimetry, use of pure Cu standard 8=15127
 charcoal adsorpt. pump in adiabatic vacuum calorimeter, for 4.2 to 300°K 8=17511
 cryogen storage, fluid heat transfer domains 8=16692
 cryogenic liquids, differential density meas. 8=19347
 cryogenic tank temp. meas. 8=19685
 cryogenic tensile assembly for testing combined nucl. radiation and cryotemp. effects 8=17763
 cryosorption props. of molecular sieves in ultra-high vacuum 8=12714
 cryostat sample holder, two degrees of freedom 8=18292
 electrical termination, use of quartz crystals 8=15137
 electroacoustic thermometry 8=19663
 evacuation of containers in liq. He, use of zeolites 8=4502
 filling of liq. He storage dewars, control monitor 8=15147
 GkZh-94 oil, use for acoustic contact at liq. He temp. 8=15136
 gases at high press., compact elec. lead 8=3147
 inexpensive app. for undergrad., for range 2°K-300°K 8=254
 Joule-Thomson refrigerator, for n diffraction at liq. N temp. 8=8501
 liquid H target, thin walled, description 8=15838
 liquid-level sensor, superconducting, for slush hydrogen use 8=16929
 microbalance, vacuum for 77.3°K operation 8=7965
 packing of valves 8=3139
 for plastics, glass-reinforced, high-strength prop. meas. 8=17840
 research in USSR, obs. 8=19681
 resistance thermometers, below 1°K 8=19665
 review, superconducting magnets 8=6225
 sapphire window mountings for low temp. spectroscopy 8=3362
 sealing of glass illuminators of H bubble chamber, using pneumatic packing 8=15645
 solid-state, appl. of superconducting electro-magnets 8=6281
 specimen cooling stage for scanning electron microscope 8=6227
 specimen holder for obs., and method of thinning specimen 8=6228
 thermal cond. determ. of semiconductor cylinders 8=3107
 thermal cond. meas. at liq. He temp., use of zeolites 8=3106
 torque meas. by superconducting torus 8=14924
 Ukraine, research development review 8=10791
 variable temp. liq. He optical stage, for metallographic studies of supercond. mats. 8=19686
 Al alloys, high strength with good weldability for cryogenic service 8=17762
 C resist. temp. meas., calibration 8=19682
 Cu calorimetric standard, atomic heat meas. 8=17517
 Ge(Li) γ-ray spectrometers cryostat systems 8=11443
 H₂ liq.-solid mixtures, quality determ. 8=15138
 H₂ liquid-solid mixture storage obs. 8=19067

Low-temperature technique--contd

- He Dewar fast precooling to N₂ temp. 8=3114
 He vapour cooling of current leads 8=15195
 Ne-H bubble chambers 8=20224
 Si, possible use in resistance thermometers 8=248

Lubrication

- See also Electroluminescence; Luminescent devices; Thermoluminescence.
 alkali metal, emission spectra, influence of electrical field 8=1895
 band shape, complex molecules 8=1215
 benzene, N and Ar excit. in solid solns., obs. 8=13036
 benzyl radical fluoresc. in methylcyclohexane, cyclopentane and methylcyclopentane, 4°K 8=12342
 cathode, optical pumping in solid state laser 8=6454
 cathodoluminescent chemical analysis using electron microprobe 8=14493
 colour centres excit. and recomb. near fundamental absorpt. limit 8=9580
 cooperative, in solids 8=14298
 in crystals, determ. of 'colour' of short scintillations 8=14297
 energy-compensated spectrofluorometer, adjustment 8=15533
 energy transfer from triplet state in rigid solns. 8=9584
 rel. to exciton annihilation and bound complexes 8=9582
 fluorescent corrections to X-ray absorption in a sphere 8=23037
 fluorescence and phosphorescence spectrometry, sensitivity comparison, and with absorption 8=23180
 fluorescent source, quantum statistics of polarization 8=23036
 fluorescence in upper atmosphere 8=9926
 glass, silicate, 6% Nd broadening of individual center 8=2487
 Gudden-Pohl effect correl. with photoelectret state 8=5679
 high pressure cell for studies at 77°K 8=6502
 lasers in meas. of stimulated emission cross section 8=14292
 rel. to meteor trails luminosity, recomb. radiation 8=19263
 molecules, ππ* and nπ* states 8=12117
 moon, due to solar wind 8=19244
 nonuniformly broadened line system, theory of multimode laser generation 8=11004
 photoluminescence limit yield, thermodynamic calc. 8=12126
 in planetary nebulae, stratification 8=10215
 plasma slab, plasma yield from s- and p- polarized photon bombardment 8=8961
 population and r. f. coherence transfer by spontaneous emission 8=16220
 radiationless transition probabilities, weak solvent-solute interactions 8=16256
 resonance quenching as diffusion process 8=2471
 scintillators, due to X-ray pulses 8=9588
 solid scintillators, for conversion of γ-ray image to visible image 8=9587
 solid solutions, excitation transfer by multimolecular resonance 8=18590
 spectroradiometer-luminometer 8=492
 spectroradiometer-luminometer for quantum-yield studies 8=18589
 super-luminescence field, correlation props. 8=19924
 thermally stimulated conductivity, in photoexcited cryst. 8=1940
 the triplet state, conference Beirut Lebanon (1967) 8=16347
 two-quantum, use in laser 8=19930
 3C273, interplanetary scintillation 8=14807
 AIO clouds, chemiluminescent reaction 8=18872
 O+P(PH₃) reactions, chemiluminescence 8=23109
 Tb³⁺ activated phosphors, correlation of fluorescence with crystal and other properties 8=9581
 Ti, 4-valent cpds., with OH and O₂H radicals, chemiluminescence 8=2522
 U VI, dil. alkali soln., low temp. luminesc. spectrum 8=18618
 Yb, anticrossing signals from 6s²P₁ level 8=16211

gases

- air, shock wave front obs. 8=21483
 anthracene fluoresc. spectrum fine struct. and vibr. analysis, 23 000-28 000 cm⁻¹ 8=1274

Luminescence—contd**gases—contd**

- anthracene vapour, structured fluoresc. spectrum 8=21113
 anthracene vapour, vibr. effects in radiationless transitions 8=21114
 atoms resonance, forward-scatt. curves 8=20946
 atoms spontaneous emission under classical and quantum fields and collisions 8=20937
 electron excitation, for shock wave meas. 8=3033
 ethanol, spectrum vibrational analysis 8=7577
 hexafluoroacetone, fluoresc. lifetime and enhancement 8=12247
 metals in flames, detect. by atomic fluoresc. 8=14460
 methane-O₂ mixtures, vibr. energy transfer 8=21200
 NGC4151 galaxy, O III fluorescence 8=5937
 pyrene vapour, vibr. effects in radiationless transitions 8=21114
 Ar-air mixture, shock wave front obs. 8=21483
 Ar, shock wave front obs. 8=21483
 Ar-5%He, scintillation props. 8=11301
 H, resonance fluoresc. scatt. and level crossings 8=4064
 H₂ flames, chemiluminesc., effects of SO₂ 8=18693
 He excited by α , scintillation mechanism 8=12202
 He-42, 5% Xe, scintillation props. 8=11301
 He-Ar mixture excited by α , scintillation mechanism 8=12202
 He-Ne mixture excited by α , scintillation mechanism 8=12202
 Hg vapour, intensity-modulated fluorescence, stimulation in double reson. expt. 8=15492
 Hg-In fluoresc. spectrum, in line intensities 8=4080
 I₂, laser-induced fluoresc. in beam 8=16288
 K₂ vapour, resonance fluoresc. from nonlinear absorpt. of ruby laser light 8=7527
 Kr, radioactive, due to atomic rearrangement, and inelastic collisions with electrons 8=7406
 N₂, by fission fragments along entire track 8=7531
 Na I, atomic fluoresc., Doppler profiles 8=12069
 Na-Na collisions, energy transfer in sensitized fluorescence 8=16213
 NO₂ chemiluminescence, rad. from far wake of hypersonic spheres 8=21478
 OH from reaction H(P) with O₂ 8=14366
 P, K-shell fluorescence obs. 8=16208
 Xe, shock wave front obs. 8=21483

Liquids and solutions

- acetophenone in soln., lowest π, π^* triplet state 8=12892
 n-alkyl derivatives, $1 \rightarrow a_1$ transitions 8=12252
 3-aminophthalimide solution in frozen dioxane, fluorescence 8=5682
 2-aminopurine solns., quantum yield 8=4595
 aniline, $1 \rightarrow a_1$ transitions 8=12252
 anthracene in diethylaniline, charge-transfer complex 8=7560
 9-anthranaldehyde in alcohol and hexane solutions, singlet-triplet conversion 8=21693
 aromatic hydrocarbons, dipolar complexes in excitation 8=7553
 aromatic hydrocarbons in solns., mixed excimer fluoresc. 8=4593
 aromatic solns., excimer formation 8=8094
 aryl oxalates, electronegatively substituted, reactions with H₂O, and fluorescent compounds 8=18672
 p-biphenylaldehyde in alcohol and hexane solutions, singlet-triplet conversion 8=21693
 butyl-PBD, concentration effects 8=4594
 chemiluminescent reactions 8=1574
 chloroaluminum phthalocyanine, fast fluorescence meas. 8=18689
 chlorophyllide a and b, fluoresc. polarization spectra, 390-440 μ 8=21700
 cryptocyanine, fast fluorescence meas. 8=18689
 dibenzosuberone, phosphoresc. spectra 8=8096
 4,4'-dibrombenzophenone, phosphoresc. spectra 8=8096
 9,10-dimethyanthracene excimers fluoresc. quenching by anthracene and 9-bromoanthracene 8=1575
 dimethylaniline, α, β -unsaturated ketone derivatives in toluene 8=21702
 9,10-di-n-propylanthracene excimers fluoresc. quenching by anthracene and 9-bromoanthracene 8=1575
 eosin, fluorescence spectrum, effect of conc. 8=21701
 fluorescence polarization, effect of self-quenching 8=21698
 fluorescence, self-depolarization, "critical distances" in theories 8=21697
 fluorescence, self-depolarization, mathematico-physical models 8=21696
 hydroxide of hyamine 10-X, chemiluminescence in liquid scintillation counting 8=11305
 indole in polar solns., fluoresc., red shift and loss of vib. struct. rel. to exciplex 8=4591
 iso-propyl benzene, pure and in hexane, excimer fluoresc. 8=21699
 mixed excimer fluoresc., charge-transfer interaction 8=4593
 molten metals, sonoluminesc., temp. variation 8=12859
 naphthalene derivatives as donors in reson. energy transfer 8=18639
 α - β -naphthylaldehyde in alcohol and hexane solutions, singlet-triplet conversion 8=21693

Luminescence—contd**liquids and solutions—contd**

- n-nonane + p-xylene + CCl₄, quenching and decay 8=8097
 organic liquids, electron-impact excited 8=12893
 organic molecules de-exciting in rare earth chelates 8=16333
 organic mol. solns., two-photon fluoresc. excitation by picosec. pulses 8=4592
 organic supercooled melts, scintillation 8=8089
 oxalic anhydrides, reactions with H₂O₂ and fluorescent compounds 8=18685
 PBD, concentration effects 8=4594
 PPO + o-xilen, and butyl-borate, radioluminescent properties 8=1578
 phenanthrene in viscous cyclohexanol 8=12894
 phenylindole derivatives, scintillation of supercooled melts 8=8089
 photoluminescence band intensity distrib. rel. to excit. freq. 8=21695
 photoluminescence concentration depolarization 8=1573
 pinacyanol dye in alcohol, long wavelength bands 8=8091
 polycyclic monoazines, solvent effect 8=8095
 polystyrene in benzene, chemiluminesc., conc. effects obs. 8=23072
 proteins in soln., polarization, ang. correl. functions 8=16384
 pseudocyanine dye in alcohol, long wavelength bands 8=8091
 p-quaterphenyl derivatives, scintillation of supercooled melts 8=8089
 quinine sulphate solns., quantum yield 8=4595
 quenching and decay in multicomponent systems 8=8097
 rare-earth ions, energy transfer to H₂O 8=16870
 relative quenching factor, definition and use in correction terms 8=20195
 salicylate mixed complexes with La aminoacetate, aqueous, fluorescence 8=21703
 scintillation spectrometers, developments 8=6644
 sonoluminescence, timing of flash obs. 8=8093
 sprays, fluorescent photography using Q-switched laser light source 8=4636
 tetrachlorophthalic anhydride complexes, polarization of charge-transfer fluoresc. 8=1576
 tetracyanoethylene complexes, polarization of charge-transfer fluoresc. 8=1576
 s-trinitrobenzene complexes, polarization of charge-transfer fluoresc. 8=1576
 two-photon fluoresc. from 2 picosec light pulses of different freqs., as display of pulses 8=8071
 viscous solns., decay and energy transfer 8=12894
 xanthane rel. to mol. π, π^* and $\pi\pi^*$ levels location 8=1302
 xylenes, pure and in hexane, excimer fluoresc. 8=21699
 TL' ions in aqueous solns., intensity and quenching 8=21704
 UO₂(CO₃)₂, dil. soln., low temp. luminesc. spectrum 8=18618
 UO₂(NO₃)₂, dil. soln., low temp. luminesc. spectrum 8=18618
- solids, inorganic**
- alkali halides, cathodoluminesc., electron-probe meas. 8=1754
 alkali halide crystals with activating impurities, and colourability 8=17682
 alkali halides, F-centre, under hydrostatic pressure 8=9599
 alkali halides, fluoresc. from two-photon absorpt. with N₂ laser 8=5578
 alkali halides, inactivated, radioluminesc. and scintillation props. obs. 8=9592
 alkali halides, intrinsic recomb. rad. and triplet state of self-trapped exciton 8=2476
 alkali halide phosphors radioluminesc. and carrier motion rel. to F-centres, obs. 8=18594
 alkali halide phosphors radioluminesc. and storage props. obs. 8=9591
 alkali-halide phosphors, temp. depend. of X-ray luminesc. and optical flash 8=5653
 alkali halides, thermal quenching of O₂⁻ and S₂⁻ 8=2485
 alkaline earth metal double orthophosphates, Sn-activated 8=14309
 alkaline-earth pyrophosphates, Eu²⁺ activated 8=9628
 alloys, analysis by X-ray fluorescence 8=9750
 alumina, X-ray fluorescence, anodic layer analysis 8=18595
 aluminophosphate glasses, radiocolouration and luminescence kinetics 8=1996
 anthracene crystals, fluorescence and absorpt. spectra symmetry 8=18631
 anthracene, recombination luminescence in mag. field 8=18630
 apatites, stoichiometry 8=2477
 book, 1966 8=18593
 calcium fluoxytantalate: Eu³⁺, Sm³⁺, rel. to crystalline field parameters of ions 8=16973
 cathodoluminescence, electron-probe meas. 8=1754
 ceramic and glass materials, viewing by optical microscopy 8=14296
 diamond, rel. to Lave spike refls., obs. 8=22014
 diamonds, natural, effect of heat treatment and irradiation 8=18596
 dielectrics, exciton transitions in 2-photon stimulation 8=9583
 diffusion couples, fluoresc. effects obs. by X-ray microanalysis 8=17553
 F-centres for hole processes meas. 8=8888

Luminescence—contd

solids, inorganic—contd

fluorescent X-rays from γ -irradiated target, absolute yield meas. 8=23039
garnet, Ce activated, fluorescence 8=2474

AlN:Eu photo-cathodo- and electroluminesc. and S and Zn impurity effects, obs. 8=9595
AlN:Mn photo-cathodo- and electroluminesc. and S and Zn impurity effects, obs. 8=9595
AlN:Sm photo-cathodo- and electroluminesc. and S and Zn impurity effects, obs. 8=9595
Al₂O₃ films, photoluminesc, spectral distrib. curves 8=9596
Al₂O₃:Rh 8=14300
Au sphere fluorescent corrections to X-ray absorption in a sphere 8=23037
BaClF:Sm²⁺, evidence of phonon annihilation from ³D₁ and ³D₂ fluorescence 8=9600
BaClF:Sm²⁺, temp. depend. 8=14332
BaF₂, additively coloured, phonon-assisted colour centre fluorescence 8=14306
BaO, Al₂O₃:Mn sensitized by Th and Ce 8=14303
BaS:Bi and electroluminesc. rel. to activator and BaSO₄ phase concs., obs. 8=9601
BaS:Cu and electroluminesc. rel. to activator and BaSO₄ phase concs., obs. 8=9601
BaS:Mn and electroluminesc. rel. to activator and BaSO₄ phase concs., obs. 8=9601
BaS:Mn phosphors in alternating and constant electric fields 8=23045
BaTiO₃:Eu²⁺, vibronic structure in spectra 8=14333
Bi in rare-earth oxides 8=14304
Bi³⁺-activated phosphors 8=23046
CaCO₃, X-ray luminesc., empirical decay law 8=14307
CaF₂, additively coloured, phonon-assisted colour centre fluorescence 8=14306
CaF₂(Eu) fluorescent response function to X and γ -rays 8=5665
CaF₂:Sm²⁺, temp. depend. 8=14332
CaF₂:Sm³⁺, tetragonal field, energy levels 8=13009
Ca₂, and scintillation props. 8=5654
CaO, Al₂O₃:Mn²⁺, sensitized by Th and Ce 8=14303
CaSO₄:Mn, X-ray, accumulation capacity 8=5655
CaSO₄:Sm²⁺ 8=23047
CaS, SrS phosphors excit. spectra obs. 8=9511
CaS, SrS:Ce:Sm i. r. flash stimulation rel. to trapping 8=9511
CaWO₄:Nd³⁺, fluoresc., quantum efficiency 8=5667
Cd, resonance fluorescence, modulation effects and lifetime meas. 8=9609

Luminescence—contd

solids, inorganic—contd

CdL₂ 8=5660
CdL₂(Eu) 8=5660
CdL₂(Pb) phosphoresc. and fluoresc. excit., e transitions 8=9605
CdS, alloyed with Au, recombination centre parameters in single crystals 8=14293
CdS, cathodoluminesc., electron-probe meas. 8=1754
CdS, cathodoluminescence temp. dependence 8=18597
CdS edge emission, doping, heat treatment and deform. effects, 4.2°K 8=9606
CdS, edge emission, peak shift with excitation intensity 8=2478
CdS, e microprobe obs. 8=14317
CdS, etched in KOH(NaOH) soln., light sensitization investigation 8=14294
CdS excit. by high photon densities, 4.2 and 77°K 8=9607
CdS, fluorescence, rel. to growth in improved furnace 8=1739
CdS, green-edge fluorescence, 4.2°K 8=2479
CdS, heat treatment and impurity effects rel. to centres nature, obs. 8=8741
CdS, i. r., and thermally stimulated currents 8=5661
CdS, photochemically sensitized and unsensitized, spectra 8=9603
CdS, and photoconduction induced by double photon absorpt. 8=14313
CdS, photoluminesc. efficiency 8=14312
CdS, photoluminescence spectrum, emission bands rel. to N₂ impurities 8=5657
CdS, pure crystals, submission to excitation of 50 keV electrons 8=14311
CdS, sensitizing recomb. centres, radiative capture yield of electrons 8=9602
CdS, two-photon excitation case 8=18599
CdS, with Te as isoelectronic trap, optical fluorescence and absorpt. 8=23048
CdS_x-CdSe_{1-x}, stimulated rad. during two-photon excitation 8=23049
CdSe, band-edge emission, excitation intensity effect 8=14316
CdSe edge emission, doping, heat treatment and deform. effects, 4.2°K 8=9606
CdSe, yield from radiative electron capture by sensitizing recombination centres 8=18598
CdSe-CdS mixed crystals at 4.2°K, photoluminescence 8=5656
Cd(S:Se) i. r. quenching rel. to band gap, 100-300°K 8=2261
Cd(S:Se) powder, cathodic luminescence 8=9604
Ce³⁺-activated phosphors 8=18600
CsBr:P radioluminesc. rel. to hole storage at centres, obs. 8=9625
Cs₂DyF₇ 8=21814
CsI(Na), fluorescent response function to X and γ -rays 8=5665
CsI(Na), single crystal, optical props. 8=2480
CsI(Tl), fluorescent response function to X and γ -rays 8=5665
CuBr, exciton spectra 8=23052
CuCl emission line lifetimes, positions and intensities, 4.2-300°K 8=9526
CuCl, exciton spectra 8=23052
CuCl, and weak absorpt., rel. to exciton complexes 8=9525
CuI, exciton spectra 8=23052
Cu₂O, non-linear dependence on photoexcitation intensity 8=18601
Dy³⁺ in tungstates and molybdates, u. v. excitation of fluoresc. 8=2473
Er³⁺, energy transfer in Na rare-earth tungstates 8=9610
Eu salts, fluoresc. lifetimes and multi-phonon deactivation, 4.2°, 77° and 300°K 8=14315
Eu³⁺ in garnet struct., hypersensitivity of ³D₀-⁷F₂ transition 8=18602
Eu³⁺ in tungstates and molybdates, u. v. excitation of fluoresc. 8=2473
EuAl borate, nonstoichiometry, X-ray fluoresc. 8=8410
EuF₃ 8=14214
Fe²⁺ in ZnS, i. r. spectra, 5 and 77°K 8=2491
GaAs, band-edge emission, excitation intensity effect 8=14316
GaAs diffused p-n junctions, longwave bands in luminescence spectra 8=5663
GaAs, epitaxially grown from Ga soln. 8=4829
GaAs, heavily doped with Te, S, Se and Sn, spectra at 77°K 8=18605
p-GaAs, photoluminescence, effect of heat treatment with excess As pressure 8=23054
GaAs, recombination processes following impact ionization by high field domains 8=2192
GaAs spherical recomb. diodes, use in optical pumping elements 8=23074
GaAs, stepwise excitation 8=23055
GaAs, Cu-diffused crystals, photoluminesc, failure to observe defect level 8=1954
n-GaAs radiative recombination 8=9612
p-GaAs, Zn doped, compensated, at 77, 194, 300°K 8=5662
GaAs, Zn-doped, rel. to heat treatment 8=2481
GaAs:Zn, photoluminescence, effect of As pressure 8=23053

Luminescence—contd

solids, inorganic—contd

- GaP p-n junctions, and microplasma obs. 8=5310
 Gd phosphate-vanadates 8=14330
 Ge, anisotropically deformed, under pinch conditions 8=18603
 Ge, emission by hot carriers 8=5664
 p-Ge, Ga doped and As compensated, rel. to impurity conc. 8=9613
 Ge:Zn, Sb-compensated, Zn-impurity conc. dependence 8=18604
 Hg-type activators, spectra genetic relationships and new phosphors prop. prediction 8=9593
 Ho-doped crystals, infrared quantum counter action of Ho^{3+} 8=18606
 K-Ba-SiO₂ glass: Nd³⁺, non-uniformly broadened band, half-width of separate centres and migration probability 8=14329
 KBr, e microprobe obs. 8=14317
 KBr-In, inner-centre luminescence, spectral-kinetic investigations 8=14319
 KBr-In photo- and thermostimulated, rel. to impurity C excits. delocalization mechanism 8=8903
 KBr:NO₃⁻, CO₃²⁻, SO₄²⁻, SeO₃²⁻ and Cu, centres nature, obs. 8=8745
 KBr:(Ni, Cu, In, Pb and Tl), roentgenoluminesc. and F-flash temp. depend. obs. 8=9626
 KBr:O₂, effect anharmonic vibrations on isotopic displacement 8=22937
 KBr:P radioluminesc. rel. to hole storage at centres, obs. 8=9625
 KBr:Sm²⁺, one-phonon sideband of 6890 Å transition at 7°K 8=9614
 KBr:Tl F-centres rel. to hole processes, obs. 8=8888
 KCl, e microprobe obs. 8=14317
 KCl:Ag, B-centre meas. 8=2006
 KCl(Ag), colouration, impurity centres produced 8=1994
 KCl-In, inner-centre luminescence, spectral-kinetic investigations 8=14319
 KCl:Na, F₁ centres 8=9615
 KCl:(Ni, Cu, In, Pb and Tl), roentgenoluminesc. and F-flash temp. depend. obs. 8=9626
 KCl:P radioluminesc. rel. to hole storage at centres, obs. 8=9625
 KCl:Pb phosphor, tetragonal symmetry 8=18607
 KCl:Tl, photostimulated, rel. to optical and thermal electron roles in recomb., 77-300°K 8=9617
 KI, e microprobe obs. 8=14317
 KI:In photo- and thermostimulated, rel. to impurity C excits. delocalization mechanism 8=8903
 KI and KI(In) self-luminesc. due to X-rays, decay 8=14318
 KI:(Ni, Cu, In, Pb and Tl), roentgenoluminesc. and F-flash temp. depend. obs. 8=9626
 KI:P radioluminesc. rel. to hole storage at centres, obs. 8=9625
 KI:Tl roentgenoluminesc., elec. field stimulation mechanism, obs. 8=9618
 KI:Tl roentgenoluminesc. and F-flash build-up obs. 8=9616
 KI:Tl⁺, at 77°K rel. to Tl⁺ clustering 8=23056
 KMgF₂:Ni²⁺, i. r. emission 8=18626
 KX: Cu⁺, (X = Br, Cl, I) lifetime of excited Cu⁺ 8=23057
 La phosphate-vanadates 8=14330
 LaF₃: Nd³⁺, absorpt., luminesc. and generation spectra 8=3334
 LaF₃:Nd³⁺, Yb³⁺, energy transfer 8=14328
 LiF, influence of thermal treatment 8=14322
 LiF, M-centre excit. spectra and transitions, obs. 8=8747
 LiF-U, radioluminescence, temp. dependence 8=14323
 Li₂Ge₂O₇:Cr, fluorescence at 4.2-300°K 8=9619
 LiH, study of red luminesc. centres 8=18608
 Lu phosphate-vanadates 8=14330
 MgF₂:V²⁺, i. r. fluorescence and phonon-terminated stimulated emission 8=2489
 MgGa₂, Mn activated, aluminium-substituted 8=14325
 MgO, fluorescence, "mirror" absorption 8=9620
 MgO:Co²⁺, near i. r. 8=23050
 3MgO.B₂O₃:Ge:Mn and cathodoluminesc. and excit. spectra rel. to mechanism 8=9621
 MgO:Ni²⁺, near i. r. 8=23050
 Mg₂TiO₄, emission spectra, temp. var. 8=2488
 MgTiO₃:Mn²⁺, at 77°K 8=14324
 (Mg, Tn)₂TiO₄, emission spectra, temp. var. 8=2488
 Mn²⁺ in hexa- and tetracoordinated cpds. 8=9551
 Mn alloys with Dy, Ho and Er, X-ray fluorescence analysis 8=2552
 MnF₂, pure and Eu³⁺, Co²⁺ doped, antiferromagnetic radiationless processes and afterglow kinetics 8=23058
 MnS 8=2484
 MnS/ZnS mixed crystals. 8=2484
 Na₂B₄O₇ glass, Eu activated, rel. to energy migration 8=23061
 NaBr:P radioluminesc. rel. to hole storage at centres, obs. 8=9625
 NaCl, e microprobe obs. 8=14317
